

CAD Lab

During our CAD Lab, I became very familiar with the inner workings of the SolidWorks program. I used commands such as revolve, sweep, extrude, extrude cut, and loft when working on a part, and learned how to mate parts in an assembly. I realized the importance of Smart Dimensioning and fully defining an object, and in the end, I created a Gingerbread House from scratch. Having confident CAD skills will definitely be important in my future when I look to efficiently and completely create or model an item.

Some examples of my CAD projects:
