

BRIAN'S PERSONAL CAD PROJECT

A MUG

- I chose to create a mug using SolidWorks because for me (being challenged by the program), this served to be a good object to choose.
- The most difficult part of the project was creating the handle for the mug.
- This project relates to my hobby/personal experience of drinking coffee from a mug.
- I learned even more functions of using SolidWorks and became more comfortable with the program. It was frustrating while creating the mug, but in retrospect, it was fun.
