

Fly Speck Counter Sheet - How to Use this Sheet.

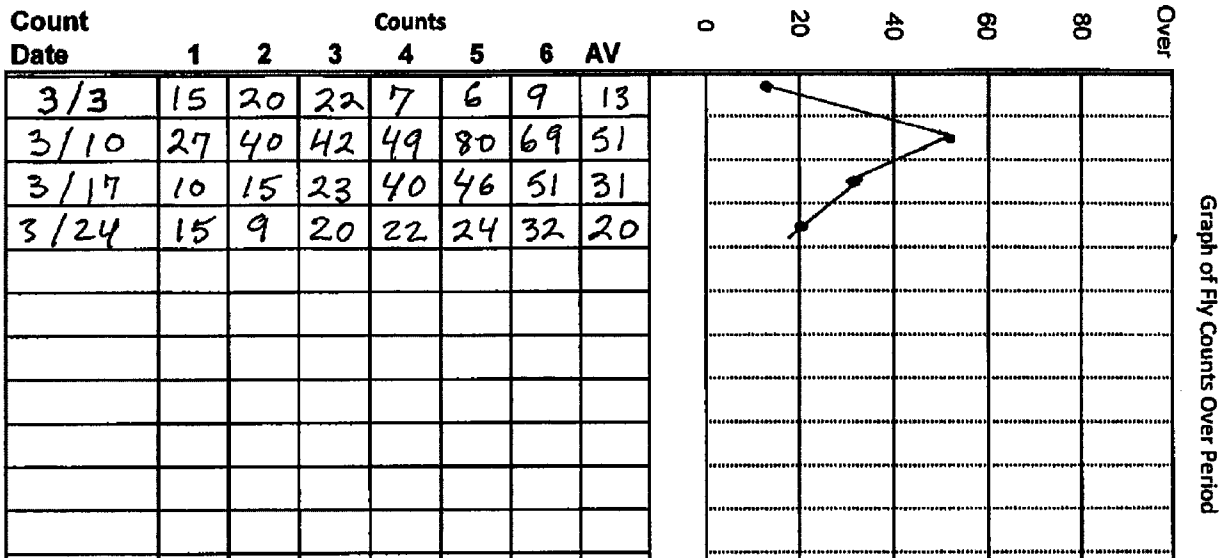

Using six white 3x5 inch index cards place the cards out in the area and wait for a week. Replace these cards with new ones, being sure to record location number and date on back of each card. Count ½ the card (draw a diagonal line from opposite corner) exposed side. Double this number and log it by location. Average all cards and place a dot in the graph area relating to the count number.

Animal IPM Program

see back of this sheet for instructions

By using this method and collecting cards weekly, a population count can be tracked over time. If IPM best management practices are being deployed a response should be reflected by the counts.
