# Concept Design Report

---

## Background

For this project, the house must have a living room, bedroom, bathroom, study room, a kitchen, a garage and a driveway, and a gym. There must also be a nearby pool. The house must also be fitness themed.

In order to design the house, various tools were required. The shape tool and the push/pull tool were used for the structure of the building. The component tool was used to add objects to the design, such as the bed, the sauna, and the trees. The rotate and scale tool were used to align many components of the house together. The texture tool was added to change an object's physical characteristics and improve the aesthetic appeal of the design.

## Design Concept

The house will be a two story building with a fitness theme. The first floor consists of five rooms, which are the living room, bedroom, bathroom, kitchen, and a study room. The second floor will consist of a gym and a sauna. Unlike most houses, the first and second room will not be connected by a flight of stairs. In order to get to the second floor, one will have to overcome a deep pool with stepping stones as well as a climbing wall with no assistance. In other words, only the physically competent can enter the second room. The house's main functions are to provide a safe and comforting environment and provide a place that can help people who value fitness to improve their athletic ability more than a regular gym.

The first floor will be comprised of a color scheme of red, brown, and beige to promote a placid environment. The second floor, on the other hand, will incorporate colors like black and blue to promote an energizing environment.

Textures were used on the floors, walls, the roof, the pool, and the stepping stones. As mentioned, adding texture makes the design to appear more visually appealing. For example, the walls on the second floor were changed to a transparent, glass wall to make the room appear more like a gym. The pool was given a "watery" texture and the first floor of the house was given a brick texture to make them more three dimensional.

# Components of the Project

## Project Description

### Exterior View

View 1: Top View

View 1: Front View

View 1: Left Side View

View 1: Right Side View

View 1: Back Side View

Description: The exterior views of the picture shows the design of the two story building. The first floor's design resembles that of an ordinary house. It consists of brick walls on all sides with 2 doors: one main door on the living room and another in the bedroom. There is a pool with chairs on the back of the house as well as a deep pool with stepping stones on the left side of the house. The front of the house shows the house with a garage and a driveway. The figure of the left side of the house shows that the door to the second floor (the Gym) can only be accessed by climbing the rock-climbing wall, which can be reached by overcoming the stepping stones on the deep pool. In other words, in order to gain access to the gym, one would need significant physical prowess, as opposed to a mere key or a flight of stairs.

## Interior View

View 2: Interior of First floor

View 2: Interior of Second floor (Gym)

Description: The first floor consists of five rooms: a living room, a kitchen, a bathroom, a study room, and a bedroom. The living room consists of a sofa, a television, a coffee table, and a dining table. The kitchen has a standard fridge, table, sink, and cabinets. The bathroom has a toilet, sink, and a shower. The bedroom has a king size bed as well as two tables. The second floor consists of two rooms: a gym and a sauna. The gym is filled with various equipment, such as dumbbells, barbells, treadmills, yoga mats, boxing bags, and a boxing ring. Next to the gym is the sauna, which is large enough for several people.
