

Throughout the year, EDSGN class has had multiple aspects, one of which was a drawing class. In this class, we learned things such as multi-view, circle drawings, and isometric view drawings. Using these techniques, we were able to dissect and analyze objects, or create them using dimensions given. The drawing class taught us how to see things from multiple perspectives, and create a simpler drawing with hidden lines and midpoints. These multi-view and isometric drawing examples are shown below.
