

Personal CAD Project

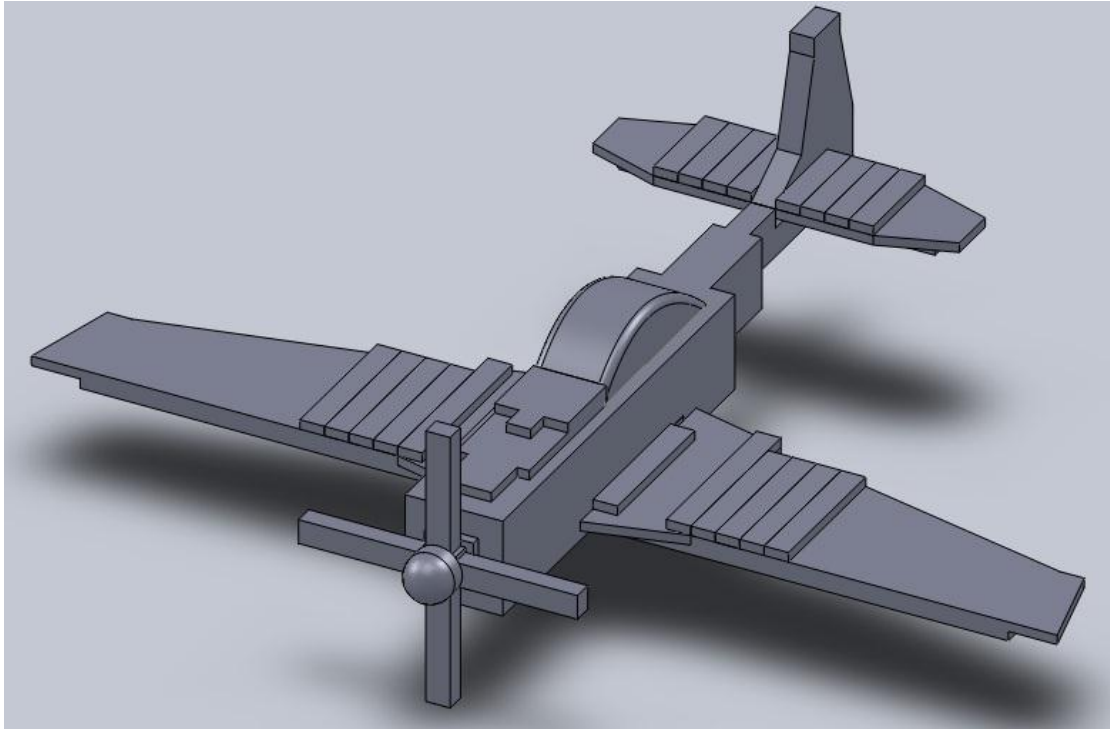

P-51 Mustang

Charlie Garlisi

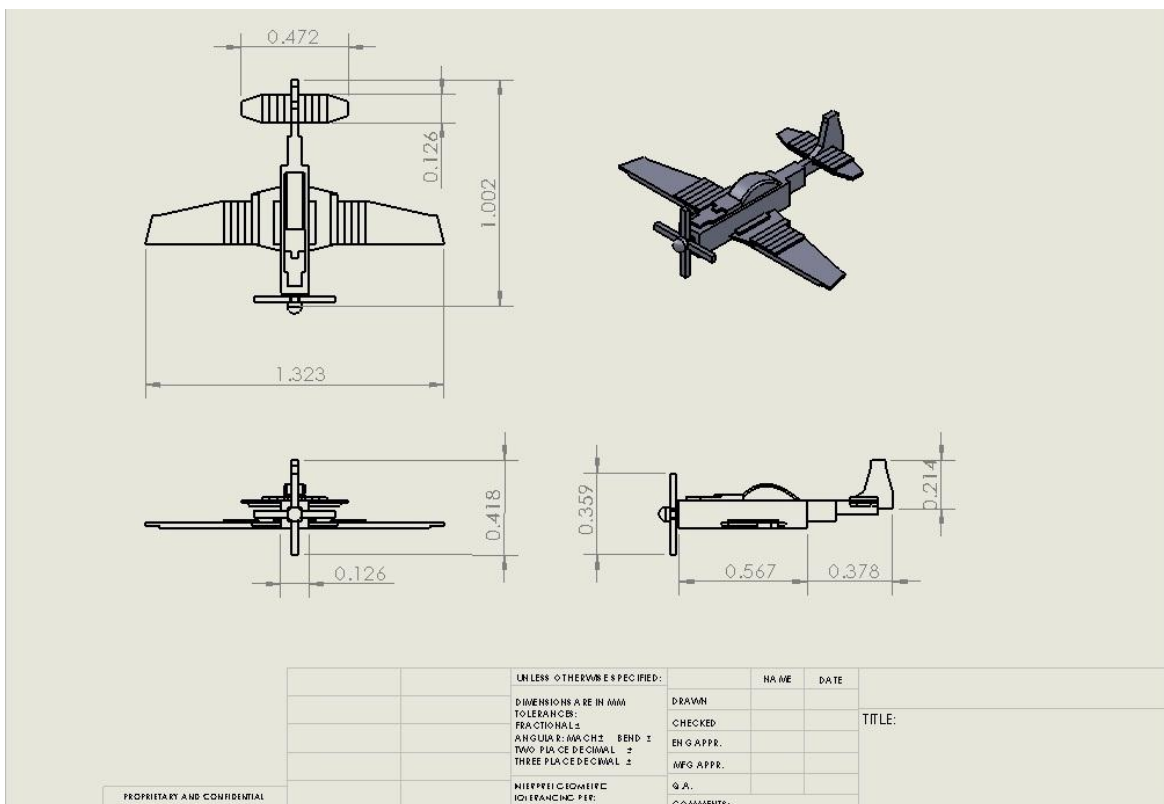

For my personal CAD Project, I choose to recreate a Lego version of a P-51 Mustang. I choose this because I plan on majoring in Aerospace Engineering and the P-51 is my favorite plane. This most difficult part of this project was figuring out how large to make each part. I had to do research to find out the dimensions of different Lego pieces and apply that to the picture to get an approximation of how big each piece needed to be. I enjoyed this project because it allowed me to play around with AutoCAD and work on an object of my choosing.
