

COASTAL APPLICATIONS USING ARCGIS

Course Description

This two-day course provides students with opportunities to address a variety of coastal issues using ArcView 9.2 technology. The course format includes lecture, demonstrations, small group discussions, and problem-solving exercises using ArcGIS.

Course Objectives

After completing this course, participants will be able to:

- *Build and synthesize their technical skills with ArcCatalog[®], ArcMap[®] and ArcToolbox[®]*
- *Familiarize themselves with basic GIS topics such as metadata, map scale issues, and data formats*
- *Apply this technology to real-world coastal issues such as population growth, sensitive habitats, and marine protected areas*

Prerequisites

*Introduction to ArcGIS**

**For those who have not completed the ESRI course within the past year, it is strongly recommended that they familiarize themselves with the concepts, as the material presented in this course is both comprehensive and fast-paced.*

Registration Fee: \$400 per student
