

SOLIDWORKS

Brendan Weiss

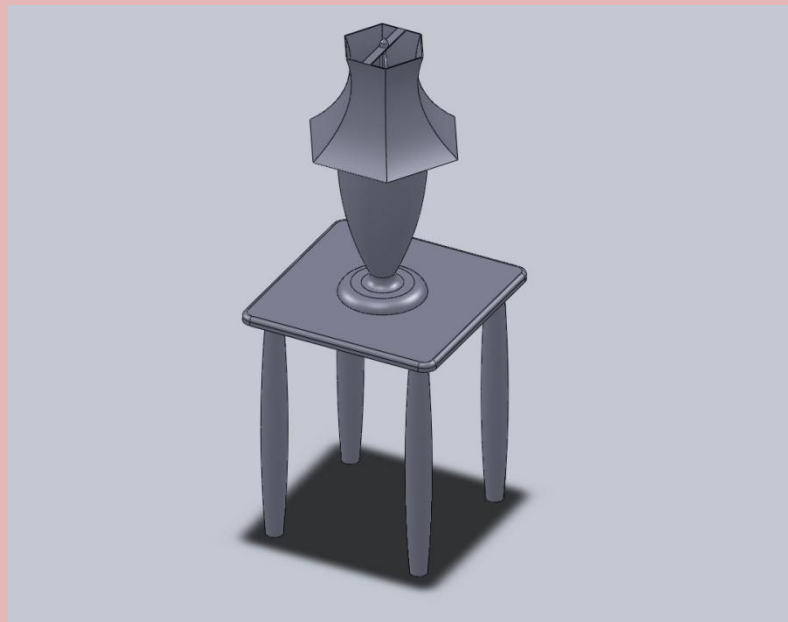

EDSGN100

Spring 2011

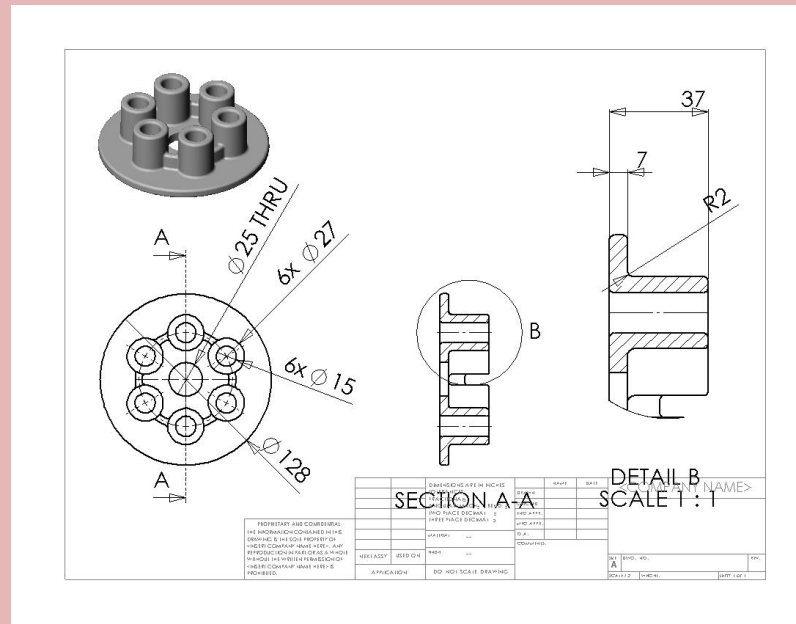

Section 19

I have attached some projects that I have completed using SolidWorks this semester. SolidWorks gave me trouble multiple times, but I am happy to say that I have learned the basics of the program.

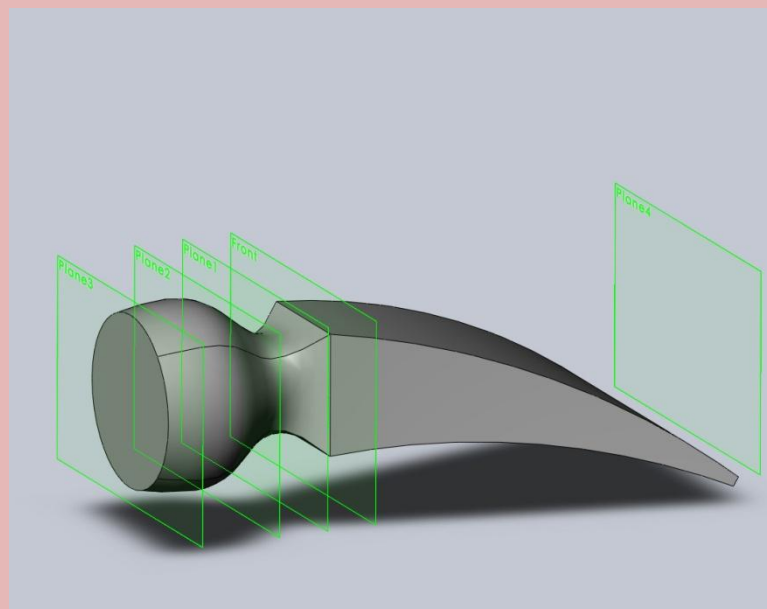

This is a lamp sitting on a table that I created. There were many parts to this figure, and they were all put together in the first assembly that I created.

This is a plate that I created. It also shows how you can take a figure and put it in to a drawing which shows multiple views and certain dimensions.

In SolidWorks, we learned how to create lofts to create more intricate drawings. This is an example.

One day, in class, we had a quiz. We were given a 3-D drawing of an object, and we had to create it in SolidWorks. It was quite difficult, but it was fun at the same time.
