

THE RELAXINATOR

IMJoPA

Ashley Howes, Irina Marii, Joe Schou, PJ Frederick

KEY FEATURES

- The chair is very sturdy and is capable of holding a lot of weight because of the double “X” feature.
- All pieces unfold flat for easy storage in a dorm room.
- The chair is built for comfort so the back of the chair is angled so you are leaning back.
- The armrests of the chair are in a position to keep your shoulders relaxed.
- If needed, the chair can easily be recycled because its made of solely cardboard.

WHAT WE COULD FIX

- We could've planned better and had fewer pieces.
 - The armrests could've been attached to the rest of the chair.
 - The back of the chair could've also been attached.
- We could've found a way to make it a recliner chair so the foot piece could be raised and lowered.
- We could've measured better and not had the piece to hold the chair together.

WHAT WE LEARNED

- How to work as a team
- How to think fast
- What would be strongest without using glue
- How to follow specific guidelines
- About cardboard
