

# Engineering Drawing

A focus this semester in engineering design was the drawing portion. Some techniques we have learned include multi-view and isometric. The drawings give engineers the ability to show three dimensional objects on a two dimensional plane. With multi-view, we would take an object and display different orientations in order to show its shape and dimensions. Isometric drawings give engineers the ability to take a multi-view drawing, and give a three dimensional orientation on paper. The possibilities are endless with these drawings, for example, we can include a section view where we display the interior parts of the object.

## Multi-view

## Section

## Isometric
