

# Chessboard Model

- ❖ The reason I chose to create this project in Solidworks was because I love the game of chess. The game itself is fascinating but seeing different styles of pieces from different cultures fascinates me more. This is my interpretation of an elegant chess set.
- ❖ The most difficult part of the project was creating the coordinate system as well as assembling the Knight, King and Queen. In order to make the features, I had to create separate parts and mate them appropriately, which took a lot of time, energy, and patience.
- ❖ This chessboard I have created has a big influence on my past. I used to play chess daily, learning opening moves and famous attacks.
- ❖ Throughout this project, I learned new applications and methods of mating objects in the program. Much of this can be seen in the job done on the queen. Overall, this project was extremely fun!
