Lamp and Table

This is my first Solidworks project. It is a basic lamp and table that someone would find in their everyday house. This drawing was not terribly difficult to draw but some challenges I had was creating the lamp shade. Overall, I enjoyed creating this piece.
My second Solidworks project is a designer watch. I was influenced to create this watch because I like watches and had the desire to create a watch that looks fashionable. The most difficult part of creating the watch was making the face. The face was difficult because it required a lot of extrusions. What I learned by doing this project is making Solidworks drawing can be painful but the end result always looks amazing.
