Evaluation/reflection on public use of technology.

Apart from all the advantages that technology has for the class, it should be considered the ease to reach a person, and make it available in these days when we all live busy lives. And not only can a person be reached but a whole country, which is one of the most important things in a language class.

Moreover, students can see the importance of the language they are learning, that it is already used, how and where, giving them the chance to know all about the language and its culture without being in the country/countries where that language is used.

In our society, technology has become an essential tool within all fields. Consequently, I believe that encouraging an environment that embraces such tool can open doors to people in order to expose them to all of the elements that technology nowadays offers. The public use of technology is something that we need to be aware of, because it is one of the things that will prevail within our world, according to statistics, news, and the media, due to its capacity to simplify our lives and reach knowledge.
