Lilien, Gary L. and Arvind Rangaswamy (1997) Marketing Engineering: Computer-Assisted Marketing Analysis and Planning, Addison-Wesley-Longman, Reading, MA.

This is an ambitious effort that combines an advanced graduate-level textbook on marketing models with cases, exercises, tutorials, and extensive Windows-based software. The book covers more than 25 important marketing decision models that have appeared in the literature, including perceptual mapping, clustering analysis, conjoint analysis, geodemographic analysis, resource allocation, new product

forecasting, marketing strategy, advertising, and pricing and promotion models. The exercises and cases (most developed by us) facilitate hands-on learning of concepts and methods to improve marketing decisions. The book is being used successfully in over 150 leading schools in their MBA and Executive Education programs, and increasingly also in Undergraduate business programs (www.decisionpro.biz).
