The purpose of this activity is for students to become familiar with identifying major components available in electronic boards and circuits.

On the board given to you by your instructor, identify the components (resistors, capacitors, diodes, integrated circuits, etc.)

For the integrated circuits:

1. Identify the manufacturer. For help with the logos, you can consult the following links:

   http://www.chipdocs.com/logos/logotypes.html

   http://www.canics.com/mfglogos.html

2. Using the manufacturer’s website, as your reference source, briefly explain in your own words the function of each integrated circuit.

Use the picture in the next page to make notes and identify the components.
