7. Furnish screws for installation, with each hardware item. Provide Phillips flat-head screws except as otherwise indicated. Finish exposed (exposed under any condition) screws to match hardware finish or, if exposed in surfaces of other work, to match finish of such other work as closely as possible, including "prepared for paint" in surfaces to receive painted finish.

8. Provide concealed fasteners for hardware units which are exposed when door is closed, except to extent no standard units of type specified are available with concealed fasteners. Do not use thru-bolts for installation where bolt head or nut on opposite face is exposed in other work, except where it is not feasible to adequately reinforce the work. In such cases, provide sleeves for each thru-bolt or use sex screw fasteners.

9. Tools and Maintenance Instructions for Maintenance: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of finish hardware.

2.3 HINGES, BUTTS AND PIVOTS

A. Templates: Except for hinges and pivots to be installed entirely (both leaves) into wood doors and frames, provide only template-produced units.

B. Screws: Furnish Phillips flat-head or machine screws for installation of units, except furnish Phillips flat-head or wood screws for installation of units into wood. Finish screw heads to match surface of hinges or pivots.

C. Hinge Pins: Except as otherwise indicated, provide hinge pins as follows:

1. Steel Hinges: Steel pins.
4. Interior Doors: Non-rising pins.
5. Tips: Flat button and matching plug, finished to match leaves.
6. Number of hinges: Provide number of hinges indicated but not less than 3 hinges per door leaf for doors 90" or less in height and one additional hinge for each 30" of additional height.

D. Acceptable Manufacturers:

1. Ives
2. McKinney
3. Hager

E. Supplier shall be responsible for the correct hinge size to fit any existing frames or doors.

F. Furnish hinges in sizes and types as required by architect’s details to achieve maximum degree of opening.

2.4 CONTINUOUS HINGES
A. Hinge shall be a pinless assembly of three interlocking extrusions applied to the full height of the door and frame without mortising. The door leaf and jamb leaf shall be geared together for the entire length of the hinge and joined by a channel. Hinge knuckle shall be monolithic in appearance. Continuous hinge with visible knuckle separations are not acceptable. Vertical door loads shall be carried on minimum 3/4" acetal bearings through a full 180 degrees. The door leaf and jamb leaf shall have templated screw hole locations for future replacement needs. All heavy duty hinges (HD) shall have a minimum of 32 bearings for a 7' length.

B. Acceptable Manufacturers:
   1. Ives
   2. Hager Roton
   3. Select Products

2.5 LOCK CYLINDERS AND KEYING

A. General: Supplier will meet with Owner to finalize keying requirements and obtain final instructions in writing.

B. Review the keying system with the Owner and provide the type required (master, grandmaster or great-grandmaster), integrated with Owner's existing Best Lock Company system. If key pinning charts are required, owner to furnish charts to hardware supplier.

C. Furnish Best Lock Company removable core cylinders at all doors, keyed as directed by the owner.

D. Furnish temporary keyed cores for the construction period, and remove these when directed. The construction cores remain property of the supplier and shall be returned to the supplier when they are removed. Contractor shall install the permanent cores in the presence of the owner's representative.

E. Metals: Construct lock cylinder parts from brass/bronze, stainless steel or nickel silver.

F. Comply with Owner's instructions for masterkeying and, except as otherwise indicated, provide individual change key for each lock which is not designated to be keyed alike with a group of related locks.

G. Permanently inscribe each key and cylinder with Visual Key Control that identifies cylinder manufacturer key symbol, and inscribe key with the notation "DO NOT DUPLICATE".

H. Key Material: Provide keys of nickel silver only.

I. Key Quantity:
   1. Furnish 3 change keys for each lock.
   2. 5 master keys for each master system.
   3. 5 grandmaster keys for each grandmaster system.
   4. One extra blank for each lock.
   5. 3 Control Keys (Construction and Permanent).
   6. 6 Construction master keys.

J. Deliver keys as directed by the owner.

K. Key Control System: Provide a key control system including envelopes, labels tags with self locking clips, receipt forms, 3-way visible card index, and standard metal cabinet, with a capacity for 150% of the number of locks required for this project.
   1. Key cabinet and system shall be provided as a part of this contract by the hardware supplier. Cabinet shall be indexed and set up by supplier with the owner's representative.
2.6 LOCKS, LATCHES AND BOLTS

A. Locks shall meet these certifications:
   1. Mortise Locks – ANSI A156.13, 1994, Grade 1 Operational, Grade 2 Security, ANSI/ASTM F476-76 Grade 30, UL listed. Levers shall be forged brass, bronze, or cast stainless steel, 93 lever design extruded brass, bronze or stainless steel. Meets A117.1 Accessibility Codes. Steel Case with ¾” throw stainless steel anti-friction latchbolt and a 1” throw stainless steel deadbolt. Lock case shall be field reversible, without opening the lock chasis and universal chasis to accept bith knob and lever functions. Lock trim shall incorporate individual lever support springs in each rose or escutcheon. Lever connection by attaching threaded bushings tightened by a spanner wrench. Threaded set screws will not be accepted. Lock spindles shall be two independent inside and outside spindles to prevent manipulation of lock. Strikes: Provide manufacturer’s standard wrought box strike for each latch or lock bolt, with curved lip extended to protect frame.
      a. Lock design shall be Schlage L9000 series Danmark 615A design – Finish to be 626.

B. Comply with UL requirements for throw of bolts and latch bolts on rated fire openings.

C. Lock Manufacturers: Subject to compliance with requirements, provide lockset products of the following approved manufacturers:
   1. Schlage Lock Co. “L9000 Series”
   2. Best Lock Co. “45H Series”
   3. Sargent Lock Co. “8200 Series”

D. Flush Bolt Heads: Minimum of 1/2” diameter rods of brass, bronze or stainless steel, with minimum 12” long rod for doors up to 7’-0” in height. Provide longer rods as necessary for doors exceeding 7’-0” in height.

E. Provide dust-proof strikes for foot bolts, except where special threshold construction provides non-recessed strike for bolt.

2.7 CLOSERS AND DOOR CONTROL DEVICES

A. Size of Units: Except as otherwise specifically indicated, comply with the manufacturer’s recommendations for size of door control unit, depending upon size of door, exposure to weather and anticipated frequency of use.

B. Closers: All door closers shall be of one manufacturer to provide for proper installation and servicing after installation. All closers shall be inspected after installation by a factory representative to ensure proper adjustment and operation. A report shall be filed with the architect after said visit has been made. Closer shall carry a manufacturer’s TEN YEAR WARRANTY for hydraulic units and 2 year warranty for electrical and/or handicap power assist door closers against manufacturing defects and workmanship.

C. Cylinder: Shall be of high strength cast iron construction. All door exterior closers shall be tested to ANSI/BHMA A156.4 test requirements by a BHMA certified independent testing laboratory. A written certification showing successful completion of a minimum of 10,000,000 cycles for all exterior door closers must be provided.

D. All door closers shall be fully hydraulic and have full rack and pinion action with a shaft diameter of a minimum of 11/16” and piston diameter of 1-1/2”. Closer shall utilize full complement bearings at shaft. Pinion and pistons shall be hardened regardless of closer size. The closer shall incorporate tamper resistant non-critical screw valves of V-slot design to reduce possible clogging. Closer shall have separate and independent screw valve adjustments for latch speed, general speed and
hydraulic backcheck. Backcheck shall be properly located so as to effectively slow the swing of the door at a minimum of 10 degrees in advance of the dead stop location.

E. Pressure relief valves are not acceptable.

F. All door closers shall pass UL10C positive pressure fire test.

G. Parallel Arm Closers: Shall incorporate one piece solid forged steel arms with bronze bushings. 1-9/16" x 1/2" steel stud shoulder bolts, shall be incorporated in regular arms, hold open arms, arms with stop built in, arms with hold open and stop built in. All other closers to have forged steel main arms for strength, and durability.

H. Built-In Stops: Where closers with built-in positive stops are used, the stops shall be of one piece cast malleable iron material. Screw on stops of any kind are not acceptable. Where required, the hold-open assembly handle for these stops shall rotate on ball bearings.

I. All closers to have a powder coat finish on closer body, arm, metal cover and adapter plate. Powder coat finish shall exceed a minimum 100 hour salt spray test, as described in ANSI Standard A156.4 and ASTM B117.

J. Hydraulic Fluid: All closers, with the exception of interior and interior electronic closers, shall utilize temperature stable fluid capable of withstanding temperature ranges of 120 degrees F. to -30F. without requiring seasonal adjustment of closer speed to properly close the door.

K. Supply all drop plates, shoe supports, spacers, templates, etc. to properly install closers according to manufacturer's recommendations.

L. Provide grey resilient parts for exposed bumpers.

M. Closer being submitted for approval shall have been manufactured for at least 10 years. A list of (10) year old projects using submitted closer shall be available upon request.

N. Closer Manufacturers: Subject to compliance with requirements, provide closer products of the following approved manufacturers:
   1. LCN Closers - 4010 / 4110 Series (No Substitutions)

2.8 ADA SPECIAL CLOSERS AND DOOR OPERATORS:

A. Were low kinetic energy, as defined by ANSI Standard A156.19, Surface mounted door operators shall be electric powered closers complying with the 1990 ADA requirements for opening force and time to closer standards. Full closing force shall be provided when the power or assist cycle ends.

B. Locate power unit exhaust away from door to minimize noise and vibration in pedestrian areas. Door operators shall be rack and pinion action with one piece forged steel pistons. Units shall be UL approved for fire labeled and non-labeled openings. Separate adjusting valves shall be provided for closing speed, latching speed and back check

C. Power operators systems shall include the following features and functions.
   1. Provisions for separate conduits to carry high and low voltage wiring, and shall be UL Listed for use on Fire Labeled Openings.

D. When obstruction or resistance to the opening swing is encountered, the operator will pause, then reattempt to open the door. If the obstruction or resistance remains, the operator will again pause the door.
E. Operators shall be designed to prevent damage to the mechanism if the system is actuated while the door is latched or if the door is forced closed during the opening cycle.

F. All parts shall be powder coated and successfully pass a minimum of 100 hours salt spray test, as outlined in ANSI Standard A156.18.

G. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include:

1. LCN 4640 Auto-Equalizer Series (No Substitutions)

2.9 EXIT DEVICES

General: All devices and mullions shall be of one manufacturer to provide for proper installation and servicing. Devices shall be furnished non-handed and capable of direct field conversion for all available trim functions. All devices shall carry a three year warranty against manufacturing defects and workmanship. Exit device(s) being submitted for approval shall have been manufactured for at least 10 years. A list of (10) years old projects using submitted exit device shall be available upon request.

Furnish maintenance kit VonDuprin #050046 to owner at closeout of project.

Furnish mullion stabilizer similar to Von Duprin #154 for all mullions.

Furnish cylinders for all locking function exit devices.

Exit device shall be tested to ANSI/BHMA A156.3 test requirements by a BHMA certified independent testing laboratory. A written certification showing successful completion of a minimum of 1,000,000 cycles for surface and concealed vertical rod devices, 5,000,000 cycles for rim devices, and 10,000,000 cycles for mortise devices.

A. Surface Mounted / Concealed Vertical Rod Exit Devices:

1. Devices shall be push through type touch pad design with a straight or horizontal motion to eliminate pinch points. The angular motion type pad with end cavity exposed when depressed is unacceptable. Latch bolt shall have a self-lubricating coating which reduces friction and wear. Plated latch bolts are unacceptable. Device housing shall be heavy duty extruded aluminum.

2. Mechanism Case or Housing: Shall have an average minimum thickness of (.140") EXTRUDED aluminum, and shall have the adaptability to convert from standard hex key dogging to a high security cylinder dog operation in the field.
   a. No exposed screws shall be seen from the back side (pull side) of the device through a glass lite.
   b. The use of plastic parts to retract the latchbolt is unacceptable.

3. Springs: Only minimum (1/16") diameter compression springs are acceptable. All internal parts shall be zinc dichromate coated to prevent rusting.

4. Quiet Feature: All devices shall incorporate a hydraulic sound damper to which decelerates the touchpad on its return stroke and eliminates noise associated with exit device operation.

5. Touch Pad: Shall be architectural metal with a minimum height of 2-3/16". Plastic is not acceptable.

6. Outside Trim: Shall be heavy duty type and fastened by means of concealed welded lugs and thru-bolts from the inside. Lever trim shall be forged brass with a minimum average thickness on the escutcheon of (.130"). Plate with pull shall be minimum average thickness of (.090") and have forged pulls. Lever trim shall be furnished with “Break-Away Levers” (994L Trim).

7. End caps shall be sloped and of heavy-duty metal alloy construction and provide horizontal adjustment to provide flush alignment with device cover plate. When device end cap is installed, no raised edges will protrude. End cap shall be cast metal or forged aluminum and have a minimum thickness of (.250"). Plastic or metal stamping will not be acceptable.
8. All devices with US28 finish to have stainless steel touch bars with US26D trim.
9. All floor strikes on interior vertical rod panic devices to be similar to Von Duprin 385A.
10. Provide all shim kits and filler plates to allow flush mounting of exit devices on all types of doors used in this project.
11. Furnish all exit devices with deadlocking latchbolts.
12. Surface Vertical Rod Series Exit Device shall be tested to ANSI/BHMA A156.3 test requirements by a BHMA certified independent testing laboratory; a written certification showing successful completion of a minimum of 5,000,000 cycles must be provided by the independent laboratory. Rim Series Exit Device shall be tested to ANSI/BHMA A156.3 test requirements by a BHMA certified independent testing laboratory; a written certification showing successful completion of a minimum of 5,000,000 cycles must be provided by the independent laboratory. Mortise Series Exit Device shall be tested to ANSI/BHMA A156.3 test requirements by a BHMA certified independent testing laboratory; a written certification showing successful completion of a minimum of 10,000,000 cycles must be provided by the independent laboratory. Concealed Vertical Rod Series Exit Device shall be tested to ANSI/BHMA A156.3 test requirements by a BHMA certified independent testing laboratory; a written certification showing successful completion of a minimum of 1,000,000 cycles must be provided by the independent laboratory.

B. Acceptable Manufacturers: Subject to compliance with requirements, provide exit device products of the following manufacturers:
   1. Von Duprin
   2. Sargent

2.10 DOOR TRIM UNITS

A. Fasteners: Provide manufacturer's standard exposed fasteners for door trim units (kick plates, edge trim, viewers, knockers, mail drops and similar units); either machine screws or self-tapping screws.

B. Fabricate protection plates (armor, kick or mop) not more than 1-1/2" less than door width on stop side and not more than 1/2" less than door width on pull side, x the height indicated. All protection plates shall have all edges beveled (B4E).

C. Metal Plates: Stainless steel, .050" (U.S. 18 ga.).

D. All pull plates and handles to be thru-bolted. Install pull plate prior to push plate to conceal thru-bolts. Provide concealed fasteners for all push/pull applications.

E. Acceptable Manufacturers:
   1. Ives.
   2. Rockwood
   3. Quality

2.11 WEATHERSTRIP AND GASKETING

A. General: Except as otherwise indicated, provide continuous weather stripping at each leaf of every exterior door. Provide type, sizes and profiles shown or scheduled. Provide non-corrosive fasteners as recommended by manufacturer for application indicated.

B. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips is easily replaceable and readily available from stocks maintained by the manufacturer.

C. Acceptable Manufacturers:
   2. Reese
3. National Guard Products

2.12 Thresholds

A. General: Except as otherwise indicated provide standard aluminum threshold unit of type, size and profile as shown or detailed.

B. Provide welded custom thresholds where scheduled and noted in the hardware sets. Provide cover plates where scheduled.

C. Provide thresholds that are 1" wider than depth of frame unless specified or detailed otherwise.

D. Acceptable Manufacturers:
   2. Reese
   3. National Guard Products

2.13 Door Silencers

All hollow metal frames shall have grey resilient type silencers. Quantity (3) on single doors and quantity (2) on pairs of doors.

2.14 Electrical Hardware

A. Where scheduled supply electrified exit devices that allow for remote retraction of latch bolts by use of a solenoid. Access control system will allow exit devices to be changed from exit only or latched to push-pull operation.

B. Furnish power transfers that are recessed into door and frame. Power transfers to allow electrical power to pass from door to frame without the use of door cords or transfer hinges.

C. Furnish power supplies to operate electrified exit devices. Power supplies to have regulated output that is field selectable for either 24VDC @ 2 amps or 12VDC @ 4 amps. Standard input at 120VAC @ 1amp or 240VAC @ 0.5amp. Power Supplies to have five (5) knockout holes for conduit connection with terminal block that handles up to 14 gauge wire. Power supplies will handle up to 16 amp current inrush to retract exit device latch bolt.

D. Furnish wiring diagrams (riser and point to point) with theory of operation to electrical contractor for use in installing electrical hardware products.

E. Electrical contractor to run all wiring and make all final connections for electrified hardware.

Hardware supplier shall be responsible to furnish all wiring diagrams to operate electrified hardware. Access control material and electrified hardware to interface at junction boxes.

Part 3—Execution

Card reader by others. Free egress at all times. Inside actuator always active and will retract latchbolt and open door. LX switch to allow outside actuator to be used when doors are electronically dogged. Presentation of valid card will retract latchbolts and allow use of outside actuator. Auto-equalizers to be powder coated to a special color to match frames. Operators to be wired for sequential operation with vestibule door. Exterior actuator to operate exterior door and inner vestibule door in a time delay manner with the interior vestibule actuator to open exterior door only. Actuator locations to be determined by the architect prior to rough in of electrical boxes.

**Henderson - Biobehavioral Health Building**

**DGS 800-290/PSU 06-42744/BCJ 08001**

**12 Nov 2010**

**FINISH HARDWARE**

**08 71 00 - 22**
3.2 INSTALLATION

A. Mount hardware units at heights indicated in "Recommended Locations for Builders Hardware for Standard Steel Doors and Frames" by the Door and Hardware Institute, except as specifically indicated or required to comply with governing regulations, and except as may be otherwise directed by Architect.

B. Install each hardware item in compliance with the manufacturer's instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished in another way, coordinate removal, storage and reinstallation or application of surface protections with finishing work specified in the Division-9 sections. Do not install surface-mounted items until finishes have been completed on the substrate.

C. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

D. Drill and countersink units which are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

E. Set thresholds for exterior doors in full bed of butyl-rubber or polyisobutylene mastic sealant.

3.3 ADJUST AND CLEAN

A. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Replace units which cannot be adjusted to operate freely and smoothly as intended for the application made.

B. Clean adjacent surfaces soiled by hardware installation.

C. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy of a space or area, return to the work during the week prior to acceptance or occupancy, and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

D. Instruct Owner's Personnel in proper adjustment and maintenance of hardware and hardware finishes, during the final adjustment of hardware.

E. Continued Maintenance Service: Approximately six months after the acceptance of hardware in each area, the Installer, accompanied by the representative of the latch and lock manufacturer, shall return to the project and re-adjust every item of hardware to restore proper function of doors and hardware. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures. Replace hardware items which have deteriorated or failed due to faulty design, materials or installation of hardware units. Prepare a written report of current and predictable problems (of substantial nature) in the performance of the hardware.

3.4 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
2. Plastic Materials
3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 08 71 00
SECTION 08 80 00 - GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:

1. Windows.
2. Doors.
4. Glazed entrances.
5. Sloped glazing.
6. Interior borrowed lites.

B. Related Sections:

1. Division 05 Section "Decorative Metal Railings" for glass panels in railings.
2. Division 08 Section “Stile and Rail Wood Doors.”
3. Division 08 Section “Glazed Aluminum Curtain Walls” for structural-sealant glazing requirements.
4. Division 08 Section “Aluminum Windows.”
5. Division 08 Section “Aluminum-Framed Entrances and Storefronts.”
6. Division 08 Section “Frameless Glass Doors & Storefront.”
7. Division 08 Section “Steel Fire Rated Glazed Curtain Wall.”
8. Division 08 Section “Mirrors.”

1.3 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

C. Interspace: Space between lites of an insulating-glass unit.

1.4 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
B. Delegated Design: Design glass, including comprehensive engineering analysis according to ASTM E 1300, but not less than that required by ICC's 2006 International Building Code by a qualified professional engineer, using the following design criteria:

1. Design Wind Pressures: As indicated on Drawings.
2. Design Snow Loads: As indicated on Drawings.
3. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.
4. Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass to resist each of the following combinations of loads:
   a. Outward design wind pressure minus the weight of the glass. Base design on glass type factors for short-duration load.
   b. Inward design wind pressure plus the weight of the glass plus half of the design snow load. Base design on glass type factors for short-duration load.
   c. Half of the inward design wind pressure plus the weight of the glass plus the design snow load. Base design on glass type factors for long-duration load.
5. Probability of Breakage for Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.008.
6. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/175 times the short-side length or 3/4, whichever is less.
7. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.6 ACTION SUBMITTALS

A. Product Data: For each glass product and glazing material indicated.

B. LEED Submittals:
1. Product Data for Credit IEQ 4.1: For glazing sealants used inside the weatherproofing system, documentation including printed statement of VOC content.

C. Glass Samples: For each type of the following products; 12 inches (300 mm) square.
   1. Coated glass.
   2. Fire-resistant glazing products.
   3. Laminated glass with colored interlayer.
   4. Insulating glass.

D. Glazing Accessory Samples: For gaskets, sealants and colored spacers, in 12-inch (300-mm) lengths.

E. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

F. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installers, manufacturers of insulating-glass units with sputter-coated, low-e coatings, glass testing agency and sealant testing agency.

B. Product Certificates: For glass and glazing products, from manufacturer.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for coated glass, insulating glass, glazing sealants and glazing gaskets.
   1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

D. Preconstruction adhesion and compatibility test report.

E. Warranties: Sample of special warranties.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass manufacturer who is approved and certified by coated-glass manufacturer.

B. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.

D. Elastomeric Glazing Sealant Product Testing: Obtain sealant test results for product test reports in "Submittals" Article from a qualified testing agency based on testing current sealant formulations within a 36-month period.
   1. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated, as documented according to ASTM E 548.
2. Test elastomeric glazing sealants for compliance with requirements specified by reference to ASTM C 920, and where applicable, to other standard test methods.

E. Preconstruction Adhesion and Compatibility Testing: Submit to elastomeric glazing sealant manufacturers, for testing indicated below, samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that will contact or affect elastomeric glazing sealants:

1. Use ASTM C 1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
2. Submit not fewer than eight pieces of each type of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
4. For materials failing tests, obtain sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
5. Testing will not be required if elastomeric glazing sealant manufacturers submit data based on previous testing of current sealant products for adhesion to, and compatibility with, glazing materials matching those submitted.

F. Source Limitations for Glass: Obtain coated float glass laminated glass and insulating glass from single source from single manufacturer for each glass type.

G. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

H. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

I. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

J. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F (250 deg C), and the fire-resistance rating in minutes.

K. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

L. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Install glazing in mockups specified in Division 08 Section "Aluminum-Framed Entrances and Storefronts," "Aluminum Windows," and "Glazed Aluminum Curtain Walls" to match glazing systems required for Project, including glazing methods.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

M. Preinstallation Conference: Conduct conference at Project site.
   1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   2. Review temporary protection requirements for glazing during and after installation.

1.9 DELIVERY, STORAGE, AND HANDLING

   A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

   B. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.10 PROJECT CONDITIONS

   A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

      1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C).

1.11 WARRANTY

   A. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

      1. Warranty Period: Ten years from date of Substantial Completion.

   B. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

      1. Warranty Period: Ten years from date of Substantial Completion.
C. Manufacturer's Special Warranty for Ceramic Frit Coated-Glass Products: Manufacturer's standard form in which frit coated-glass manufacturer agrees to replace frit coated-glass units that deteriorate within specified warranty period. Deterioration of frit coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in frit coating.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

1. Minimum Glass Thickness for Exterior Lites: Not less than 6.0 mm.

B. Strength: Where float glass is indicated, provide annealed float glass, Kind HS heat-treated float glass, or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened glass is indicated, provide Kind HS heat-treated float glass or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.

C. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
2. For laminated-glass lites, properties are based on products of construction indicated.
3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.2 GLASS PRODUCTS

A. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.

B. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. For uncoated glass, comply with requirements for Condition A.
3. For coated vision glass, comply with requirements for Condition C (other coated glass).

2. Ceramic Coating Color: As selected by Architect from manufacturer's full range of standard and optional colors.
3. Ceramic Coating Pattern:

D. Ceramic-Coated Spandrel Glass: ASTM C 1048, Condition B, Type I, Quality-Q3, and complying with other requirements specified.

2. Ceramic Coating Color: As selected by Architect from manufacturer's full range of standard and optional colors.

2.3 LAMINATED GLASS

A. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

1. Construction: Laminate glass with polyvinyl butyral interlayer to comply with interlayer manufacturer's written recommendations.
   a. Where edges of laminated glass are indicated in the specifications or the drawings as exposed to the exterior, provide PVB interlayer suitable for exposure to exterior.

2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
3. Interlayer Color: Clear unless otherwise indicated.

B. Glass: Comply with applicable requirements in "Glass Products" Article as indicated by designations in "Laminated-Glass Types" Article.

2.4 INSULATING GLASS

A. Basis of Design Manufacturers: Subject to compliance with requirements and where indicated as a basis of design manufacturer in glazing types below, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. PPG Industries, Inc.

B. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.

1. Sealing System: Dual seal, with manufacturer's standard primary and secondary.
2. Spacer: Thermally broken stainless steel "warm edge" spacer in color selected by Architect from manufacturer's full range of standard and premium colors and finishes.
   a. Desiccant: Molecular sieve or silica gel, or blend of both.
   b. Corner Construction: Manufacturer's standard corner construction
   c. Basis of Design Product: Structural Warm-Light glass spacers, as manufactured by AZON USA, Inc, or approved equal.
3. Mechanically keyed spacer required in IGU's for structurally glazed curtain wall.
C. Glass: Comply with applicable requirements in "Glass Products" Article and in "Laminated Glass" Article as indicated by designations in "Insulating-Glass Types" Article and in "Insulating-Laminated-Glass Types" Article.

2.5 FIRE-PROTECTION-RATED GLAZING

A. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies.

B. Laminated Ceramic Glazing: Laminated glass made from 2 plies of clear, ceramic flat glass; 5/16-inch (8-mm) total nominal thickness; complying with testing requirements in 16 CFR 1201 for Category II materials.

1. Basis of Design Product: Subject to compliance with requirements, provide the following:
   a. Nippon Electric Glass Co., Ltd. (distributed by Technical Glass Products); FireLite Plus.
   b. Or approved equal.

2. To be used for fire rated door lights.

2.6 GLAZING GASKETS

A. Use only gaskets which glass manufacturers confirm are compatible with their products.

B. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:
   1. EPDM complying with ASTM C 864.
   2. Silicone complying with ASTM C 1115.
   3. Thermoplastic polyolefin rubber complying with ASTM C 1115.

C. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned EPDM, silicone or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.

1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

2.7 GLAZING SEALANTS

A. General:

   1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

   2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.

   3. Sealants used inside the weatherproofing system, shall have a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range of standard and premium colors.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   a. Dow Corning Corporation; 799.
   b. Or approved equal.

2. Confirm compatibility with interlayers of laminated glass.

3. Confirm compatibility with seals of insulated glass units.

C. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

2.8 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

   1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
   2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

   1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
   2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.9 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

2.10 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

C. Grind smooth and polish exposed glass edges and corners.

2.11 MONOLITHIC-GLASS TYPES

A. Glass Type GL 5: ¼” Clear heat-strengthened float glass.
   1. Thickness: 6.0 mm.
   2. Visible light transmittance: 88%
   3. UV Transmittance: 63%
   4. Winter Nighttime U-Factor: 1.02 Btu/(hr x sqft x deg F) maximum
   5. Summer Daytime U-Factor: 0.92 Btu/(hr x sqft x deg F) maximum
   6. Solar Heat Gain Coefficient: 0.94 maximum.

B. Glass Type GL 5T: ¼” Clear fully tempered float glass.
   1. Thickness: 6.0 mm.
   2. Visible light transmittance: 88%
   3. UV Transmittance: 63%
   4. Winter Nighttime U-Factor: 1.02 Btu/(hr x sqft x deg F) maximum
   5. Summer Daytime U-Factor: 0.92 Btu/(hr x sqft x deg F) maximum
   6. Solar Heat Gain Coefficient: 0.94 maximum.
   7. Provide safety glazing labeling.

2.12 LAMINATED-GLASS TYPES

A. Glass Type GL 4: 1-1/4” Nominal Clear laminated glass with two equal plies of heat strengthened float glass.
   1. Thickness of each Glass Ply: 5/8”.
   2. Interlayer Thickness: 0.060 inch.
   3. Interlayer Type: PVB suitable for exterior exposure of glass edge.
   4. Visible Light Transmittance: 85 percent
   5. Ultra Violet Transmittance: less than one %
   6. Winter Nighttime U-Factor: 0.97 Btu/(hr x sqft x deg F) maximum
   7. Summer Daytime U-Factor: 0.88 Btu/(hr x sqft x deg F) maximum
   8. Provide safety glazing labeling.
10. Use: As indicated on the Drawings.

B. See Division 08 Section “Frameless Glass Doors & Storefront” for Laminated Glass types GL 7 and GL 8 to be used for frameless interior doors and partitions.

C. See Division 05 Section “Ornamental Railings” for Laminated Glass used for monumental stair railings, glass railings elsewhere in the building, and draft curtain glazing.

2.13 INSULATING-GLASS TYPES

A. Glass Type GL 1 and GL 1T: 1” Low-e-coated, clear insulating glass.
   1. Basis of Design: 1” IGU “Solarban 70XL Low-E Insulating Glass with Argon Gas as manufactured by PPG.
   2. Overall Unit Thickness: 1 inch.
   3. Thickness of Each Glass Lite: 6.0 mm.
   4. Outdoor Lite: Ultra-clear, low-iron Starphire, or approved equal; Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by the applicable Building Code and the CPSC safety glazing requirements.
   5. Interspace Content: Argon.
   6. Indoor Lite: Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by the applicable Building Code and the CPSC safety glazing requirements.
   7. Low-E Coating: Sputtered on second surface.
   8. Visible Light Transmittance: 64 percent minimum.
   9. Solar Energy Transmittance: 24%.
   10. Ultra Violet Transmittance: 6%.
   11. Winter Nighttime U-Factor: 0.24 Btu/(hr x sqft x deg F) maximum.
   12. Summer Daytime U-Factor: 0.21 Btu/(hr x sqft x deg F) maximum.
   13. Solar Heat Gain Coefficient: 0.27 maximum.
   14. Shading Coefficient: 0.31.
   15. Provide safety glazing labeling where applicable.
   16. Use: Typical pressure-plate curtain wall glazing and aluminum window glazing.

B. Glass Type 13 and 13T: 1 1/4” Low-e-coated, clear, tempered insulating glass for installation in structural glazed curtain wall system.
   1. Basis of Design: 1 1/4” IGU “Solarban 70XL Low-E Insulating Glass with Argon Gas as manufactured by PPG.
   2. Overall Unit Thickness: 1 1/4” inch.
   3. Thickness of Each Glass Lite: 6.0 mm.
   4. Outdoor Lite: Ultra-clear, low-iron Starphire, or approved equal; Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by the applicable Building Code and the CPSC safety glazing requirements.
   5. Interspace Content: Argon.
   6. Mechanically Keyed Spacer: Provide extruded aluminum desiccant filled u-channel spacer to accept Schuco structurally glazed system glazing clip, or approved equal that is compatible with glazing system selected.
   7. Indoor Lite: Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by the applicable Building Code and the CPSC safety glazing requirements.
   8. Low-E Coating: Sputtered on second surface.
   10. Solar Energy Transmittance: 24%.
   11. Ultra Violet Transmittance: 6%.
   12. Winter Nighttime U-Factor: 0.25 Btu/(hr x sqft x deg F) maximum.
   13. Summer Daytime U-Factor: 0.16 Btu/(hr x sqft x deg F) maximum.
14. Solar Heat Gain Coefficient: 0.27 maximum.
15. Shading Coefficient: 0.31.
16. Provide safety glazing labeling where applicable.
17. Use: Structurally glazed curtain wall.

C. Glass Type **GL 2 and GL 2T (Fritted):** 1" Clear, Ceramic coated, low e coated, insulated glass.
1. Basis of Design: Custom modification of 1" IGU “Solarban 70XL Low-E Insulating Glass with Argon Gas as manufactured by PPG.
2. Overall Unit Thickness: 1 inch.
3. Thickness of Each Glass Lite: 6.0 mm.
4. Outdoor Lite: Ultra-clear, low-iron Starphire, or approved equal; Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by the applicable Building Code and the CPSC safety glazing requirements.
5. Interspace Content: Argon.
6. Indoor Lite: Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by the applicable Building Code and the CPSC safety glazing requirements.
7. Low-E Coating: Sputtered on second surface.
8. Ceramic Dot Coating Silk Screen Pattern
   a. Location: No. 3 surface.
   b. Dot size: 1/8 inch diameter.
   c. Dot color: Medium gray.
   d. Pattern: 50% coverage
10. Solar Energy Transmittance: 24 percent.
11. Ultra-Violet Transmittance (300 to 380 nm): 6 percent.
12. Winter Nighttime U-Factor: 0.24 Btu/(hr x sqft x def F) maximum.
13. Summer Daytime U-Factor: 0.21 Btu/(hr x sqft x def F) maximum.
14. Solar Heat Gain Coefficient: 0.27 maximum.
15. Shading Coefficient: 0.31.
16. Provide safety glazing labeling where applicable.
17. Use: South wall glazing, including Southeast Conference Rooms.

D. Glass Type **14:** 1" Clear insulating glass with simulated acid etch.
1. Basis of Design: Custom modification of 1" IGU Solarscreen Insulating Glass as manufactured by Viracon.
2. Overall Unit Thickness: 1 inch.
3. Thickness of Each Glass Lite: 6.0 mm.
4. Outdoor Lite: Clear float glass.
5. Interspace Content: Air.
6. Indoor Lite: Clear float glass.
7. Low-E Coating: Sputtered on second surface.
8. Simulated acid etch coating: (Basis of Design) **V1085 screen #3058,** simulated acid etch, full coverage on second and third surface.
10. Interior windows in Offices 218, 311, 412 and entrance framing and doors in Classrooms 102, 102A.
11. Aesthetic Effect: The simulated acid etch product listed establishes the standard (texture, density, translucence) which must be met by any other product to be considered an acceptable equal.

2.14 INSULATING-LAMINATED-GLASS TYPES

A. Glass Type **GL 3:** 1" Low-e-coated, clear insulating laminated glass.
1. Basis of Design: Basis of Design: "Solarban 70XL Low-E Insulating Glass with Argon Gas as manufactured by PPG.
2. Overall Unit Thickness: 1”.
3. Thickness of Outdoor Lite: 6.0 mm.
4. Outdoor Lite: Ultra-clear, low-iron Starphire, or approved equal; Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by ICC's 2006 International Building Code and the CPSC safety glazing requirements.
5. Interspace Content: Argon.
6. Indoor Lite: Clear laminated glass with two plies of Heat-strengthened float glass, except that fully tempered glass shall be provided at all locations required by ICC's 2006 International Building Code and the CPSC safety glazing requirements.
   a. Thickness of Each Glass Ply: 6.0 mm.
   b. Interlayer Thickness: 0.060 inch.
   c. Interlayer Type: Clear PVB.
7. Low-E Coating: Sputtered on second surface.
8. Visible Light Transmittance: 64 percent minimum.
10. Ultra-Violet Transmittance (300 to 380 nm): 0 percent.
11. Winter Nighttime U-Factor: 0.24 Btu/(hr x sqft x def F) maximum.
12. Summer Daytime U-Factor: 0.21 Btu/(hr x sqft x def F) maximum
13. Solar Heat Gain Coefficient: 0.27 maximum.
14. Shading Coefficient: 0.31.
15. Use: Skylight identified in Division 08 Section “Sloped Glazing.”

2.15 FIRE-PROTECTION-RATED GLAZING TYPES

A. Glass Type GL 6: 90-minute fire-rated glazing; laminated ceramic glazing.
   1. Provide safety glazing labeling.
   2. Use: Fire stair door vision lights.

B. See Division 08 Section “Steel Fire Rated Curtain Wall” for Glass Types GL 9, GL 10, GL 11 and GL 12 to be used in interior fire rated steel curtain walls and doors.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
   1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
   2. Presence and functioning of weep systems.
   3. Minimum required face and edge clearances.
   4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.

2. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until right before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant.

G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.
3.6 **SEALANT GLAZING (WET)**

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.7 **LOCK-STRIP GASKET GLAZING**

A. Comply with ASTM C 716 and gasket manufacturer's written instructions. Provide supplementary wet seal and weep system unless otherwise indicated.

3.8 **CLEANING AND PROTECTION**

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

3.9 **WASTE MANAGEMENT**

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Remove and replace glass which is broken, chipped, cracked, abraded, or damaged during construction.
   1. Separate tempered glass waste for use as aggregate of nonstructural fill.

C. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
1. Aluminum
2. Plastic Materials and Gaskets
3. Corrugated cardboard packaging.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 08 80 00
SECTION 08 83 00 – MIRRORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes the following types of silvered flat glass mirrors:
   1. Annealed monolithic glass mirrors.

B. Related Sections:
   1. Division 06 Section "Interior Architectural Woodwork" for solid surfacing trim to be installed at mirror.
   2. Division 10 Section "Toilet & Shower Accessories" for metal-framed mirrors.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Mirrors. Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.

B. LEED Submittals:
   1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.

C. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachments to other work.

D. Samples: For each type of the following products:
   1. Mirrors: 12 inches (300 mm) square, including edge treatment on two adjoining edges.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Product Certificates: For each type of mirror and mirror mastic, from manufacturer.

C. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing and substrates on which mirrors are installed.

D. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For mirrors to include in maintenance manuals.
1.6 QUALITY ASSURANCE

A. Installer Qualifications:  A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

B. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.

C. Glazing Publications: Comply with the following published recommendations:
   1. GANA's "Glazing Manual" unless more stringent requirements are indicated. Refer to this publication for definitions of glass and glazing terms not otherwise defined in this Section or referenced standards.
   2. GANA Mirror Division's "Mirrors, Handle with Extreme Care: Tips for the Professional on the Care and Handling of Mirrors."

D. Safety Glazing Products: For film-backed mirrors, provide products complying with testing requirements in 16 CFR 1201 for Category II materials.

E. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing and substrates on which mirrors are installed.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect mirrors according to mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.8 PROJECT CONDITIONS

A. Environmental Limitations:
   1. Do not proceed with mirrored glass installation until ambient conditions of ventilation, temperature, and humidity will be continuously maintained at values near those indicated for final occupancy.
   2. Do not install mirrored glass over new masonry, plaster, or freshly painted walls without proper sealing.
   3. Do not install mirrored glass in construction areas while airborne solvents or heavy-duty cleaners are in the air.

B. Coordinate mirrored glass installation to occur after completion and lean-up of work by other divisions that might have detrimental effects on mirrors.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which mirror manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.
   1. Warranty Period: Five years from date of manufacture.

PART 2 - PRODUCTS
2.1 SILVERED FLAT GLASS MIRRORS

A. Glass Mirrors, General: ASTM C 1503; manufactured using copper-free, low-lead mirror coating process.
   1. Manufacturers: Subject to compliance with requirements, including fabrication of custom cut sizes, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Arch Aluminum & Glass Co., Inc.
      b. Avalon Glass and Mirror Company.
      c. Binswanger Mirror; a division of Vitro America, Inc.
      d. D & W Incorporated
      e. Donisi Mirror Company.
      f. Gardner Glass, Inc.
      g. Gilded Mirrors, Inc.
      h. Guardian Industries.
      i. Head West.
      j. Independent Mirror Industries, Inc.
      k. Lenoir Mirror Company.
      l. Maran-Wurzell Glass & Mirror.
      m. National Glass Industries.
      n. Stroupe Mirror Co., Inc.
      o. Sunshine Mirror; Westshore Glass Corp.
      p. Virginia Mirror Company, Inc.
      q. Walker Glass Co., Ltd.

B. Clear Glass: Mirror Quality; ultraclear (low-iron) float glass with a minimum 91 percent visible light transmission.
   1. Nominal Thickness: 6.0 mm.

C. Tempered Clear Glass: Mirror Glazing Quality, for blemish requirements; and comply with ASTM C 1048 for Kind FT, Condition A, tempered float glass before silver coating is applied.
   1. Nominal Thickness: 6.0 mm.

2.2 MISCELLANEOUS MATERIALS

A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.

C. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror manufacturer and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Franklin International; Titebond Division.
      b. Laurence, C. R. Co., Inc.
      c. Macco Adhesives; Liquid Nails Division.
      d. OSI Sealants, Inc.
      e. Palmer Products Corporation.
      f. Pecora Corporation.
      g. Royal Adhesives & Sealants; Gunther Mirror Mastics Division.
      h. Sommer & Maca Industries, Inc.
   2. Adhesive shall have a VOC content of not more than 70 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
D. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

2.3 FABRICATION
A. Mirror Sizes: To suit Project conditions, cut mirrors to final sizes and shapes.
B. Mirror Edge Treatment: Flat polished.
   1. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.
   2. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.
B. Verify compatibility with and suitability of substrates, including compatibility of mirror mastic with existing finishes or primers.
C. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION
A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

3.3 INSTALLATION
A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.
B. Provide a minimum air space of 1/8 inch (3 mm) between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.
C. Wall-Mounted Mirrors: Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
   1. Top and Bottom Aluminum J-Channels: Provide setting blocks 1/8 inch (3 mm) thick by 4 inches (100 mm) long at quarter points. To prevent trapping water, provide, between setting blocks, two slotted weeps not less than 1/4 inch (6.4 mm) wide by 3/8 inch (9.5 mm) long at bottom channel.
   2. Install mastic as follows:
      a. Apply barrier coat to mirror backing where approved in writing by manufacturers of mirrors and backing material.
      b. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
      c. After mastic is applied, align mirrors and press into place while maintaining a minimum air space of 1/8 inch (3 mm) between back of mirrors and mounting surface.
3.4 CLEANING AND PROTECTION

A. Protect mirrors from breakage and contaminating substances resulting from construction operations.

B. Do not permit edges of mirrors to be exposed to standing water.

C. Maintain environmental conditions that will prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.

D. Wash exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash mirrors as recommended in writing by mirror manufacturer.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Remove and replace glass which is broken, chipped, cracked, abraded, or damaged during construction.
   1. Separate tempered glass waste for use as aggregate of nonstructural fill.

C. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 08 83 00
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Fixed, extruded-aluminum louvers.
   2. Wall vents (brick vents).

1.3 PERFORMANCE REQUIREMENTS
A. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.
   1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.
B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
   1. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.
   2. Show mullion profiles and locations.

1.5 QUALITY ASSURANCE
A. Source Limitations: Obtain louvers and vents from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

1.6 PROJECT CONDITIONS
A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Aluminum Extrusions: ASTM B 221, Alloy 6063-T5, T-52, or T6.

B. Galvanized-Steel Sheet: ASTM A 653/A 653M, G60 zinc coating, mill phosphatized.

C. Fasteners: Use types and sizes to suit unit installation conditions.
   1. Use Phillips flat-head screws for exposed fasteners unless otherwise indicated.
   2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
   3. For fastening galvanized steel, use hot-dip-galvanized steel or 300 series stainless-steel fasteners.

D. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed, for masonry, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.2 FABRICATION, GENERAL

A. Assemble louvers in factory to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
   1. Continuous Vertical Assemblies: Fabricate units without interrupting blade-spacing pattern unless horizontal mullions are indicated.
   2. Horizontal Mullions: Provide horizontal mullions at joints unless continuous vertical assemblies are indicated.

C. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
   1. Frame Type: Interior flange unless otherwise indicated.

D. Include supports, anchorages, and accessories required for complete assembly.

E. Provide vertical mullions of type and at spacings indicated, but not more than recommended by manufacturer, or 72 inches o.c., whichever is less.
1. Exposed Mullions: Where indicated, provide units with exposed mullions of same width and depth as louver frame. Where length of louver exceeds fabrication and handling limitations, provide interlocking split mullions designed to permit expansion and contraction.

F. Join frame members to each other and to fixed louver blades with fillet welds, threaded fasteners, or both, as standard with louver manufacturer unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.3 FIXED, EXTRUDED-ALUMINUM LOUVERS

A. Horizontal, Drainable-Blade Louver:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Construction Specialties, Inc.
   b. Dowco Products Group; Safe-Air of Illinois, Inc.
   c. Greenheck Fan Corporation.
   d. Industrial Louvers, Inc.
   e. NCA Manufacturing, Inc.
   f. Ruskin Company; Tomkins PLC.

2. Louver Depth: 6 inches.
3. Frame and Blade Nominal Thickness: Not less than 0.080 inch.
4. Mullion Type: Exposed.
5. Louver Performance Ratings:
   a. Free Area: Not less than 8.5 sq. ft. for 48-inch-wide by 48-inch-high louver.
   b. Point of Beginning Water Penetration: Not less than 900 fpm.
   c. Air Performance: Not more than 0.10-inch wg static pressure drop at 700-fpm free-area velocity.

6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.4 LOUVER SCREENS

A. General: Provide screen at each exterior louver.

1. Screen Location for Fixed Louvers: Interior face.
2. Screening Type: Insect screening.

B. Secure screen frames to louver frames with machine screws with heads finished to match louver, spaced a maximum of 6 inches from each corner and at 12 inches o.c.

C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.

1. Metal: Same kind and form of metal as indicated for louver to which screens are attached.
2. Finish: Same finish as louver frames to which louver screens are attached.
3. Type: Rewirable frames with a driven spline or insert.
D. Louver Screening for Aluminum Louvers:

1. Insect Screening: Aluminum, 18-by-16 mesh, 0.012-inch wire.

2.5 BLANK-OFF PANELS

A. Insulated, Blank-Off Panels: Laminated panels consisting of insulating core surfaced on back and front with metal sheets and attached to back of louver.

1. Thickness: 2 inches.
2. Metal Facing Sheets: Galvanized-steel sheet, not less than 0.028-inch nominal thickness.
3. Insulating Core: Rigid, glass-fiber-board insulation or extruded-polystyrene foam.
4. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard channel frames, with corners mitered and with same finish as panels.
5. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
6. Panel Finish: Same type of finish applied to louvers, but black color.
7. Attach blank-off panels with clips or sheet metal screws.

2.6 WALL VENTS (BRICK VENTS)

A. Extruded-Aluminum Wall Vents:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Construction Specialties, Inc.
   b. Dowco Products Group; Safe-Air of Illinois, Inc.
   c. Greenheck Fan Corporation.
   d. Industrial Louvers, Inc.
   e. Reliable Products, Inc.
   f. Ruskin Company; Tomkins PLC.

2. Extruded-aluminum louvers and frames, not less than 0.125-inch nominal thickness, assembled by welding; with 18-by-14-mesh, aluminum insect screening on inside face; incorporating weep holes, continuous drip at sill, and integral waterstop on inside edge of sill; of load-bearing design and construction.

3. Dampers: Aluminum blades and frames mounted on inside of wall vents; operated from exterior with Allen wrench in socket-head cap screw. Fabricate operating mechanism from Type 304 stainless-steel components.

2.7 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2.8 ALUMINUM FINISHES

A. Finish louvers after assembly.
B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION
A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION
A. Locate and place louvers and vents level, plumb, and at indicated alignment with adjacent work.
B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
C. Form closely fitted joints with exposed connections accurately located and secured.
D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
E. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.
F. Protect unpainted galvanized and nonferrous-metal surfaces that will be in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
G. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Division 07 Section "Joint Sealants" for sealants applied during louver installation.

3.4 ADJUSTING AND CLEANING
A. Test operation of adjustable louvers and adjust as needed to produce fully functioning units that comply with requirements.
B. Clean exposed surfaces of louvers and vents that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
C. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.

D. Restore louvers and vents damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
   
1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION 08 90 00
SECTION 08 90 10 – ARCHITECTURAL GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Fixed, extruded aluminum bar grate architectural grille in window stools.
   2. Aluminum door transom grille, stopped into interior aluminum frame.

B. Related Sections:
   1. Division 08 Section "Interior Aluminum Frames" for transom frames above doors to receive grille.
   2. Division 23 Sections for louvers that are a part of mechanical equipment.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated, including finishing materials.

B. Shop Drawings: For grilles and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.

C. Samples for Initial Selection: For units with factory-applied color finishes.

D. Samples for Verification: For each type of metal finish required.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain louvers and vents from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

B. Powder-Coating Applicator Qualifications for Door Transom Grille: A firm experienced in successfully applying powder coatings of type indicated and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
   1. Powder-Coat Finish on door transom grille to exactly match interior aluminum frame into which it is stopped.

C. Welding: Qualify procedures and personnel according to the following:
   1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."

1.5 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.
PART 2 - PRODUCTS

2.1 MATERIALS

A. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T5, T-52, or T6.

B. Aluminum Sheet: ASTM B 209 (ASTM B 209M), Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.

D. Fasteners: Use types and sizes to suit unit installation conditions.
   1. Use tamper-resistant screws for exposed fasteners unless otherwise indicated.
   2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
   3. For color-finished louvers, use fasteners with heads that match color of louvers.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.2 FABRICATION, GENERAL

A. Assemble louvers in factory to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

B. Maintain equal louver blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

C. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
   1. Frame Type: Frameless, unless otherwise indicated.

D. Include supports, anchorages, and accessories required for complete assembly.

2.3 FIXED, EXTRUDED-ALUMINUM GRILLES

A. Horizontal, Sightproof, Grille:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Model A700 Aluminum No-Vision Door and Partition Grille as manufactured by A-J Manufacturing Co., or comparable product by one of the following:
      a. Air Balance Inc.; a Mestek company.
      b. Air Flow Company, Inc.
      c. Airolite Company, LLC (The).
      d. American Warming and Ventilating, Inc.; a Mestek company.
      e. Arrow United Industries; a division of Mestek, Inc.
      f. Cesco Products; a division of Mestek, Inc.
      g. Construction Specialties, Inc.
      h. Dowco Products Group; Safe-Air of Illinois, Inc.
      i. Greenheck Fan Corporation.
      j. Industrial Louvers, Inc.
      k. Ruskin Company; Tomkins PLC.
      l. United Enertech Corp.
   2. Grille Depth: 1 inch.
   4. Frame and Blade Nominal Thickness: 0.050 inch.
   5. Blade Spacing: ½ inch o.c.
   6. Free Area: 80%.
7. Frame Type: Minimal frame with no flange. Grille to be stopped into interior aluminum door frame transom opening. Grille frame shall not be visible after grille is installed.
8. Finish: Custom powder coat finish to exactly match Interior Aluminum Frame.
9. Number of Colors Required: One.

2.4 EXTRUDED ALUMINUM BAR GRATING ARCHITECTURAL GRILLES

A. Basis-of-Design Product: Subject to compliance with requirements, provide “KDAL Aluminum Grate” core material and accessories, as manufactured by Kadee Industries, Cleveland, Ohio, or comparable product by another manufacturer. Core material as follows:
   1. Tread Material: Architectural 6063-T6 extruded aluminum, 1.175” x .25” bars
   2. Tread Spacing: Standard Slot openings of .250”
   3. Core bar deflection angle: 0 degrees.
   4. Steel rod spacing: 10 inches on center.
   5. Assembly: Tread bars spaced with spacers and assembled with ¼” threaded steel rods and nuts.
   6. Fabricate for fastening: welded tabs as required for lockdown and to fasten core material to frame or substrate.
   7. Framing: 6063-T5 extruded aluminum.

B. Fabrication, General
   1. Provide hidden locking devices to prevent warping and rattling. Number of lockdowns shall be in accordance with manufacture’s recommendations for type and size of installation
   2. Core material welded wall panel sizes: 54-inches by twelve feet, or in sizes indicated.
   3. Shop fabricate core material to the greatest extent possible in sizes indicated.
   4. Fabricate cores for field joinery so that spacing of bars is consistent within and between core panels.
   5. Fabricate cores for field joinery for continuous appearance of linear bars at butt joints.
   6. Install black pencil screening at all grilles in a horizontal installation.
   7. Paint interior of ductwork behind grilles black.

C. Fabrication, Assembly, Frames and Mounting For Sill Installation
   1. Border subframe: Aluminum, finish to match core material.

D. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

2.5 BLANK-OFF PANELS

A. Uninsulated, Blank-Off Panels: Metal sheet attached to back of louver.
   1. Aluminum sheet for aluminum louvers, not less than 0.050-inch (1.27-mm) nominal thickness.
   2. Panel Finish: Same type of finish applied to louvers, but black color.
   3. Paint interior of ductwork behind grilles black.

2.6 FINISHES, GENERAL

A. Comply with NAAMM’s "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION
A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION
A. Locate and place grilles level, plumb, and at indicated alignment with adjacent work.
B. Use concealed anchorages where possible.
C. Form closely fitted joints with exposed connections accurately located and secured.
D. Fit exposed connections accurately together to form tight, hairline joints or, where indicated, uniform reveals and spaces for sealants and joint fillers.
E. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.
F. Protect nonferrous-metal surfaces that will be in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
G. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Division 07 Section "Joint Sealants" for sealants applied during louver installation.

3.4 ADJUSTING AND CLEANING
A. Clean exposed surfaces of grilles that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
C. Restore grilles damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
   1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.
3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 08 90 00
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 09 20 20 – ACOUSTICAL PLASTER

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Work in this Section includes the following:
1. “Acoustical Plaster” shall include all labor, materials, equipment and services necessary to complete the seamless sound absorptive plaster system as shown on the drawings, and / or defined and specified herein. Acoustical plaster consists of manufacturer's standard, pre-coated mineral wool supporting panels, which are adhered to a stable substrate by others. The seams shall be filled with manufacturer’s Fill seam fill. A base coat and a finish coat, are applied onto the supporting panels on site, per manufacturer's specifications. The topcoat shall be troweled smooth to give the appearance of a smooth conventional plaster. The Acoustical Finish System is for reduction of reverberation time and is based on a fine porous surface that appears to be solid. The sound energy that enters through the pores is converted into heat. The work described in this Section, as shown on Drawings or as specified herein, shall be in accordance with the requirements of the Contract Documents

B. Related Sections include the following:
1. Division 05 Section "Cold-Formed Metal Framing" for load-bearing steel framing that supports gypsum board.
2. Division 07 Section "Joint Sealants" for acoustical sealants.
3. Division 09 Section "Non-Structural Metal Framing" for non-structural framing and suspension systems that support gypsum board.
4. Division 09 Section "Gypsum Board" for interior gypsum board substrate for Acoustical Plaster system.

1.3 QUALITY ASSURANCE

A. Certified Installers:
1. At least 3 years experience installing the manufacturer’s Seamless Acoustical Finish System, employing supervisors and mechanics certified and approved by the manufacturer's North American Distributor.

B. New Installers:
1. New installers shall comply with all requirements of the manufacturer’s North American Distributor’s Certified Training Program, including, but not limited to, the purchase of approved manufacturer’s installation hand tools and equipment as well as contracting the services of at least one of Distributor’s full time on-site working Certified Trainer throughout the duration of the installation to ensure quality and compliance with all of the manufacturer’s details and other installation requirements.

1.4 SUBMITTALS

A. Shop Drawings / Product Data
1. Base Drawings, Approved Detail Drawings and Field Measurements.
2. Show dimensioned wall elevations or ceiling plans with joint locations, mounting details, transitions details to adjacent work, design, weight, thickness, color and other data necessary to install the work and coordinate work with other affected trades.

B. LEED Submittals:
   1. Credit EQ 4.1: Product data for sealants and sealant primers used inside the weatherproofing system, including printed statement of VOC content.
   2. Credit EQ 4.2: Product data for paints and coatings used inside the weatherproofing system indicating VOC content of each product used. Indicate VOC content in g/L calculated according to 40 CFR 59, Subpart D.
   3. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.

C. Samples / Mock-Up
   1. Provide two 8-1/2” x 11” samples of the Acoustical Finish System in color as noted in section 2.1 D below.
   2. Job Site Mock-Up Area: Install mock-up of sound absorptive finish system. Obtain mock-up acceptance before any additional applications. Accomplish work to equal or exceed standard established by accepted job site mock-up.

D. Certification
   1. Acoustical Performance: Certified Acoustical Performance Sound Absorption Test Report data reports, conducted by a recognized, independent, testing agency shall be submitted upon request and meet the following minimum requirements. Sound absorption reports shall not be more than 3 years old. Noise Reduction Coefficient (NRC) for the 2.67” (68 mm) system shall be 0.85 as per ASTM C 423-07 Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method. Specific performance of the 2.67” seamless absorptive plaster system shall be as follows:

<table>
<thead>
<tr>
<th>Frequency, Hz</th>
<th>Absorption Coefficient</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>0.29</td>

   2. Fire Hazard: Evidence of compliance with regulatory agency and specification requirements.

1.5 REFERENCES

1.6 DELIVERY, STORAGE AND HANDLING
A. Allow materials to become acclimated to Project conditions before installation.
B. Ship and deliver in protective packaging to prevent freight damage.
C. Store materials in accordance with manufacturer's recommendations in a fully enclosed space where materials will be protected against damage from moisture, direct sunlight, surface contamination and other causes. All wet work must be completed in area of storage.
D. Protect Base 407 and Top from freezing.

1.7 PROJECT CONDITIONS
A. Environmental Requirements: Comply with requirements of referenced plaster application standards and recommendations of product manufacturer for environmental conditions before, during and after installation.
B. Cold Weather Requirements: When ambient outdoor temperatures are below 40 deg F, maintain a continuous uniform temperature of at least 50 deg F for at least 3 days before beginning of the material application, during its application and until material is dry, but for at least 7 days after application is complete. Distribute heat evenly; prevent concentrated or uneven heat from contacting material application near heat source.
C. Ventilation: Ventilate building spaces as required to remove excess moisture to promote drying of applied material.
D. Protect contiguous work form soiling, splattering, moisture deterioration and other harmful effects that may be caused by the application of the material.

PART 2 - PRODUCTS

2.1 MATERIALS

B. Installation shall be based upon the manufacturer’s Sound Absorptive Acoustical Finish System’s performance; specifications, information and details as supplied by the North American BASWAphon Distributor, Sound Solutions Construction Services, LLC, 3900 Ben Hur Ave., Suite 10, Willoughby, Ohio 44094 www.BASWAphonusa.com (440.951.6022 phone). Other products and installers must meet the exact design and performance criteria described herein. Substitutions only considered by written approval prior to bid.

C. Acoustical Plaster shall be provided in a total system thickness (adhesive, pre-coated mineral wool panels, base coat and finish coat) of approximately 2.67”.

D. The Acoustical Plaster seamless absorption system shall consist of pre-coated Manufacturer’s standard mineral wool supporting panels, which are adhered to a stable substrate. The seams shall be filled with Manufacturer’s standard Fill seam fill. A base coat, BASWAphon 407 and a finish coat, BASWAphon Top is applied onto the supporting panels on site, per manufacturer's
specifications. The topcoat shall be troweled smooth to give the appearance of a smooth conventional plaster.

E. The base and finish coats shall be integrally colored by the addition of pigments provided by the North American Manufacturer’s Distributor, Sound Solutions Construction Services, LLC, 3900 Ben Hur Ave., Suite 10, Willoughby, Ohio 44094 (440.951.6022 phone).

F. Color shall be custom color to match Architect’s sample.

G. Light Reflectance shall be 0.91 as per ASTM E1477-98a.

H. Flame Spread shall be Class A (I) per ASTM E-84.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine areas where and conditions under which Acoustical Plaster is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed until unsatisfactory conditions have been corrected to permit the proper installation of the work.

B. All substrates for the application shall not vary from plumb, level or “smooth consistent curvature” more than 1/4 inch in 12 feet.

C. Verify that all mechanical and electrical services within area of application have been tested, approved, and operable prior to commencement of application.

3.2 INSTALLATION

A. Install materials in accordance with the manufacturer’s instructions and details. Installation shall start only after all other work in the area of the installation has been completed.
1. Install a field applied adhesive layer 3-mm thick, using adhesive and methods in accordance with manufacturer’s installation instructions to the Manufacturer’s standard 63-mm thick Pre-Coated panels and adhere panels to stable substrate. Ensure that panels are set as level and as smooth to each other as practicable.
2. Install Manufacturer’s standard Trims with approved adhesives and cover with Pre-Coat.
3. Fill seams with Manufacturer’s standard Pre-Fill, sand Pre-Fill on panel seams and Pre-Fill on Manufacturer’s standard Trim completely smooth when dry.
4. Apply a 1.5-mm thick layer of Manufacturer’s standard Base-Coat 407, trowel smooth, sand completely smooth when dry.
5. Apply a 0.5-mm thick layer of Manufacturer’s standard Top-Coat and trowel smooth to a quality level consistent with accepted samples or mock-up. Note that Acoustical Plaster is a hand troweled finished product. Inherent in all hand troweled product applications, minor trowel marks in the finished surface may occur. Critical lighting may expose minor trowel marks inherent in all hand troweled products. The finish should be viewed under end-use lighting conditions.
6. Apply finish coat to both gwb ceiling and acoustical plaster ceiling in room to provide matching texture/finish.

3.3 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.
B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 20 20
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes: Gypsum board shaft wall assemblies.

1.3 ACTION SUBMITTALS
   A. Product Data: For each component of gypsum board shaft wall assembly.
   B. LEED Submittals:
      1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
      2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.

1.4 INFORMATIONAL SUBMITTALS
   A. Evaluation Reports: For shaft wall assemblies, from ICC-ES.

1.5 DELIVERY, STORAGE, AND HANDLING
   A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.6 FIELD CONDITIONS
   A. Environmental Limitations: Comply with ASTM C 840 requirements or with gypsum board manufacturer's written recommendations, whichever are more stringent.
   B. Do not install interior products until installation areas are enclosed and conditioned.
   C. Do not install panels that are wet, moisture damaged, or mold damaged.
      1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
      2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS
2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.

2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES

A. Fire-Resistance Rating: 2 hours.

B. Studs: Manufacturer's standard profile for repetitive members, corner and end members, and fire-resistance-rated assembly indicated.
   1. Depth: as indicated.
   2. Minimum Base-Metal Thickness: 0.033 inch.

C. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches long and matching studs in depth.
   1. Minimum Base-Metal Thickness: Matching steel studs.

D. Firestop Tracks: Provide firestop track at head of shaft wall on each floor level.

E. Room-Side Finish: Gypsum board, unless otherwise indicated.

F. Shaft-Side Finish: As indicated.

G. Insulation: Sound attenuation blankets.

2.3 PANEL PRODUCTS

A. Recycled Content of Gypsum Panel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 20 percent by weight.

B. Regional Materials: Gypsum panel products shall be manufactured within 500 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

C. Panel Size: Provide in maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

D. Gypsum Shaftliner Board, Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with paper faces.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. American Gypsum; Shaft Liner.
      b. CertainTeed Corp.; ProRoc Shaftliner.
      d. Lafarge North America, Inc.; Firecheck Type X Shaftliner.
      e. National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner.
      f. PABCO Gypsum; Pabcore Shaftliner Type X.
      g. Temple-Inland Inc.; Fire-Rated SilentGuard Gypsum Shaftliner System.
      h. USG Corporation; Sheetrock Brand Gypsum Liner Panel.
   2. Thickness: 1 inch.
E. Gypsum Shaftliner Board, Moisture- and Mold-Resistant Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with moisture- and mold-resistant core and surfaces.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corp.; ProRoc Moisture and Mold Resistant Shaftliner.
      b. Georgia-Pacific Gypsum LLC, Subsidiary of Georgia Pacific; Dens-Glass Ultra Shaftliner.
      c. Lafarge North America, Inc.; Firecheck Moldcheck Type X Shaftliner.
      d. National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner XP.
      e. PABCO Gypsum; Pabcore Mold Curb Shaftliner Type X.
      f. Temple-Inland Inc.; Fire-Rated SilentGuard TS Mold-Resistant Gypsum Shaftliner System.
      g. USG Corporation; Sheetrock Brand Mold Tough Gypsum Liner Panel.
   2. Thickness: 1 inch.
   4. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

F. Gypsum Board: As specified in Division 09 Section "Gypsum Board."

2.4 NON-LOAD-BEARING STEEL FRAMING

A. Recycled Content of Steel: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Steel Framing Members: Comply with ASTM C 645 requirements for metal unless otherwise indicated.

C. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Fire Trak Corp.; Fire Trak System.
      b. Grace Construction Products; FlameSafe FlowTrak System.
      c. Metal-Lite, Inc.; The System.
      d. Steel Network Inc. (The); VertiClip SLD or VertiTrack VTD Series.

2.5 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with manufacturer's written recommendations.

B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Division 09 Section "Gypsum Board" that comply with gypsum board shaft wall assembly manufacturer's written recommendations for application indicated.

C. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.

D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
   1. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing according to ASTM E 488 conducted by a qualified testing agency.
2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing according to ASTM E 1190 conducted by a qualified testing agency.

E. Sound Attenuation Blankets: As specified in Division 09 Section "Gypsum Board."

F. Acoustical Sealant: As specified in Division 09 Section "Gypsum Board."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates to which gypsum board shaft wall assemblies attach or abut, with Installer present, including hollow-metal frames, elevator hoistway door frames, cast-in anchors, and structural framing. Examine for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft wall assemblies to comply with requirements specified in Division 07 Section "Applied Fireproofing."

B. After sprayed fire-resistive materials are applied, remove only to extent necessary for installation of gypsum board shaft wall assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION

A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated, manufacturer's written installation instructions, and ASTM C 754 other than stud-spacing requirements.

B. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.

   1. Reinforcing: Where handrails directly attach to gypsum board shaft wall assemblies, provide galvanized steel reinforcing strip with 0.033-inch minimum thickness of base metal (uncoated), accurately positioned and secured behind at least one layer of face panel.

C. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.

D. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels, while maintaining continuity of fire-rated construction.
E. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

F. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by Architect while maintaining fire-resistance rating of gypsum board shaft wall assemblies.

G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.4 PROTECTION

A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 21 16
SECTION 09 22 16 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Non-load-bearing steel framing systems for interior gypsum board assemblies.
   2. Suspension systems for interior gypsum ceilings, soffits, and grid systems.
   3. Rated suspension system for ceiling.

B. Related Requirements:
   1. Division 05 Section "Cold-Formed Metal Framing" for exterior and interior non-load-bearing wall studs that are supporting brick or stone veneer.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
   1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.

PART 2 - PRODUCTS

2.1 DESCRIPTION

A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

2.2 FRAMING SYSTEMS

A. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
   1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated.
B. Studs and Runners: ASTM C 645.
1. Minimum Base-Metal Thickness: 0.033 inch typical; Provide deeper or heavier gauge studs wherever the unbraced height exceeds the stud capacity to meet L/240 deflection requirements with a 5 psf wall load.
2. Depth: As indicated on Drawings or 3-5/8 inches.

C. Slip-Type Head Joints: At all non-fire-rated partitions, provide one of the following:
1. Double-Runner System: ASTM C 645 top runners, inside runner with 2-inch-deep flanges in thickness not less than indicated for studs and fastened to studs, and outer runner sized to friction fit inside runner.
2. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      1) Steel Network Inc. (The); VertiTrack VTD Series.
      2) Superior Metal Trim; Superior Flex Track System (SFT).

D. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Fire Trak Corp.; Fire Trak System attached to studs with Fire Trak Posi Klip.
   b. Metal-Lite, Inc.; The System.

E. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
1. Minimum Base-Metal Thickness: 0.033 inch.

F. Cold-Rolled Channel Bridging: Steel, 0.053-inch minimum base-metal thickness, with minimum 1/2-inch-wide flanges.
1. Depth: 1-1/2 inches.
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch-thick, galvanized steel.

1. Minimum Base-Metal Thickness: 0.033 inch.
2. Depth: 7/8 inch.

H. Resilient Furring Channels: 1/2-inch-deep, steel sheet members designed to reduce sound transmission.
1. Configuration: Asymmetrical or hat shaped.

I. Cold-Rolled Furring Channels: 0.053-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges.
1. Depth: 3/4 inch.
2. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with minimum uncoated-steel thickness of 0.033 inch.
3. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.

J. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, minimum uncoated-metal thickness of 0.018 inch, and depth required to fit insulation thickness indicated.
2.3 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- diameter wire, or double strand of 0.048-inch- diameter wire.

B. Hanger Attachments to Concrete:
   1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by an independent testing agency.
      a. Type: Cast-in-place anchor, designed for attachment to concrete forms; Postinstalled chemical or expansion anchor permitted.
   2. Powder-Actuated Fasteners: Suitable for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E 1190 by an independent testing agency.

C. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.16 inch in diameter.

D. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.053 inch and minimum 1/2-inch- wide flanges.

E. Furring Channels (Furring Members):
   1. Cold-Rolled Channels: 0.053-inch uncoated-steel thickness, with minimum 1/2-inch- wide flanges, 3/4 inch deep.
   2. Steel Studs and Runners: ASTM C 645.
      a. Minimum Base-Metal Thickness: 0.033 inch.
      b. Depth: 3-5/8 inches.
      a. Minimum Base-Metal Thickness: 0.033 inch.
   4. Resilient Furring Channels: designed to reduce sound transmission.
      b. Size: as noted on the Drawings.

F. Grid Suspension System for Gypsum Board Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      b. Chicago Metallic Corporation; Drywall Grid System.
      c. USG Corporation; Drywall Suspension System.

G. Resilient Suspended Ceiling Hanger System:
   1. Model: Kinetics Noise Control Model SRH-BBT Ceiling Hanger, or approved equal.
   2. Deflection Rating: One inch rated deflection.
   3. Construction: Rated deflection spring in series with a neoprene cup designed to resiliently support an STC rated ceiling assembly.
   4. Locations: Lecture Hall.
   5. Coordinate hanger mounting with adjacent construction.

2.4 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.
   1. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
B. Isolation Strip at Exterior Walls: Provide the following:
   1. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

B. Coordination with Sprayed Fire-Resistive Materials:
   1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
   2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that required for fire-resistance ratings indicated. Protect adjacent fire-resistant materials from damage.

3.3 INSTALLATION, GENERAL

A. Installation Standard: ASTM C 754, except comply with framing sizes and spacing indicated.
   1. Gypsum Veneer Plaster Assemblies: Also comply with requirements in ASTM C 844 that apply to framing installation.
   2. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.

B. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

C. Install bracing at terminations in assemblies.

D. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 INSTALLING FRAMED ASSEMBLIES

A. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

B. Install studs so flanges within framing system point in same direction.
1. Space studs as follows:
   a. Single-Layer Application: 16 inches o.c. unless otherwise indicated.
   b. Multilayer Application: 16 inches o.c. unless otherwise indicated.
   c. Tile Backing Panels: 16 inches o.c. unless otherwise indicated.

C. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.
1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
   a. Install two studs at each jamb unless otherwise indicated.
   b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
   c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
   a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated. Provide UL rated fire-resistive joint assembly in accordance with Division 07 Section “Fire-Resistive Joint Systems” to seal openings in metal deck above and around top track.
5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
6. Curved Partitions:
   a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
   b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs 6 inches o.c.

D. Direct Furring:
1. Screw to metal framing.
2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.

E. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.5 INSTALLING SUSPENSION SYSTEMS

A. Install suspension system components in sizes and spacings indicated on Drawings, but not less than those required by referenced installation standards for assembly types and other assembly components indicated.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:
1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
   a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
   a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
4. Do not attach hangers to steel roof deck.
5. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
6. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
7. Do not connect or suspend steel framing from ducts, pipes, or conduit.

D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.

E. Seismic Bracing: Sway-brace suspension systems with hangers used for support as required to meet seismic requirements of authorities having jurisdiction.

F. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

G. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

H. Sound-Rated Isolation Ceiling at Lecture Hall:
   1. Install framing for sound-isolating suspended GWB ceiling hung on specified spring hangers from structure above.
   2. Install suspension system such that framing members and supports are not in contact with ductwork, piping, conduit, adjacent structure or any other construction that would allow for the transfer of vibration from rooftop equipment above.

3.6 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers who take back waste for reuse or recycling.

END OF SECTION 09 22 16
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes interior decorative polished plaster finish system for installation over walls.
   B. Related Requirements:
      1. Division 09 Section “Gypsum Board Assemblies” for preparation of substrate.

1.3 REFERENCES

1.4 SYSTEM PERFORMANCE REQUIREMENTS
   A. Polished plaster system shall be tested by a qualified independent testing agency for the following properties according to the following test methods:
      1. Pencil Hardness: Minimum of 5H+ when tested in accordance with ASTM D3363.
      2. Scrub Resistance: Minimum 10,000 cycles using 10 grams of scrubbing medium and 5 grams of water applied by brush.

1.5 SUBMITTALS
   A. Product Data: Provide manufacturer’s technical data on products specified, including installation instructions.
   B. Shop Drawings: Indicate designs, colors, and locations.
   C. Samples: Submit 4 samples, 6 x 6 inches in size, illustrating finish color and texture.
   D. Qualification Data: Certificate issued by distributor indicating that installer has attended training class and is authorized to install specified product.
   E. Warranty: Sample copy of manufacturer's warranty stating obligations, remedies, limitations, and exclusions of warranty.

1.6 QUALITY ASSURANCE
   A. Installer Qualifications: Company specializing in performing work of this Section with a minimum of
one year documented experience. Include list of at least three completed projects of similar scope with project names and addresses and names and addresses of architects and owners. Installers must have attended the Polished Plaster manufacturer’s training class.

B. Single Source Responsibility: Provide a full system of only proprietary, factory-formulated materials as produced by the manufacturer specifically for applications indicated. Substitutes within the system are not permitted.

C. Fire-Test-Response Characteristics: Provide finished system with the following surface-burning characteristics as determined per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
   1. Flame Spread: 10 or less.
   2. Smoke Contribution: 10 or less.

D. Aesthetic Effect: The Basis-of-Design Product listed herein establishes not only performance standards but also aesthetic standards which must be met by any other product to be considered an acceptable equal.

1.7 MOCK-UP

A. Prior to installing polished plaster, construct mock-up of finished surface, 4 feet long by 8 feet wide, illustrating surface, finish and color.

B. Locate where directed by Architect.

C. Mockup shall remain in place until permanent installation is complete.

D. Mock-up may not remain as part of the Work.

1.8 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to the construction site in their original packaging with manufacturer’s labels identifying manufacturer and product; color designation; lot number; and date of manufacture.

B. Inspect materials upon delivery and immediately report to Architect damaged or defective materials.

C. Store materials in a well ventilated area with minimum ambient temperature of 45º F (7º C). Prevent deterioration due to moisture, temperature changes, contamination, or other causes.

1.9 PROJECT CONDITIONS

A. Environmental Requirements: Do not apply polished plaster when substrate or ambient air temperatures is under 45º F (7º C) or over 95º F (35ºC).

B. Maintain these conditions 24 hours before, during and after installation of polished plaster.

1.10 WARRANTY

A. Provide manufacturer’s standard written warranty.

B. Period of Warranty: 10 years.

PART 2 - PRODUCTS
2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Armourcoat Ltd.; Morewood Close, London Road, Sevenoaks Kent. TH13 2HU. Tel: +44 (0) 1732 460668. Fax: +44 (0) 1732 450930. E-mail: sales@armourcoat.co.uk. Web: www.armourcoat.com.

2.2 PRODUCTS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Armourcoat Polished Plaster, Armourcoat Ltd., or a comparable product by an equivalent manufacturer.

B. Design: Single monolithic finish.

C. Finish: Smooth.

D. Color:
   1. Two (2) custom colors will be required, to match Architect’s samples.

2.3 MATERIALS

A. Polished Plaster System: Provide manufacturer’s complete system of proprietary materials specifically formulated for compatibility with one another and which may include primer, keycoat, resin, finish coat, and wax polish as required for designs, finishes, and colors specified.

B. Water: Clean, fresh, potable and free of mineral or organic matter which can affect plaster.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify the suitability of existing conditions before starting work. Do not begin Work of this Section until unsatisfactory conditions have been corrected.

B. Acceptable Substrate Tolerances: Verify that substrates are true and level. Substrates shall be constructed to the following tolerances:
   1. ± 0.05 inches in 2 feet and ± 0.15 inches in 6 feet.

3.2 PREPARATION

A. Comply with manufacturer's written instructions for substrate preparation.

B. Remove hardware, electrical switch and outlet plates, lighting fixtures and other items already in place that are not to receive plaster finish.
   1. After completion of work, reinstall items using workers skilled in the trades involved.

C. Protect adjacent surfaces and items that are not to receive plaster finish, but which cannot be removed, from finish work. Use masking materials that will not damage protected items and surfaces.

D. Clean substrates of substances that could impair bond including mold, mildew, oil, grease, salts, contamination and dirt using methods recommended by manufacturer.

E. Substrate: For gypsum board substrates, apply coats of joint compound over joints and fasteners to achieve a minimum of a Level 4 finish. Use ready-mixed or job-mixed, drying-type, all-purpose or topping compound, or proprietary product specifically formulated for joint coating. Touch up and
sand as needed to produce a surface free of visual defects, tool marks, or ridges, and conforming to a smooth flat surface. Only apply Polished Plaster to Regular Gypsum Board that is fire resistant and complies with ASTM C 1396. Do not use moisture resistant Gypsum Boards.

F. Prepare all materials in accordance with manufacturer’s recommendations.

3.3 INSTALLATION

A. Prime Coat: Where recommended by manufacturer, apply prime coat. Allow to dry.

B. Keycoat: Where recommended by the manufacturer, mix and apply Keycoat in accordance with manufacturer’s instructions. Allow to dry.

C. Finish: Apply finish coats as recommended by manufacturer to achieve desired results. Number of coats and total dry mil thickness shall be as recommended by manufacturer for specified system. Allow to dry.

D. Wax: Apply wax to obtain sheen in accordance with manufacturer’s instructions using type of wax recommended by manufacturer for particular finish.

E. Provide finish free of unsightly variations in texture and other defects.

3.4 CLEANING AND PROTECTION

A. Remove temporary coverings used to protect adjacent surfaces and reinstall hardware, plates, lighting fixtures and other items previously removed.

B. Clean and repair adjacent surfaces and items soiled or damaged during Work of this Section.

C. Maintain and protect completed polished plaster surfaces until time of acceptance at Substantial Completion.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 23 00
SECTION 09 29 00 - GYPSUM BOARD

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Interior gypsum board for painted finish.
   2. Reveal trims and other trim pieces for painted gypsum surfaces.
   3. Interior gypsum board substrate for polished plaster finish.
   4. Reveal trims and other trim pieces for polished plaster walls.
   5. Tile backing panels.
   7. Acoustic joint sealant.

B. Related Requirements:
   1. Division 06 Section "Sheathing" for gypsum sheathing for interior masonry veneer backup and exterior walls.
   2. Division 09 Section "Non-Structural Metal Framing" for non-structural framing and suspension systems that support gypsum board panels.
   3. Division 09 Section "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
   4. Division 09 Section "Polished Plaster" for polished plaster finish to be installed over substrate specified in this section.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
   1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit MR 5: For products and materials required to comply with requirements for regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating distance to Project, cost for each regional material, and fraction by weight that is considered regional.
   3. Product Data for Credit IEQ 4.1: For adhesives used to laminate gypsum board panels to substrates, documentation including printed statement of VOC content.

C. Samples: For the following products:
   1. Trim Accessories: Full-size Sample in 12-inch-long length for each trim accessory indicated.
1.4 QUALITY ASSURANCE

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
   1. All rated construction shall be continuous from concrete slab to underside of floor/deck above.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

C. Tolerances: For aluminum trim, tolerances shall be as follows:
   1. Horizontal plane: Variation from level shall be no more than 1/8 inch in 12 feet. Variation in plane of adjacent wallboard panels prior to joint treatment shall not exceed 1/16 inch prior to joint treatment.
   2. Framed vertical construction:
      a. Position: ¼ inch maximum variation from design position.
      b. Alignment: 1/8 inch in 8 feet maximum. ¼ inch maximum in any continuous wall, line or surface.
      c. Surface smoothness: No joint or fastener location, roughness or blemish discernible after application of finish when viewed at any angle from a distance of five feet under occupancy lighting conditions, with surface preparation as specified in Division 09 Section “Interior Painting.”

D. Mockups: Before beginning gypsum board installation, install mockups of at least 100 sq. ft. in surface area to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Install mockups for the following:
      a. Each level of gypsum board finish indicated for use in exposed locations.
      b. Each reveal trim and molding specified.
   2. Apply or install final decoration indicated, including painting and wallcoverings, on exposed surfaces for review of mockups.
   3. Simulate finished lighting conditions for review of mockups.
   4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, those that are moisture damaged, and those that are mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.
PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

2.2 GYPSUM BOARD, GENERAL

A. Recycled Content of Gypsum Panel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 10 percent.

B. Regional Materials: Gypsum panel products shall be manufactured within 500 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

C. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.3 INTERIOR GYPSUM BOARD

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Georgia-Pacific Gypsum LLC.
   3. USG Corporation.

B. Abuse-Resistant Gypsum Board: ASTM C 1629/C 1629M.
   1. Core: 5/8 inch, Type X, unless noted otherwise.
   2. Long Edges: Tapered.
   4. Locations: Typical, at all interior wall assemblies and interior face of exterior walls

C. Gypsum Wallboard: ASTM C 1396/C 1396M.
   1. Thickness: As indicated.
   2. Long Edges: Tapered.
   3. Locations: Where indicated.

D. Gypsum Board, Type X: ASTM C 1396/C 1396M.
   1. Thickness: As indicated.
   2. Long Edges: Tapered.
   3. Locations: Where indicated.

E. Flexible Gypsum Board: ASTM C 1396/C 1396M. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.
   1. Thickness: 1/4 inch.
   2. Long Edges: Tapered.
   3. Locations: At radiusse walls.
F. Gypsum Ceiling Board: ASTM C 1396/C 1396M; Manufactured to have more sag resistance than regular-type gypsum board.
   1. Thickness: As indicated.
   2. Long Edges: Tapered.
   3. Locations: At all GWB ceiling areas, unless noted otherwise.

2.4 TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Board: ASTM C 1178/C 1178M, with manufacturer's standard edges.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Georgia-Pacific Gypsum LLC; DensShield Tile Backer.
   2. Core: 5/8 inch, Type X.

B. Water-Resistant Gypsum Backing Board: ASTM C 1396/C 1396M, with manufacturer's standard edges.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Georgia-Pacific Gypsum LLC.
      c. USG Corporation.
   2. Core: 5/8 inch, Type X.
   3. To be used on any wall surfaces in toilet rooms or janitor closets where a tile finish is not applied.
   4. Behind drinking fountains and on plumbing walls of coffee areas and work rooms with sinks.

2.5 TRIM ACCESSORIES

A. Interior Trim: ASTM C 1047.
   1. Material: Galvanized Sheet Steel.
   2. Shapes:
      a. Cornerbead, with flanges punched and spackled in.
      b. U-Bead: J-shaped; exposed long flange receives joint compound.
      c. V-Control Joint: Expansion (control) joint.
      d. Curved-Edge Cornerbead: With notched or flexible flanges.

B. Aesthetic Effect: The Basis of Design Products listed herein establish not only performance standards, but also aesthetic standards which must be met by any other product to be considered an acceptable equal.

C. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.
   1. Basis of Design Manufacturer: Subject to compliance with requirements, provide the products indicated below as manufactured by the Fry Reglet Corp. or Gordon, Inc., or a comparable product by one of the following:
      a. Fry Reglet Corp.
      b. Gordon, Inc.
      c. Pittcon Industries.
      d. MM Systems Corp.
   2. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
   3. Finish:
      a. All other shapes: Manufacturer’s standard factory spray and bake-on primer to serve as base for field painting.
   4. Shapes Used with Polished Plaster:
a. Where indicated “1/2” Plaster Z Reveal Molding” in the Drawings, the Basis of Design product shall be Fry VPRZ-625-50.
b. Where indicated “Plaster Corner Key” in the Drawings, the Basis of Design product shall be Fry PCM-75-75.
c. Where indicated “L Trim Molding” in the Drawings, the Basis of Design product shall be Fry DRML-50.

5. Shapes Used with Acoustic Plaster:
a. Where indicated “Column Collar” in the Drawings, the Basis of Design product shall be Fry Reglet Column Collar, sized as indicated for specific column.

6. Shapes Used with GWB:
a. Where indicated “3/8” Z Reveal Molding” in the Drawings, the Basis of Design product shall be Fry DRMZ-625-375
b. Where indicated “Edge Cap Trim” in the Drawings, the Basis of Design product shall be Fry DMEC-200 where a 2” molding is shown, and Fry DMEC-3500 where a 3.5” molding is shown.
c. Where indicated “Projection Wall Edge” in the Drawings, the Basis of Design product shall be Gordon Final Forms I Shape 965-2125R.

7. End Caps: Provide end caps with or without flanges as is appropriate for the termination conditions of all reveal trim.

8. Fasteners: Exposed fasteners shall be counter sunk and shall match accessories in color.
a. Aluminum to aluminum: aluminum or Type 302 or 304 stainless steel.
b. Aluminum to stainless steel or carbon steel: Type 302 or 304 stainless steel.

9. Fabrication:
a. Mounting holes: provide mounting holes located 8 inches on center.
b. Make custom miters and intersections with welded corners or with high strength industrial tape on backs.

2.6 GWB GLAZING RETAINER TRIM

A. General:
1. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
2. Anchor trim to stud partition framing according to manufacturer’s recommendations, but not less than 8 inches on center.

B. Basis of Design: Subject to compliance with requirements, provide the following products by C.R. Laurence Co., Inc., or comparable product.
1. CRL ¼” Single ‘U’ Channel 5/8” High
2. CRL ¼” Single ‘U’ Channel 1-3/16” High
4. Provide manufacturer’s standard glazing gaskets.
5. Locations: Install in locations indicated on the Drawings.

2.7 SPRING-LOADED MULLION EXTENSION

A. General:
1. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
2. Anchor trim to stud partition framing according to manufacturer’s recommendations, but not less than 8 inches on center.

B. Basis of Design: Subject to compliance with requirements, provide the following products by Gordon, Inc., or comparable product.
1. Mullion Mate II: 4-11/16” min to 7-1/8” max opening.
2. STC 38.
3. Finish: Prefinish with same 3-coat system used on adjacent curtain wall; Color to match adjacent curtain wall.
4. Locations: Install in locations indicated on the Drawings.

2.8 GWB CHALKBOARD ACCESSORIES

A. General:
1. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
2. Anchor trim to stud partition framing according to manufacturer’s recommendations, but not less than 8 inches on center.

B. Basis of Design: Subject to compliance with requirements, provide the following products by Fry Reglet Architectural Metals, or comparable product.
1. Integrated Functional Reveal Rail – Provide where indicated in Drawings.
2. 2” Chartrail Insert – Provide where indicated in Drawings.
3. Hook Insert – Provide 10 hook inserts for each Integrated Functional Reveal Rail that is indicated to be installed at the top of a chalk board.

2.9 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C 475/C 475M.

B. Joint Tape:
1. Interior Gypsum Board: Paper.
2. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
3. Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Board: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.
1. Prefilling: At open joints and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
   a. Use setting-type compound for installing paper-faced metal trim accessories.
3. Fill Coat: For second coat, use drying-type, all-purpose compound.
4. Finish Coat: For third coat, use drying-type, all-purpose compound.
5. Skim Coat: For final coat of Level 5 finish, use drying-type, all-purpose compound.

D. Joint Compound for Tile Backing Panels:
1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
2. Water-Resistant Gypsum Backing Board: Use setting-type taping compound and setting-type, sandable topping compound.

2.10 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer’s written recommendations.

B. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.
1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.

C. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
2. Recycled Content of Blankets: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50% percent.

D. Acoustical Joint Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Pecora Corporation; AC-20 FTR.
      b. USG Corporation; SHEETROCK Acoustical Sealant.
   2. Acoustical joint sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

E. Thermal Insulation: As specified in Division 07 Section "Thermal Insulation."

F. Vapor Retarder: As specified in Division 07 Section "Thermal Insulation."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and framing, with Installer present, for compliance with requirements and other conditions affecting performance.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLYING AND FINISHING PANELS, GENERAL

A. Comply with ASTM C 840.

B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.

D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

E. Form control and expansion joints with space between edges of adjoining gypsum panels.

F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
   1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
   2. Fit gypsum panels around ducts, pipes, and conduits.
3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.

G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments, except floors. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

I. Wood Framing: Install gypsum panels over wood framing, with floating internal corner construction. Do not attach gypsum panels across the flat grain of wide-dimension lumber, including floor joists and headers. Float gypsum panels over these members or provide control joints to counteract wood shrinkage.

J. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer’s written recommendations for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

K. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.3 APPLYING INTERIOR GYPSUM BOARD

A. Single-Layer Application:
1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
2. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
   a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
   b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
3. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

B. Multilayer Application:
1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
3. On Z-furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
4. Fastening Methods: Fasten base layers and face layers separately to supports with screws.
C. Curved Surfaces:
1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 12-inch-long straight sections at ends of curves and tangent to them.
2. For double-layer construction, fasten base layer to studs with screws 16 inches o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches o.c.

3.4 APPLYING POLISHED PLASTER SUBSTRATE

A. Prime Construction Considerations:
1. Applying Polished Plaster puts a lot of pressure on the substrate. Polished plaster does not shrink or crack on its own but being very hard, cracks in the substrate will penetrate through the finish.
2. 2-3 mm board joints filled with plaster are much more crack resistant than butted board joints.
3. Substrates must be dry. Dampness will affect the finish

B. Construction:
1. The wall shall be firmly constructed in metal stud partition which shall be vertically plumb and built to a true horizontal line without undulations, within strict tolerances:
   a. Plus or minus 1 mm in 600 mm
   b. Plus or minus 3 mm in 1.8 metres
2. All layers of substrate must be mechanically fixed to studs. The application of polished plaster involves the material being heavily trowelled as it is finished. The forces involved are much greater than normal plastering and will highlight any weaknesses in the substrate at the final stages.

C. Recommended Fixing Details for Plasterboard Walls in One and Two Layer Work:
1. Metal Frame Supports 0.55mm to 0.7mm – Use Gyproc Drywall Screws or equal
2. Metal Frame Supports 0.75mm to 2.5mm – Use Gyproc Jack-Point Screws or equal
3. Board Thickness: 12.5 mm
4. Length of Fixing Screws:
   a. First Board: 25mm
   b. Second Board: 38mm
5. Maximum Fastener Spacing: 300mm
6. Maximum Support Center Spacing: 600mm
7. For curved or circular walls, reduce support centers to 300mm.

D. Movement:
1. The walls when boarded out shall have no discernible movement when subjected to intermittent pressures (rocking) or impact.

E. Substrate Finishing: Taping & Jointing
1. **Jointing Boards Prior to Taping** Only jointing compounds approved by the board manufacturers shall be used to fill board joints, joint depressions, screw heads and any hammer or other impact marks. This operation shall be done in two applications; the first being allowed to set before the second is applied. Screw spotting shall be carried out between operations in the main jointing sequence. When filler is dry, sand down filler to remove snags and any unevenness before taping. With square edge boards cracking risks will be reduced by filling open joints (2-3mm) full depth with jointing compound. *

   *NOTE* A thin skim across close butting joints will simply bridge the board joint and predispose the surface to cracking.
2. **Taping and Jointing** Approved jointing tapes only shall be used. Armourcoat Limited recommends Gyproc joint tape applied in accordance with the manufacturer's recommendations. Ensure a clean surface free from dust or grease. Unroll tape centrally over filled joint pressing down firmly to ensure good adhesion. Apply a thin band of jointing compound 200 mm wide over and beyond each side of the tape and trowel flat. Make sure
the tape is firmly embedded with no air pockets. Using a jointing sponge, moisten the sponge and feather out the margins. Rinse sponge frequently to keep clean and soft. Obvious depressions in the surface can be filled again to correct surface flatness to the specified tolerances. When the sanding and filling process is complete and when the jointing compound is set and dry, lightly sand down the surface before applying a final layer of jointing compound 400-450mm wide feathered out either side of the tape avoiding any build over the tape run. Moisten the jointing sponge and feather out the edges. **NOTE** This dubbing out procedure, in successive thin coats, is required to take out the bump caused by taping the board joint. All other unevenness in the background shall be taken out in a similar way or by plastering overall with Thistle Multi-finish if flatness cannot be achieved by any other means. Jointing compounds, particularly along wallboard joints, shall be thoroughly dry before sealing. When wallboard surfaces are sealed before the jointing compounds are dry, polished plaster applications cannot proceed since the joint lines will grin through permanently disfiguring the finished work.

3. **Internal Corners** Armourcoat Limited recommends Gyproc tape. The gap 2-3 mm between corner boards shall be filled full depth with jointing compound. A thin layer of jointing compound is then applied to both sides of the arris. The joint tape is folded and pressed into the angle using a taping knife to bed the tape. Make sure that air bubbles are eliminated. There must be sufficient jointing compound left under the tape to ensure good adhesion. A thin layer of jointing compound 100 mm wide shall then be applied to each side of the arris. When this coat has set, another coat of jointing compound 300 mm wide shall be applied to both sides of the angle and the edges feathered out with a wetted sponge float or a damp sponge.

4. **Obtuse Angles** Armourcoat Limited recommends Gyproc corner-tape for obtuse angles. It is often difficult to produce a sharp straight line when forming an obtuse angle. By using Gyproc corner tape (zinc coated steel strips set on fibre paper) a good line can be formed where the directional change occurs. The procedure and sequence for fixing the tape and for finishing the surface of the plasterboard after fixing the tape is the same as in 2.1.10 but in this case feather out the plaster 600 mm either side of the arris.

5. **External Angles** With Armourcoat Polished Plaster applications a, choice of angle protection is available. (i) Gyproc Angle Bead (ii) SAS 90 Degrees High Strength Corners. **For corners where corner damage can be anticipated, consider pencil rounding the corners without beads or insert wood or metal end posts or cappings.** Gyproc angle bead and/or Truline angle bead affords optimum protection where a sharp external arris is specified but note comments regarding high-risk locations. Cut to the required length. Place the angle bead plumb over the external corner guarding against flaring top and bottom. Fix angle bead in approved manner. Apply a 200 mm wide 2 mm thick band of jointing compound to both sides and feather out the edges with a wetted sponge float or sponge. When set and dried, apply a second layer of jointing compound 400-450 mm wide to both sides of the angle and feather out the edges.

6. **Feature Beads** Thin coat plastering beads are available from British Gypsum Ltd (Tel 0800 225225), SAS – (Tel 0118 9290900) or QIC Trims (Tel: 01280 818 950). For detailing drawings please refer to the end of this document.

7. **Sealing Surface** All prepared wall surfaces shall be painted with an approved wallboard primer. Gyproc topcoat is approved by Armourcoat Limited. Before wallboard sealers are applied, the jointing compound must be thoroughly dry. Where wallboard surfaces are sealed before the jointing compounds are dry, polished plaster applications will be disfigured since dampness underneath the sealer will cause permanent shadow lines as the wall dries out. Similarly, shadow lines will arise at joint lines if surfaces are not sealed first.

3.5 **APPLYING TILE BACKING PANELS**

A. **Glass-Mat, Water-Resistant Backing Panels:** Comply with manufacturer's written installation instructions and install at locations indicated to receive tile. Install with 1/4-inch gap where panels abut other construction or penetrations.
B. Water-Resistant Backing Board: Install where indicated with 1/4-inch gap where panels abut other construction or penetrations.

C. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.6 INSTALLING TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints at locations indicated on Drawings and according to ASTM C 840 and in specific locations approved by Architect for visual effect.

C. Interior Trim: Install in the following locations:
   1. Cornerbead: Use at outside corners, spackled in.
   2. U-Bead: Use at exposed panel edges and reveals, spackled in.

D. Aluminum Trim: Install in locations where noted on the drawings, and any other similar circumstances shown on the drawings even if not specifically noted in every instance.
   1. Install trim in accord with manufacturer’s product data and as follows:
      a. Install 3/8” “GWB Z Reveal Molding” where GWB meets any other material such as brick, metal, slate, except,
      b. Do not install reveal trim in fire rated or in STC-rated partitions.
      c. Install with mechanical anchors spaced at 8 inches on center.
   2. Finish joints and attachment flanges with spackle, as described in this Section.
   3. Dust surfaces. Joint and fastener treatment shall be indistinguishable in finished work.
   4. Protect accessories from damage until date of Substantial Completion. Replace trim which may become damaged.

3.7 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints and damaged surface areas.

C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840:
   1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
   2. Level 2: Panels that are substrate for tile.
   3. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
      a. Primer and its application to surfaces are specified in other Division 09 Sections.
   4. Level 5: Lecture Hall projection wall to receive “Goo” paint finish, and where indicated on Drawings.
      a. Primer and its application to surfaces are specified in other Division 09 Sections.

E. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.
3.8 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.

B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

3.9 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers who take back waste for reuse or recycling.

END OF SECTION 09 29 00
SECTION 09 30 00 – TILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Retain or delete this article in all Sections of Project Manual.

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Ceramic tile.

B. Revise first two subparagraphs below if applicable only to thin-set applications.

C. Related Sections:
   1. Division 1 Section “Sustainable Design Requirements” for additional LEED requirements.
   2. Division 07 Section for waterproofing under thinset mortar beds at showers.
   3. Division 07 Section “Joint Sealants” for sealing of expansion, contraction, control, and isolation joints in tile surfaces.
   4. Division 09 Section “Gypsum Board” for glass-mat, water-resistant backer board.
   5. Waterproof membrane. See Division 09 Section “Stone Flooring” for Waterproof Membrane.
   6. Crack isolation membrane. See Division 09 Section “Stone Flooring” for Crack Isolation Membrane.
   7. Division 09 Section “Stone Flooring” for stone thresholds.

D. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 DEFINITIONS

A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

C. Module Size: Actual tile size plus joint width indicated.

D. Face Size: Actual tile size, excluding spacer lugs.
1.4 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:

1. Level Surfaces: Minimum 0.6.
2. Step Treads: Minimum 0.6.
3. Ramp Surfaces: Minimum 0.8.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.
2. Credits MR 4.1 and MR 4.2: Product Data indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.
   a. Include statement indicating costs for each product having recycled content.
3. Refer to Division 1 Section “Sustainable Design Requirements” for additional submittal requirements.

C. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

D. Samples for Initial Selection: For each type of tile and grout indicated. Include Samples of accessories involving color selection.

E. Samples for Verification:

1. Full-size units of each type and composition of tile and for each color and finish required.
2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 12 inches square, but not fewer than 4 tiles. Use grout of type and in color or colors approved for completed Work.
3. Full-size units of each type of trim and accessory for each color and finish required.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.

C. Product Certificates: For each type of product, signed by product manufacturer.

D. Material Test Reports: For each tile-setting and -grouting product and special purpose tile.
1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.

2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.8 QUALITY ASSURANCE

A. Source Limitations for Tile: Obtain tile of each type and color or finish from one source or producer.

1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from one manufacturer and each aggregate from one source or producer.

C. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer for each product:

2. Waterproof membrane. See Division 09 Section "Stone Flooring" for Waterproof Membrane.
3. Crack isolation membrane. See Division 09 Section "Stone Flooring" for Crack Isolation Membrane.

D. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup of each type of floor tile installation.
2. Build mockup of each type of wall tile installation.
3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
D. Store liquid materials in unopened containers and protected from freezing.

E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

F. Broken, cracked, chipped, stained, or damaged tile will be rejected.

1.10 PROJECT CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply for product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.

2. Basis-of-Design Product: The design for each tile type is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other manufacturers specified.

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.

1. Provide tile complying with Standard grade requirements unless otherwise indicated.

2. For face dimensions of tile, comply with requirements relating to tile sizes specified in Part 1 "Definitions" Article.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCA installation methods specified in tile installation schedules, and other requirements specified.

C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.

1. Where tile is indicated for installation in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.
E. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.3 TILE PRODUCTS

A. Aesthetic Effect: The Basis of Design Products listed herein establish not only performance standards, but also aesthetic standards – sheen, texture, color range, dimension, etc. – which must be met by any other product to be considered an acceptable equal.

B. Tile Type-1: Glazed wall tile.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide “Veranda” as manufactured by Daltile or comparable product.
   2. Composition: Porcelain
   3. Module Size: 6 1/2 by 20 inch field tile; 3 by 20 inch decorative border.
   5. Face: Plain with square edges.
   7. Finish: Mat, clear glaze.
   8. Tile Color and Pattern: As selected by Architect from manufacturer's full range.
   9. Grout Color: As selected by Architect from manufacturer's full range.
  10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:
      a. Base shapes: Cove, module size 6 by 13, outside corner
      b. External Corners for Thin-Set Mortar Installations: Surface bullnose, same size as adjoining flat tile.
      c. Internal Corners: Field-butted square corners. For coved base and cap use angle pieces designed to fit with stretcher shapes.

C. Tile Type-2: Glazed paver tile (also used at shower wall).
   1. Basis-of-Design Product: Subject to compliance with requirements, provide “Natural Hues” as manufactured by Daltile or comparable product.
   2. Composition: Porcelain.
   3. Face Size: 4 by 4 inches.
   5. Face: Plain with square or cushion edges.
   6. Surface:
      a. Walls: Smooth, without abrasive admixture.
      b. Floor: Slip-resistant, with abrasive admixture.
   7. Finish: Mat, opaque or Mat, clear glaze.
   8. Tile Color and Pattern: As selected by Architect from manufacturer's full range.
   9. Grout Color: As selected by Architect from manufacturer's full range.
  10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:
      b. External Corners for Thin-Set Mortar Installations: Surface bullnose, module size 1 by 4 inches.
      c. Internal Corners: Round inside corner, 1 by 1 inch.
d. Trim: 3 3/4 x 7 3/4 inch

2.4 WATERPROOF MEMBRANE
A. General: Manufacturer's standard product that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
1. See Division 09 Section "Stone Flooring" for Waterproof Membrane.

2.5 CRACK ISOLATION MEMBRANE
A. General: Manufacturer's standard product selected from the following, that complies with ANSI A118.12 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
1. See Division 09 Section "Stone Flooring" for Crack Isolation Membrane.

2.6 SETTING MATERIALS
1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with acrylic resin or styrene-butadiene-rubber liquid-latex additive at Project site.
3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.
4. Applications: TCA Installation Method F113 for floors and F122 for toilet room floor tile and W245 for wall tile, unless noted otherwise.

2.7 GROUT MATERIALS
A. Polymer-Modified Tile Grout: ANSI A118.7.
1. Polymer Type: Either ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients or Acrylic resin or styrene-butadiene rubber in liquid-latex form for addition to prepackaged dry-grout mix.
   a. Unsanded grout mixture for joints 1/8 inch and narrower.
   b. Sanded grout mixture for joints 1/8 inch and wider.

2.8 ELASTOMERIC SEALANTS
A. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Division 07 Section "Joint Sealants."
1. Use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.
B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints unless otherwise indicated.
C. One-Part, Mildew-Resistant Silicone Sealant: Install in accordance with Division 07 Section “Joint Sealants” for wall joints and Multi-Component Pourable Urethane Traffic Grade Sealant for floor expansion and control joints, in accordance with Division 07 Section “Joint Sealants.”

2.9 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.10 MIXING MORTARS AND GROUT

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers’ written instructions.

B. Add materials, water, and additives in accurate proportions.

C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
   1. Verify that substrates for setting tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
   2. Verify that concrete substrates for tile floors installed with thin-set mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
      a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
      b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
   3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
   4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove coatings, including curing compounds and other substances that contain soap, wax, oil, or silicone, that are incompatible with tile-setting materials.
B. Provide concrete substrates for tile floors installed with thin-set mortar that comply with flatness tolerances specified in referenced ANSI A108 Series of tile installation standards.
   1. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with thin-set mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
   2. Remove protrusions, bumps, and ridges by sanding or grinding.

C. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot toward drains.

D. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

E. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 TILE INSTALLATION

A. Comply with TCA's "Handbook for Ceramic Tile Installation" for TCA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
   1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
   2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
   3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.

E. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

F. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
   1. As a minimum, provide sealant-filled movement joints in inside corners of walls, at changes in direction of tile in floors or walls, at changes from one type of ceramic or stone tile to another, and at all perimeter walls, columns and other obstructions.
   2. Locate movement joints at an even, regular spacing in open areas.
3. Limit the size of tile panels between movement joints to a ratio of length to width of approximately 1:1.5 or less, unless otherwise directed. Show all proposed locations and details for movement joints on Shop Drawings in accordance with the requirements of Part 1 of this Section.

4. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.

5. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants."

G. Floor Tile Installation: Install tile to comply with requirements in the referenced TCA installation methods and ANSI A108 Series of the tile installation standards.
   1. For installations indicated below, follow procedures in ANSI A108 Series tile installation standards for providing 95 percent mortar coverage.
      a. Tile floors in wet areas.
      b. Tile floors composed of rib-backed tiles.

2. Joint widths: Install tile on floors with the following joint widths:

H. Ceramic Mosaic Tile: 1/16 inch

I. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
   1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in latex-portland cement mortar (thin set).
   2. Do not extend waterproofing under thresholds set in dry-set portland cement or latex-portland cement mortar. Fill joints between such thresholds and adjoining tile set on waterproofing with elastomeric sealant.

J. Grout tile to comply with requirements of the following tile installation standards:
   1. For ceramic tile grouts, comply with ANSI A108.10.

K. Grout Sealer: Apply grout sealer to cementitious grout joints in tile floors according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

L. Wall Tile Installation: Install types of tile designated for wall installations to comply with the requirements in the referenced TCA installation methods and ANSI setting-bed standards.
   1. Joint Widths: Install tile on walls with the following joint widths:
      a. Ceramic Mosaic Tile: 1/16 inch.

3.4 WATERPROOFING INSTALLATION

A. See Division 09 Section "Stone Flooring" for Waterproof Membrane.

3.5 CRACK ISOLATION MEMBRANE INSTALLATION

A. See Division 09 Section "Stone Flooring" for Crack Isolation Membrane.

3.6 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
   1. Remove latex-portland cement grout residue from tile as soon as possible.
   2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by
testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.

B. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.

C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

D. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.

3.7 INTERIOR TILE INSTALLATION SCHEDULE

A. Interior Floor Installations, Concrete Subfloor:
   1. Tile Installation F113: Thin-set mortar; TCA F113.
      a. Tile Type: All floor tile.
      b. Thin-Set Mortar: Latex-portland cement mortar.
      c. Grout: Polymer-modified sanded grout.

B. Interior Wall Installations, Metal Studs or Furring:
   1. Tile Installation W245: Thin-set mortar on coated glass-mat, water-resistant gypsum backer board; TCA W245.
      a. Tile Type: all wall tile.
      b. Thin-Set Mortar: Latex- portland cement mortar.
      c. Grout: Polymer-modified unsanded grout.

3.8 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:

   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:

   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 30 00
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes
1. Acoustical panel ceilings.
2. Linear acoustical wood panel ceilings.
3. Exposed suspension systems for ceilings.
B. Related Requirements:
1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
C. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete at ceilings.
D. LEED Opportunities: This Section has opportunities for the following LEED points:
1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
2. Indoor Environmental Quality Credit 4.1.

1.3 PREINSTALLATION MEETINGS
A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.
B. LEED Submittals:
1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.
2. Product Data for Credit EQ 4.1: For sealants, documentation including printed statement of VOC content.
3. Product Data for MR Credit 7.0: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that mill is certified for chain of custody by an FSC-accredited certification body. Include a statement indicating costs for each certified wood product.
C. Samples for Initial Selection: For components with factory-applied color finishes.
D. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
1. Acoustical Panel: Set of full-size Samples of each type, color, pattern, and texture.
2. Exposed Suspension-System Members, Moldings, and Trim: Set of 12-inch- (300-mm-) long Samples of each type, finish, and color.
3. Linear acoustical wood panel ceilings.
1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Suspended ceiling components.
2. Structural members to which suspension systems will be attached.
3. Distinguish between areas to receive each type of acoustical panel ceiling.
4. Size and location of initial access modules for acoustical panels.
5. Items penetrating finished ceiling including the following:
   a. Lighting fixtures.
   b. Air outlets and inlets.
   c. Speakers.
   d. Sprinklers.
   e. Access panels.
6. Perimeter moldings.
7. Minimum Drawing Scale: 1/8 inch = 1 foot.

B. Shop Drawings: Provide Shop Drawings/Coordination Drawings for all ceilings, which should include RCP and product details. Coordinate Linear acoustical wood panel ceiling layout and installation of wood panels and suspension system components with other construction elements that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system components, partition assemblies and all perimeter conditions.
1. Refer to Drawings for custom cantilevered edge detail at linear acoustical wood panel ceilings. This detail will require a mock-up for Architects review.

C. Qualification Data: For testing agency.

D. Product Test Reports: For each acoustical panel ceiling, for tests performed by a qualified testing agency.

E. Evaluation Reports: For each acoustical panel ceiling suspension system and anchor and fastener type, from ICC-ES.

F. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Acoustical Ceiling Panels: Full-size panels equal to 2 percent of quantity installed.
2. Linear acoustical wood panel ceilings: Full-size panels equal to 5 percent of quantity installed, but not less than six panels.
3. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.
4. Hold-Down Clips: Equal to 2 percent of quantity installed.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to NVLAP for testing indicated.

B. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockup of each typical ceiling area as shown on Drawings.
2. Refer to Drawings for custom cantilevered edge detail at linear acoustical wood panel ceilings. Discuss size and location of mock-up with Architect.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, wood acoustical panels, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use. Building areas to receive ceilings shall be free of construction dust and debris.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Acoustical ceiling shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.
   2. Smoke-Developed Index: 50 or less.

2.2 ACOUSTICAL PANELS, GENERAL

A. Aesthetic Effects: The Basis of Design Products listed herein establish not only performance standards but also aesthetic standards – texture, color, pattern, etc. – which must be met by any other product to be considered an acceptable equal.

B. Low-Emitting Materials: Acoustical panel ceilings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system from single source from single manufacturer.

D. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50 percent.
E. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances unless otherwise indicated.
   1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface according to ASTM E 795.

F. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.
   1. Where appearance characteristics of acoustical panels are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by Architect from each manufacturer's full range that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.

G. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.

2.3 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING ACT-1

A. Basis-of-Design Product: Subject to compliance with requirements, provide “Ultima” Ceiling System, as manufactured by Armstrong World Industries, Inc. or a comparable product.

B. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern as follows:
   1. Type and Form: Type IV, mineral base with membrane-faced overlay; Form 2, water felted.

C. Color: White

D. LR: Not less than 0.90.

E. NRC: Not less than 0.70.

F. CAC: Not less than 33.

G. AC: N/A.

H. Edge/Joint Detail: Beveled Tegular, sized for 15/16-inch grid.

I. Thickness: 3/4 inch.

J. Modular Size: 24 by 24 inches

K. Antimicrobial Treatment: Surface treatment to inhibit growth of mold and mildew.

L. Humidity and Sag Resistant Treatment: HumiGuard Plus.

M. Recycled Content: 65% pre-consumer, 15% post-consumer.

N. Warranty: 10 year limited.

2.4 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING ACT-2, ACT-3 and ACT-4

A. Basis-of-Design Product: Subject to compliance with requirements, provide “Optima Open Plank” Ceiling System, as manufactured by Armstrong World Industries, Inc. or a comparable product.
B. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern as follows:
   1. Type and Form: Type IV, mineral base with membrane-faced overlay; Form 2, water felted.

C. Color: White

D. LR: Not less than 0.90.

E. NRC: Not less than 0.70.

F. CAC: Not less than 33.

G. AC: N/A.

H. Edge/Joint Detail: Square Tegular, sized for 15/16-inch grid. (custom) [C]

I. Thickness: 1 inch.

J. Modular Size:
   a. ACT-2: 2 by 5 feet.
   b. ACT-3: 2 by 6 feet.
   c. ACT-4: 2 by 8 feet.

K. Antimicrobial Treatment: Surface treatment to inhibit growth of mold and mildew.

L. Humidity and Sag Resistant Treatment: HumiGuard Plus.

M. Recycled Content: 65% pre-consumer, 15% post-consumer.

N. Warranty: 10 year limited.

2.5 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING ACT-5 and ACT-6

A. Basis-of-Design Product System: Subject to compliance with requirements, provide the following panels for the integrated ceiling assemblies, “TechZone” Ceiling System, as manufactured by Armstrong World Industries, Inc. or a comparable product.

   1. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern as follows:
      a. Type and Form: Type XII, glass-fiber base with membrane-faced overlay; Form 2, cloth.
      b. Pattern: E (lightly textured).
   2. Color: White
   3. LR: Not less than 0.90.
   4. NRC: Not less than 0.95.
   5. AC: Not less than 190.
   7. Thickness: 1 inch.
   8. Modular Size:
      a. ACT-5: 33 by 24 inches. Custom size.
      b. ACT-6: 24 by 42 inches.

   1. Metal Technical Panels, powder coated, galvanized steel, unperforated.
   2. Technical Zone Technical panels accommodates recessed fixtures, linear air diffusers, sprinkler heads, and other components.
3. Size for both ACT-5 and ACT-6: 6 inch by 48 inch x .025”.
5. Edge detail: Square Tegular.
6. Thickness: 1 inch.

D. Humidity and Sag Resistant Treatment: HumiGuard Plus.
E. Recycled Content: 40%
F. Warranty: 10 year limited.

2.6 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING ACT-7

A. Basis-of-Design Product: Subject to compliance with requirements, provide “Ceramaguard” Ceiling System, as manufactured by Armstrong World Industries, Inc. or a comparable product.
B. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern as follows:
   1. Type and Form: Type IV, mineral base with membrane-faced overlay; Form 2, water felted.
C. Color: White
D. LR: 0.82.
E. NRC: N/A.
F. CAC: Not less than 33.
G. AC: N/A.
H. Edge/Joint Detail: Square Lay-in sized for 15/16-inch grid.
I. Thickness: 5/8 inch.
J. Modular Size: 24 by 24 inches
K. Antimicrobial Treatment: Surface treatment to inhibit growth of mold and mildew.
L. Humidity and Sag Resistant Treatment: HumiGuard Plus.
M. Recycled Content: 65% pre-consumer, 15% post-consumer.
N. Warranty: 10 year limited.

2.7 LINEAR ACOUSTICAL WOOD PANEL CEILINGS

A. Basis-of-Design Product: Subject to compliance with requirements, provide “2100 Panelized Linear Wood” Ceiling System, as manufactured by 9 Wood, Inc. or a comparable product.
B. Wood Species: As selected by Architect. Plain sawn, solid Cherry [(Cherry (PS)]. FSC certified wood.
C. Member size: 5 1/4 by 3/4 inch.
D. Standard Panel Length: nominal 8 feet.
E. Edge Profile: Square.

F. Reveal: 3/4 inch, see Drawings

G. Members/LF: 5 members per linear foot

H. Assembly Style: “Panelized Linear”

I. Fire Rating: Class 1(A) Fire Rating

K. Reveal Scrim: “Gray reveal scrim”

L. Acoustical Backing: SoundTex (black) OR 1 inch Fiberglass (if Fiberglass is used for backing furring will be required to accommodate thickness in this application)

M. Backer/Cross Piece: 1 1/4 by 1/2 inch Gray or Black (to match scrim)

2.8 METAL SUSPENSION SYSTEMS, GENERAL

A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Metal Suspension-System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635/C 635M.

C. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, “Direct Hung,” unless otherwise indicated. Comply with seismic design requirements.
   1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to six times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
      a. Type: Cast-in-place or Postinstalled bonded anchors.
      b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.

D. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
   2. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, “Direct Hung”) will be less than yield stress of wire, but provide not less than 0.135-inch- (3.5-mm-) diameter wire.

E. Hanger Rods or Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

F. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.

G. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.

H. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
I. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical panels in place.

J. Hold-Down Clips: Where indicated, provide manufacturer's standard hold-down clips spaced 24 inches (610 mm) o.c. on all cross tees.

2.9 METAL SUSPENSION SYSTEM FOR ACOUSTICAL PANEL CEILING

A. Basis-of-Design Product: Subject to compliance with requirements, provide “Prelude standard 15/16 inch Exposed Tee System” as manufactured by Armstrong World Industries, Inc. or a comparable product.

B. Components: All main beams and cross tees shall be commercial quality hot-dipped galvanized (galvanized steel, aluminum, or stainless steel) as per ASTM A 653. Main beams and cross tees are double-web steel construction with type exposed flange design. Exposed surfaces chemically cleansed, capping pre-finished galvanized steel (aluminum or stainless steel) in baked polyester paint. Main beams and cross tees shall have rotary stitching (exception: extruded aluminum or stainless steel).
   2. End Condition of Cross Runners: Butt-edge type.
   3. Face Design: Flat, flush.
   5. Cap Finish: Painted white
   6. Provide shadow molding to match system as required.

2.10 METAL SUSPENSION SYSTEM FOR LINEAR ACOUSTICAL WOOD PANEL CEILINGS

A. Provide manufacturer’s standard metal suspension system compatible with 9Wood or equal exposed wood ceiling system.

2.11 METAL EDGE MOLDINGS AND TRIM, GENERAL

A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.
   1. Provide manufacturer's standard edge moldings that fit acoustical panel edge details and suspension systems indicated and that match width and configuration of exposed runners, unless otherwise indicated.
   2. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.
   3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

   1. HCPA: 12-inch horizontal piece and VCPQ 12-inch vertical piece.
   2. Custom brake formed from .090 aluminum sheets.

C. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements and the following:
1. Aluminum Alloy: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of aluminum extrusions complying with ASTM B 221 for Alloy and Temper 6063-T5.

2. Finish designations prefixed by AA comply with system established by the Aluminum Association for designating aluminum finishes.

3. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.

   a. Organic Coating: Thermosetting, primer/topcoat system with a minimum dry film thickness of 0.8 to 1.2 mils.

5. Profile: As indicated in Drawings.

6. Provide fabricated corner units, where required.

7. Provide concealed splice plates to join where required.

2.12 EXTRUDED-ALUMINUM EDGE MOLDINGS AND TRIM FOR ACT-1 through ACT-7

A. Basis of Design Product: Subject to compliance with requirements, provide Axiom Classic Trim, Armstrong World Industries, or a comparable product.

B. Extruded Aluminum Edge Molding: Narrow vertical fin profile.
   1. Edge treatment: designed to produce ¼" perimeter reveal
   2. Depth: Manufacturer's nominal 2" Axiom Classic edge trim, with a vertical face dimension of 1 15/16".
   3. Colors: As selected by the Architect from the manufacturer's full range of custom colors.
   4. Install edge molding at perimeter of each pod, or at any location where ceiling does not extend to face of wall.

2.13 OTHER METAL EDGE MOLDINGS AND TRIM FOR GWB

A. Basis of Design Product: Subject to compliance with requirements, provide “Infinity D” as manufactured by Chicago Metallic or a comparable product.

   1. “Infinity D” 5/8 inch drywall ceilings, 8 inches high with 1” horizontal face taping flange grooved to accept joint compound. Panels to be as indicated on approved drawings. Outer surface to be primed for adhesion of joint compound and field applied paint finish.

B. Manufacturer's standard metal or extruded aluminum moldings for edges and penetrations, including light textures, that fit type of edge detail and suspension system indicated. Exposed edge flange to match face dimension of runner.

2.14 ACOUSTICAL SEALANT

A. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   1. Acoustical Sealant for Exposed and Concealed Joints:
      a. Pecora Corporation; AC-20 FTR Acoustical and Insulation Sealant.
      b. USG Corporation; SHEETROCK Acoustical Sealant.
   2. Acoustical Sealant for Concealed Joints:
      a. Henkel Corporation; OSI Pro-Series SC-175 Acoustical Sound Sealant.
      b. Pecora Corporation; AIS-919.
B. Acoustical Sealant: Manufacturer's standard sealant complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
   3. Acoustical sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION

A. General: Install acoustical panel ceilings to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
   1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.

B. Suspend ceiling hangers from building's structural members and as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
   2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
   4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
   5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.

7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.

8. Do not attach hangers to steel deck tabs.

9. Do not attach hangers to steel roof deck. Attach hangers to structural members.

10. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.

11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
   1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
   2. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
   3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install exposed suspension system edge trim system in accordance with approved shop drawings and manufacturer's instructions.
   1. Keep hanger wires back from edge of “floating ceilings” such that hangers are concealed from view.

G. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
   1. Arrange directionally patterned acoustical panels as follows:
      a. As indicated on reflected ceiling plans.
      b. Install panels in a basket-weave pattern.
   2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
   3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with the top surface of runner flanges.
   4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom faces of runners.
   5. Re-tegular all cut edges of tegular ceiling tiles.
   6. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
   7. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions unless otherwise indicated.
3.4 INSTALLATION OF ACT-1 through ACT-7

A. Install suspension system and six-inch wide technical panels according to manufacturer's instructions.

3.5 INSTALLATION OF LINEAR ACOUSTICAL WOOD PANEL CEILINGS

A. General: Install 9Wood, Inc. Linear Acoustical Wood Panel Ceilings to comply with manufacturer's instructions and CISCA “Ceiling Systems Handbook”.

B. Refer to Drawings and approved Shop Drawings for custom cantilevered edge detail.

3.6 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.7 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 51 13
SECTION 09 63 40 - STONE FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes the following applications of dimension stone:
   1. Interior flooring.
   2. Stair treads.
   3. Thresholds.
   4. Slate window stools.

B. Related Sections:
   1. Division 04 Section "Stone Masonry" for exterior and interior stone veneer to match stone flooring.
   2. Division 04 Section “Stone Veneer Site Walls” for exterior and interior stone veneer to match stone flooring.
   3. Division 07 Section "Joint Sealants" for sealing control and expansion joints in stonework with elastomeric sealants.
   4. Division 32 Section "Unit Paving" for stone pavers to match interior stone flooring.

1.3 ACTION SUBMITTALS

A. Product Data:
   1. For each variety of stone.
   2. For stone accessories and other manufactured products.

B. LEED Submittals:
   1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
   2. Product Data for Credit IEQ 4.3: For adhesives and grout, documentation including printed statement of VOC content.

C. Shop Drawings: Include plans, sections, details, and attachments to other work.

D. Samples for Initial Selection: For joint materials involving color selection.

E. Samples for Verification:
   1. For each stone type indicated, in sets of Samples not less than 12 inches square. Include four or more Samples in each set and show the full range of variations in appearance characteristics expected in completed Work. Samples will establish the standard by which stone will be judged.
   2. For each color of grout and pointing mortar required.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified fabricator.
1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For stone flooring to include in maintenance manuals. Include Product Data for stone-care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that custom fabricates stone.

B. Installer Qualifications: Stone fabricator.

C. Source Limitations for Stone: Obtain each variety of stone, regardless of finish, from a single quarry, whether specified in this Section or in other Sections of the Specifications, with resources to provide materials of consistent quality in appearance and physical properties.
   1. For stone types that include same list of varieties and sources, provide same variety from same source for each.
   2. Make quarried blocks available for examination by Architect for appearance characteristics.
   3. Make stone slabs available for Architect to examine for appearance characteristics.
      a. Architect will select aesthetically acceptable slabs and will indicate aesthetically unacceptable portions of slabs.
      b. Segregate slabs selected for use on Project and mark backs indicating approval.
      c. Mark and photograph aesthetically unacceptable portions of slabs as directed by Architect.

D. Source Limitations for Other Materials: Obtain each type of cementitious material, grout, admixture, stone accessory, and other material from single source.

E. Mockups: Build mockups to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Build mockup of each type of stone flooring as directed by Architect.
   2. Build mockup of one typical stair tread, full width of final tread.
      a. Coordinate with the mockup of AESS steel for the Atrium monumental stair.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.

B. Store stone on wood A-frames or pallets with nonstaining separators and nonstaining, waterproof covers. Ventilate under covers to prevent condensation.

C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.8 PROJECT CONDITIONS

A. Cold-Weather Requirements for Interior Stone Flooring:
   1. Do not set stone when air or material temperature is below 50 deg F.
   2. Maintain temperature at 50 deg F or above in installation areas during installation and for 7 days after completion unless higher temperatures are required by fabricator's or supplier's instructions.
B. Cold-Weather Requirements for Exterior Stone Paving: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

C. Hot-Weather Requirements for Exterior Stone Paving: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602 and with the following:
   1. Maintain temperature of materials below 100 deg F.
   2. Do not apply mortar to substrates with temperatures of 100 deg F and above.
   3. When the ambient temperature exceeds 90 deg F, fog spray installed stone paving until damp at least 3 times a day until paving is 3 days old.

PART 2 - PRODUCTS

2.1 STONE

A. Products: Subject to compliance with requirements, provide stone of varieties and from sources complying with Division 04 Section “Stone Masonry” and Division 32 Section “Unit Paving.”

2.2 GRANITE

A. Granite: Comply with ASTM C 615.

B. Granite Type 1:
   2. Description: Uniform, fine-grained, gray stone with light veining.
   3. Stair Treads and Risers:
      a. Thickness: as indicated on the Drawings, both 1-1/4” and 2-1/4” stone will be used.
      1) Provide Thermal finish on tread and riser ends where exposed @ glass railing – see Drawings.
      c. Sizes: As indicated on Drawings.
   4. Flooring:
      a. Thickness: 1 1/4”.
      c. GF 1 -- Pattern 1 (typical) – 18” x 36”, 1/3 running bond
      d. GF 2 -- Pattern 2 (accent band along column line F and where indicated) – size and pattern as indicated on drawings: 4'-6” x 2'-0” U.O.N.
      e. GF 3 -- Pattern 3 – 20” x 36”, 1/3 running bond
      f. GF 4 – Pattern 4 (accent band along column lines B and D where indicated; also along column lines D.1 and A.7 on Level 1 only) – size and pattern as indicated on drawings
      g. GF 5 – Pattern 5 (Stair C landings where shown) – size as indicated on drawings
   5. Thresholds:
      a. Thickness: As indicated on schedules.
      b. Width: Width of threshold to match depth of door frame or wall unless otherwise indicated.
      c. Length: Full width of opening unless otherwise indicated.
   6. Match Architect’s samples for color, finish, and other stone characteristics relating to aesthetic effects.

C. Granite Type 2:
   1. Variety: “Southern Yellow Waterjet” as manufactured by Structural Stone, Inc., or equal.
   2. Tile:
a. Thickness: 3/8”.
b. Finish: Thermal.
c. GT -- Pattern 1 – Random size and pattern.
3. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.3 SLATE

A. Slate: Comply with ASTM C 629, Classification II Interior, with a fine, even grain and unfading color, from clear, sound stock.
2. Color: Unfading Black.
3. Stair Treads, Risers and Landing Flooring:
   a. Thickness: as indicated on the Drawings, both 1-1/4” thick and 2-1/4” thick slate will be used.
   b. Finish: Honed.
   c. Sizes: As indicated on Drawings.
4. Tile Type 1:
   a. Thickness: 3/8”.
   b. Finish: Honed.
   c. ST 2 -- Pattern 2 (accent band along column line F and where indicated) – size and pattern as indicated on drawings: 8” x 16” typ running bond U.O.N.
   d. ST 3 -- Pattern 3 (flooring at top and bottom landings of Stair C and where indicated) – size and pattern as indicated on drawings: 8 1/2” x 18” typ thin joint U.O.N.
5. Tile Type 2:
   a. Finish: Natural Cleft.
   b. ST 4 -- Pattern: as shown on Drawings: 6” X 16” typ, 1/3 running bond.
   c. ST 5 -- Pattern: accent band @ column lines B & D where indicated: 8” x 16” typ running bond U.O.N.
6. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
7. Thresholds:
   a. Thickness: As indicated on schedules.
   b. Width: Width of threshold to match depth of door frame or wall unless otherwise indicated.
   c. Length: Full width of opening unless otherwise indicated.
8. Window Stools:
   a. Thickness: ¾”.
   b. Finish: Honed.

2.4 MORTAR MATERIALS

A. Portland Cement: ASTM C 150, Type I or II. Provide natural color or white cement as required to produce mortar color indicated.
1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.

B. Hydrated Lime: ASTM C 207, Type S.

C. Portland Cement-Lime Mix: Packaged blend of portland cement complying with ASTM C 150, Type I or III, and hydrated lime complying with ASTM C 207, Type S.

D. Aggregate: ASTM C 144; except for joints narrower than 1/4 inch and pointing mortar, use aggregate graded with 100 percent passing No. 16 sieve.
1. White Aggregates: Natural white sand or ground white stone.
2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.
E. Mortar Pigments: Natural and synthetic iron oxides, compounded for use in mortar mixes. Use pigments with a record of satisfactory performance in mortar and containing no carbon black.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      b. Davis Colors; True Tone Mortar Colors.
      c. Solomon Colors; SGS Mortar Colors.

F. Latex Additive: Manufacturer's standard non-staining water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement mortar bed, and not containing a retarder.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Bonsal.
      c. Bostik Findley Inc.
      d. C-Cure.
      e. Custom Building Products.
      f. DAP Inc.
      g. Laticrete International, Inc.
      h. MAPEI Corp.
      i. Summitville Tiles, Inc.
      j. TEC Specialty Construction Brands; H. B. Fuller Company.

G. Thin-Set Mortar:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Bonsal.
      c. Bostik Findley Inc.
      d. C-Cure.
      e. Custom Building Products.
      f. DAP Inc.
      g. Laticrete International, Inc.
      h. MAPEI Corp.
      i. Summitville Tiles, Inc.
      j. TEC Specialty Construction Brands; H. B. Fuller Company.
   2. Latex-Portland Cement Mortar: ANSI A118.4, consisting of the following:
      a. Prepackaged Dry-Mortar Mix: Factory-prepared mixture of portland cement; dry, redispersible, ethylene vinyl acetate additive; and other ingredients to which only water needs to be added at Project site.
      b. Mixture of Dry-Mortar Mix and Latex Additive: Mixture of prepackaged dry-mortar mix and styrene-butadiene-rubber or acrylic-resin liquid-latex additive.

H. Water: Clean, non-alkaline and potable.

2.5 GROUT

A. Grout Colors: Match Architect's samples.

B. Polymer Modified Cement Grout: ANSI A118.7.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Bonsal.
      c. Bostik Findley Inc.
      d. C-Cure.
e. Custom Building Products.
f. DAP Inc.
g. Laticrete International, Inc.
h. MAPEI Corp.
i. Summitville Tiles, Inc.
j. TEC Specialty Construction Brands; H. B. Fuller Company.

2. Polymer Type: Either ethylene vinyl acetate, in dry, redispersible form, prepackaged with other dry ingredients, or acrylic resin or styrene-butadiene rubber in liquid-latex form for addition to prepackaged dry-grout mix.

3. Unsanded grout mix for joints 1/8 inch and narrower.

4. Sanded grout mix for joints wider than 1/8 inch.

2.6 ACCESSORIES

A. Temporary Spacers: Resilient plastic, nonstaining to stone, sized to suit joint thickness.

B. Waterproofing and Crack Suppression Membrane: Corrugated polyethelene with dovetail shaped corrugations for adhering to Portland cement mortar and with anchoring webbing on the underside; 39" wide x 3/16" nom thickness.

C. Reinforcing Wire: Galvanized, welded, 0.062-inch- diameter wire; 2-by-2-inch mesh; comply with ASTM A 185 and ASTM A 82 except for minimum wire size.

D. Control-Joint Filler: Neoprene.

E. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer and, if a sealer is specified, by sealer manufacturer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

F. Floor Sealer for Slate: Colorless, slip- and stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated. Sealer to be non-changing in color over time, and provide a matte finish.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Bostik Findley Inc.
   b. Custom Building Products.
   c. Hillyard, Inc.
   d. HMK Stone Care System.
   e. Miracle Sealants Company.
   f. Stonecare International.
   g. Summitville Tiles, Inc.

2.7 MORTAR AND GROUT MIXES

A. Mortar: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated. Do not use calcium chloride.

2. Combine mortar materials and thoroughly mix in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.

3. Mixing Pointing Mortar: Thoroughly mix cementitious and aggregate materials together before adding any water. Add only enough water to produce a damp, unworkable mix that will retain its form when pressed into a ball. Maintain mortar in this dampened condition for one to two hours. Add remaining water in small portions until mortar reaches desired
consistency. Use mortar within 30 minutes of final mixing; do not retemper or use partially hardened material.

B. Portland Cement-Lime Setting Mortar: ASTM C 270, Proportion Specification, Type N. Use amount of water to produce a stiff mixture with a moist surface when bed is ready to receive stone.

C. Latex-Modified Portland Cement Setting Mortar: Proportion and mix portland cement, aggregate, and latex additive to comply with latex-additive manufacturer's written instructions and to produce a stiff mixture with a moist surface when bed is ready to receive stone.

D. Mortar-Bed Bond Coat: Mix neat cement and latex additive to a creamy consistency.

E. Latex-Modified Portland Cement Bond Coat: Proportion and mix portland cement, aggregate, and latex additive to comply with latex-additive manufacturer's written instructions.

F. Pointing Mortar: Comply with requirements indicated above for setting mortar, including type and the following:
1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.

G. Joint Grout: Comply with mixing requirements in referenced ANSI standards and with manufacturer's written instructions.

2.8 STONE FABRICATION

A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.
1. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by Architect.

B. Fabricate stone to comply with requirements indicated and with the following references:
1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
2. For stone not otherwise indicated, comply with recommendations in MIA's "Dimension Stone - Design Manual."

C. Cut stone to produce pieces of thickness, size, and shape indicated, including details on Drawings and Shop Drawings.
1. Pattern: As indicated.
2. Stone Edges: Square cut with top corner slightly eased to prevent snipping.

D. Pattern Arrangement: Fabricate and arrange stone units with veining and other natural markings to comply with the following requirements:
1. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
2. Arrange units with veining with all pieces aligned in the same direction, as directed by Architect.
3. Arrange units in side-slip and end-slip pattern.

E. Fabricate stone thresholds in sizes and profiles as indicated or required to provide transition between adjacent floor finishes.
1. Bevel edges of thresholds at 1:2 slope, aligning lower edge of bevel with adjacent floor finish. Limit height of bevel to 1/2 inch or less, and finish bevel to match face of threshold.

F. Fabricate stone stair treads in sizes and profiles indicated.

G. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units. Clean sawed backs of stones to remove rust stains and iron particles.
   1. Grade and select stone for overall uniform appearance when assembled in place.
   2. Natural variations in appearance are acceptable if installed stone units match range of colors and other appearance characteristics represented in approved Samples and mockups.

H. Stair treads and other stone where bottom is semi-exposed or exposed to view: Finish underside of stone stair treads and other stone material where underside is subjected to view.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces indicated to receive stone, with Installer present, for compliance with requirements and other conditions affecting performance.

B. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of stone flooring.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Vacuum clean concrete substrates to remove dirt, dust, debris, and loose particles.

B. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.

C. Clean dirty or stained stone surfaces by removing soil, stains, and foreign materials before setting. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

3.3 INSTALLATION, GENERAL

A. Do necessary field cutting as stone is set. Cut lines straight and true and finish field-cut edges to match shop-cut edges.
   1. Use power saws with diamond blades to cut stone.

B. Set stone to comply with Drawings and Shop Drawings. Match stone for color and pattern by using units numbered in sequence as indicated on Shop Drawings.

C. Scribe and field-cut stone as necessary to fit at obstructions. Produce neat joints of size specified or indicated.

D. Expansion- and Control-Joint Installation: Locate and install according to Drawings and Shop Drawings.
3.4 INSTALLATION TOLERANCES

A. Variation in Line: For positions shown in plan for edges of paving, flooring, ramps, steps, changes in color or finish, and continuous joint lines, do not exceed 1/8 inch in 96 inches, 1/4 inch in 20 feet, or 3/8 inch maximum.

B. Variation in Joint Width: Do not vary joint thickness more than 1/16 inch or 1/4 of nominal joint width, whichever is less.

C. Variation in Surface Plane: Do not exceed 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 3/8 inch maximum from level or slope indicated.

D. Variation in Plane between Adjacent Units (Lipping): Do not exceed 1/32-inch difference between planes of adjacent units.

3.5 INSTALLATION OF STONE OVER CLEAVAGE MEMBRANE

A. Place cleavage membrane over substrates indicated to receive stone, lapped at least 4 inches at joints.

B. Place mortar bed over cleavage membrane with reinforcing wire fabric fully embedded in middle of mortar bed. Spread, tamp, and screed to uniform thickness at elevations required for setting stone to finished elevations indicated.

C. Mix and place only that amount of mortar bed that can be covered with stone before initial set. Cut back, bevel edge, and discard material that has reached initial set before stone can be placed.

D. Place stone before initial set of mortar occurs. Immediately before placing stone on setting bed, apply uniform 1/16-inch-thick bond coat to bed or to back of each stone unit.

E. Tamp and beat stone with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each unit in a single operation before initial set of mortar; do not return to areas already set and disturb stone for purposes of realigning finished surfaces or adjusting joints.

F. Rake out joints to depth required to receive grout as units are set.

3.6 STONE THRESHOLD INSTALLATION

A. At locations adjacent to stone flooring, install stone thresholds in same type of setting bed as abutting stone flooring unless otherwise indicated.

1. Set thresholds in thin-set, latex-portland cement mortar to comply with ANSI A108.5 at locations where mortar bed would otherwise be exposed above other adjacent paving and flooring.

B. At locations not adjacent to stone flooring, install stone thresholds in thin-set, latex-portland cement mortar to comply with ANSI A108.5.

3.7 STONE STAIR TREAD INSTALLATION

A. Place reinforcing wire fabric tack welded to steel stair pan, according to drawing details, in a manner which will provide keying. Lap at least one full mesh at joints. Support mesh so that it becomes embedded in the middle of the setting bed. Hold edges back from vertical surfaces about 1/2 inch, unless indicated otherwise.
B. Place mortar bed over steel stair pan with reinforcing wire fabric fully embedded in the middle of the mortar bed. Spread, tamp and screed to uniform thickness at elevations required for setting stone to finished elevations indicated.

C. Mix and place only that amount of mortar bed that can be covered with stone before initial set. Cut back, bevel edge, and discard material that has reached initial set before stone can be placed.

D. Place stone before initial set of mortar occurs. Immediately before placing stone on setting bed, apply uniform 1/16-inch-thick bond coat to bed or to back of each stone unit.

E. Tamp and beat stone with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each unit in a single operation before initial set of mortar; do not return to areas already set and disturb stone for purposes of realigning finished surfaces or adjusting joints.

F. Rake out joints to depth required to receive pointing mortar as units are set.

G. Point joints after setting. Fill full with mortar type and color indicated. Tool joints flat, uniform, and smooth, without visible voids.

3.8 GROUTING

A. Grout stone joints with polymer-modified cement grout to comply with ANSI A108.10 and with manufacturer’s written instructions.
   1. Do not use sanded grout for polished stone.
   2. Grout joints as soon as possible after initial set of setting bed. Force grout into joints, taking care not to smear grout on adjoining stone and other surfaces. After initial set of grout, finish joints by tooling to produce a slightly concave polished joint, free of drying cracks.
   3. Cure grout by maintaining in a damp condition for seven days except as otherwise recommended by manufacturer.

B. Grout stone joints with water-cleanable epoxy grout to comply with ANSI A108.6 and with manufacturer’s written instructions.

3.9 ADJUSTING AND CLEANING

A. Remove and replace stonework of the following description:
   1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by Architect.
   2. Defective joints.
   3. Stone paving, flooring, and joints not matching approved Samples and mockups.
   4. Stonework not complying with other requirements indicated.

B. Replace in a manner that results in stonework matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.

C. In-Progress Cleaning: Clean stonework as work progresses. Remove mortar fins and smears before tooling joints.

D. Clean stonework after setting and grouting are complete. Use procedures recommended by stone fabricator for types of application.

E. Apply sealer to cleaned stonework according to sealer manufacturer’s written instructions.

3.10 PROTECTION

A. Prohibit traffic from installed stone for a minimum of 72 hours.
B. Protect installed stonework during construction with nonstaining kraft paper. Where adjoining areas require construction work access, cover stonework with a minimum of 3/4-inch untreated plywood over nonstaining kraft paper.

3.11 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 63 40
SECTION 09 65 13 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Resilient base.
   2. Resilient stair accessories.
   3. Resilient molding accessories.

B. Related Sections:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 09 Section "Linoleum Flooring" for linoleum floor coverings.
   3. Division 09 Section "Resilient Tile Flooring" for resilient floor tile.
   4. Division 09 Section "Carpet Tile" for carpet tile flooring.

C. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:
   1. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.
   2. Credit MR 5.1 and 5.2: Manufacturers certificate demonstrating that each material or product indicated was extracted, harvested or recovered, as well as manufactured within 500 miles of the project site.
   3. Product Data for Credit IEQ 4.1: For adhesives, sealants and chemical-bonding compounds, documentation including printed statement of VOC content and chemical components."Laboratory Test Reports for Credit IEQ 4" Subparagraph below applies to LEED for Schools.

C. Samples for Initial Selection: For each type of product indicated.

D. Samples for Verification: For each type of product indicated, in manufacturer's standard-size Samples but not less than 12 inches long, of each resilient product color, texture, and pattern required.
E. Product Schedule: For resilient products. Use same designations indicated on Drawings.

1.4 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.5 QUALITY ASSURANCE
A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
   1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.
B. Mockups: Provide resilient products with mockups specified in other Sections.

1.6 DELIVERY, STORAGE, AND HANDLING
A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C).

1.7 PROJECT CONDITIONS
A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 95 deg F (3deg C), in spaces to receive resilient products during the following time periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.
B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C).
C. Install resilient products after other finishing operations, including painting, have been completed.

1.8 WARRANTY
A. Stair Tread and Stair Accessories Warranty: Written warranty, signed by manufacturer agreeing to repair or replace rubber stair tread and accessories that fails in materials or workmanship. Failures include, but are not limited to, excessive wear, buckling, cupping, warping, splitting, cracking and delamination.
   1. Contractor shall install rubber stair treads with manufacturer’s recommended adhesives and installation techniques as is required for a five year warranty.
B. Rubber Base Warranty: Written warranty, signed by manufacturer agreeing to repair or replace rubber base that fails in materials or workmanship. Failures include, but are not limited to, excessive wear, buckling, cupping, warping, splitting, cracking and delamination.

1. Contractor shall install rubber base with manufacturer’s recommended adhesives and installation techniques as is required for a three year warranty.

PART 2 - PRODUCTS

2.1 RESILIENT BASE

A. Resilient Base:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Allstate Rubber Corp.; Stoler Industries.
   b. Armstrong World Industries, Inc.
   c. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
   d. Endura Rubber Flooring; Division of Burke Industries, Inc.
   e. Estrie Products International; American Biltrite (Canada) Ltd.
   f. Flexco, Inc.
   g. Johnsonite.
   h. Mondo Rubber International, Inc.
   i. Musson, R. C. Rubber Co.
   j. Nora Rubber Flooring; Freudenberg Building Systems, Inc.
   k. PRF USA, Inc.
   l. Roppe Corporation, USA.
   m. VPI, LLC; Floor Products Division.

1. Material Requirement: Type TP (rubber, thermoplastic).

C. Minimum Thickness: 0.125 inch.

D. Height: 2-1/2 inches, unless otherwise indicated on Drawings.

E. Lengths: Coils in manufacturer’s standard length.

F. Outside Corners: Preformed.

G. Inside Corners: Job formed or preformed.

H. Finish: As selected by Architect from manufacturer’s full range.

I. Colors and Patterns: As selected by Architect from full range of standard and premium industry colors.

2.2 RESILIENT STAIR ACCESSORIES

A. Resilient Stair Treads:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
   b. Endura Rubber Flooring; Division of Burke Industries, Inc.
   c. Estrie Products International; American Biltrite (Canada) Ltd.
   d. Flexco, Inc.
   e. Johnsonite.
   f. Mondo Rubber International, Inc.
   g. Musson, R. C. Rubber Co.
   h. Nora Rubber Flooring; Freudenberg Building Systems, Inc.
   i. PRF USA, Inc.
   j. R.C.A. Rubber Company (The).
   k. Roppe Corporation, USA.
   l. VPI, LLC; Floor Products Division.

B. Resilient Stair Treads Standard: ASTM F 2169.
   1. Material Requirement: Type TS (rubber, vulcanized thermoset).
   2. Surface Design:
      a. Class 2, Pattern: Raised-disc design.
   1. Manufacturing Method: If required by Code or the authorities having jurisdiction, use Group 1, tread with embedded abrasive strips and/or Group 2, tread with contrasting color for the visually impaired.

C. Nosing Style: Square, adjustable to cover angles between 60 and 90 degrees.

D. Nosing Height: 1-1/2 inches, unless otherwise indicated.

E. Thickness: 1/4 inch and tapered to back edge.

F. Size: Lengths and depths to fit each stair tread in one piece.

G. Risers: Smooth, flat, toeless, height and length to cover risers; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
   1. Thickness: 0.125 inch.

H. Stringers: Of same thickness as risers, height and length after cutting to fit risers and treads and to cover stair stringers; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.

I. Colors and Patterns: As selected by Architect from full range of standard and premium industry colors.

2.3 RUBBER FLOOR TILE, GENERAL

2.4 RUBBER FLOOR TILE – STAIR LANDINGS

   A. Basis of Design Product: Subject to compliance with requirements, provide "Raised Disc Finish Rubber Tile," as manufactured by Roppe Corporation, or comparable product.
B. Tile Standard: ASTM F 1344, Class I-B, homogeneous rubber tile, through mottled.

C. Hardness: Min 85 Shore A, per ASTM F1344 and ASTM D-2240.

D. Wearing Surface: Smooth Molded pattern.
   1. Molded-Pattern Figure: Raised Disc.

E. Thickness: 1/8 inch (3.175 mm)

F. Size: 12 x 12 inches.

G. Edge Style: Square Edge.

H. Seaming Method: N/A

I. Attachment: Adhered.

J. Colors and Patterns: As selected by Architect to match stair riser and treads.

2.5 RESILIENT STAIR ACCESSORIES AT LECTURE HALL (022)

A. See Section 09 68 13 Tile Carpeting, Division 2.2 C

2.6 RESILIENT MOLDING ACCESSORY

A. Resilient Molding Accessory:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
      b. Flexco, Inc.
      c. Johnsonite.
      d. R.C.A. Rubber Company (The).
      e. Roppe Corporation, USA.
      f. VPI, LLC; Floor Products Division.

B. Description: Carpet edge for glue-down applications, Nosing for carpet, Nosing for resilient floor covering, Reducer strip for resilient floor covering, Joiner for tile and carpet, Transition strips and other profiles as indicated.

C. Material: Vulcanized, Thermoset Rubber.

D. Profile and Dimensions: As indicated in drawings or as required for each transition between different flooring materials and conditions.

E. Colors and Patterns: As selected by Architect from full range of standard and premium industry colors.
2.7 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by manufacturer to suit resilient products and substrate conditions indicated.
   1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), except that adhesive for rubber stair treads shall have a VOC content of 60 g/L or less.

C. Stair-Tread-Nose Filler: Two-part epoxy compound recommended by resilient tread manufacturer to fill nosing substrates that do not conform to tread contours.

D. Floor Polish: Provide protective liquid floor polish products as recommended by resilient stair tread manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer’s written instructions to ensure adhesion of resilient products.

B. Concrete Substrates for Resilient Stair Treads and Accessories: Prepare according to ASTM F 710.
   1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
   2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
   3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.
   4. Moisture Testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing.
      a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
      b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have maximum 75 percent relative humidity level measurement.
C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install resilient products until they are same temperature as the space where they are to be installed.

1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

### 3.3 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

G. Preformed Corners: Install preformed corners before installing straight pieces.

H. Job-Formed Corners:

1. Inside Corners: Use straight pieces of maximum lengths possible. Form without producing discoloration (whitening) at bends.

### 3.4 RESILIENT ACCESSORY INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.

B. Resilient Stair Accessories:

1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
2. Tightly adhere to substrates throughout length of each piece.
3. For treads installed as separate, equal-length units, install to produce a flush joint between units.

C. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of carpet or resilient floor covering that would otherwise be exposed.
3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.

B. Perform the following operations immediately after completing resilient product installation:
   1. Remove adhesive and other blemishes from exposed surfaces.
   2. Sweep and vacuum surfaces thoroughly.
   3. Damp-mop surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, visible adhesive and surface blemishes from resilient stair treads and horizontal surfaces before applying liquid floor polish. Use commercially available product acceptable to manufacturer.
   1. Coordinate selection of floor polish with Owner's maintenance service.
   2. Apply number of coats recommended by manufacturer.

E. Cover resilient products with undyed untreated kraft paper until Substantial Completion.

F. Do not move heavy and sharp objects directly over surfaces. Place hardboard or plywood panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels.

3.6 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 65 13
SECTION 09 65 16.13 - LINOUEM FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Linoleum floor tile.
   2. Linoleum sheet flooring.

B. Related Sections:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 09 Section "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with linoleum floor covering.

C. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:
   1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC contents.
   2. Refer to Division 1 Section “LEED Requirements” for additional submittal requirements.
   3. Credits MR 4.1 and MR 4.2: Product Data indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.
      a. Include statement indicating costs for each product having recycled content.
   4. Product Data for Credit MR 6.0: For linoleum flooring, including printed statement of costs for each rapidly renewable material.
   5. Refer to Division 1 Section “Sustainable Design Requirements” for additional submittal requirements.

C. Shop Drawings: For each type of floor covering. Include floor covering layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
   1. Show details of special patterns.

D. Samples for Initial Selection: For each type of floor covering indicated.
   1. Include similar Samples of installation accessories involving color selection.

E. Samples for Verification: In manufacturer's standard size, but not less than four (4) full size tiles of each color and pattern of floor covering required.
F. Heat-Welded Seam Samples: For each floor covering product and welding bead color and pattern combination required; with seam running lengthwise and in center of 6-by-9-inch Sample applied to rigid backing and prepared by Installer for this Project.

G. Product Schedule: For floor covering.

H. Warranty: Submit Manufacturer’s warranty as specified in this section.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of floor covering to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Floor Tile: Furnish 1 box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.
   2. Sheet Flooring: Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, in roll form and in full roll width for each color, pattern, and type of sheet flooring installed.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor covering installation.
   1. Engage an installer who employs workers for this Project who are trained or certified by manufacturer for installation techniques required.

B. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
   1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store floor coverings and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 65 deg F (18 deg C) or more than 90 deg F (32 deg C).
   1. Floor Tile: Store on flat surfaces.

1.9 PROJECT CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 95 deg F (35 deg C), in spaces to receive floor coverings during the following time periods:
   1. 72 hours before installation.
   2. During installation.
3.  72 hours after installation.

B.  Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C).

C.  Close spaces to traffic during floor covering installation.

D.  Close spaces to traffic for 72 hours after floor covering installation.

E.  Install floor coverings after other finishing operations, including painting, have been completed.

1.10 WARRANTY

A.  Provide Manufacturer’s standard five year warranty commencing on date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A.  Basis-of-Design Product: Subject to compliance with requirements, provide product listed below or comparable product meeting the requirements of this section:
   1.  “Walton Uni” Linoleum sheet product as manufactured by Forbo Flooring, Inc.
   2.  “Marmoleum Dual” Linoleum tiles as manufactured by Forbo Flooring, Inc.

2.2 LINOLEUM FLOOR COVERING

A.  Floor Tile: ASTM F 2195, Type I, linoleum floor tile with fibrous backing.
   1.  Nominal Floor Tile Size: 20 by 20 inches.

B.  Sheet Flooring: ASTM F 2034, Type I, linoleum sheet with backing.
   1.  Roll Size: In manufacturer’s standard length by not less than 78 inches wide.

D.  Thickness: 0.10 inch.

E.  Finish coat: Provide manufacturer’s proprietary top coat finish,

F.  Slip Resistance: 0.6 per ASTM D2047.

G.  Castor Resistance: EN 425: Suitable for office chairs with castors.

H.  Colors and Patterns: As selected by Architect from full range of standard and premium industry colors and patterns.

2.3 INSTALLATION MATERIALS

A.  Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.
B. Adhesives: Water-resistant type recommended by manufacturer to suit products and substrate conditions indicated.
   1. Adhesives shall have a VOC content of not more than 50 g/L when calculated according to 40 CFR 59, Subpart DEPA Method 24).

   1. As selected by Architect from manufacturer's full range to match linoleum floor covering.

D. Floor Polish: Provide protective liquid floor polish products as recommended by manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor coverings.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings.

B. Concrete Substrates: Prepare according to ASTM F 710.
   1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
   2. Remove substrate coatings and other substances that are incompatible with floor covering adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
   3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
   4. Moisture Testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing.
      a. Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
      b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have maximum 75 percent relative humidity level measurement.
      c. Proceed with installation only after verifying that floor substrate and environmental conditions meet manufacturer's requirements.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install floor coverings until they are same temperature as space where they are to be installed.
   1. Move floor coverings and installation materials into spaces where they will be installed at least 72 hours in advance of installation.
E. Sweep and vacuum clean substrates to be covered by floor coverings immediately before installation.

3.3 INSTALLATION, GENERAL

A. Comply with manufacturer's written instructions for installing floor coverings.

B. Scribe and cut floor coverings to butt neatly and tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings.

C. Extend floor coverings into toe spaces, door reveals, closets, and similar openings.

D. Maintain reference markers, holes, or openings that are in place or marked for future cutting by repeating on floor coverings as marked on subfloor. Use chalk or other nonpermanent marking device.

E. Install floor coverings on covers for telephone and electrical ducts and similar items in finished floor areas. Maintain overall continuity of color and pattern between pieces of floor covering installed on covers and adjoining floor covering. Tightly adhere floor covering edges to substrates that abut covers and to cover perimeters.

F. Adhere floor coverings to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

G. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and use welding bead to permanently fuse sections into a seamless floor covering. Prepare, weld, and finish seams to produce surfaces flush with adjoining floor covering surfaces.

3.4 LINOLEUM FLOOR TILE INSTALLATION

A. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so floor tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay floor tiles square with room axis in running bond pattern in orientation indicated or otherwise directed by Architect.

B. Match floor tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.

1. Lay floor tiles with grain running in one direction.

3.5 LINOLEUM SHEET FLOORING INSTALLATION

A. Unroll sheet floorings and allow them to stabilize before cutting and fitting.

B. Lay out sheet floorings as follows:

1. Maintain uniformity of floor covering direction.

2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches away from parallel joints in floor covering substrates.

3. Match edges of floor coverings for color shading at seams.

4. Avoid cross seams.

5. Eliminate deformations that result from hanging method used during drying process (stove bar marks).
3.6 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of floor coverings.

B. Perform the following operations immediately after completing floor covering installation:
   1. Remove adhesive and other blemishes from exposed surfaces.
   2. Sweep and vacuum surfaces thoroughly.
   3. Damp-mop surfaces to remove marks and soil.

C. Protect floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, visible adhesive and surface blemishes from floor coverings before applying liquid floor polish.
   1. Apply number of coats as recommended by manufacturer for initial floor finishing.

E. After allowing drying room film (yellow film caused by linseed oil oxidation) to disappear, cover floor coverings until Substantial Completion.

F. Do not move heavy and sharp objects directly over floor covering surfaces. Place plywood or hardboard panels over floor coverings and other objects while they are being moved. Slide or roll objects over panels without moving panels.

G. Replace all damaged or loose linoleum tile prior to final completion.

3.7 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 65 16.13
SECTION 09 66 10 - EPOXY TERRAZZO FLOORING W/RECYCLED GLASS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Thin-set, epoxy-resin terrazzo flooring.

B. Related Requirements:

1. Division 07 Section "Joint Sealants" for sealants installed with terrazzo.

1.3 DEFINITIONS

A. Aggregate: Recycled glass (80%).

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to terrazzo including, but not limited to, the following:

a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.

b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

c. Review special terrazzo designs and patterns.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
3. Product Data for Credit IEQ 4.3: For sealers, documentation including printed statement of VOC content.
4. Product Data for Credit IEQ 4.3: For terrazzo flooring, documentation from an independent testing agency indicating compliance with the FloorScore Standard.

C. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work. Show layout of the following:
   1. Divider strips.
   2. Accessory strips.

D. Samples for Initial Selection: NTMA color plates showing the full range of colors and patterns available for each terrazzo type.

E. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo sample to identify manufacturer’s matrix color and aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in size indicated below:
   1. Terrazzo: Three (3) samples, minimum 6-inch- square for each finished combination of Epoxy Resin Color and Glass Aggregate Color for acceptance before proceeding with the Work.
   2. Accessories: 6-inch- long Samples of each exposed strip item required.

1.6 INFORMATIONAL SUBMITTALS
A. Qualification Data: For Installer.
B. Material Certificates: For each type of terrazzo material or product, from manufacturer.
C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.

1.7 CLOSEOUT SUBMITTALS
A. Maintenance Data: For terrazzo to include in maintenance manuals.

1.8 QUALITY ASSURANCE
A. Fabricator Qualifications: Company specializing in fabricating work specified in this Section with minimum five years experience in type work required for Project.
B. Installer Qualifications:
   1. Engage an installer who is a contractor member of NTMA.
   2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer’s products.
C. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant,
and repair materials of type and from source recommended by manufacturer of primary materials.

D. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

E. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups for terrazzo including accessories.
   a. of typical poured-in-place flooring condition for each color and pattern in locations directed by Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.

B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.

B. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.

C. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.

D. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.
2.2 ACCEPTABLE FABRICATORS

A. Basis of Design: Subject to compliance with requirements indicated provide products from fabricators listed below, or established equal:
   1. EnviroGLAS®, 5048 Tennyson Parkway, Suite 202, 972.473.3725, 888.523.7894 toll free voice.

2.3 MATERIAL

A. EnvioTRAZ Epoxy Terrazzo with Glass and/or Porcelain Aggregate: Provide sound, hard, durable, epoxy terrazzo of uniform strength, color, and texture, free of flaws, cracks, seams, or other mineral or organic defects which affect visual appearance or structural integrity.
   1. EnviroPOxy Resin Performance Criteria without EnviroSCAPE added:

<table>

2. EnviroPOXY Resin color: As selected by Architect from Manufacturer’s full available range of standard and premium colors.

B. Aggregate:
   1. 100% Pre and/or Post Recycled Glass and/or Porcelain Aggregate.
   2. EnviroSCAPE Aggregate: As supplied by EnviroGLAS® LLC ‘ONLY’
   3. Sizes to conform to NTMA Gradation standards. Aggregate color as selected by Architect from Manufacturer’s full available range of standard and premium colors.

C. EnviroTRAZ Epoxy Terrazzo Flooring with Glass Matrix: Provide sound, hard, durable, epoxy terrazzo of uniform strength, color, and texture, free of flaws, cracks, seams, or other mineral or organic defects which affect visual appearance or structural integrity.
   1. EnviroPOXY Resin blended with three volumes of EnviroSCAPE glass finished to nominal 1/4" thickness, per Manufacturer’s recommendations:
   2. Performance criteria with EnviroSCAPE aggregate:

3. Acceptable **Product**: EnviroTRAZ™.

4. Proportions:
   a. EnviroPOXY Terrazzo Topping: Recommended (80) 50 lb bags per 1000 feet of coverage.

5. Mixing:
   a. EnviroPOXY Terrazzo Topping: Blend and Mix EnviroSCAPE glass aggregate, Filler, and EnviroPOXY Resin per Manufacturer's recommendations.

D. Strips:
   1. Stop and Divider Strips: L type, zinc, depth as required.

E. Terrazzo Cleaner:
   1. Ph factor between 7 and 10, where applicable.
   2. Biodegradable and phosphate-free.

F. Sealer:
   1. Ph factor between 7 and 10, where applicable.
   2. Shall not discolor or amber
   3. Flash Point: ASTM D-56 – 80 degrees Fahrenheit minimum, where applicable.
   4. UL-listed as “Slip Resistant”.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

B. Concrete Slabs:
1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
   a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
   b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations.
   c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
   1. Moisture Testing: Perform tests indicated below.
      a. Calcium Chloride Test: Perform anhydrous calcium chloride test per ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
         1) Perform tests so that each test area does not exceed 200 sq. ft., and perform not less than two tests in each installation area and with test areas evenly spaced in installation areas.
      b. In-Situ Probe Test: Perform relative-humidity test using in-situ probes per ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative-humidity-level measurement.
      c. Test Method: Test for moisture content by method recommended in writing by terrazzo manufacturer. Proceed with installation only after substrates pass testing.

D. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
   1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 EPOXY TERRAZZO INSTALLATION

A. Comply with NTMA's written recommendations for terrazzo and accessory installation.

B. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."

C. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet; noncumulative.

D. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.

E. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
F. Flexible Reinforcing Membrane:
   1. Prepare and prefill substrate cracks with membrane material.
   2. Install membrane to produce full substrate coverage in areas to receive terrazzo.
   3. Reinforce membrane with fiberglass scrim.
   4. Prepare membrane according to manufacturer’s written instructions before applying substrate primer.

G. Primer: Apply to terrazzo substrates according to manufacturer’s written instructions.

H. Strip Materials:
   1. Divider Strips:
      a. Locate divider strips in locations indicated.
      b. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
   2. Accessory Strips: Install as required to provide a complete installation.

I. Placing Terrazzo
   1. Prime sub-floor in accordance with Manufacturer’s recommendations.
   2. Place terrazzo mixture in panels formed by divider strips. Trowel mixture to top of strips.
   3. Allow to cure 24 hours prior to grinding.

J. Finishing: finish terrazzo to NTMA requirements.
   1. Rough Grinding: Grind with 24 or finer grit stones or with comparable diamond plates.
      a. Follow initial grind with 80 – 120 grit stones.
   2. Grouting: Cleanse with clean water and rinse thoroughly.
      a. Remove excess rinse water and allow drying.
      b. Machine or hands apply grout to fill voids completely.
      c. Allow grout to cure.
   3. Fine Grinding: Grind with 220 or finer grit stones to achieve superior finish.

3.4 REPAIR
A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA’s written recommendations, as approved by Architect.

3.5 CLEANING AND PROTECTION
A. Cleaning:
   1. Remove grinding dust from installation and adjacent areas.
   2. Wash surfaces with cleaner according to NTMA’s written recommendations and manufacturer’s written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:
   1. Seal surfaces according to NTMA’s written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

3.6 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:

   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:

   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 66 10
SECTION 09 68 13 - TILE CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes modular, tufted carpet tile as part of the base bid.

B. Related Requirements:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 09 Section "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet tile.
   3. Division 09 Section "Access Flooring" for access floor below carpet tile.

C. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1 and 4.3.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination".
   1. Review methods and procedures related to carpet tile installation including, but not limited to,
      the following:
      a. Review delivery, storage, and handling procedures.
      b. Review ambient conditions and ventilation procedures.
      c. Review subfloor preparation procedures.
      d. Coordinate with access floor.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
   2. Include installation recommendations for each type of substrate.

B. LEED Submittals:
   1. Product Data for Credit EQ 4.1:
      a. For sealants, including printed statement of VOC content and chemical components.
   2. Product Data for Credit EQ 4.3:
      a. For carpet tile, documentation indicating compliance with testing and product requirements of CRI's "Green Label Plus" program.
      b. For installation adhesive, documentation including printed statement of VOC content.
   3. Refer to Division 1 Section "Sustainable Design Requirements" for additional submittal requirements.
   4. Credits MR 4.1 and MR 4.2: Product Data indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.

C. Shop Drawings: Show the following:
1. Columns, doorways, enclosing walls or partitions, built-in cabinets, floor boxes for electrical and data distribution, and locations where cutouts are required in carpet tiles.
2. Carpet tile installation on stepped platforms of Lecture Hall.
3. Extent of and joints within access flooring below as they relate to joints of carpet tile above.
4. Carpet tile type, color, and dye lot.
5. Locations where dye lot changes occur.
6. Type of subfloor.
7. Type of installation.
8. Pattern of installation.
9. Pattern type, location, and direction.
11. Type, color, and location of edge, transition, and other accessory strips.
12. Transition details to other flooring materials.
13. Nosing details at edge of stair treads and platforms.

D. Samples for selection: For each product, submit samples demonstrating the manufacturer's full range of colors available.

E. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
   1. Carpet Tile: A minimum of four full-size samples of each type and color selected by architect.
   2. Exposed Edge, Transition, and other Accessory Stripping: 12-inch-long Samples.

F. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

G. Sustainability: Provide the Statement of the Achievement Level the carpet has attained for Bronze, 28 to 36; Silver, 37 to 51; or Gold, 52 to 70 points, based on specific Sustainable Attribute Performance for all product stages according to ANSI/NSF 140.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.

C. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
   1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
   2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.
1.8 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association or who can demonstrate compliance with its certification program requirements.

B. Fire-Test-Response Ratings: Where indicated, provide carpet tile identical to those of assemblies tested for fire response according to NFPA 253 by a qualified testing agency.

C. Mockups: Before installing carpet tile, build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
   1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI 104.

1.10 FIELD CONDITIONS

A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.

B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.

C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

1.11 WARRANTY

A. Special Warranty for Carpet Tiles: Manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.
   1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
   2. Failures include, but are not limited to, more than 10 percent edge raveling, snags, runs, dimensional stability, excess static discharge, loss of tuft bind strength, loss of face fiber, and delamination.
   3. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CARPET TILE – Type-1

A. Basis-of-Design Product: Subject to compliance with requirements, provide Bentley Prince Street "Really Late Nite TV"

B. Color: Custom Color

C. Pattern: Bentley Prince Street “Really Late Nite TV”, Style: 4RV240AB0T.

D. Fiber Content: Antron Lumena nylon.
E. Fiber Type:

F. Recycled Content: 28% - 32% post consumer.

G. Dye Method: 100% Solution dye.

H. Pile Characteristic: Tufted Tip-Sheared pile.

I. Pile Height: varies due to texture; High 0.206 inch, Medium 0.158 inch, Low 0.094 inch

J. Density:

K. Pile Thickness: .38 for finished carpet tile.

L. Stitches: 10 per inch.

M. Gauge: 1/12 ends per inch.

N. Surface Pile Weight: 24 oz./sq. yd.

O. Total Thickness: 0.380 inch for finished carpet tile.

P. Primary Backing: Select RC Cushion Tile backing materials; consult manufacturers.

Q. Secondary Backing: NexStep Cushion Tile backing materials; consult manufacturers.

R. Size: 19.69 inches by 19.69 inches.

T. Antimicrobial Treatment: Manufacturer's standard "Intersept" treatment. (AATCC 138 washed)

U. Performance Characteristics: As follows:
   1. Radiant Panel Passes Class 1 (ASTM E-648) Critical Radiant Flux
   2. Dry Breaking Strength: Not less than 100 lbf according to ASTM D 2646.
   3. Tuft Bind: according to ASTM D 1335.
   4. Delamination: according to ASTM D 3936.
   5. Dimensional Tolerance: Within 1/32 inch of specified size dimensions, as determined by physical measurement.
   6. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
   8. Colorfastness to Crocking
   9. Colorfastness to Light:
   10. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
   11. Electrostatic Propensity: Less than 3.5 kV according to AATCC 134.

2.2 CARPET TILE – Type-2

A. Basis-of-Design Product: Subject to compliance with requirements, provide InterfaceFLOR “Monochrome”

B. Color: Granite

C. Pattern: InterfaceFLOR “Monochrome”, 13857101837.
   1. Style: 13857
2. Color: 101837

D. Fiber Content: 100 percent nylon 6, 6

E. Fiber Type:

F. Recycled Content: 31% - 34% post industrial; 32% post consumer.

G. Dye Method: 100% Solution dye.

H. Pile Characteristic: Tufted Textured Loop pile.

I. Pile Height: 0.18 inch.

J. Density:

K. Pile Thickness: ___ for finished carpet tile

L. Stitches: 10.3 per inch.

M. Gauge: 1/12 ends per inch.

N. Surface Pile Weight: 24 oz./sq. yd.>

O. Primary Backing/Backcoating: GlasBac RE Tile backing materials; consult manufacturers.

P. Secondary Backing: GlasBac Tile or NexStep backing materials; consult manufacturers.

Q. Size: 19.69 inches by 19.69 inches.

S. Antimicrobial Treatment: (AATCC 138 Washed) (AATCC 174 Parts 2&3) Intersept

T. Performance Characteristics: As follows:
   1. Radiant Panel: (AST< E-648) Class 1
   2. Dry Breaking Strength: Not less than 100 lbf according to ASTM D 2646.
   3. Tuft Bind: according to ASTM D 1335.
   4. Delamination: according to ASTM D 3936.
   5. Dimensional Tolerance: Within 1/32 inch of specified size dimensions, as determined by physical measurement.
   6. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
   8. Colorfastness to Crocking
   9. Colorfastness to Light:
   10. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
   11. Electrostatic Propensity: Less than 3.0 kV according to AATCC 134.

2.3 CARPET TILE – Type-3

A. Basis-of-Design Product: Subject to compliance with requirements, provide InterfaceFLOR “Monochrome”

B. Color: Custom
C. Pattern: InterfaceFLOR “Monochrome”, 13857-____ (custom color).
   1. Style: 13857
   2. Color: custom

D. Fiber Content: 100 percent nylon 6, 6

E. Fiber Type:

F. Recycled Content: 31% - 34% post industrial; 32% post consumer.

G. Dye Method: 100% Solution dye.

H. Pile Characteristic: Tufted Textured Loop pile.

I. Pile Height: 0.18 inch.

J. Density:

K. Pile Thickness: .119 for finished carpet tile

L. Stitches: 10.3 per inch.

M. Gauge: 1/12 ends per inch.

N. Surface Pile Weight: 24 oz./sq. yd.>

O. Primary Backing/Backcoating: GlasBac RE Tile backing materials; consult manufacturers.

P. Secondary Backing: GlasBac Tile or NexStep backing materials; consult manufacturers.

Q. Size: 19.69 inches by 19.69 inches.

S. Antimicrobial Treatment: (AATCC 138 Washed) (AATCC 174 Parts 2&3) Intersept

T. Performance Characteristics: As follows:
   1. Radiant Panel: (AST< E-648) Class 1
   2. Dry Breaking Strength: Not less than 100 lbf according to ASTM D 2646.
   3. Tuft Bind: according to ASTM D 1335.
   4. Delamination: according to ASTM D 3936.
   5. Dimensional Tolerance: Within 1/32 inch of specified size dimensions, as determined by physical measurement.
   6. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
   8. Colorfastness to Crocking
   9. Colorfastness to Light:
   10. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.
   11. Electrostatic Propensity: Less than 3.0 kV according to AATCC 134.
2.4 Emissions: Provide carpet tile that complies with testing and product requirements of CRI's "Green Label Plus" program.

2.5 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and is recommended by carpet tile manufacturer for releasable installation.
   1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Carpet tile at access floor shall be partial glue down such that carpet tiles may be removed and reinstalled for occasional removal of access flooring.

C. Stair Nosing at Lecture Hall (022):
   1. Profile: Johnsonite, Model RCN-XX-A flexible vinyl stair nosing as manufactured by Johnsonite, or approved equal.
   2. Size: 1 15/16" horizontal face / 2" vertical face; designed to accept ¼" or 5/16" material.
   3. Location: Edge of seating risers in Lecture Hall (nosing to run full length of stepped risers).
   4. Color/Finish: Color/Finish shall be as selected by Architect from manufacturer’s full range of standard and premium colors and finishes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance. Examine carpet tile for type, color, pattern, and potential defects.

B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:
   1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.
   2. Subfloor finishes comply with requirements specified in Division 03 Section "Cast-in-Place Concrete" for slabs receiving carpet tile.
   3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

C. For raised access flooring systems, verify the following:
   1. Access floor complies with installation requirements specified in Division 09 Section "Access Flooring."
   2. Access floor substrate is compatible with carpet tile and adhesive if any.
   3. Underlayment surface is flat, smooth, evenly planed, tightly jointed, and free of irregularities, gaps greater than 1/8 inch, protrusions more than 1/32 inch, and substances that may interfere with adhesive bond or show through surface.

D. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 PREPARATION

A. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.

C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.

D. Clean metal substrates of grease, oil, soil and rust, and prime if directed by adhesive manufacturer. Rough sand painted metal surfaces and remove loose paint. Sand aluminum surfaces, to remove metal oxides, immediately before applying adhesive.

E. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

A. General: Comply with CRI 104, Section 14, "Carpet Modules," and with carpet tile manufacturer's written installation instructions.

B. Installation Method: As recommended in writing by carpet tile manufacturer and approved by owner.

C. Maintain dye lot integrity. Do not mix dye lots in same area.

D. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

E. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

G. Install pattern parallel to walls and borders.

H. Installation Method: Non Directional or as directed by Architect.

I. Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.

3.4 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:
   1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet tile manufacturer.
   2. Remove yarns that protrude from carpet tile surface.

B. Protect installed carpet tile to comply with CRI 104, Section 16, "Protecting Indoor Installations."
C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 68 13
SECTION 09 69 00 - ACCESS FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Access-flooring panels.
   2. Understructure.

B. Related Requirements:
   1. Division 01 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 09 Sections for finish flooring applied over access-flooring panels.
   3. Division 26 Section "Grounding and Bonding for Electrical Systems" for connection to ground of access-flooring understructure.
   4. Division 26 Sections for coordination with cable trays and understructure.
   5. Division 27 Sections for voice and data cabling for service outlets and for coordination with understructure pedestals.

1.3 ALLOWANCES

A. Cutouts in floor panels are required for electrical and data devices in access flooring; coordinate with electrical drawings. Allow for five cutouts.

B. Service outlets are required for electrical and data devices in access flooring; coordinate with electrical drawings. Allow for five devices in access flooring.

1.4 COORDINATION

A. Coordinate location of electrical work in underfloor cavity to prevent interference with access-flooring pedestals.

B. Mark pedestal locations on subfloor using a grid to enable electrical work to proceed without interfering with access-flooring pedestals.

C. Proceed with installation only after completion of other construction within affected spaces.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review connection electrical and data systems.
2. Review and finalize construction schedule and verify availability of materials, Installer’s personnel, equipment, and facilities needed to make progress and avoid delays.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
   1. Product Data for Credit IEQ 4.1: For pedestal-installation adhesives, documentation including printed statement of VOC content.

C. Shop Drawings: Include layout of access-flooring system and relationship to adjoining Work based on field-verified dimensions.
   1. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories, and understructures.

D. Samples for Initial Selection: For each type of product and exposed finish.

E. Samples for Verification: For the following products:
   1. One complete full-size floor panel, pedestal, and understructure unit for each type of access-flooring system required.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of access-flooring system, signed by product manufacturer.

C. Seismic Design Calculations: For seismic design of access-flooring systems including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Preconstruction Test Reports: For preconstruction adhesive field test.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Flooring Panels: 10%
   2. Pedestals: 10%

1.9 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Mockups: Build mockups to verify selections made under Sample submittals to demonstrate aesthetic effects and to set quality standards for materials and execution.
1. Build mockup of typical access-flooring assembly as shown on Drawings. Size to be an area no fewer than five floor panels in length by five floor panels in width.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not install access flooring until spaces are enclosed, subfloor has been sealed, ambient temperature is between 50 and 90 deg F, and relative humidity is not less than 20 and not more than 70 percent.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Access flooring shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Structural Performance: Provide access-flooring systems capable of complying with the following performance requirements according to testing procedures in CISCA's "Recommended Test Procedures for Access Floors":

1. Concentrated Loads: 1250 lbf with the following deflection and permanent set:
   a. Top-Surface Deflection: 0.10 inch.
   b. Permanent Set: 0.010 inch.

3. Rolling Loads: With local or overall deformation not to exceed 0.040 inch.
   a. CISCA Wheel 1: 10 passes 1000 lbf.
   b. CISCA Wheel 2: 10,000 passes 800 lbf.

4. Pedestal Axial Load Test: 6000 lbf.
5. Pedestal Overturning Moment Test: 1000 lbf x inches.
6. Uniform Load Test: 300 lbf/sq. ft. with a maximum top-surface deflection not to exceed 0.040 inch and a permanent set not to exceed 0.010 inch.
7. Drop Impact Load Test: 100 lb.

2.2 MANUFACTURERS

A. Source Limitations: Obtain access-flooring system from single source from single manufacturer.

2.3 FLOOR PANELS

A. Floor Panels, General: Provide modular panels interchangeable with other field panels without disturbing adjacent panels or understructure.

1. Size: Nominal 24 by 24 inches.
2. Attachment to Understructure: Bolted or by gravity to pedestal head. Provide panels with holes drilled in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.

3. One-to-One Carpet Tile: Fabricate panels to accept one-to-one carpet tile.

B. Cementitious-Core Steel Panels: Fabricated from cold-rolled steel sheet, with the die-cut flat top sheet and die-formed and stiffened bottom pan welded together, and with metal surfaces protected against corrosion by manufacturer's standard factory-applied finish. Fully grout internal spaces of completed units with manufacturer's standard cementitious fill.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Tate Access Floor “ConCore 1250 Panel (ConCore Panel 24” with PosiLock Understructure)” or comparable product by one of the following:
   a. ASM Modular Systems, Inc.
   b. Bergvik North America, Inc.
   c. Camino Modular Systems, Inc.
   d. Computer Environments, Inc.
   e. Haworth, Inc.
   f. InterfaceAR.
   g. Maxcess Technologies, Inc.

2.4 UNDERSTRUCTURE

A. Pedestals: Assembly consisting of base, column with provisions for height adjustment, and head (cap); made of steel.
   1. Provide pedestals designed for use in seismic applications.
   2. Base: Square or circular base with not less than 16 sq. in. of bearing area.
   3. Column: Of height required to bring finished floor to elevations indicated. Weld to base plate.
   4. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than 2 inches and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
   5. Head: Designed to support the panel system indicated.
      a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
      b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.

2.5 FLOOR PANEL COVERINGS

A. Provide bare panels without factory-applied floor coverings on traffic surfaces.

2.6 FABRICATION

A. Fabrication Tolerances:
   1. Size: Plus or minus 0.015 inch of required size.
   2. Squareness: Plus or minus 0.015 inch between diagonal measurements across top of panel.
   3. Flatness: Plus or minus 0.035 inch, measured on a diagonal on top of panel.
B. Panel Markings: Clearly and permanently mark floor panels on their underside with panel type and concentrated-load rating.

C. Bolted Panels: Provide panels with holes drilled in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.
   1. Captive Fasteners: Provide fasteners held captive to panels.

D. Cutouts: Fabricate cutouts in floor panels for cable penetrations and service outlets. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with structural performance requirements.
   1. Number, Size, Shape, and Location: As indicated.
   2. Grommets: Where indicated, fit cutouts with manufacturer's standard grommets; or, if size of cutouts exceeds maximum grommet size available, trim edge of cutouts with manufacturer's standard plastic molding with tapered top flange. Furnish removable covers for grommets.
   3. Provide foam-rubber pads for sealing annular space formed in cutouts by cables.

2.7 ACCESSORIES

A. Adhesives: Manufacturer's standard adhesive for bonding pedestal bases to subfloor.
   1. Adhesive shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Post-Installed Anchors: For anchoring pedestal bases to subfloor, provide post-installed anchors as determined to be required by the design criteria conforming with the applicable building codes. The embedment of any post-installed anchor that is required must not exceed 3/4", with the capability to sustain, without failure, a load equal to 1.5 times the loads imposed by pedestal overturning moment on fasteners, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

C. Service Outlets: Standard UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:
   1. Structural Performance: Cover capable of supporting a 1000-lbf concentrated load.
   2. Cover and Box Type: Hinged polycarbonate cover with opening for passage of cables when cover is closed and including frame and steel box or formed-steel plate for mounting electrical receptacles. The service outlet box shall be a drop-in design having a hinged lid with carpet inset and frame with tapered edge.
   3. Location: In center of panel quadrant unless otherwise indicated.
   4. Receptacles and Wiring: Electrical receptacles and wiring for service outlets are specified in Division 26 Sections.
   5. Electrical compartments must be separated from the communications compartments by a metal divider.

D. Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal-closure plates with manufacturer's standard finish.

E. Panel Lifting Device: Panel manufacturer's standard portable lifting device for each type of panel required.

F. Perimeter Support: Where indicated, provide manufacturer's standard method for supporting panel edge and forming transition between access flooring and adjoining floor coverings at same level as access flooring.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer and manufacturer's representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. Verify that substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, foreign deposits, and debris that might interfere with attachment of pedestals.
   2. Verify that concrete floor sealer and finish have been applied and cured.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Lay out floor panel installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than 6 inches.

B. Locate each pedestal, complete any necessary subfloor preparation, and vacuum subfloor to remove dust, dirt, and construction debris before beginning installation.

3.3 INSTALLATION

A. Install access-flooring system and accessories under supervision of access-flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.

B. Adhesive Attachment of Pedestals: Set pedestals in adhesive, according to access-flooring manufacturer's written instructions, to provide full bearing of pedestal base on subfloor.

C. Mechanical Attachment of Pedestals: Attach pedestals to subfloor with post-installed mechanical anchors with an embedment not to exceed 3/4”.

D. Adjust pedestals to permit top of installed panels to be set flat, level, and to proper height.

E. Install flooring panels securely in place, properly seated with panel edges flush. Do not force panels into place.

F. Scribe perimeter panels to provide a close fit with adjoining construction with no voids greater than 1/8 inch where panels abut vertical surfaces.

G. Cut and trim access flooring and perform other dirt-or-debris-producing activities at a remote location or as required to prevent contamination of subfloor under already-installed access flooring.

H. Clean dust, dirt, and construction debris caused by floor installation, and vacuum subfloor area as installation of floor panels proceeds.

I. Install access flooring without change in elevation between adjacent panels and within the following tolerances:
   1. Plus or minus 1/8 inch in any 10-foot distance.
J. Installed panels shall be spaced so that the distance from one end to the other of any line of 12 panels is not less than 24 feet and does not exceed 24'-1/8".

3.4 PROTECTION

A. Prohibit traffic on access flooring for 24 hours and removal of floor panels for 72 hours after installation to allow pedestal adhesive to set.

B. After completing installation, vacuum access flooring and cover with continuous sheets of reinforced paper or plastic. Maintain protective covering until time of Substantial Completion.

C. Replace access-flooring panels that are stained, scratched, or otherwise damaged or that do not comply with specified requirements.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 69 00
SECTION 09 71 00 – INTERIOR METAL SURFACES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes:
   1. Aluminum-faced composite wall panels.
   2. Stainless Steel faced composite wall panels.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal-faced surface.
B. Shop Drawings: Show fabrication and installation layouts of metal-faced composite wall and ceiling panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish among factory-, shop-, and field-assembled work.
   1. Accessories: Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches:
      a. Trim.
      b. Anchorage systems.
C. Samples for Initial Selection: For each type of metal item indicated with factory-applied color finishes.
   1. Include similar Samples of trim and accessories involving color selection.
D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
   1. Metal-Faced Composite Wall Panels: Minimum 12 x 12 inches. Include fasteners, closures, and other metal-faced composite wall panel accessories.
   2. Corrugated Alum Sheet: 12 x 12 inches.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Exterior elevations, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Wall panels and attachments.
2. Girts and Stud framing.
3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
4. Penetrations of wall by pipes and utilities.

B. Warranties: Samples of special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For all metal items to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Source Limitations: Obtain each type of product from single source from single manufacturer.

C. Aesthetic Effect: The Basis-of-Design Products listed herein establish not only performance standards, but also aesthetic standards which must be met by any other products to be considered an acceptable equal.

D. Mockups: Build mockup for each type of interior metal finish to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical wall and corner panel, including soffit where applicable, as indicated by Architect, including supports, attachments, and accessories.
   a. Include four-way joint for metal-faced composite wall panels.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

E. Preinstallation Conference: Conduct conference at Project site.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, sheets, metal-faced composite wall panels, and other manufactured items so as not to be damaged or deformed. Package metal-faced composite wall panels for protection during transportation and handling.

B. Unload, store, and erect metal finish products in a manner to prevent bending, warping, twisting, and surface damage.

C. Store metal-faced composite wall panels vertically, covered with suitable weathertight and ventilated covering. Store metal-faced composite wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal-faced composite wall panels in contact with other materials that might cause staining, denting, or other surface damage. Do not allow storage space to exceed 120 deg F.

D. Retain strippable protective covering on metal-faced composite wall panel for period of panel installation.
1.8 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal-faced composite wall panels to be performed according to manufacturer's written instructions and warranty requirements.

B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal-faced composite wall panel fabrication and indicate measurements on Shop Drawings.

1.9 WARRANTY FOR ALUMINUM COMPOSITE PANELS

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal-faced composite wall panel assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures, including rupturing, cracking, or puncturing.
   b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal-faced composite wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
   a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
   b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
   c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 10 years from date of Substantial Completion.

1.10 WARRANTY FOR STAINLESS STEEL AND CORRUGATED ALUMINUM PANELS

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal-faced composite wall panel assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures, including rupturing, cracking, or puncturing.
   b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.
PART 2 - PRODUCTS

2.1 MATERIALS

A. Aluminum Sheet for Composite Panels: Coil-coated sheet, ASTM B 209, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.

1. Surface: Smooth, flat finish.
2. Exposed Coil-Coated Finishes:
   a. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

2.2 MISCELLANEOUS METAL FRAMING

A. Zee Clips: 0.079-inch nominal thickness.

2.3 MISCELLANEOUS MATERIALS

A. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. All fasteners to be concealed.

2.4 ALUMINUM-FACED COMPOSITE WALL PANELS

A. General: Provide factory-formed and -assembled, metal-faced composite wall panels fabricated from two metal facings bonded, using no glues or adhesives, to solid, extruded thermoplastic core; formed into profile for installation method indicated. Include attachment system components and accessories.

1. Fire-Retardant Core: Noncombustible, with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
   a. Flame-Spread Index: 0.
   b. Smoke-Developed Index: 5.
2. Basis-of-Design Product: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Alcan Composites USA Inc.; Alucobond Plus.

B. Aluminum-Faced Composite Wall Panels: Formed with 0.020-inch-thick, coil-coated aluminum sheet facings.

1. Panel Thickness: 4mm.
2. Core: Fire retardant.
3. Exterior Finish: 3-coat fluoropolymer.
b. Number of Colors: Three.
c. Both solid and metallic colors will be used.

C. Attachment System Components: Formed from extruded aluminum Z-clips as shown on Drawings.

2.5 STAINLESS STEEL FACED COMPOSITE WALL PANELS

A. General: Provide metal-faced composite wall panels fabricated from one layer of stainless steel adhered to fire retardant MDF board. Include attachment system components and accessories.

1. Fire-Retardant Core: Noncombustible, with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
   a. Adhere stainless sheet with contact adhesive to ½" thick fire retardant MDF backer board. Refer to Division 06 Section “Interior Architectural Woodwork” for MDF requirements.
   b. Flame-Spread Index: 25 or less.
   c. Smoke-Developed Index: 450 or less.

2. Basis-of-Design Product: Subject to compliance with requirements, available stainless steel sheet finish products include, but are not limited to, the following:
      1) Finish: Seastone.
      2) Thickness: 1.5 mm.
      3) Formed edges and corners.

B. Attachment System Components: Formed from extruded aluminum Z-clips as shown on Drawings.
   1. All fasteners to be concealed.
   2. Refer to the Drawings for attachment details.

2.6 CORRUGATED ALUMINUM PANEL

1. Basis-of-Design Product: Subject to compliance with requirements, available corrugated aluminum sheet finish products include, but are not limited to, the following:
   a. Forms + Surfaces: Bonded Aluminum.
      1) Pattern: Delta.
      2) Thickness: 4.3 mm.
      3) Finish: Natural.

B. Attachment System Components: Formed from extruded aluminum Z-clips as shown on Drawings.
   1. All fasteners to be concealed.
   2. Refer to the Drawings for attachment details.

2.7 FABRICATION

A. General: Fabricate and finish metal-faced composite wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
B. Metal-Faced Composite Wall Panels: Trim and square edges of sheets with no displacement of face sheets or protrusion of core material.

1. Form panel lines, breaks, and angles to be sharp and true, with surfaces free from warp and buckle.
2. Fabricate panels with sharply cut edges, with no displacement of face sheets or protrusion of core material.
3. Fabricate panels with panel stiffeners, as required to comply with deflection limits, attached to back of panels with structural silicone sealant or bond tape.
4. Dimensional Tolerances:
   a. Panel Bow: 0.8 percent maximum of panel length or width.
   b. Squareness: 0.25 inch maximum.

2.8 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal-faced composite wall panel supports, and other conditions affecting performance of the Work.

1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal-faced composite wall panel manufacturer.

2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal-faced composite wall panel manufacturer.

B. Examine roughing-in for components and systems penetrating metal-faced composite wall panels to verify actual locations of penetrations relative to seam locations of panels before panel installation.

C. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 METAL-FACED COMPOSITE WALL PANEL INSTALLATION

A. General: Install metal-faced composite wall panels in orientation, sizes, and locations indicated on Drawings. Anchor panels and other components of the Work securely in place, with provisions for thermal and structural movement, using concealed z-clip system.
   1. Shim or otherwise plumb substrates receiving metal-faced composite wall panels.
   2. No exposed fasteners permitted.

B. Fasteners:
   1. As indicated on the Drawings.

C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal-faced composite wall panel manufacturer.

D. Attachment System Installation, General: Install attachment system required to support metal-faced composite wall panels and to provide a complete system.

E. Clip Installation: Attach panel clips to supports at each metal-faced composite wall panel joint at locations and spacings recommended by manufacturer. Attach routed-and-returned flanges of wall panels to panel clips with manufacturer's standard fasteners.

3.3 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal-faced composite wall panel units within installed tolerance of 1/4 inch in 20 feet, nonaccumulative, on level, plumb, and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.4 CLEANING

A. Remove temporary protective coverings and strippable films, if any, as metal-faced composite wall panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal-faced composite wall panel installation, clean finished surfaces as recommended by panel manufacturer. Maintain in a clean condition during construction.

B. Replace metal-faced composite wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 71 00
SECTION 09 84 33 - SOUND-ABSORBING WALL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes shop-fabricated acoustic panel units tested for acoustical performance, including:
   1. Perforated Metal facing for Sound-absorbing wall panels (straight and curved configurations).
   2. Bonded Acoustical Cotton used in sound absorbing wall panels (straight and curved configurations).
B. Related Sections:
   1. Division 01 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 06 Section "Interior Architectural Woodwork".
C. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 DEFINITIONS
A. NRC: Noise Reduction Coefficient.
B. SAA: Sound Absorption Average.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of fabric panel facing, metal facing, core material, and mounting indicated. Submit manufacturer's product data and installation instructions.
B. LEED Submittals:
   1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit MR 5.1: For products and materials required to comply with requirements for regionally manufactured materials. Include statement indicating
cost, location of manufacturer, and distance to Project for each regionally manufactured material.

C. Shop Drawings: For sound-absorbing wall units. Include mounting devices and details; details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge and core materials.

1. Include elevations showing panel sizes and direction of fabric weave and pattern matching. Coordinate acoustic panels with Interior Architectural Millwork.
2. Include elevations showing panel sizes for units with perforated metal facings.

D. Samples for Initial Selection: For each type of sound-absorbing wall unit manufacturer's full range.

E. Samples for Verification: For the following products, prepared on Samples of size indicated below:
   1. Fabric: Full-width by approximately 36-inch-long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied, showing full range of exposed texture to be expected in completed work. Mark top and face of fabric. Coordinate with Interior Architectural Millwork samples.
   2. Perforated Metal: Full-width by approximately 36-inch-long Sample integrated with Bonded Acoustical Cotton core showing full range of exposed texture to be expected in completed work.
   3. Panel Edge: 12-inch-long Sample(s) showing each edge profile, corner, and finish.
   4. Core Material: 12-inch-square Sample at corner.
   6. Assembled Panels: Approximately 36 by 36 inches, including joints and mounting methods.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Electrical outlets, switches, and thermostats.
2. Items penetrating or covered by sound-absorbing wall units including the following:
   a. Lighting fixtures.
   b. Air outlets and inlets.
   c. Speakers.
   d. Alarms.
   e. Sprinklers.
   f. Access panels.

B. Product Certificates: For each type of sound-absorbing wall unit, from manufacturer.

C. Warranty: Sample of special warranty.
1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sound-absorbing wall units to include in maintenance manuals. Include fabric manufacturers’ written cleaning and stain-removal recommendations.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fabric: For each fabric, color, and pattern installed, provide length equal to 10 percent of amount installed, but no fewer than 10 yards.

2. Mounting Devices: Full-size units equal to 5 percent of amount installed, but no fewer than five devices, including unopened adhesives.

1.8 QUALITY ASSURANCE

A. Source Limitations: Obtain sound-absorbing wall units from single source from single manufacturer.

B. Fire-Test-Response Characteristics: Provide sound-absorbing wall units meeting the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: As determined by testing per ASTM E 84.
   a. Flame-Spread Index: 25 or less.
   b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Meeting acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 and NFPA 286.

C. Mockups: Build mockups of all acoustic panel units to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials, fabrication, and installation.

1. Build mockup of typical wall area as directed by Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

D. Preinstallation Conference: Conduct conference at Project site.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with fabric and sound-absorbing wall unit manufacturers’ written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.

B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.
1.10 PROJECT CONDITIONS

A. Environmental Limitations: Do not install sound-absorbing wall units until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Lighting: Do not install sound-absorbing wall units until a permanent level of lighting is provided on surfaces to receive the units.

C. Air-Quality Limitations: Protect sound-absorbing wall units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.

D. Field Measurements: Verify locations of sound-absorbing wall units and actual dimensions of openings and penetrations by field measurements before fabrication. Field measure curved substrate.

1.11 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sound-absorbing wall units that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to the following:
   b. Fabric sagging, distorting, or releasing from panel edge.
   c. Warping of core.

2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOUND-ABSORBING WALL UNITS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Acoustical Panel Systems (APS, Inc.).
2. Acoustical Solutions, Inc.
3. Acoustical Surfaces, Inc.
5. AVL Systems, Inc.
6. Benton Brothers Solutions, Inc.
7. Conwed Designscapes; an Owens Corning company.
8. Decoustics Limited; a CertainTeed Ceilings company.
11. Kinetics Noise Control, Inc.
12. Lamvin, Inc.
13. MBI Products Company, Inc.
14. Panel Solutions, Inc.
17. Proudfoot Company, Inc. (The).
19. Sound Management Group LLC.
20. Tectum Inc.
21. Wall Technology, Inc.; an Owens Corning company.
22. Working Walls, Inc.

B. Sound-Absorbing Wall Panel (Fabric Panel): Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back edge border of core or stretched over front face of edge-framed core and bonded or attached to edges and back of frame.

2. Mounting: Edge mounted with splines secured to substrate.
   a. Finish Color at Exposed Edges: As selected by Architect from manufacturer's full range.
3. Mounting: The appropriate hardware as determined most suitable by the manufacturer shall be mounted to the back of the panel.
4. Core: glass-fiber board. Provide wood or plywood nailing strips in core where indicated for the mounting hardware selected by the manufacturer.
   a. Core-Face Layer: Manufacturer's standard tackable, impact-resistant, high-density board or impact-resistant, acoustically transparent, copolymer sheet.
5. Edge Construction: Manufacturer's standard chemically hardened frame.
6. Edge Profile: Square profile as indicated on Drawings.
7. Corner Detail in Elevation: Square with continuous edge profile indicated.
8. Reveals between Panels: reveals as selected by Architect from manufacturer's full range or as indicated on Drawings.
10. Acoustical Performance: Sound absorption NRC or SAA of not less than 0.65 according to ASTM C 423 for Type A mounting according to ASTM E 795.
12. Panel Width: As indicated on Drawings.
13. Panel Height: As indicated on Drawings.

C. Sound-Absorbing Wall Panel (Perforated Metal Panel): Manufacturer's standard panel construction.

3. Mounting: The appropriate hardware as determined most suitable by the manufacturer shall be mounted to the back of the panel.
4. Core: Bonded Acoustical Cotton
5. Edge Construction: Manufacturer's standard
6. Edge Profile: Square profile as indicated on Drawings.
7. Corner Detail in Elevation: Square with continuous edge profile indicated.
8. Reveals between Panels: reveals as selected by Architect from manufacturer's full range or as indicated on Drawings.
10. Nominal Overall Panel Thickness: 2 inches.
11. Panel Width: As indicated on Drawings.
12. Panel Height: As indicated on Drawings.

2.2 MATERIALS

A. General:
   1. Minimum Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50 percent by weight.
   2. Regional Materials: Sound-absorbing wall units shall be manufactured within 500 miles of Project site.
   3. Certified Wood: Fabricate products with wood-based components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

B. Core Materials (Fabric Panel):
   1. Glass-Fiber Board: ASTM C 612, Type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft., unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
   2. Tackable, Impact-Resistant, High-Density Board for Face Layer: 1/8-inch-thick layer of compressed molded glass-fiber board with a nominal density of 16 to 18 lb/cu. ft. laminated to face of core.
   3. Impact-Resistant, Acoustically Transparent, Copolymer Sheet for Face Layer: 1/16- to 1/8-inch-thick layer of perforated, noncombustible, copolymer sheet laminated to face of core.

C. Core Materials (Perforated Metal Panels):
   1. Bonded Acoustic Cotton:

D. Facing Material (Fabric Panel): Fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range.

E. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:
   1. Adhesives: As recommended by sound-absorbing wall unit manufacturer and with a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart DEPA Method 24).
   2. Metal Clips or Bar Hangers: If determined by Manufacturer to be the most suitable mounting installation and approved in Shop Drawings, Manufacturer's standard two-part metal "Z" clips, with one part of each clip mechanically attached to back of unit and the other part to substrate, designed to permit unit removal.

2.3 FABRICATION

A. General: Use manufacturer's standard construction except as otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
   1. Glass-Fiber Board Cores (Fabric Panel): Chemically harden core edges and areas of core where mounting devices are attached.

B. Core-Face Layer (Fabric Panels): Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.

C. Facing Material (Fabric Panels): Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
   1. Square Corners: Tailor corners.
   2. Radius and Other Nonsquare Corners: Attach facing material so there are no seams or gathering of material.
   3. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.

D. Facing Material (Perforated Metal):
   1. Square Corners.
   2. Perforations in metal to be square and plumb at each individual unit and adjacent units.

E. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for the following:
   1. Thickness.
   2. Edge straightness.
   3. Overall length and width.
   4. Squareness from corner to corner.
   5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fabric, fabricated units, substrates, areas, and conditions, for compliance with requirements, installation tolerances, and other conditions affecting performance of sound-absorbing wall units.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install sound-absorbing wall units in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

B. Comply with sound-absorbing wall unit manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.

C. Align and level fabric pattern and grain among adjacent units.
3.3 INSTALLATION TOLERANCES

A. Variation from Plumb and Level: Plus or minus 1/16 inch.

B. Variation of Panel Joints from Hairline: Not more than 1/32 inch wide.

3.4 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:

   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:

   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 84 33
SECTION 09 91 23 – PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes surface preparation and the application of paint systems on the following interior substrates:
   1. Concrete.
   2. Concrete masonry units (CMU).
   3. Steel.
   5. Aluminum (not anodized or otherwise coated).
   6. Wood.
   7. Gypsum board.
   8. Plaster.

B. Related Requirements:
   1. Division 05 Sections for shop priming of metal substrates with primers specified in this Section.
   2. Division 06 Sections for shop priming carpentry with primers specified in this Section.

C. Surfaces to be Painted: Except where natural or clear finish of material is specifically noted as a surface not to be painted, paint all interior and exterior new and existing exposed surfaces whether or not painting is designated on drawings.
   1. Where items or surfaces are not specifically mentioned, paint the same as similar adjacent materials or areas after first obtaining direction from the Architect. If color or finish is not designated, Architect will select these from finishes available, and provide color sample for custom color matching.
   2. Paint (or stain, as indicated) all six sides of all doors.
   3. Paint concealed miscellaneous ironwork, which is not stainless steel, copper, galvanized, or insulated, except as otherwise indicated.
   4. Paint all mechanical, electrical, fire protection, and plumbing piping exposed to view in public spaces. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, fire protection pipes, conduits, junction boxes, etc., and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.
   5. Surfaces indicated on Drawings to receive Projection Screen Paint.

D. Unless otherwise indicated, do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.
   1. Prefinished items include but are not limited to the following factory-finished components:
      a. Architectural woodwork.
      b. Hardware.
      c. Satin Finished Stainless Steel.
      d. Aluminum entrances, storefront, and curtain wall.
      e. Acoustical panels.
      f. Pre-finished louvers and vents.
      g. Finished mechanical and electrical equipment.
h. Light fixtures.
i. Miscellaneous items with baked-on powder coats.
j. Overhead rolling doors.
k. Acoustical plaster.
l. Elevator entrance doors, frames and elevator equipment scheduled for stainless steel finishes.
m. Prefinished insulated metal panels.
n. Zinc/tin coated copper roof, trim and flashing.
o. Prefinished aluminum extrusions used as exterior trim.

2. Concealed surfaces include walls or ceilings in the following generally inaccessible spaces:
a. Foundation spaces.
b. Furred areas.
c. Ceiling plenums, except for areas above “floating” ceilings when area is partially exposed.
d. Pipe spaces.
e. Duct shafts.
f. Elevator shafts.

3. Finished metal surfaces include the following:
a. Anodized aluminum.
b. Stainless steel.
c. Chromium plate.
d. Copper and copper alloys.
e. Bronze and brass.
f. Metal surfaces indicated to receive fluoropolymer (Duranar or Kynar) coating finish.

4. Operating parts include moving parts of operating equipment and the following:
a. Valve and damper operators.
b. Linkages.
c. Sensing devices.
d. Motor and fan shafts.

5. Labels: Do not paint over Underwriters’ Laboratories (UL), Factory Mutual Global (FMG), or other code-required labels or equipment name, identification, performance rating, or nomenclature plates.

E. Work under this contract shall also include, but not necessarily be limited to:
1. Moisture testing of substrates.
2. Surface preparation of substrates as required for acceptance of paint, including cleaning, small crack repair, patching, caulking, and making good surfaces and area to the limits defined under MPI Repainting Manual Preparation requirements.
3. Specific pre-treatments noted herein or specified in the MPI Repainting Manual.
4. Sealing/priming surfaces for repainting in accordance with the MPI Repainting Manual requirements.

F. The material and installation shall conform to the applicable building code requirements of all authorities having jurisdiction.

1.3 DEFINITIONS

A. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D 523.

B. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.

C. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.
D. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D 523.

E. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D 523.

F. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D 523.

G. Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D 523.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

B. LEED Submittals:
   1. Product Data for Credit EQ 4.2: For paints and coatings, including printed statement of VOC content.

C. Samples for Initial Selection: For each type of topcoat product.

D. Samples: Prior to beginning work, Architect will furnish color chips for surfaces to be painted. Use representative colors to match Architect’s chips when preparing samples for review. Submit samples for Architect’s review of color and texture only. Provide a listing of material and application for each coat of each finish sample.
   1. On 12” x 12” hardboard, provide two samples of each color and material, with texture to simulate actual conditions. Resubmit samples as requested by Architect until acceptable sheen, color and texture is achieved.
   2. On concrete masonry, provide two 4” square samples of masonry for each type of finish and color, defining filler, prime and finish coats.
   3. On actual wall surfaces and other building components, duplicate painted finishes of prepared samples. Provide full coat finish samples on at least 100 sq. ft. of surface, as directed, until required sheen color and texture is obtained; simulate finished lighting conditions for review of in-place work.
   4. For non-ferrous and ferrous metal, provide two 4-inch square samples of flat metal and two 8 inch long samples of solid metal for each color and finish.
   5. Final acceptance of colors will be from samples applied on the job.

E. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
   1. Submit Samples on rigid backing, 8 inches square.
   2. Step coats on Samples to show each coat required for system.
   3. Label each coat of each Sample.
   4. Label each Sample for location and application area.

F. Product List: For each product indicated, include the following:
   1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
   2. Printout of current "MPI Approved Products List" for each product category specified in Part 2, with the proposed product highlighted.
   3. VOC content.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Paint: 5 percent, but not less than 1 gal. of each material and color applied.
1.6 QUALITY ASSURANCE

A. MPI Standards:
   1. Products: Complying with MPI standards indicated and listed in "MPI Approved Products List."

B. Applicator Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

C. Mockups: Apply benchmark samples of each paint system indicated and each color and finish selected to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.
      a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft..
      b. Other Items: Architect will designate items or areas required.
   2. Apply benchmark samples after permanent lighting and other environmental services have been activated.
   3. Final approval of color selections will be based on benchmark samples.
      a. If preliminary color selections are not approved, apply additional benchmark samples of additional colors selected by Architect at no added cost to Owner.

D. Credit EQ 4.2: Provide anti-corrosive and anti-rust paints to interior ferrous metal substrates that do not exceed VOC limit of 250g/L established in Green Seal Standard GS-03, Anti-Corrosive Paints, second edition, January 7, 1997.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
   1. Maintain containers in clean condition, free of foreign materials and residue.
   2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.

B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Benjamin Moore & Co.
   3. Cloverdale Paint.
5. Duron, Inc.
6. Insl-x.
8. PPG Architectural Finishes, Inc.
10. Tnemec.

B. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to products listed in other Part 2 articles for the paint category indicated.

2.2 PAINT, GENERAL

A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."

B. Material Compatibility:
   1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
   2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

C. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction and, for interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   1. Flat Paints and Coatings: 50 g/L.
   2. Nonflat Paints and Coatings: 150 g/L.
   3. Dry-Fog Coatings: 400 g/L.
   4. Primers, Sealers, and Undercoaters: 200 g/L.
   5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
   7. Pretreatment Wash Primers: 420 g/L.
   8. Floor Coatings: 100 g/L.
   9. Shellacs, Clear: 730 g/L.
   10. Shellacs, Pigmented: 550 g/L.

D. Chemical Components of Field-Applied Interior Paints and Coatings: Provide topcoat paints and anti-corrosive and anti-rust paints applied to ferrous metals that comply with the following chemical restrictions; these requirements do not apply to paints and coatings that are applied in a fabrication or finishing shop:
   1. Aromatic Compounds: Paints and coatings shall not contain more than 1.0 percent by weight of total aromatic compounds (hydrocarbon compounds containing one or more benzene rings).
   2. Restricted Components: Paints and coatings shall not contain any of the following:
      a. Acrolein.
      b. Acrylonitrile.
      c. Antimony.
      d. Benzene.
      e. Butyl benzyl phthalate.
      f. Cadmium.
      g. Di (2-ethylhexyl) phthalate.
      h. Di-n-butyl phthalate.
      i. Di-n-octyl phthalate.
      j. 1,2-dichlorobenzene.
      k. Diethyl phthalate.
      l. Dimethyl phthalate.
m. Ethylbenzene.
n. Formaldehyde.
o. Hexavalent chromium.
p. Isophorone.
q. Lead.
r. Mercury.
s. Methyl ethyl ketone.
t. Methyl isobutyl ketone.
u. Methylene chloride.
v. Naphthalene.
w. Toluene (methylbenzene).
x. 1,1,1-trichloroethane.
y. Vinyl chloride.

E. Colors: Provide multiple custom colors for each substrate indicated as selected by Architect.

2.3 BLOCK FILLERS

   1. VOC Content: E Range of E3.

2.4 PRIMERS/SEALERS

A. Interior Latex Primer/Sealer: MPI #50.
   1. VOC Content: E Range of E2.

B. Wood-Knot Sealer: Sealer recommended in writing by topcoat manufacturer for use in paint systems indicated.

2.5 METAL PRIMERS

A. Refer to Paint Schedule in Part 3 of this Section for product information.

2.6 WOOD PRIMERS

A. Interior Latex-Based Wood Primer: MPI #39.
   1. VOC Content: E Range of E3.
   2. Environmental Performance Rating: EPR 3.

2.7 LATEX PAINTS

A. Institutional Low-Odor/VOC Latex (Flat): MPI #143 (Gloss Level 1).
   1. VOC Content: E Range of E3.

B. Institutional Low-Odor/VOC Latex (Eggshell): MPI #144 (Gloss Level 2).
   1. VOC Content: E Range of E3.
   2. Environmental Performance Rating: EPR 4.5.

C. Institutional Low-Odor/VOC Latex (Semigloss): MPI #147 (Gloss Level 5).
   1. VOC Content: E Range of E3.
   2. Environmental Performance Rating: EPR 5.5.

2.8 EPOXY PAINTS

A. Refer to Paint Schedule in Part 3 of this Section for product information.
2.9 SOURCE QUALITY CONTROL

A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
   1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
   2. Testing agency will perform tests for compliance with product requirements.
   3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
   1. Concrete: 12 percent.
   3. Wood: 15 percent.
   4. Gypsum Board: 12 percent.
   5. Plaster: 12 percent.

C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

D. Plaster Substrates: Verify that plaster is fully cured.

E. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

F. Proceed with coating application only after unsatisfactory conditions have been corrected.
   1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates indicated.

B. Proper product selection, surface preparation, and application affect coating performance. Coating integrity and service life will be reduced because of improperly prepared surfaces. Selection and implementation of proper surface preparation ensures coating adhesion to the substrate and prolongs the service life of the coating system.

C. The surface must be dry and in sound condition. Remove oil, dust, dirt, and loose rust, peeling paint or other contamination to ensure good adhesion. Schedule cleaning and painting so that dust and other contaminants from the cleaning process will not fall onto wet, newly painted surfaces.
D. Remove mildew before painting by washing with a solution of 1 part liquid household bleach and 3 parts of warm water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with clean water and allow the surface to dry 48 hours before painting. Wear protective glasses or goggles, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

E. No exterior painting should be done immediately after a rain, during foggy weather, when rain is predicted, or when the temperature is below 50°F unless the specified product is designed for the marginal conditions.

F. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified.
1. Provide barrier coats over incompatible primers or remove and reprime as required. Check for compatibility by applying a test patch of the recommended coating system, covering at least 2 to 3 square feet. Allow to dry one week before testing adhesion per ASTM D3359. If the coating system is incompatible, complete removal is required. Notify Architect in writing of any anticipated problems in using the specified coating systems with substrates primed by others.
2. Cementitious Materials: Prepare concrete and concrete unit masonry to be painted by removing efflorescence, chalk, dust, dirt, grease, oils, and by roughening as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
   a. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
   b. Determine alkalinity and moisture content of surfaces to be painted by performing appropriate tests. If surfaces are found to be sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application of paint. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's printed directions.
3. Existing Drywall or Plaster:
   a. Remove all peeling or scaling paint by scraping. Sand areas thoroughly to feather edge smooth with adjacent surface.
   b. Cracks, holes and blemished areas are to be filled and sanded flush with adjacent surfaces, then spot primed with finish coating.
   c. All surfaces must be free of sanding dust, and joint treatment cement should be thoroughly dry.
   d. Damaged or defective surfaces are to be repaired by spackling or by other appropriate measures.
   e. Glossy surfaces are to be dulled by sanding lightly with 180-grit sandpaper.
   f. All surfaces must be thoroughly dry and clean.
   g. Cracks, voids and abrasions must be spackled and finished in the same wall texture and finish flush to the adjoining surfaces. Repaired surfaces are to be spot-primed with appropriate prime sealer before applying an overall coat of the same.
4. Ferrous Metals: Clean ferrous surfaces, including galvanized or shop-coated surfaces, of oil, grease, dirt, loose mill scale, spatter, slag, flux deposits, and other foreign substances by solvent or mechanical cleaning.
   a. Touch-up shop-applied prime coats wherever damaged or bare, where required by other sections of these specifications. Clean and touch-up with same type shop primer.
   b. Galvanized Metal: Clean per SSPC-SP1 using detergent and water or a degreasing cleaner to remove greases and oils. Apply a test area, priming as required. Allow the coating to dry at least one week before testing. If adhesion is poor, Brush Blast per SSPC-SP7 is necessary to remove these treatments.
   c. All interior and exterior ferrous metals exposed in finished construction shall be cleaned in accordance with Steel Structures Painting Council (SSPC). Visual standards are available through the Steel Structures Painting Council; ask for SSPC-VIS 1-89.
1) **Commercial Blast Cleaning, SSPC-SP6 or NACE 3** - for structural steel and all partially or fully exposed interior and exterior ferrous metal, except for interior ferrous metal pipe and bar railings and metal pan stairs, clean to attain an average profile depth of 1.5 mils. A Commercial Blast Cleaned surface, when viewed without magnification, shall be free of all visible oil, grease, dirt, dust, mill scale, rust, paint, oxides, corrosion products, and other foreign matter, except for staining. Staining shall be limited to no more than 33 percent of each square inch of surface area and may consist of light shadows, slight streaks, or minor discoloration caused by stains of rust, stains of mill scale, or stains of previously applied paint. Before blast cleaning, visible deposits of oil or grease shall be removed by any of the methods specified in SSPC-SP1 or other agreed upon methods.

d. **Interior and exterior ferrous metals not exposed to finished construction shall be cleaned in accordance with Steel Structures Painting Council (SSPC).** Visual standards are available through the Steel Structures Painting Council; ask for SSPC-VIS 1-89.

1) **Solvent Cleaning, SSPC-SP1:** Solvent cleaning is a method for removing all visible oil, grease, soil, drawing and cutting compounds, and other soluble contaminants. Solvent cleaning does not remove rust or mill scale. Change rags and cleaning solution frequently so that deposits of oil and grease are not spread over additional areas in the cleaning process. Be sure to allow adequate ventilation.

e. **All foundry and mill marks shall be removed by grinding or other approved method, and surfaces finished smooth and flush.** Any marks showing through finished work shall be removed and the entire surface of item repainted at no additional cost to the Owner. Spot touch-up on finish coats will not be accepted.

G. **Remove plates, machined surfaces, and similar items already in place that are not to be painted.** If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

2. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.

H. Clean substrates of substances that could impair bond of paints, including dirt, oil, grease, and incompatible paints and encapsulants.

1. Remove incompatible primers and reprime substrate with compatible primers as required to produce paint systems indicated.

I. **Concrete Substrates:** Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

J. **Concrete Masonry Substrates:** Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

K. **Steel Substrates:** Remove rust and loose mill scale. Clean using methods recommended in writing by paint manufacturer.

L. **Galvanized-Metal Substrates:** Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

M. **Wood Substrates:**

1. Scrape and clean knots, and apply coat of knot sealer before applying primer.
2. Sand surfaces that will be exposed to view, and dust off.
3. Prime edges, ends, faces, undersides, and backsides of wood.
4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler.
   Sand smooth when dried.

N. Gypsum Board Substrates: Do not begin paint application until finishing compound is dry and sanded smooth.

O. Plaster Substrates: Do not begin paint application until plaster is fully cured and dry.

P. Cotton or Canvas Insulation Covering Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
   1. Use applicators and techniques suited for paint and substrate indicated.
   2. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
   3. The term "exposed surfaces" include areas visible when permanent or built-in fixtures, grilles, convector covers, covers for finned-tube radiation and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
   4. Provide finish coats that are compatible with prime coats used.
   5. Apply ADDITIONAL coats when undercoats, stains, or other conditions show through final coat of paint, until paint film is of uniform finish, color and appearance. Give special attention to insure that surfaces, including edges, corners, crevices and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
   6. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
   7. Paint interior surfaces of ducts, where visible through registers or grilles, with a flat, non specular black paint. Pint exterior surface of exposed ducts.
   8. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
   9. If not factory-finished, finish interior and exterior doors on tops, bottoms, and side edges same as faces.
   10. Sand lightly between each succeeding enamel or varnish coat.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
   1. Mechanical Work:
      a. Uninsulated metal piping.
      b. Uninsulated plastic piping.
      c. Pipe hangers and supports.
d. Tanks that do not have factory-applied final finishes.
e. Visible portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets.
f. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
g. Mechanical equipment that is indicated to have a factory-primed finish for field painting.

2. Electrical Work:
   a. Switchgear.
   b. Panelboards.
   c. Electrical equipment that is indicated to have a factory-primed finish for field painting.

3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

3.4 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
   1. Contractor shall touch up and restore painted surfaces damaged by testing.
   2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 INTERIOR PAINTING SCHEDULE

A. CMU Substrates:
   1. Institutional Low-Odor/VOC Latex System: MPI INT 4.2E.

B. Steel Substrates: Roof Steel, not including acoustical deck:
   1. Semi-Gloss Zinc/Epoxy/Urethane Finish: 2 coats over primer
      a. Zinc-Rich Primer
         1) When not specified otherwise, for shop applied on surfaces blast cleaned in the shop (2.5 – 3.5 mils): Tnemec, Series 90-97 or Equal.
         2) For field primed (2.4 – 3.5 mils): Tnemec, Series 94-H2O Hydro-Zinc or equal.
      b. First Coat:
         1) Tnemec, Series L69 Epoxoline (3-5 mils).
         2) Or equal.
      c. Second Coat:....
1) Tnemec, Series 1081 WB Endura-Shield (2-3 mils).
2) Or equal.

C. Steel Substrates: Acoustic and Non-Acoustic Metal Deck:
1. Low VOC Semi-Gloss Zinc/Epoxy/Urethane Non-Bridging Finish:
   a. Primer: Manufacturer’s factory-applied epoxy primer and oven-cured polyester topcoat, unless otherwise noted.
   b. First Finish Coat:
      1) Tnemec: L69, Epoxoline (3-5 mils)
      2) Or equal.
   c. Second Finish Coat:
      1) Tnemec: Series 750 Endura-Shield, (3-4 mils)
      2) Or equal.

D. Steel Substrates: Decorative Metal and all other Ferrous Metal:
1. Low VOC Semi-Gloss Zinc/Epoxy/Urethane Finish: 2 finish coats over primer.
   a. Zinc-Rich Primer:
      1) For Shop or Field Primed (2.5 – 3.5 mils): Tnemec, Series 94-H2O Hydro-Zinc or equal.
      2) First Coat:
         1) Tnemec, Series L69 or L69F Epoxoline (3-5 mils).
         2) Or equal
      c. Second Coat:
         1) Tnemec, Series 750 Endura-Shield (3-4 mils).
         2) Or equal.

E. Steel Substrates: AESS where indicated:
1. Low VOC Semi-Gloss Zinc/Epoxy/Urethane Finish: 2 finish coats over primer.
   a. Zinc-Rich Primer:
      1) For Shop or Field Primed (5-6 mils): Tnemec, Series L-69 Hi-Build Epoxoline II or equal.
      2) First Coat:
         1) Tnemec, Series V701 Hydroflon (2-3 mils).
         2) Or equal
      c. Second Coat:
         1) Tnemec, Series V701 Hydroflon (2-3 mils).
         2) Or equal.

F. Galvanized-Metal Substrates:
1. Low VOC Semi-Gloss Zinc/Epoxy/Urethane Finish: 2 finish coats over primer.
   a. Self-Priming First Coat:
      1) Tnemec, Series L69 or L69F Epoxoline (4-6 mils).
      2) Or equal
   b. Second Coat:
      1) Tnemec, Series 750 Endura-Shield (3-4 mils).
      2) Or equal.

G. Aluminum Substrates: Decorative Metal and Metal Fabrications:
   a. Primer: (0.7-1.3 mils) Sherwin-Williams DTM Wash Primer, or equal.
   b. First Coat: (2.5-4.0 mils) Sherwin-Williams DTM Acrylic Coating, or equal.
   c. Second Coat: (2.5-4.0 mils) Sherwin-Williams DTM Acrylic Coating, or equal.

H. Wood Panel Substrates and Wood Furring for Matte Black Paint Finish (e.g. Flipper Carrels, semi-exposed furring and blocking): Including painted plywood.
1. Institutional Low-Odor/VOC Latex System: MPI INT 6.4T.
b. Intermediate Coat: Institutional Low Odor/VOC, Flat (MPI Gloss Level 1), MPI #143.
c. Topcoat: Institutional Low Odor/VOC, Flat (MPI Gloss Level 1) MPI # 143.

I. Wood Panel Substrates, for typical conditions, including painted plywood.
   1. Institutional Low-Odor/VOC Latex System: MPI INT 6.4T.

J. Wood Substrates: Including wood trim, but not including Interior Architectural Woodwork.
   1. Institutional Low-Odor/VOC Latex System:
      a. Prime Coat: Primer, latex, for interior wood, MPI #39.
      c. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (Gloss Level 5), MPI #147.

K. Gypsum Board Substrates, for walls bathrooms:
   1. Institutional Low-Odor/VOC Latex System: MPI INT 9.2M.
      a. Prime Coat: Interior latex primer/sealer, MPI #149.
      c. Topcoat: Institutional low-odor/VOC interior latex (semi-gloss), MPI# 147.

L. Gypsum Board Substrates, for walls in typical conditions:
   1. Institutional Low-Odor/VOC Latex System: MPI INT 9.2M.
      a. Prime Coat: Interior latex primer/sealer, MPI #149.
      c. Topcoat: Institutional low-odor/VOC interior latex (eggshell), MPI #144.

M. Gypsum Board Substrates, for ceilings in typical conditions:
   1. Institutional Low-Odor/VOC Latex System: MPI INT 9.2M.
      a. Prime Coat: Interior latex primer/sealer, MPI#149.
      c. Topcoat: Institutional low-odor/VOC interior latex (flat), MPI#143.

N. Gypsum Board Substrates, for Projection Wall in Lecture Hall:
      a. Reflective Base Coat #1: CRT White.
      b. Reflective Base Coat #2: CRT White.
      c. Diffusive Top Coat # 1: CRT White.
      d. Diffusive Top Coat #2: CRT White.

O. Gypsum Board Substrates concealed by tackboard surfaces:
   1. Institutional Low-Odor/VOC Latex System: MPI INT 9.2M.
      a. Prime Coat: Interior latex primer/sealer, MPI #149.

P. Plaster Substrates, for ceiling surfaces:
   1. Institutional Low-Odor/VOC Latex System: MPI INT 9.2M.
      a. Prime Coat: Interior latex primer/sealer. MPI#149.

Q. Cotton or Canvas Insulation-Covering Substrates: Including pipe and duct coverings.
   1. Institutional Low-Odor/VOC Latex System: MPI INT 10.1D.
      a. Prime Coat: Interior latex primer/sealer. MPI#50.

3.7 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 09 91 23
SECTION 10 11 00 - VISUAL DISPLAY SURFACES  [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Chalkboards.
   2. Resilient linoleum tackable wall surface.

B. Related Sections:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 9 Section "Gypsum Board" for Visual display rails and Custom chalk rails.

C. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 DEFINITIONS

A. Visual Display Board Assembly: Visual display surface that is factory fabricated into composite panel form, either with or without a perimeter frame; includes chalkboards, markerboards, and tackboards.

B. Visual Display Surface: Surfaces that are used to convey information visually, including surfaces of chalkboards, markerboards, tackboards, and surfacing materials that are not fabricated into composite panel form but are applied directly to walls.

C. Tackable wall surface: Framed or unframed tackable surface.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for visual display surfaces.

B. LEED Submittals:
   1. Product Data for Credit IEQ 4.1: For adhesives, documentation including printed statement of VOC content.
2. Product Data for Credit IEQ 4.4: For composite wood products, documentation indicating that the product contains no urea formaldehyde.

3. Credits MR 4.1 and MR 4.2: Product Data indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.
   a. Include statement indicating costs for each product having recycled content.

4. Refer to Division 1 Section "Sustainable Design Requirements" for additional submittal requirements.

C. Shop Drawings: For visual display surfaces. Include plans, elevations, sections, details, and attachments to other work.
   1. Show locations of panel joints.
   2. Include sections of typical trim members.

D. Samples for Initial Selection: For each type of visual display surface indicated, for units with factory-applied color finishes, and as follows:
   1. Actual sections of porcelain-enamel face sheet.
   2. Include accessory Samples to verify color selected.
   3. Actual samples of manufacturer's full range of colors for resilient linoleum tackable wall surfaces.

E. Samples for Verification: For each type of visual display surface indicated.
   1. Visual Display Surface: Not less than 8-1/2 by 11 inches, mounted on substrate indicated for final Work. Include one panel for each type, color, and texture required.
   2. Trim: 6-inch-long sections of each trim profile.
   3. Accessories: Full-size Sample of each type of accessory.
   4. Tackable Wall Surface: Not less than 8 ½ by 11 inches (215 by 280 mm) for each type, color and texture required.

F. Product Schedule: For visual display surfaces. Use same designations indicated on Drawings.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for surface-burning characteristics of fabrics.

C. Warranties: Sample of special warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For visual display and tackable wall surfaces to include in maintenance manuals.
1.7 QUALITY ASSURANCE

A. Source Limitations: Obtain visual display surfaces from single source from single manufacturer.

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: 25 or less.
   2. Smoke-Developed Index: 50 or less.

C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate appearance and aesthetic effects and set quality standards for installation.
   1. Build mockup of typical wall area as shown on Drawings. Include accessories.
   2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

D. Preinstallation Conference: Conduct conference at Project site.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver factory-built visual display surfaces, including factory-applied trim where indicated, completely assembled in one piece without joints, where possible. If dimensions exceed maximum manufactured panel size, provide two or more pieces of equal length as acceptable to Architect. When overall dimensions require delivery in separate units, prefabricate components at the factory, disassemble for delivery, and make final joints at the site.

B. Store visual display surfaces vertically with packing materials between each unit.

1.9 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install visual display surfaces until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Field Measurements: Verify actual dimensions of construction contiguous with visual display surfaces by field measurements before fabrication.

   1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

1.10 WARRANTY

A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer's standard form in which manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.

   1. Failures include, but are not limited to, the following:
      a. Surfaces lose original writing and erasing qualities.
b. Surfaces become slick or shiny.
c. Surfaces exhibit crazing, cracking, or flaking.

2. Warranty Period: 50 years from date of Substantial Completion.

B. Special Warranty for Tackable Wall Surfaces: Manufacturer's standard form in which manufacturer agrees to repair or replace tackable wall surfaces that fail in materials or workmanship within specified warranty period.

1. Warranty Period: A minimum of 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Porcelain-Enamel Face Sheet: Porcelain-enamel-clad, ASTM A 463/A 463M, Type 1, stretcher-leveled aluminized steel, with 0.024-inch uncoated thickness; with porcelain-enamel coating fused to steel at approximately 1000 deg F.

1. Matte Finish: Low reflective; chalk wipes clean with dry cloth or standard eraser.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      1) Claridge Products and Equipment, Inc.; Vitracite Chalkboard.

B. Particleboard: ANSI A208.1, Grade M-1, made with binder containing no urea formaldehyde.

C. Extruded Aluminum: ASTM B 221, Alloy 6063.

D. Resilient Linoleum Tackable Surface: Uni-color linoleum resilient homogeneous tackable surface consisting of linseed oil, granulated cork, rosin binders and dry pigments calendared onto a natural burlap backing. Color shall extend through thickness of material.

1. Basis of Design: Subject to compliance with requirements, provide “Forbo Bulletin Board,” as manufactured by Forbo International, Humboldt Industrial Park, P.O. Box 667, Hazleton, PA 18201; Telephone: 800 842 7839, 570 459 0771; Fax: 570 450 0258. www.forboflooring.na.com, or approved equal.

2.2 CHALKBOARD ASSEMBLIES

A. Porcelain-Enamel Chalkboards: Balanced, high-pressure, factory-laminated chalkboard assembly of three-ply construction consisting of backing sheet, core material, and porcelain-enamel face sheet with matte finish.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Claridge Products and Equipment, Inc.
2. Particleboard Core: 7/16 inch thick; with 0.005-inch-thick, aluminum foil backing. ANSI A208.1, Grade M-1, made with binder containing no urea formaldehyde.

3. Laminating Adhesive: Manufacturer's standard, moisture-resistant thermoplastic type.

4. Extruded Aluminum: ASTM B 221, Alloy 6063.

2.3 TACKABLE WALL SURFACE FOR DIRECT APPLICATION

A. Manufacturers:
   1. Forbo Industries, Inc., Hazleton, PA, or alternative manufacturer as approved by Architect.

   1. Colors: As selected by Architect from the full range of manufacturer's standard and custom colors. Three colors will be required.

C. Gauge: ¼ inch thick.

D. Widths: 48 inch and 72 inch, as required by dimensions indicated in Drawings.

E. Material Length: Supply material in one piece to cover extent of surface indicated.

F. Backing: Burlap.

G. Flexibility: Will not crack or bend when bent around a 2 ¾ inch diameter cylinder.

H. Fire Resistance: ASTM E-84 – Class B / NFPA 255 – Class II.

I. Dimensional Stability: Dimensionally stable in all directions. Resistant to cracking, peeling and drying.

J. Self-healing: Ability to self-heal from thumbtack and push pin punctures.

K. Light Reflectance/Finish: Provide matte finish material to minimize reflection from surface.

L. Adhesive: Manufacturer's standard adhesive for adhering tackable wall material to wall surface.

M. Factory Cut Edges: Where two or more sections of tackable wall surface are butted together, either vertically or horizontally, provide factory cut edge to form tight, hairline joint without the need for applied trim.

N. Beveled Edges: At all perimeter exposed edges, provide beveled (eased) edge. [C]

2.4 FABRICATION

A. Porcelain-Enamel Visual Display Assemblies: Laminate porcelain-enamel face sheet and backing sheet to core material under heat and pressure with manufacturer's standard flexible, waterproof adhesive.

B. Visual Display Boards: Field assemble visual display boards unless otherwise indicated.

   1. Where factory-applied trim is indicated, trim shall be assembled and attached to visual display boards at manufacturer's factory before shipment.
2.5 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

B. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer’s written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.

B. Examine walls and partitions for proper preparation and backing for visual display surfaces.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Comply with manufacturer’s written instructions for surface preparation.

B. Clean substrates of substances that could impair the performance of and affect the smooth, finished surfaces of visual display boards, including dirt, mold, and mildew.

C. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between visual display surfaces and wall surfaces.

1. Prepare substrates indicated to receive visual display wall covering as required by manufacturer's written instructions to achieve a smooth, dry, clean, structurally sound surface that is uniform in color.
a. Moisture Content: Maximum of 4 percent when tested with an electronic moisture meter.
b. Plaster: Allow new plaster to cure. Neutralize areas of high alkalinity. Prime with primer as recommended in writing by primer/sealer manufacturer and wall covering manufacturer.
c. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall covering manufacturer.
d. Painted Surfaces: Treat areas susceptible to pigment bleeding.

3.3 INSTALLATION, GENERAL

A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

1. Mounting Height: 36 inches above finished floor to top of chalktray, unless otherwise indicated.

3.4 INSTALLATION OF FIELD-FABRICATED VISUAL DISPLAY BOARDS AND ASSEMBLIES FOR WALL-TO-WALL APPLICATION

A. Field-Assembled Visual Display Units: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.

1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, as indicated on approved Shop Drawings.
2. Provide manufacturer’s standard vertical-joint spline system between abutting sections of chalkboards.
3. Where size of visual display boards or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer’s standard structural support accessories to suit conditions indicated.

B. Locations as shown in Drawings, including but not limited to classrooms, multi-purpose event spaces, conference rooms, meeting/work rooms, etc. [C]

3.5 INSTALLATION OF FACTORY-FABRICATED VISUAL DISPLAY BOARDS AND ASSEMBLIES, WHERE INDICATED

A. Visual Display Boards: Attach visual display boards to wall surfaces with adhesive gobs at 16 inches o.c., horizontally and vertically.

B. Visual Display Boards: Attach concealed clips, hangers, and grounds to wall surfaces and to visual display boards with fasteners at not more than 16 inches o.c. Secure both top and bottom of boards to walls.

1. Field-Applied Aluminum Trim: Attach trim over edges of visual display boards and conceal grounds and clips. Attach trim to boards with fasteners at not more than 24 inches o.c.
   a. Attach chalktrays to boards with fasteners at not more than 12 inches o.c.
3.6 INSTALLATION OF TACKABLE WALL SURFACE

A. Install tackboard surfaces to wall surfaces and architectural woodwork substrates indicated in the Drawings, according to the tackboard surface manufacturer’s instructions.

B. Allow substrate and tackboard surface to acclimate to occupancy temperatures and humidity for 72 hours prior to lamination or fabrication.

C. Follow manufacturer’s recommendations for seaming.

D. Install material at locations and elevations indicated, with seams horizontal and level.

E. Butt factory cut seams where two sections meet, with no gaps or overlaps. Remove air bubbles, wrinkles, blisters, and other defects.

F. Conduct an adhesion material bond test prior to fabrication.

G. Apply tackboard surface manufacturer’s recommended adhesive according to instructions with recommended applicators. Apply tackboard surface to substrate and roll, cold press or hot press thoroughly.

H. Install tackboard surfaces in a manner that will not strip or harm the factory finish of the tackboard surface.

I. Follow tackboard surface manufacturer’s recommendations for cleaning, allowing the recommended duration after installation onto substrate to achieve an adequate bond and cure before conducting wet cleaning procedures.

J. Fabricate tackboard panels with edge treatment indicated in Drawings.

3.7 CLEANING AND PROTECTION

A. Clean visual display surfaces according to manufacturer’s written instructions. Attach one cleaning label to visual display surface in each room.

B. Touch up factory-applied finishes to restore damaged or soiled areas.

C. Cover and protect visual display surfaces after installation and cleaning.

3.8 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:

1. Aluminum
2. Plastic Materials and Gaskets
3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 10 11 00
SECTION 10 14 00 – SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Dimensional characters (letters and numbers) for interior and exterior use and the hardware to install characters.

B. Related Sections include the following:
   1. Division 01 Section "Temporary Facilities and Controls" for temporary Project identification signs and for temporary information and directional signs.
   2. Division 01 Section "Sustainable Design Requirements" for additional LEED requirements.
   3. Division 10 Section "Directories" for building directories.
   4. Division 14 Section for code-required elevator signage.
   5. Division 23 Identification for HVAC Piping and Equipment" for labels, tags, and nameplates for HVAC systems and equipment.
   6. Division 26 Section "Identification for Electrical Systems" for labels, tags, and nameplates for electrical equipment.
   7. Division 26 Section "Interior Lighting" for illuminated Exit signs.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show fabrication and installation details for signs.
   1. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
   2. Mounting template designating stud locations is required.
   3. Provide message list, typestyles, and graphic elements including large-scale details of wording and lettering and layout for each sign.
   4. 

C. Samples for Initial Selection: Manufacturer's color charts consisting of actual units or sections of units showing the full range of colors available.

D. Samples for Verification: For each of the following products and for the full range of color, texture, and sign material indicated, of sizes indicated:
   1. Dimensional Characters: Full-size Samples of each type of dimensional character, letter, number, and graphic element required.
   2. Accessories: Manufacturer's full-size unit.
   3. Approved samples will not be returned for installation into Project.
1.4 LEED Submittals:
   A. Refer to Division 1 Section "Sustainable Design Requirements" for additional submittal requirements.
   B. Credits MR 4.1 and MR 4.2: Product Data indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.

1.5 INFORMATIONAL SUBMITTALS
   A. Qualification Data: For Installer.

1.6 CLOSEOUT SUBMITTALS
   A. Maintenance Data: For signs to include in maintenance manuals.

1.7 QUALITY ASSURANCE
   A. Installer Qualifications: An authorized representative of signage manufacturer for installation and maintenance of units required for this Project.
   B. Source Limitations for Signs: Obtain each sign type indicated from one source from a single manufacturer.

1.8 PROJECT CONDITIONS
   A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit installation of signs in exterior locations to be performed according to manufacturers' written instructions and warranty requirements.
   B. Field Measurements: Where sizes of signs are determined by dimensions of surfaces on which they are installed, verify dimensions by field measurement before fabrication and indicate measurements on Shop Drawings.

1.9 COORDINATION
   A. Coordinate placement of anchorage devices with templates for installing signs.

1.10 WARRANTY
   A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
      1. Failures include, but are not limited to, the following:
         a. Deterioration of metal finishes beyond normal weathering.
      2. Warranty Period: Lifetime Warranty
PART 2 - PRODUCTS

2.1 MATERIALS

A. Aluminum Castings: ASTM B 26/B 26M, of alloy and temper recommended by sign manufacturer for casting process used and for use and finish indicated.

2.2 DIMENSIONAL CHARACTERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Basis-of-Design Product: Subject to compliance with requirements, provide Gemini Incorporated, Aluminum, 1 1/2" deep 'DEEP RIBBON' stud mount, or comparable product by one of the following:
1. ACE Sign Systems, Inc.
2. Advance Corporation; Braille-Tac Division.
4. ASI-Modulex, Inc.
5. Bunting Graphics, Inc.
6. Charleston Industries, Inc.
8. Grimco, Inc.
10. Metal Arts; Div. of L&H Mfg. Co.
15. Southwell Company (The).

C. Cast Characters: Produce characters with smooth flat faces, sharp corners, and precisely formed lines and profiles, free of pits, scale, sand holes, and other defects. Cast lugs into back of characters and tap to receive threaded mounting studs. Alloy and temper recommended by sign manufacturer for casting process used and for use and finish indicated. Comply with the following requirements.
2. Thickness: As indicated.
3. Color(s): Match Architect's samples.
   a. Color 1: Interior
   b. Color 2: Exterior
4. Character Style (Font): DEEP RIBBON (all upper case unless noted otherwise)
5. Character Height (Font):
   a. Exterior: As indicated on Drawings.
   b. Interior: As indicated on Drawings.
6. Font Spacing: as indicated on Drawings
7. Mounting: Concealed studs, non-corroding for substrates encountered.

D. Dimensional Character Sign Schedule:
1. Sign Type – Interior
   a. Sign Size: As indicated on Drawings.
   b. Character Size: As indicated on Drawings.
   c. Text/Message: To be determined by client; allow for twenty-five (25) characters at each location.
   d. Location: As indicated on Drawings.
   e. Room: Lecture Hall (022) and Lobby (F002). (Two locations total).
2. Sign Type – Exterior
2.3 ACCESSORIES

A. Anchors and Inserts: Provide nonferrous-metal or hot-dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or lead expansion-bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

2.4 FABRICATION

A. General: Provide manufacturer's standard signs of configurations indicated.
   1. Preassemble signs in the shop to greatest extent possible. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in location not exposed to view after final assembly.
   2. Conceal fasteners if possible; otherwise, locate fasteners where they will be inconspicuous.

2.5 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

A. Powder-Coat Finish: Advanced Powder Coating system meeting the requirements of AAMA 2604. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying finish.
   1. Painting System: "InterponD2000" by the Kawneer Company, Inc., or an equivalent powder coated paint system meeting AAMA 2604.

B. Finishes to be applied by experienced craftsmen resulting in no surface pits or blemishes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
B. Verify that items, including anchor inserts, are sized and located to accommodate signs.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Locate signs and accessories where indicated, using mounting methods of types described and complying with manufacturer's written instructions.
   1. Install signs level, plumb, and at heights indicated, with sign surfaces free of distortion and other defects in appearance.

B. Dimensional Characters: Mount characters using standard fastening methods to comply with manufacturer's written instructions for character form, type of mounting, wall construction, and condition of exposure indicated. Provide heavy paper template to establish character spacing and to locate holes for fasteners.
   1. Projected Mounting: Mount characters at projection distance from wall surface; use 1” stud spacers.

3.3 CLEANING AND PROTECTION

A. After installation, clean soiled sign surfaces according to manufacturer's written instructions. Protect signs from damage until acceptance by Owner.

3.4 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 10 14 00
SECTION 10 21 13 - TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Solid-polymer toilet compartments configured as toilet enclosures and urinal screens.
B. Related Sections:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 06 Section "Rough Carpentry" for blocking.
   3. Division 10 Section "Toilet, Bath, and Laundry Accessories" for toilet tissue dispensers, grab bars, purse shelves, and similar accessories.
      a. Note: toilet tissue dispensers to be provided by Owner.
C. Make sure this is true LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
B. LEED Submittals:
   1. Recycled Content Statement: Provide a statement in compliance with LEED documentation requirements, certifying percentage by weight of materials provided for project which contain:
      a. Post-consumer recycled content
      b. Post-industrial recycled content.
   2. Refer to Division 1 Section "Sustainable Design Requirements" for additional submittal requirements.
C. Shop Drawings: For toilet compartments. Include plans, elevations, sections, details, and attachments to other work.
   1. Show locations of cutouts for compartment-mounted toilet accessories.
   2. Show locations of reinforcements for compartment-mounted grab bars.
   3. Show locations of centerlines of toilet fixtures.
   4. Show ceiling grid and overhead support or bracing locations.
D. Samples for Initial Selection: For each type of unit indicated. Include Samples of hardware and accessories involving material and color selection.

E. Samples for Verification: For the following products, in manufacturer's standard sizes unless otherwise indicated:
   1. Each type of material, color, and finish required for units, prepared on 6-inch- (152-mm-) square Samples of same thickness and material indicated for Work.
   2. Each type of hardware and accessory.

1.4 INFORMATIONAL SUBMITTALS
   A. Product Certificates: For each type of toilet compartment, from manufacturer.

1.5 CLOSEOUT SUBMITTALS
   A. Maintenance Data: For toilet compartments to include in maintenance manuals.

1.6 QUALITY ASSURANCE
   B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities" for toilet compartments designated as accessible.

1.7 PROJECT CONDITIONS
   A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 MATERIALS
   A. Aluminum Extrusions: ASTM B 221 (ASTM B 221M).
   B. Stainless-Steel Castings: ASTM A 743/A 743M.

2.2 SOLID-POLYMER UNITS
   A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      1. Accurate Partitions Corporation.
      2. Ampco, Inc.
5. General Partitions Mfg. Corp.
6. Global Steel Products Corp.
7. Metpar Corp.
8. Santana Products, Inc.
9. Sanymetal; a Crane Plumbing company.
10. Weis-Robart Partitions, Inc.

B. Toilet-Enclosure Style: Overhead braced, Floor anchored.

C. Urinal-Screen Style: Wall hung.

D. Door, Panel, and Pilaster Construction: Solid, high-density polyethylene (HDPE) panel material containing a minimum of 10 percent recycled material, not less than 1 inch (25 mm) thick, seamless, with eased edges, and with homogenous color and pattern throughout thickness of material.

1. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum or stainless-steel strip fastened to exposed bottom edges of solid-polymer components to prevent burning.
2. Color and Pattern: One color and pattern in each room as selected by Architect from manufacturer's full range.

E. Pilaster Shoes: Manufacturer's standard design; stainless steel.

F. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; extruded aluminum or stainless steel.

2.3 ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard design, heavy-duty operating hardware and accessories.

1. Material: Clear-anodized aluminum or Stainless steel.
2. Hinges: Manufacturer’s standard self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees.
3. Latch and Keeper: Manufacturer’s standard surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.
4. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories.
5. Door Bumper: Manufacturer's standard rubber-tipped bumper at out-swinging doors.
6. Door Pull: Manufacturer's standard unit at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel or chrome-plated steel or brass, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized steel, or other rust-resistant, protective-coated steel.
2.4 FABRICATION

A. Floor-Anchored, Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

B. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide, out-swinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:
   a. Pilasters and Panels: 1/2 inch (13 mm).
   b. Panels and Walls: 1 inch (25 mm).

2. Brackets: Secure panels to walls and to pilasters with continuous brackets.
   a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

B. Floor-Anchored, Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches (44 mm) into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.

C. Wall-Hung Urinal Screens: Attach with continuous brackets and anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

3.2 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

3.3 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:

   1. Aluminum
2. Plastic Materials and Gaskets
3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:

   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 10 21 13
SECTION 10 28 00 – TOILET AND SHOWER ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Public-use washroom accessories.
   2. Public-use shower room accessories.
   3. Underlavatory guards.

B. Owner-Furnished Material:
   1. Toilet Tissue Dispensers
   2. Paper Towel Dispensers
   3. Soap Dispensers
   4. Trash Receptacles

C. Related Sections:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 08 Section "Mirrors" for frameless mirrors.

D. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include the following:
   1. Construction details and dimensions.
   2. Anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
   3. Material and finish descriptions.
   4. Features that will be included for Project.
   5. Manufacturer's warranty.

B. Samples: Full size, for each accessory item to verify design, operation, and finish requirements.
   1. Approved full-size Samples will be returned and may be used in the Work.

C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
   1. Identify locations using room designations indicated.
   2. Identify products using designations indicated.
1.4 INFORMATIONAL SUBMITTALS
A. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS
A. Maintenance Data: For toilet and bath accessories to include in maintenance manuals.

1.6 LEED Submittals:
1. Recycled Content Statement: Provide a statement in compliance with LEED documentation requirements, certifying percentage by weight of materials provided for project which contain:
   a. Post-consumer recycled content
   b. Post-industrial recycled content.
2. Refer to Division 1 Section "Sustainable Design Requirements" for additional submittal requirements.

1.7 QUALITY ASSURANCE
A. Source Limitations: For products listed together in the same Part 2 articles, obtain products from single source from single manufacturer.

1.8 COORDINATION
A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.
C. Coordinate accessory locations with related work to assure that blocking or other reinforcement is located and installed to allow for proper anchoring of all toilet accessories (including those to be provided by the Owner).

1.9 WARRANTY
A. Special Mirror Warranty: Manufacturer's standard form in which manufacturer agrees to replace mirrors that develop visible silver spoilage defects and that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS
A. Stainless Steel: ASTM A 666, Type 304, 0.031-inch minimum nominal thickness unless otherwise indicated.
B. Brass: ASTM B 19, flat products; ASTM B 16/B 16M, rods, shapes, forgings, and flat products with finished edges; or ASTM B 30, castings.
C. Steel Sheet: ASTM A 1008/A 1008M, Designation CS (cold rolled, commercial steel), 0.036-inch minimum nominal thickness.

D. Galvanized-Steel Sheet: ASTM A 653/A 653M, with G60 hot-dip zinc coating.

F. Fasteners: Screws, bolts, and other devices of same material as accessory unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.

G. Chrome Plating: ASTM B 456, Service Condition Number SC 2 (moderate service).

H. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.2 PUBLIC-USE TOILET ROOM ACCESSORIES AND ACCESSORIES ADJACENT TO TOILET/SINK IN SHOWER ROOMS

A. Basis-of-Design Product: The design for accessories is based on products indicated. Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. A & J Washroom Accessories, Inc.
   2. American Specialties, Inc.
   5. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.
   6. Tubular Specialties Manufacturing, Inc.

B. Toilet Tissue Dispenser provided by Owner, blocking and installation by Contractor.

C. Paper Towel Dispenser provided by Owner, blocking and installation by Contractor.

D. Waste Receptacle provided by Owner, blocking and installation by Contractor.

E. Liquid-Soap Dispenser provided by Owner, blocking and installation by Contractor.

F. Grab Bars:
   3. Material: Stainless steel, 0.05 inch thick.
      a. Finish: Smooth, No. 4, satin finish on ends and slip-resistant texture in grip area.
   5. Configuration and Length:
      a. American Specialties, Inc. Type 01: 12 inches, Straight
      b. American Specialties, Inc. Type 02: 72 inches, Straight

G. Vendor:
   2. Type: Sanitary napkin and tampon.
   3. Mounting: Recessed. Unit to have adjustable flange to allow recessed installation in wall depths from 1” to 6”.
   4. Capacity: 27 tampons/30 feminine napkins
   5. Operation: Single coin (25 cents)
   6. Exposed Material and Finish: Stainless steel, No. 4 finish (satin)
   7. Lockset: Tumbler type with separate lock and key for coin box.
8. Locations: Provide one unit each in Women’s Toilet Room, Women’s Shower Room and each Unisex Toilet Room (8 total).

H. Sanitary-Napkin Disposal Unit:
   3. Door or Cover: Sloping cover on top with full length piano hinge.
   5. Material and Finish: Stainless steel, No. 4 finish (satin).
   6. Locations: Provide one unit for each water closet in Women’s Toilet Room, Women’s Shower Room and each Unisex Toilet Room (18 total).

I. Purse Shelf:
   1. Basis-of-Design Product: Model 0690 as manufactured by American Specialties, Inc.
   2. Description: Fixed shelf unit with raised edges.
   3. Nominal Size: 24 inches long by 6 inches wide.
   5. Locations: One unit each in Women’s Toilet Room, Women’s Shower Room and each Unisex Toilet Room (8 total).

J. Tilted Mirror Unit:
   1. Basis-of-Design Product: Bobrick, Model B-293
   2. Frame: Stainless steel, fixed tilt
      a. Corners: All edges hemmed and returned.
      b. Finish: Stainless Steel with satin finish
   3. Hangers: Produce rigid, tamper- and theft-resistant installation
   4. Size: 18 inches wide by 30 inches high.
   5. Locations: One unit each in Shower Rooms and Unisex Toilet Rooms - 126, 128, R228 and R423 (4 total).

2.3 PUBLIC-USE SHOWER ROOM ACCESSORIES

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. A & J Washroom Accessories, Inc.
   2. American Specialties, Inc.
   5. GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.
   6. Tubular Specialties Manufacturing, Inc.

B. Shower Curtain Rod:
   1. Basis-of-Design Product: Bobrick, Model B-207
   2. Description: 18-8, type-304, 20-gauge (1.0mm) stainless steel tubing with satin finish. 1" (25mm) outside diameter.
   3. Mounting Flanges: 1-3/8" (35mm) diameter. Two Chrome-plated plastic flanges, bright polished finish, with, concealed mounting brackets (2) — aluminum.
   4. Finish: No. 4 satin.
   5. Quantity: one per shower, field verify dimensions

C. Shower Curtain Hooks:
   1. Basis-of-Design Product: Bobrick, Model 204-2
   2. Description: 18-8 S, type-304, 0.09" (2mm) diameter stainless steel.
   3. Finish: No. 4 satin.
   4. Quantity: one set per shower area
D. Shower Curtain:
1. Basis-of-Design Product: Bobrick, Model 204-2
2. Size: Minimum 12 inches wider than opening by 72 inches high.
3. Material: Vinyl, minimum 0.006 inch thick, opaque, matte.
5. Grommets: Corrosion resistant at minimum 6 inches o.c. through top hem.
6. Shower Curtain Hooks: Chrome-plated or stainless-steel, spring wire curtain hooks with snap fasteners, sized to accommodate specified curtain rod. Provide one hook per curtain grommet.

E. Folding Shower Seat:
1. Basis-of-Design Product: Bobrick, Model B-5191
2. Configuration: Rectangular seat.
3. Seat: Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by Architect.
5. Dimensions: 18" wide, 15 13/16" deep, Universal/Barrier Free recommended mounting height 17" – 19"
6. Caution: These shower seats are no stronger than the anchors and walls to which they are attached and, therefore, must be firmly secured in order to support the loads for which they are intended. Consult and comply with local building codes.

F. Soap Dish see Section 09 30 00 Tiling (accessory of wall tile).

G. Towel Pin:
2. Description: Projecting minimum of 3 inches from wall surface.
4. Quantity: Two per shower; one at ADA height (38-40"), one at standard height.

H. Grab Bars:
3. Material: Stainless steel, 0.05 inch thick.
   a. Finish: Smooth, No. 4, satin finish on ends and slip-resistant texture in grip area.
5. Configuration and Length:
   a. American Specialties, Inc. Type 01: 12 inches, Straight
   b. American Specialties, Inc. Type 02: 72 inches, Straight

2.4 UNDERLAVATORY GUARDS

A. Basis-of-Design Product: The design for accessories is based on products indicated. Subject to compliance with requirements, provide the named product or a comparable product by one of the following:
1. Plumberex Specialty Products, Inc.
2. TCI Products.
3. Truebro, Inc.

B. Underlavatory Guard:
2. Description: Insulating pipe covering for supply and drain piping assemblies that prevent direct contact with and burns from piping, and allow service access without removing coverings.
3. Material and Finish: Antimicrobial, molded-plastic, color as selected by Architect from manufacturer's full range of standard and optional colors.
4. Locations: In all Toilet Rooms and at sinks in Shower Rooms, provide under lavatory guards at all lavatories.

2.5 CUSTODIAL ACCESSORIES

A. Basis-of-Design Product: The design for accessories is based on products indicated. Subject to compliance with requirements, provide the named product or a comparable product by one of the following:
   1. A & J Washroom Accessories, Inc.
   2. American Specialties, Inc.

B. Utility Shelf with utility hooks and mops strip:
   1. Basis-of-Design Product: Model 1308-4 as manufactured by American Specialties, Inc.
   2. Description: With exposed edges turned down not less than 1/2 inch and supported by two triangular brackets welded to shelf underside.
   3. Size: 44 inches long by 8 inches deep.
   4. Material and Finish: Not less than nominal 0.05-inch-thick stainless steel, No. 4 finish (satin).
   5. Mop Holder/Utility Hooks: Provide four mop hooks and five utility hooks on each unit.
   6. Locations: At all Janitor Closets, provide one unit.

2.6 FABRICATION

A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.

B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
   1. Contractor to provide concealed blocking and reinforcement at all locations to receive toilet and bath accessories.
      a. Provide for both Contractor-supplied and Owner-supplied units.
      b. Coordinate all toilet and bath accessory locations with related construction.

B. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested according to ASTM F 446.

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

3.3 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 10 28 00
SECTION 10 44 13 - FIRE EXTINGUISHER CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Fire protection cabinets for the following:
   a. Portable fire extinguishers.

B. Related Sections:
1. Division 09 painting Sections for field painting fire protection cabinets.
2. Division 10 Section "Fire Extinguishers."

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire protection cabinets.
   1. Fire Protection Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.

B. Shop Drawings: For fire protection cabinets. Include plans, elevations, sections, details, and attachments to other work.

C. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
   1. Size: 6 by 6 inches square.

D. Product Schedule: For fire protection cabinets. Coordinate final fire protection cabinet schedule with fire extinguisher schedule to ensure proper fit and function.

E. Maintenance Data: For fire protection cabinets to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Fire-Rated, Fire Protection Cabinets: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.

1.5 COORDINATION

A. Coordinate size of fire protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.

B. Coordinate sizes and locations of fire protection cabinets with wall depths.
PART 2 - PRODUCTS

2.1 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

B. Stainless Steel Sheet: ASTM A 666, Type 304.

C. Glass: Clear tempered safety glass.

2.2 FIRE PROTECTION CABINET

A. Cabinet Type: Suitable for fire extinguisher.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      b. Kidde Residential and Commercial Division, Subsidiary of Kidde plc.
      c. Larsen's Manufacturing Company.
      d. Potter Roemer LLC; (Basis of Design: 7000 Series.)

B. Cabinet Construction: Nonrated and 2-hour fire rated.
   1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.0428-inch-thick, cold-rolled steel sheet lined with minimum 5/8-inch-thick, fire-barrier material. Provide factory-drilled mounting holes.

C. Cabinet Material: Steel sheet.

D. Trimless Recessed Cabinet: Cabinet box fully recessed in walls of sufficient depth and installed without trim.
   1. Trimless: One-piece combination trim and perimeter door frame flush with surrounding wall surface.
   2. Location: All recessed trimless cabinets to be located in Lecture Hall (room 022).
   3. Quantity: Two (2).

E. Semirecessed Cabinet: Cabinet box partially recessed in walls of sufficient depth to suit style of trim indicated; with one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend). Provide where shown on drawings, or where walls are of insufficient depth for recessed cabinets but are of sufficient depth to accommodate semirecessed cabinet installation.
   1. Square-Edge Trim: 2 to 3-inch backbend depth.
   2. Location: Typical cabinets throughout building, U.O.N.
   3. Quantity: One unit at each location shown on the drawings U.O.N.
   4. Fire-Rating: Provide Rated Cabinets within rated wall assemblies to maintain the required fire ratings.
   5. Basis of Design Products: Model 7062 Semi-Recessed "Alta" series fire extinguisher cabinets with 2 inch square trim as manufactured by Potter Roemer for all non-rated units. Model 7063 Fire-Rated Semi-Recessed "Alta" series fire extinguisher cabinets with 3 inch square trim as manufactured by Potter Roemer for all fire-rated units.

F. Cabinet Trim Material: Stainless Steel sheet.

G. Door Material: Stainless Steel sheet.
H. Door Style: Fully glazed panel with frame.

I. Door Glazing: Safety glass.
   1. Clear tempered safety glass.

J. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
   1. Provide lock with Break Rite handle.
   2. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.

K. Finishes:
   1. Manufacturer's standard baked-enamel paint for the following:
      a. Interior of cabinet.
   2. Stainless Steel: Manufacturer’s standard:
      a. Exterior trim and cabinet door.

2.3 FABRICATION

A. Fire Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
   1. Weld joints and grind smooth.
   2. Provide factory-drilled mounting holes.

B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.
   1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
   2. Miter and weld perimeter door frames.

C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.4 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM’s "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces of fire protection cabinets from damage by applying a strippable, temporary protective covering before shipping.

C. Finish fire protection cabinets after assembly.

D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.5 STEEL FINISHES

A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.

B. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting
topcoat. Comply with coating manufacturer’s written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.

1. Color and Gloss: As selected by Architect from manufacturer’s full range of colors and finishes.

2.6 STAINLESS STEEL FINISHES

A. General: Remove tool and die marks and stretch lines or blend into finish.

1. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.

B. Provide type 304 stainless steel with #4, bright directional finish.

C. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls and partitions for suitable framing depth and blocking where recessed and semirecessed cabinets will be installed.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare recesses for trimless recessed and semirecessed fire protection cabinets as required by type and size of cabinet and trim style.

3.3 INSTALLATION

A. General: Install fire protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

B. Fire Protection Cabinets: Fasten cabinets to structure, square and plumb.

1. Fasten mounting brackets to inside surface of fire protection cabinets, square and plumb.

3.4 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as fire protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.

B. Adjust fire protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.

C. On completion of fire protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

D. Touch up marred finishes, or replace fire protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire protection cabinet and mounting bracket manufacturers.
E. Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 10 44 13
SECTION 10 44 16 - FIRE EXTINGUISHERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes portable fire extinguishers and mounting brackets for fire extinguishers.

B. Related Sections:
   1. Division 10 Section "Fire Extinguisher Cabinets."

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.

B. Product Schedule: For fire extinguishers. Coordinate final fire extinguisher schedule with fire protection cabinet schedule to ensure proper fit and function.

C. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

D. Warranty: Sample of special warranty.

1.4 QUALITY ASSURANCE

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
   1. Provide fire extinguishers approved, listed, and labeled by FMG.

1.5 COORDINATION

A. Coordinate type and capacity of fire extinguishers with fire protection cabinets to ensure fit and function.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Failure of hydrostatic test according to NFPA 10.
      b. Faulty operation of valves or release levers.
   2. Warranty Period: Six years from date of Substantial Completion.
PART 2 - PRODUCTS

2.1 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. Fire Extinguishers: Type, size, and capacity for each fire protection cabinet and mounting bracket indicated.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Kidde Residential and Commercial Division; Subsidiary of Kidde plc.
      c. Larsen's Manufacturing Company.
      d. Potter Roemer LLC.

2. Valves: Manufacturer's standard.
3. Handles and Levers: Manufacturer's standard.
4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B.

B. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 4-A:60-B:C, 10-lb nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container.

2.2 MOUNTING BRACKETS

A. Mounting Brackets: Manufacturer's standard steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
   1. In all Mechanical Rooms, surface mount fire extinguisher to wall with manufacturer's standard bracket.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fire extinguishers for proper charging and tagging.
   1. Remove and replace damaged, defective, or undercharged fire extinguishers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.

B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

3.3 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.
B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 10 44 16
SECTION 10 51 13 - METAL LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

B. Related Section:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.

1.3 LEED Opportunities: This Section has opportunities for the following LEED points:

1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
2. Indoor Environmental Quality Credit 4.1.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker.

B. Shop Drawings: For metal lockers. Include plans, elevations, sections, details, and attachments to other work.
   1. Show locker trim and accessories.
   2. Include locker identification system and numbering sequence.

C. Samples for Initial Selection: For units with factory-applied color finishes.

D. Samples for Verification: For metal lockers, in manufacturer's standard sizes.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Warranty: Sample of special warranty.
1.6 CLOSEOUT SUBMITTALS
A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Full-size units of the following metal locker hardware items equal to 10 percent of amount installed for each type and finish installed, but no fewer than five units:
   a. Locks.
   b. Identification plates.
   c. Hooks.

1.8 QUALITY ASSURANCE
A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Source Limitations: Obtain metal lockers and accessories from single source from single manufacturer.

C. Regulatory Requirements: Where metal lockers are indicated to comply with accessibility requirements, comply with the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities".

D. Preinstallation Conference: Conduct conference at Project site.

1.9 DELIVERY, STORAGE, AND HANDLING
A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.

B. Deliver combination control charts to Owner directly at the Pennsylvania State University Office of Physical Plant, addressed as follows:

1. Director of Buildings and Grounds, The Pennsylvania State University, Office of Physical Plant, 125 Physical Plant Building, University Park, Pa 16802.

1.10 PROJECT CONDITIONS
A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.
1.11 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.12 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.

1. Failures include, but are not limited to, the following:

   a. Structural failures.
   b. Faulty operation of latches and other door hardware.

2. Damage from deliberate destruction and vandalism is excluded.
3. Warranty Period for All-Welded Metal Lockers: Lifetime from date of Substantial Completion. At project closeout, provide to Owner or Owners Representative an executed copy of the manufacturer's standard limited warranty against manufacturing defect, outlining its terms, conditions, and exclusions from coverage.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.

2.2 HEAVY-DUTY METAL LOCKERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide American Locker Security Systems, 'Envoy' Employee Lockers, or approved equal.

B. Locker Arrangement: Single tier.

C. Material: Cold-rolled steel sheet.

D. Dimensions: 72" Frame height, 15" Frame width, 18" Frame depth.

E. Body: Assembled by welding body components together; welded hasp assembly. Fabricate from un-perforated steel sheet with thicknesses as follows:

1. Locker Frame: Minimum 16 gauge nominal thickness.
2. Locker Sloping Tops: Minimum 20 gauge nominal thickness.
3. Locker Bottom Shelf and Recessed Base: Galvanized Steel, minimum 20 gauge nominal thickness.
4. Locker Sides: Minimum 24 gauge nominal thickness.
5. Locker Backs: Minimum 24 gauge nominal thickness.
7. Locker Shelves: Minimum 22 gauge nominal thickness, with double bend at front and single bend at sides and back.
8. Locker Hinges: Minimum 14 gauge nominal thickness.
10. Locker Handles: Minimum 18 gauge nominal thickness.

F. Frames: Channel formed; fabricated from Minimum 16 gauge nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.

G. Doors: One piece; fabricated from Minimum 20 gauge nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges.
   1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.
   2. Door Style:
      a. Perforated Vents: Manufacturer's standard shape and configuration.

H. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
   1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum 2 inches (51 mm) high. Provide no fewer than three hinges for each door more than 42 inches (1067 mm) high.
   2. Continuous Hinges: Manufacturer's standard, steel, full height.

I. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry and vandal resistant.
   1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks or padlocks; positive automatic latching and pre-locking.
      a. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks; fabricated from 0.120-inch (3.04-mm) nominal-thickness steel sheet; welded to full-height door strikes; with resilient silencer on each latch hook.
      b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact, and incorporating a pre-locking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.

J. Built-in Combination Locks: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.

K. Equipment: Equip each metal locker with identification plate and the following unless otherwise indicated:
   1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.

L. Accessories:
   1. Continuous Zee Base: Fabricated from, manufacturer's standard thickness, but not less than Minimum 20 gauge nominal-thickness steel sheet.
      a. Height: 4 inches (102 mm).
2. Continuous Sloping Tops: Fabricated from Minimum 20 gauge nominal-thickness steel sheet, with a pitch of approximately 20 degrees.
   a. Closures: Vertical-end type.
M. Finish: Baked enamel.
   1. Color(s): As selected by Architect from manufacturer's full range.

2.3 FABRICATION

A. Fabricate metal lockers square, rigid, and without warp and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
   1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
   2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments. Factory weld frame members of each metal locker together to form a rigid, one-piece assembly.
C. All-Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds flush.
D. Accessible Lockers: Fabricate as follows:
   1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.
   2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.
E. Hooks: Manufacturer's standard ball-pointed type, aluminum or steel; zinc plated.
F. Identification Plates: Manufacturer's standard, etched, embossed, or stamped aluminum plates, with numbers and letters at least 3/8 inch (9 mm) high.
G. Continuous Base: Formed into channel or zee profile for stiffness, and fabricated in lengths as long as practical to enclose base and base ends of metal lockers; finished to match lockers.
H. Continuous Sloping Tops: Fabricated in lengths as long as practical, without visible fasteners at splice locations; finished to match lockers.
I. Recess Trim: Fabricated with minimum 2-1/2-inch (64-mm) face width and in lengths as long as practical; finished to match lockers.
J. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.
K. Boxed End Panels: Fabricated with 1-inch-(25-mm-) wide edge dimension, and designed for concealing fasteners and holes at exposed ends of non-recessed metal lockers; finished to match lockers.

1. Provide one-piece panels for double-row (back-to-back) locker ends.

L. Finished End Panels: Designed for concealing unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of non-recessed metal lockers; finished to match lockers.

1. Provide one-piece panels for double-row (back-to-back) locker ends.

2.4 STEEL SHEET FINISHES

A. Factory finish steel surfaces and accessories except stainless-steel and chrome-plated surfaces.

B. Baked-Enamel Finish: Immediately after cleaning, pretreating, and phosphatizing, apply manufacturer's standard thermosetting baked-enamel finish. Comply with paint manufacturer's written instructions for application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install level, plumb, and true; shim as required, using concealed shims.

1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.

2. Anchor metal lockers to walls at spacing indicated on approved shop drawings with appropriate anchor devices to suit adjacent materials and finishes.

B. All-Welded Metal Lockers: Connect groups together with standard fasteners, with no exposed fasteners on face frames.

C. Equipment and Accessories: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.

1. Attach hooks with at least two fasteners.

2. Attach door locks on doors using security-type fasteners.

3. Identification Plates: Identify metal lockers with identification indicated on Drawings.

   a. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
4. Attach recess trim to recessed metal lockers with concealed clips.
5. Attach filler panels with concealed fasteners. Locate filler panels where indicated on Drawings.
6. Attach sloping-top units to metal lockers, with closures at exposed ends.
7. Attach boxed end panels with concealed fasteners to conceal exposed ends of non-recessed or semi-recessed metal lockers.
8. Attach finished end panels with fasteners only at perimeter to conceal exposed ends of non-recessed or semi-recessed metal lockers.

3.3 ADJUSTING, CLEANING, AND PROTECTION

A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. If required, verify that integral locking devices operate properly.

B. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.

C. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

3.4 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 10 51 13
SECTION 11 01 14 – FALL RESTRAINT EQUIPMENT

PART 1: GENERAL

1.1 SUMMARY SECTION INCLUDES

A. Horizontal fall restraint cable system including
   1. System design
   2. Cable
   3. Intermediate anchors
   4. Terminating anchors
   5. Energy absorber

1.2 Related Sections

A. Section 03300 Cast-In-Place Concrete
B. Section 05120 Structural Steel
C. Section 05500 Metal Fabrications
D. Section 07500 Membrane Roofing
E. Section 07620 Sheet Metal Flashing and Trim
F. Section 07920 Joint Sealants

1.3 REFERENCES

A. Publications listed herein are part of this specification to extent referenced.
   1. American Institute of Steel Construction (AISC)
      a. AISC Publication Load and Resistance Factor Design for Structural Steel Buildings
      b. AISC Specifications for the Design of Cold-Formed Steel Structural Members
      a. ASTM A36 Specification for Structural Steel
      b. ASTM A123 Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Hardware
      c. ASTM A500 Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
      d. ASTM A780 Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings
      e. ASTM B209-04 Specification for Aluminum and Aluminum-Alloy Sheet and Plate
      f. ASTM B221-02 Specification for Aluminum and Aluminum-Alloy Extruded Bars, Wire, Shapes, and Tubes
      g. ASTM B308/B308M-02 Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles
   3. American Welding Society (AWS)
      a. AWS D1.1 Structural Welding Code
   4. Occupational Safety and Health Standards
      a. 1910.66 Appendix C (Personal Fall Arrest)

1.4 SYSTEM DESCRIPTION

A. Anchorage Design Requirements
1. Safety anchor system design shall comply with current OSHA, ANSI, and local regulations pertaining to fall protection in accordance with sections 1.1, 1.2, and 1.3.
2. Anchor system shall provide independent fall arrest anchorages as required by OSHA and ANSI requirements.
3. Structural design requirements of anchorages and tie-back
   a. Anchorage shall be capable of sustaining a minimum ultimate load of 5,000 lbs., in any direction the load may be applied, without fracture or failure.
   b. Anchorage shall be capable of sustaining a minimum proof load of 2,500 lbs., in any direction the load may be applied, without permanent deformation or damage to anchorage.
   c. Anchorages shall be designed with a minimum 1,250 lb. working load, in any direction the load may be applied.

B. Horizontal fall restraint cable system
1. The Horizontal fall restraint cable system (HFRCS) shall allow up to two users to traverse the length of the cable span, each using a single lanyard for traveling along the cable spans. Turns in the HFRCS will require a double lanyard. The HFRCS shall be designed for two users using an energy absorbing lanyard, which limits the force applied to the HFRCS to 900 lb. or less.
2. HFRCS shall spans shall not exceed 100 foot long.
3. The horizontal line shall be constructed of 3/8” x 7 x 19 stainless steel or galvanized aircraft cable, commercial grade per specification SD 118 and Fed. Spec. RR-W-410, construction grade, with an average breaking strength of not less than 14,400 lbs.
4. Horizontal lines shall be permanently attached to anchors with 2 non-corrosive permanently swaged fittings swaged to manufacturer's specifications at each termination. Swages shall be verified not to loosen under load. Load capacity of one swage shall exceed strength of wire rope.
5. Horizontal lines must be attached to anchorages designed to be capable of supporting a minimum 5,000 lb. However, the HFRCS cable and anchorages shall be independent of anchorages used for suspension in accordance with Section 1.4(A) Anchorage Design Requirements.

1.5 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product proposed
   1. Test report certified by a professional engineer
   2. General product data
   3. Detailed drawings of equipment proposed
   4. Installation instructions

B. Shop Drawings
   1. Submit scaled shop drawings showing location plan of all fall restraint equipment and sections detailing all parts and accessories.
   2. Clearly specify equipment dimensions, materials, fabrication details, hardware, and installation instructions.
   3. Include notes with guidelines of proper use of system.
   4. Equipment location plan to include identification number next to each piece of fall restraint equipment (anchors, etc.) that are permanently affixed to a structure.
   5. Field welds shall be indicated on equipment details using AWS symbols and showing length and size. Auxiliary views shall be shown to clarify welding as required.
   6. Shop drawings shall be prepared under supervision of a registered professional engineer and shall bear engineer’s seal and signature. Professional engineer shall be licensed in jurisdiction where project is located. Include P.E. certified report of tested equipment.

C. Quality Assurance Submittal Certificates
   1. Provide documentation verifying company’s amount of experience and successful performance in design, fabrication, and installation of permanent fall restraint equipment.
2. Submit listing of company’s installations representing similar scope and complexity to project requirements for previous 10 years. List shall include information as follows:
   a. Project name and address
   b. Name of owner
   c. Name of contractor
   d. Name of architect (if applicable)
   e. Date of completion
3. Provide documentation verifying that installers have been trained by the manufacturer and are competent.

D. Contract Close-out Submittals
   1. Operation and Maintenance
      a. Provide a safety inspection logbook for yearly inspections. Log book shall include a certification of compliance letter. The certification of compliance shall state that access system is in compliance with current OSHA regulations.
   2. Project Record Document Data
      a. Record anchor locations and details.
      b. Submit 2 copies of a reduced, plastic laminated Project Record Drawing showing as-installed anchor locations, details, and instructional text in English (and Spanish upon request). Post one copy on interior of each roof door or adjacent to exit on roof; owner shall establish exact location.
      c. Submit a letter of certification by a registered professional engineer licensed in jurisdiction where project is located verifying that installed anchors and system are in compliance with OSHA and ANSI requirements as specified. Each piece of access equipment dedicated to the building shall be tested on site under the supervision of a P.E. in accordance with manufacturer’s/provider’s test procedures.

1.6 QUALITY ASSURANCE

A. Qualifications
   1. Provide products from a company specializing in design, fabrication, and installation of permanent fall restraint equipment with a minimum of 5 years documented experience. Companies like miscellaneous metal fabricators not normally engaged in design and fabrications of fall restraint equipment are not acceptable.
   2. Manufacturer and installer shall have specific liability insurance (products and completed operations) in an amount not less than $5,000,000.
   3. Installer(s) shall be trained or qualified by manufacturer in installation techniques and procedures of fall restraint equipment and shall demonstrate a minimum of 5 years successful experience in such installation.

B. Regulatory Requirements
   1. Comply with Occupational Health and Safety Standards:
      a. 1910.66 Appendix C (Personal Fall Arrest)
   2. Welding shall comply with AWS D1.1 and shall be performed by welders qualified to work in jurisdiction where project is located.
   3. Comply with AISC publications:
      a. Load and Resistance Factor Design for Structural Steel Buildings
      b. Specifications for the Design of Cold-Formed Steel Structural Members

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original unopened packaging.

B. Storage and Protection
   1. Store materials in a protected area away from construction activities.
   2. Clean bolts that have become dirty before installing.
3. Special care must be taken with stainless steel since not compatible with many chemicals and materials.
4. Do not install damaged materials. Remove damaged materials from site.

1.8 SEQUENCING AND COORDINATION

A. General contractor is responsible for coordinating the schedule for producing shop drawings, fabricating suspended access equipment, and installation. General contractor shall allow three weeks for delivery of shop drawings and three weeks to deliver equipment upon approval of shop drawing by general contractor.

B. Manufacturer to provide detailed installation instructions and directions for installation of embedded items, welded items, and through-bolted items, etc.

C. Manufacturer to provide installation assistance during installation of the equipment. However, the responsibility of the installation rests with the general contractor unless equipment is installed and certified by the manufacturer.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS & Installers

A. Basis-of-Design: Subject to compliance with requirements, provide listed Fall Restraint System, or approved equal:
   1. Summit Anchor Company
      Tel: 800-372-1098
      Fax: 301-620-9819
      Web Site: www.summitanchor.com

2.2 STRUCTURAL COMPONENTS' MATERIALS

A. Exposed Structural Components Finish: Galvanized Mild Steel or Stainless Steel
   1. Steel: ASTM A572 GR 50
   2. Steel: ASTM A36
   3. Galvanizing: ASTM A123
   4. Stainless Steel; 304 ASTM A 193 Grade B8, Class 2
   5. Aluminum; 6061-T6 Alloy

B. Yield Strength
   1. Base Plates and Bottom Plates, High Strength Steel: 50 ksi minimum
   2. Other Sections: 36 ksi minimum

C. Non-Structural Components
   1. Aluminum; 6061-T6 Alloy
   2. Alloys shall conform to requirements published in AA Aluminum Standards.
   3. Sheet and Plate: ASTM B209
   4. Extruded Bars, Rods, Shapes, and Tubes: ASTM B221

D. Cold-Rolled Sections
   1. ASTM A500
   2. Yield Strength: 55 ksi minimum
   3. Tensile Strength: 62 ksi minimum

E. Nuts, Bolts, Davit Pins, and Washers
   1. Stainless Steel; 304 ASTM A 193 Grade B8 or F593C
2. Galvanized Flat Washers ASTM F-436 or 18-8 Stainless Steel

F. Anchor Bolts (for securing base plate)
1. Metal: Stainless Steel, 304 Stainless Steel; ASTM A 193 Grade 8, B8
2. Size: 5/8 in. diameter minimum

G. Hilti HDA Undercut Anchoring System
1. HAD-T Undercut Anchor (Through-Set Type)
2. Anchor size and embedment depth: As needed to suit loads imposed by equipment. Consult project engineer to determine proper anchoring system based on concrete condition, psi, and thickness before ordering equipment.
3. Installed per Hilti installation instructions.

H. Hilti HVA Capsule Adhesive Anchoring System
1. Anchor size and embedment depth: As needed to suit loads imposed by equipment. Consult project engineer to determine proper anchoring system based on concrete condition, psi, and thickness before ordering equipment.
2. Installed per Hilti installation instructions.
3. Installed by Hilti accredited installers only.
4. Each installed anchor assembly shall be load tested to 50 percent of its rated capacity. Test results shall be certified a P.E. with experience in suspended access equipment.

2.3 MANUFACTURED UNITS

A. Anchor
1. Capable of withstanding 5000 lbs. (2268kg) in any direction without permanent deflection.
2. Anchor eye size: Not less than ¾ inch (20 mm) diameter material with 2 ¼ in (60 mm) eye opening.
3. Anchor eye metals:
4. Forged, 1030 quenched and tempered per ASTM 576-90-b, 72ksi minimum
5. Stainless steel, type 304, solution annealed, 35 ksi minimum
6. 
7. Anchor tube height: not less than 4 in. above the finished roof.

B. Cable system
1. Install complete with inline shock absorber to limit load to 2,250 lbs. or less at terminating anchors.
2. Pass through cable anchors to allow up to two workers to traverse straight cable runs with single lanyard without detachment off lanyard.

C. Flashing with one E.P.D.M. gasket seal top and base
1. Seamless Spun Aluminum Flashing: ASTM B221; Type 6061-T6 alloy
2. Stainless Steel: 304

D. Cast in place equipment
1. A minimum of two cast-in-place steel studs are required for concrete embedded anchors.

2.4 FABRICATION

A. Fabricate work true to dimension, square, plumb, level, and free from distortion or defects detrimental to appearance and performance.

B. Grind off surplus welding material to ensure exposed surfaces are smooth so as not to abrade workers’ ropes.

C. Welding shall be in accordance with the AWS Structural Welding Code D1.1/D1.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions
1. Examine areas and conditions under which permanent fall restraint equipment shall be installed.
2. Report to general contractor any conditions that deviate from shop drawings or any defects in workmanship that would cause an unsafe installation. This report shall be verified in writing to the general contractor and any other responsible party.
3. Correct conditions detrimental to timely and proper execution of work.
4. Do not proceed until unsatisfactory conditions have been corrected.
5. Commencement of installation constitutes acceptance of conditions and responsibility for satisfactory performance by installer.
6. Faults occurring in work of this section due to acceptance of unsatisfactory conditions shall be corrected at no additional cost to owner.

3.2 INSTALLATION

A. General Requirements
1. Install fall restraint system in compliance with manufacturer’s instructions. Install equipment level, tightly fitted, and flush to adjacent surfaces as needed for proper installation.
2. Coordinate anchor installation with roofing installation to ensure a watertight and warrantable condition of the roofing. Anchors shall be directly flashed into roofing in a manner compatible with roofing system and anchors.
3. When components come into contact with dissimilar metals, surfaces shall be kept from direct contact to prevent corrosion.
4. No wall anchors shall be installed through membrane roofing system without specification detailing such from the architect or waterproofing company warranting the roof.
5. Deform a minimum of two threads of tail end of anchor studs after nuts have been tightened to prevent accidental removal or vandalism. Deform threads with 2/32" stainless steel punch.

B. Instructions for welding access equipment to structure
1. All welders must be certified to American Welding Society (AWS) in accordance with AWS standards.
2. Welding rods used to weld the anchor system to be E70 xx electrodes.
3. Prior to welding anchors to structure, abrasively remove within one inch of all welded surfaces galvanizing, mill, scale, and rust.
4. Immediately after welding, chip away slag to prepare for welding inspector to inspect welds.
5. An AWS certified welding inspector must inspect and confirm size of all field welds. Following the inspection a written report must be supplied to the building owner and/or general contractor. Welded joints shall not be painted until after welding has been completed and the weld accepted.
6. Immediately after an acceptable inspection, paint welded areas with cold-galvanizing compound to protect from corrosion.
7. Structural steel to receive roof or wall anchors shall have a surface wide enough so that base plate can be welded all the way around. For example, anchors equipped with 4½ in. (112.5 mm) base plates would require a minimum 5 in. (137.5 mm) surface to weld to.

C. Adhesive and Undercut Anchor Fasteners
1. Installation of Summit Anchor Co. equipment mounted with adhesive type anchor fasteners shall be performed by Hilti accredited installers only.
2. Installation of Summit Anchor Co. equipment mounted with undercut type anchor fasteners shall be performed by Hilti trained installers only.

D. Aluminum Flashing
1. Deck flange shall be flashed in compliance with National Roofing Contractor Association recommendations.

3.3 REPAIR/RESTORATION

A. Galvanizing Touch-Up
   1. Immediately after erection clean field welds and abraded areas. Repair damaged areas in compliance with ASTM A780.

3.4 FIELD QUALITY CONTROL

A. Inspection and site visits
   1. Inspections and site visits shall be performed while installation of equipment is in progress under the supervision qualified professional engineer registered in the jurisdiction where the project is located.
   2. On site inspection of equipment welded to structure shall be performed by an AWS Certified Welding Inspector verifying, in writing, size and quality of welds. Such an inspection shall be performed on each piece of equipment before roofing material is installed.
   3. On site inspection shall be performed on all cast in place items while being tied in with the rebar with sufficient time before concrete is poured to allow to adjustments to embedded items as recommended by inspector.
   4. G.C. shall be responsible to schedule above site visits and inspections with sufficient advanced notice given to the inspection company.

B. Site Tests
   1. All equipment shall be tested on site in accordance with manufacturer’s recommendations, under the supervision of a professional engineer before being placed in service.
   2. Equipment shall be tested under the supervision of a professional engineer with experience with fall restraint equipment and manufacturers guidelines.

C. Manufacturer shall assist and/or supervise installation of fall restraint equipment installed by others when such is included in contracted.

3.5 ADJUSTING

A. Verify that completed work has been installed correctly and products function properly. Make adjustments where needed to ensure satisfactory operation.

B. Complete inspection logbook to certify system for use noting any deviations, changes, or corrections from original shop drawings. Provide as-built anchor layout plan on 11 in. x 17 in. paper or larger together with annual inspection log book.

END OF SECTION  11 01 14
SECTION 11 52 13 - PROJECTION SCREENS & PROJ MOUNTS [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Electrically operated projection screens and controls.
   2. Projector mount and vibration isolation plate.
B. Related Sections:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
   2. Division 05 Section "Metal Fabrications" for metal support framing for projection screens.
   3. Division 06 Section "Rough Carpentry" for wood backing for screen installation.
   4. Division 09 Section “Painting” for special Projection Wall Finish in Lecture Hall.
   5. Division 26 Sections for electrical service and connections including device boxes for switches and conduit, where required, for low-voltage control wiring.
C. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
   2. Indoor Environmental Quality Credit 4.1.

1.3 DEFINITIONS
A. Gain of Front-Projection Screens: Ratio of light reflected from screen material to that reflected perpendicularly from a magnesium carbonate surface as determined per SMPTE RP 94.
B. Half-Gain Angle: The angle, measured from the axis of the screen surface to the most central position on a perpendicular plane through the horizontal centerline of the screen where the gain is half of the peak gain.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.
B. Shop Drawings: For projection screens. Show layouts and types of projection screens. Include the following:
   1. For electrically operated projection screens and controls:
      a. Location of screen centerline relative to ends of screen case.
      b. Location of wiring connections for electrically operated units.
      c. Location of seams in viewing surfaces.
      d. Drop lengths.
      e. Anchorage details, including connection to supporting structure for suspended units.
      f. Details of juncture of exposed surfaces with adjacent finishes.
      g. Accessories.
      h. Wiring diagrams.
C. Samples for Initial Selection: For finishes of surface-mounted screen cases.

1.5 CLOSEOUT SUBMITTALS
A. Maintenance Data: For projection screens to include in maintenance manuals.

1.6 LEED Submittals
A. Refer to Division 1 Section "LEED Requirements" for additional submittal requirements.
B. Credits MR 4.1 and MR 4.2: Product Data indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.
   1. Include statement indicating costs for each product having recycled content.

1.7 QUALITY ASSURANCE
A. Source Limitations for Projection Screens: Obtain each type of projection screen from single manufacturer. Obtain accessories, including necessary mounting hardware, from screen manufacturer.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.8 DELIVERY, STORAGE, AND HANDLING
A. Environmental Limitations: Do not deliver or install projection screens until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
B. Always handle screen in horizontal position.
C. Do not unpack screen or remove outer wrapping from case, or, remove black tape or bands from slat pocket until installation.

1.9 COORDINATION
A. Coordinate layout and installation of projection screens with adjacent construction, including ceiling suspension systems, light fixtures, HVAC equipment, fire-suppression system, and partitions. See Drawings for plan dimensions and angle of screen installation.

PART 2 - PRODUCTS

2.1 ELECTRICALLY OPERATED PROJECTION SCREENS
A. General: Manufacturer's standard units consisting of case, screen, motor, controls, mounting accessories, and other components necessary for a complete installation. Provide units that are listed and labeled as an assembly by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
1. Controls: Remote, three-position control switch installed in recessed device box with flush cover plate matching other electrical device cover plates in room where switch is installed. Provide engraved: SCREEN UP, STOP, DOWN on switch plate to operate screen movement.
   a. Provide one control switch for each screen.
   b. Provide power supply for low-voltage systems if required.
   c. Provide locking cover plates for switches.
2. Motor in Roller: Instant-reversing motor of size and capacity recommended by screen manufacturer; with permanently lubricated ball bearings, automatic thermal-overload protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Mount motor inside roller with vibration isolators to reduce noise transmission.
3. Screen Mounting: Top edge securely anchored to rigid metal roller and bottom edge formed into a pocket holding a 3/8-inch- diameter metal rod with ends of rod protected by plastic caps.
   a. Roller for motor in roller supported by vibration- and noise-absorbing supports.

B. Suspended, Electrically Operated Screens for recessed ceiling installation: Motor-in-roller units designed and fabricated for suspended mounting concealed above finished ceilings; bottom of unit with open slot to allow screen to lower and raise freely. [C]
1. Basis of Design Product: Subject to compliance with requirements, provide the following, or equal:
   a. Motor in Roller:  
      1) Da-Lite Screen Company; Cosmopolitan Electrol.
2. Provide metal or metal-lined wiring compartment on units with motor in roller.
3. Ceiling Trim Kit: Provide manufacturer's standard trim kit for installation of electrically operated screen units above finished ceilings. Trim kit shall provide 1.84 inch slot in finished ceiling for screen. If low voltage controls are incorporated into the screens, supply with built-in low voltage control. [C]
4. Screen Case: Made from metal and fire-retardant materials.
5. Provide screen case with trim flange to receive ceiling finish.
6. Finish on Exposed Surfaces: Prime painted or baked enamel.

2.2 FRONT-PROJECTION SCREEN MATERIAL
A. Matte-White Viewing Surface: Peak gain not less than 0.9, and gain not less than 0.8 at an angle of 50 degrees from the axis of the screen surface.
1. Basis of Design Product: Subject to compliance with requirements, provide one of the following, or equal:
   a. Da-Lite Screen Company; Matte White.
C. Mildew-Resistance Rating: 0 or 1 when tested according to ASTM G 21.
D. Flame Resistance: Passes NFPA 701.
E. Flame-Spread Index: Not greater than 75 when tested according to ASTM E 84.
F. Seamless Construction: Provide screens, in sizes indicated, without seams.
G. Edge Treatment: Without black masking borders.
H. Size of Viewing Surface: 
   1. Electrically Operated Projection Screens:
      a. Type 1:  43 by 57 inches.
      b. Type 2:  60 by 80 inches.
c. Type 3: 10 by 10 feet.
d. See Drawings for location of each type.

I. Accessories: For recessed ceiling mounted units provide mounting brackets, threaded rod supports, and all other required accessories required to provide a complete installation.

2.3 PROJECTOR MOUNT AND VIBRATION ISOLATION PLATE

A. Projector Mount: Provide adjustable projector mount and all necessary accessories for each projector listed.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Da-Lite UPM-1 Advance Universal Projector Mount.
      b. Roll adjustment of +/- 20 degrees; Pitch adjustment of +/- 15 degrees; 360 degree swivel.
      c. Supports projectors up to 50 pounds.
      d. Powder coat finish, color to be selected by Architect from manufacturer's full line of standard and premium colors.
      e. CM-P: NPT pipe for connecting ceiling mount coupling plate and mount. Provide lengths as required for each application so that projector hangs correct distance below ceiling.
      f. NOTE: Projectors by Owner.

B. Isolation Plate: Provide adjustable projector mount and all necessary accessories for each projector listed.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Da-Lite CM-VIP Vibration Isolation Ceiling Plate.

C. Locations: Provide Projector Mounts, Isolation Plates and Pipe Connectors for each projector in the following rooms:
   1. Classroom 102
   2. Classroom 102a
   3. Lecture Hall 022

2.4 FRONT-PROJECTION SCREEN INSTALLATION

A. Install front-projection screens at locations indicated to comply with screen manufacturer's written instructions.

B. Provide blocking, threaded rods and all other required supports to provide for concealed support of recessed ceiling screen. Provide blocking within walls at all wall-mounted screens. Coordinate with all adjacent construction and finishes. FROM PSU WB

C. Install front-projection screens with screen cases in position and in relation to adjoining construction indicated. Securely anchor to supporting substrate in a manner that produces a smoothly operating screen with vertical edges plumb and viewing surface flat when screen is lowered.
   1. Install low-voltage controls according to NFPA 70 and complying with manufacturer's written instructions.
      a. Wiring Method: Install wiring in raceway except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Use UL-listed plenum cable in environmental air spaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.
   2. Test electrically operated units to verify that screen controls, limit switches, closures, and other operating components are in optimum functioning condition.
   3. Test manually operated units to verify that screen-operating components are in optimum functioning condition.
   4. Confirm that screen installation is level and plumb.
2.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 11 52 13
SECTION 12 24 13 - ROLLER WINDOW SHADES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Manually operated sunscreen roller shades with single rollers. Type 1.
   3. Accessories.
   4. Local group and master control system for shade operation with encoded motors and addressable system.

B. Related Requirements:
   1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements
   2. Division 06 Section "Miscellaneous Rough Carpentry" for wood blocking and grounds for mounting roller shades and accessories.
   3. Division 09 Section "Gypsum board Assemblies" for coordination with gypsum board assemblies for installation of closures and related accessories.
   4. Division 26 Sections for electrical service and connections for motors, controls, limit switches, and other powered devices and for system disconnect switches for motor-operated shades.
   5. Roller Shade dealer/installer will bid:
      a. Roller shade hardware, shade fabric, and motor furnished and installed as a complete assembly.
      b. All electrical and electronic controls and accessories required for a complete control system including appropriate interface to communicate with stand alone BMS, daylighting, AV, or Central Integration contractor, shall be provided as part of the roller shade dealer / installer based proposal as a separate line item listing the control / interface components provided. Equipment shall include, but not be limited to, motor controllers, dry contact closures, RS-232, or 485 interface units, transformers, relays, and/or interface units as required.
      c. Roller shade dealer / installer shall list all components included in their bid and shall be financially responsible for any change orders and / or back charges required by the BMS, AV, or lighting control system contractors to interface with the motorized roller shade system.

C. LEED Opportunities: This Section has opportunities for the following LEED points:
   1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1, 4.2 and 5.1.
1.3 REFERENCES

B. NFPA 70 - National Electrical Code.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Manufacturers Data sheets to include:
      a. preparation instructions and recommendations.
      b. styles, material descriptions, dimensions of individual components and profiles, features, finishes, and operating instructions for roller shades.
      c. construction/mounting details and installation methods
      d. Storage and handling requirements and recommendations.
      e. Typical wiring diagrams including integration of motor controllers with building management system, audiovisual and lighting control systems as applicable.

B. Shop Drawings: Show fabrication and installation details for roller shades, including shadeband materials, their orientation to rollers, and their seam and batten locations. Show location and extent of roller shades. Include plans, elevations, sections, product details, and dimensions not shown in Product Data. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.
   1. Motor-Operated Shades: Include details of installation and diagrams for power, signal, and control wiring.

C. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   1. Ceiling suspension system members and attachment to building structure.
   2. Ceiling-mounted or penetrating items including light fixtures, air outlets and inlets, speakers, sprinklers, recessed shades, and special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.
   3. Shade mounting assembly and attachment.
   4. Size and location of access to shade operator, and adjustable components.
   5. Minimum Drawing Scale: 1/8 inch = 1 foot.

D. Samples for Initial Selection: For each finish product specified, one set of shade cloth options and aluminum finish color samples representing manufacturer’s full range of available colors and patterns.
   1. Include Samples of accessories involving color selection.

E. Samples for Verification: For each type of roller shade finish product specified
   1. Shadeband Material: Not less than 10 inches square from dye lot used for the Work, with specified treatments applied. Show complete pattern repeat. Mark face of material to indicate interior faces.
2. Roller Shade: Full-size operating unit, not less than 16 inches wide by 36 inches long for each type of roller shade indicated.
3. One set of shade components, unassembled, demonstrating compliance with specified requirements.
4. Installation Accessories: Full-size unit, not less than 10 inches long.

F. Roller-Shade Schedule: Use same room designations indicated on Drawings and include opening sizes and key to typical mounting details.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.
B. Product Certificates: For each type of shadeband material, signed by product manufacturer.
C. Product Test Reports: For each type of shadeband material, for tests performed by a qualified testing agency.
G. LEED Submittals:
   1. Credits MR 4.1 and MR 4.2: Product Data indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content.
      a. Include statement indicating costs for each product having recycled content.
   2. Refer to Division 1 Section "Sustainable Design Requirements" for additional submittal requirements.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roller shades to include in maintenance manuals.
   1. Methods for maintaining roller shades and finishes.
   2. Precautions regarding cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.
   3. Instructions for operating hardware and controls.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Roller Shades: Full-size units equal to 5 percent of quantity installed for each size, color, and shadeband material indicated, but no fewer than ten units.
1.8 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products; Installer trained and certified by the manufacturer with a minimum of ten years experience in installing products comparable to those specified in this section.

B. Anti-Microbial Characteristics: ‘No Growth’ per ASTM G21 results for fungi ATCC9642, ATCC 9644, and ATCC9645.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution. Locate mock-up in window designated by Architect.

1. Do not proceed with remaining work until, mock-up is accepted by Architect.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver shades in factory packages, marked with manufacturer and product name, fire-test-response characteristics, lead-free designation, and location of installation using same room designations indicated on Drawings and in a window treatment schedule.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Architect of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.11 WARRANTY

A. Roller Shade Hardware, Chain and Shadecloth: provide Manufacturer’s standard non-depreciating twenty-five year warranty commencing on date of Substantial Completion.

B. Roller Shade Motors and Motor Control Systems: provide Manufacturer’s standard non-depreciating five year warranty commencing on date of Substantial Completion.

C. Roller Shade Installation: provide one year warranty commencing on date of Substantial Completion.
PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide MechoShade systems listed in description of ‘Shade Type 1’ and ‘Shade Type 2’ below or comparable product by one of the following:

1. BTX Window Automation, Inc.
2. DFB Sales.
3. Draper Inc.
5. Lutron Electronics Co., Inc.
8. OEM Shades Inc.
9. Shade Techniques, LLC.
10. Silent Gliss USA, Inc.
11. SM Automatic, Inc.

B. Source Limitations: Obtain roller shades from single source from single manufacturer with a minimum of ten years experience in manufacturing products comparable to those specified in this section.

2.2 APPLICATION/SCOPE

A. Roller Shade Schedule:

1. Shade Type 1: Manual operating, chain drive, Light-Filtering Fabric roller shades in all exterior windows of the following rooms and spaces listed below and shown on Drawings:

   a. All perimeter offices and office support spaces at floors L1 through L4 labeled as:

      1) Administrative Assistant
      2) Administrative Director
      3) Assistant Director’s Office
      4) Associate Director
      5) Data Analyst
      6) Department Head Office
      7) Director’s Administrative Office
      8) Director’s Office
      9) Faculty Office
     10) Faculty Office w/ Research Space
     11) Office of the Benefit Chair
     12) Post Doc
     13) Post Doctoral Fellow
     14) Professional Staff
     15) Project Office
     16) Research Associate
     17) Research Office
     18) Research Staff/Post Doc
     19) Staff Assistant
     20) Support Space
     21) Undergraduate PIC
22) Visiting Faculty Office

b. Perimeter rooms not labeled as an office or office support space at floors L1 through L4:
   1) Conference Classroom (116) including window facing onto Stair C
   2) Conference Room (232)
   3) Conference Room (312) including window facing onto Stair C
   4) Remote Data Collection Lab (406)
   5) Women’s Toilet Room (R425)
   6) Men’s Toilet Room (R424)
   7) Office Services (433)
   8) Meeting/Work Room (434)

c. All interior windows at office and office support spaces at floors L1 through L4 labeled as:
   1) Support Space (116A)
   2) Receptionist and visitor Area (219)
   3) Staff Assistant (219A) interior window shared with 218
   4) Administrative Assistant (219B)
   5) Graduate PIC (219C)
   6) Work Study (219F) interior window shared with 218
   7) Receptionist and Visitor Area/ Hourly Wage Space (314) interior window shared with 311
   8) Copier Room (313A) interior window shared with 311
   9) Graduate Assistants (413) interior window shared with 412
   10) Office Services Area (417) window facing onto Stair C
   11) Printer Room (417A) window facing onto Stair C
   12) Faculty Office (416) window facing onto Stair C

2. Shade Type 2: Motorized interior operated blackout shade in all exterior windows of the following rooms listed below and shown on Drawings and related motor control systems:

   a. Room # 218
   b. Room # 311
   c. Room # 412
   d. Provide blackout shades in observation windows at rooms 026, 104 and 204, complete with blackout jambs and sills.

2.3 ROLLER SHADE TYPE 1: MANUALLY OPERATED SHADES WITH SINGLE ROLLERS

A. Drive Bracket/Brake Assembly:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Drive Bracket model M5 roller shades without fascia with end caps, as manufactured by MechoShade Systems, Inc; or a comparable product.
   2. Bracket model shall be fully integrated with all accessories, including, but not limited to: room darkening side / sill channels, center supports and connectors for multi-banded shades as indicated on Shop Drawings.
   3. M5 drive sprocket and brake assembly shall rotate and be supported on a welded 3/8 inch (9.525 mm) steel pin.
   4. The brake shall be an over-running clutch design which disengages to 90 percent during the raising and lowering of a shade. The brake shall withstand a pull force of 50 lbs. (22 kg) in the stopped position.
5. The braking mechanism shall be applied to an oil-impregnated hub on to which the brake system is mounted. The oil impregnated hub design includes an articulated brake assembly, which assures a smooth, non-jerky operation in raising and lowering the shades. The assembly shall be permanently lubricated. Products that require externally applied lubrication and or not permanently lubricated are not acceptable.

6. The entire M5 assembly shall be fully ceiling mounted on the steel support bracket, and fully independent of the shade tube assembly, which may be removed and reinstalled without effecting the roller shade limit adjustments.

B. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.

   a. Loop Length: As indicated on Drawings.
   b. Chain-Retainer Type: Chain tensioner, as indicated in Shop Drawings.

2. Position of Clutch Operator: As indicated on Drawings or in window schedule.
3. Clutch: Capacity to lift size and weight of shade; sized to fit roller or provide adaptor.
4. Lift-Assist Mechanism: Manufacturer's standard spring assist for balancing roller shade weight and lifting heavy roller shades.
5. Shade Coupler System: Designed for simultaneously operating two or more shade rollers with a single chain drive. Provide system where indicated on Drawings or where indicated in a window treatment schedule.
6. Operating Function: Stop and hold shade at any position in ascending or descending travel.

C. Drive Chain: #10 qualified stainless steel chain rated to 90 lb. (41 kg) minimum breaking strength. Nickel plate chain shall not be accepted.

D. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shade bands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shade bands for service.

1. Roller Drive-End Location: As indicated on Drawings.
2. Direction of Shadeband Roll: Regular, from back of roller or Reverse, from front of roller as indicated on Drawings.
3. Shadeband-to-Roller Attachment: Removable spline fitting integral channel in tube. See 'Shade Band' Section 2.6 below.

E. Mounting Hardware: Brackets to be corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.

F. Provide for universal, regular and offset drive capacity, allowing drive chain to fall at front, rear or non-offset for all shade drive end brackets. Universal offset shall be adjustable for future change.

G. Provide shade hardware constructed of minimum 1/8-inch (3.18 mm) thick plated steel or heavier as required to support 150 percent of the full weight of each shade.

H. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.
1. Provide shade hardware system that allows for operation of multiple shade bands (multi-banded shades) by a single chain operator, subject to manufacturer's design criteria. Connectors shall be offset to assure alignment from the first to the last shade band.

2. Provide shade hardware system that allows multi-banded manually operated shades to be capable of smooth operation when the axis is offset a maximum of 6 degrees on each side of the plane perpendicular to the radial line of the curve, for a 12 degrees total offset.

I. Shadebands:

2. Shadeband Bottom Hem) Bar: Steel or extruded aluminum.
   a. Type: Enclosed in sealed pocket of shadeband material.
   b. Color and Finish: As selected by Architect from manufacturer's full range.

J. Installation Accessories:

1. Closure: Continuous Aluminum extrusion that conceals roller and operating mechanism; see Drawings.
   a. Shape: L-shaped.
   b. Horizontal depth: 2 inch Closure with Single Closure Mount
   c. Height: Manufacturer's standard height; see Drawings.
   d. Notching of Closure for manual chain shall not be acceptable.

2. Installation Accessories Color and Finish: As selected from manufacturer's full range.

2.4 ROLLER SHADE TYPE 2: MOTOR-OPERATED, SINGLE-ROLLER SHADES

A. Motorized Operating System: Provide factory-assembled, shade-operator system of size and capacity and with features, characteristics, and accessories suitable for conditions indicated, complete with electric motor and factory-prewired motor controls, power disconnect switch, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.

1. Electrical Components: Listed and labeled as defined in NFPA 70, either UL or ETL or other testing agency acceptable to authorities having jurisdiction, and marked for intended location and application and tested as a system. Individual testing of components will not be acceptable in lieu of system testing.

2. Electric Motor Basis-of-Design Product: Subject to compliance with requirements, provide "Electro III" tubular, enclosed in roller without fascia with end caps, as manufactured by MechoShade Systems, Inc; or a comparable product.
   a. Electrical Characteristics: Single phase, \[24\] \[110\] \[220\] <Insert value> V, 60 Hz.

3. Remote Control: Electric controls with NEMA ICS 6, Type 1 enclosure for recessed or flush mounting. Provide the following for remote-control activation of shades:
   a. Individual/Group Control Station: [Maintained] [Momentary]-contact, three-position, rocker-style, wall-switch-operated control station with open, close, and center off functions for individual and group control.
   b. Color: As selected by Architect from manufacturer's full range.
4. Crank-Operator Override: Crank and gearbox operate shades in event of power outage or motor failure.
5. Limit Switches: Adjustable switches interlocked with motor controls and set to stop shades automatically at fully raised and fully lowered positions.
6. Operating Features:
   a. Group switching with integrated switch control; single faceplate for multiple switch cutouts.
   b. Capable of interface with audiovisual control system.

B. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
   1. Roller Drive-End Location: As indicated on Drawings.
   2. Direction of Shadeband Roll: Regular, from back of roller.

C. Mounting Hardware: Brackets to be corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.

D. Shadebands:
   2. Shadeband Bottom Hem Bar: Steel or extruded aluminum.
      a. Type: Enclosed in sealed pocket of shadeband material.
      b. Color and Finish: As selected by Architect from manufacturer's full range.

E. Installation Accessories:
   1. Closure: Continuous Aluminum extrusion that conceals roller and operating mechanism; see Drawings.
      a. Shape: L-shaped.
      b. Horizontal depth: 3 inch Closure with Single Closure Mount
      c. Height: Manufacturer's standard height; see Drawings.
      d. Notching of Closure for manual chain shall not be acceptable.
   2. Side Channels: With light seals and designed to eliminate light gaps at sides of shades as shades are drawn down. Provide side channels with shadeband guides or other means of aligning shadebands with channels at tops.
      a. Provide side channels for shades in observation windows at rooms 026, 104 and 204.
   3. Bottom Sill Channel or Angle: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.
      a. Provide bottom sill channel or angle for shades in observation windows at rooms 026, 104 and 204.
4. Installation Accessories Color and Finish: As selected from manufacturer's full range.

### 2.5 SHADEBAND MATERIALS

A. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701 small and large-scale vertical burn. Materials tested shall be identical to products proposed for use. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Light-Filtering Fabric for Roller Shade Type 1: Woven fabric, stain and fade resistant.
   2. Type: fabricated from polyester core yarn, single thickness non-raveling
   4. Thickness: 0.030 inch (0.762 mm) thick fabric
   5. Weight: 14.4 oz./sq. yd.
   6. Roll Width: MechoShade stocks in 96 inches.
   7. Orientation on Shadeband: As indicated on approved Shop Drawings
   8. Openness Factor: 3 percent.
   9. Color: As selected by Architect from manufacturer's full range.

C. Light-Blocking Fabric for Roller Shade Type 2: Opaque fabric, stain and fade resistant.
   2. Type: comprising of 53% fiberglass, 45% acrylic, 2% poly finish.
   3. Thickness: .008 inches thick (.19 mm) blackout material
   4. Weight: 15.1 oz./sq. yd.
   5. Roll Width: MechoShade stocks in 100 inches.
   6. Orientation on Shadeband: As indicated on approved Shop Drawings
   7. Features: Contact MechoShade or manufacturer for cleaning instructions
   8. Color: As selected by Architect from manufacturer's full range.

### 2.6 SHADE BAND

A. Shade Bands: Construction of shade band includes the fabric, the hem weight, hem-pocket, shade roller tube, and the attachment of the shade band to the roller tube. Sewn hems and open hem pockets are not acceptable.

B. Hem Pockets and Hem Weights: Fabric hem pocket with RF-welded seams (including welded ends) and concealed hem weights. Hem weights shall be of appropriate size and weight for shade band. Hem weight shall be continuous inside a sealed hem pocket. Hem pocket construction and hem weights shall be similar, for all shades within one room.

C. Shade Band and Shade Roller Attachment:
   1. Use extruded aluminum shade roller tube of a diameter and wall thickness required to support shade fabric without excessive deflection. Roller tubes less than 1.55 inch (39.37 mm) in diameter for manual shades, and less than 2.55 inches (64.77 mm) for motorize shades are not acceptable.
   2. Provide for positive mechanical engagement with drive / brake mechanism.
   3. Provide for positive mechanical attachment of shade band to roller tube; shade band shall be made removable / replaceable with a "snap-on" snap-off" spline mounting,
without having to remove shade roller from shade brackets. Friction fit connectors for drive mechanism connection to shade roller tube are not acceptable.

4. Mounting spline shall not require use of adhesives, adhesive tapes, staples, and/or rivets.
5. Any method of attaching shade band to roller tube that requires the use of adhesive, adhesive tapes, staples, and/or rivets are not acceptable.

2.7 ROLLER-SHADE FABRICATION

A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.

B. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.
   1. Lifting Mechanism: With permanently lubricated moving parts.

C. Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.

D. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F:
   1. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 1/4 inch from face of jamb. Length equal to head to sill dimension of opening in which each shade is installed.
   2. Shade Units Installed Outside Jambs: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.
   3. Fabricate units to completely fill existing openings from head to sill, unless specifically indicated otherwise. All manual shades must be multi-banded in curtain wall glass system.

E. Fabricate shadecloth to hang flat without buckling or distortion. Fabricate with heat-sealed trimmed edges to hang straight without curling or raveling. Fabricate unguided shadecloth to roll true and straight without shifting sideways more than 1/8 inch (3.18 mm) in either direction per 8 feet (2438 mm) of shade height due to warp distortion or weave design. Fabricate hem as follows:
   1. Bottom hem weights

F. Shadeband Fabrication: Fabricate shadebands without battens or seams to extent possible except as follows:
   1. Vertical Shades: Where width-to-length ratio of shadeband is equal to or greater than 1:4, provide battens and seams at uniform spacings along shadeband length to ensure shadeband tracking and alignment through its full range of movement without distortion of the material.
   2. Railroaded Materials: Railroad material where material roll width is less than the required width of shadeband and where indicated. Provide battens and seams as required by railroaded material to produce shadebands with full roll-width panel(s) plus, if required, one partial roll-width panel located at top of shadeband.
   3. For railroaded shadebands, provide seams in railroaded multi-width shadebands as required to meet size requirements and in accordance with seam alignment as acceptable to Architect. Seams shall be properly located. Furnish battens in place of plain seams when the width, height, or weight of the shade exceeds manufacturer's standards. In absence of such standards, assure proper use of seams or battens as required to, and assure the proper tracking of the railroaded multi-width shadebands.
G. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting and operating hardware and for hardware position and shade mounting method indicated.

H. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.

I. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.
   1. Four color finishes will be required.

J. Colors of Metal and Plastic Components Exposed to View: As selected by Architect from manufacturer's full range of standard and custom colors, unless otherwise indicated.

2.8 COMPONENTS

A. Access and Material Requirements:
   1. Provide shade hardware allowing for the removal of shade roller tube from brackets without removing hardware from opening and without requiring end or center supports to be removed.
   2. Provide shade hardware that allows for removal and re-mounting of the shade bands without having to remove the shade tube, drive or operating support brackets. Use only Delrin engineered plastics by DuPont for all plastic components of shade hardware. Styrene based plastics, and/or polyester, or reinforced polyester will not be acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 ROLLER-SHADE INSTALLATION

A. Install roller shades level, plumb, square, true and aligned with adjacent units according to manufacturer's written instructions.

   1. Shadebands: Located so shadeband is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.
B. Contractor to provide blocking within wall construction as required for proper support and anchorage of roller shade assemblies.

C. Electrical Connections: Connect motor-operated roller shades to building electrical system.

3.4 ADJUSTING

A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.5 CLEANING AND PROTECTION

A. Clean roller-shade surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades and motor-operated roller shades. Refer to Division 01 Section Demonstration and Training."

3.7 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:

1. Aluminum
2. Plastic Materials and Gaskets
3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:

1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 12 24 13
SECTION 12 48 13 - FLOOR MATS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Modular entrance floor panels in recessed frames.

B. Related Sections include the following:
   1. Division 03 Section "Cast-in-Place Concrete" for slab depression for recessed mats and frames, and topping slab required to bring top of mat to height level with adjacent finish floor.

1.3 ACTION SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Show the following:
   1. Items penetrating floor mats and frames, including structural columns and other items shown on the Drawings.
   2. Divisions between mat sections.
   3. Perimeter floor moldings.

C. Samples for Initial Selection: For each type of product indicated.

D. Samples for Verification: For each type of product indicated.
   1. Floor Panel: 12-inch-square, assembled sections of floor mat.
   2. Frame Members: 12-inch-long Sample.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For floor mats and frames to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Entrance Panels: Full-size units equal to 2 percent of amount installed for each size, color, and pattern indicated, but no fewer than 10 units.

1.6 QUALITY ASSURANCE

A. Source Limitations: Obtain floor mats and frames through one source from a single manufacturer.

B. Accessibility Requirements: Provide installed floor mats that comply with Section 4.5 in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)."
C. Performance Data:
1. Certified by the NFSI as safe walking surface meets .6 wet SCOF.
2. Provide a 500 lb per wheel rolling load.
3. Class I Fire Rated.
4. Considered permanent grille or grate as recommended in LEED IAQ Credit 5.
5. Removes 98% of foot traffic contaminants within 18’ of walking surface.

1.7 PROJECT CONDITIONS
A. Field Measurements: Indicate measurements on Shop Drawings.

1.8 COORDINATION
A. Coordinate size and location of recesses in concrete with installation of finish floors to receive floor mats and frames.

PART 2 - PRODUCTS

2.1 MATERIALS
A. Stainless Steel – Type 304 Stainless Steel.
B. Aluminum – ASTM 221, alloys 6061-T5, 6063-T6, 6210-T5, and 6005-T5 for extrusions, sheet, or plate.

2.2 FLOOR MATS / GRIDS
A. Basis-of-Design Product: Subject to compliance with requirements, provide Floorometry 201 as manufactured by Construction Specialties, or an approved equal.
B. Stainless Steel Mesh Panels:
1. Panel Size: 18” x 18” x ¾”.
2. Mesh: Flat Weave, with thickness of .150” and 36.9% free area.
3. All components to be T304 Stainless Steel.
4. Substructure of .090” thick perimeter s.s. banding and s.s. intermediate supports with a horizontal drain feature.
5. All components tack welded.
6. Panels are removable and replaceable.
7. Finish: Mill.
8. Weight: 11.7 lbs per panel.

C. Recessed Frames:
1. All components to be T304 Stainless Steel.
2. ¾” deep frame with 1/8” exposed surface.

2.3 COMMON MUD PLATE AND BOND BREAKER
A. Product includes a common mud plate and bond breaker. The aluminum mud plate attaches to the slab with the manufacturer’s recommended adhesive. Integral to the mud plate is the bond breaker, preventing the flooring adhesive from bonding to the top surface of the product. The bond breaker also provides the base of the collection reservoir which contains all contaminates removed and collected from foot traffic. Top surface sections are removable, using common integral attachment clips allowing for periodic maintenance by vacuuming the reservoir or power washing the product.
Each mud plate comes with four alignment pins to ensure a proper and quick connection of the removable surface to the common base. Surface removal tools to be included.

2.4 ADHESIVES

A. Basis-of-Design Adhesives:
   1. Provide adhesives recommended by product manufacturer.
      a. Henry 130 Thin Spread Floor Tile Adhesive – Interior Use only.
      b. Laticrete Latapoxy 300 Adhesive – Interior or Exterior Use.

2.5 FABRICATION

A. Floor Mats: Shop fabricate units to greatest extent possible in sizes indicated. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.

B. Recessed Frames: As indicated, for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices.
   1. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.

C. Coat surfaces of aluminum frames that will contact cementitious material with manufacturer's standard protective coating.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and floor conditions for compliance with requirements for location, sizes, and other conditions affecting installation of floor mats and frames.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install recessed mat frames to comply with manufacturer's written instructions. Set mat tops at height recommended by manufacturer for most effective cleaning action; coordinate top of mat surfaces with bottom of doors that swing across mats to provide clearance between door and mat.
   1. Install necessary shims, spacers, and anchorages for proper location and secure attachment of frames.
   2. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

B. Install surface-type units to comply with manufacturer's written instructions at locations indicated; coordinate with entrance locations and traffic patterns.
   1. Anchor fixed surface-type frame members to floor with devices spaced as recommended by manufacturer.

3.3 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.
3.4 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated area for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum.
   2. Plastic Materials
   3. Corrugated cardboard packaging.

C. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 12 48 13
SECTION 12 61 00 - FIXED SEMINAR TABLES  [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes fixed, continuous seminar tables with the following:

2. Table top design: continuous worksurface, straight; see Drawings
3. Modesty Panels: unitized, straight; see Drawings
4. End Panels: project specific dimensions; see Drawings
5. Power service to individual table locations; see Drawings
6. Row ID on table tops; see Drawings

B. Related Sections:

1. Division 1 Section "Sustainable Design Requirements" for additional LEED requirements.
2. Division 26 Sections for electrical service and connections to table junction box locations for power receptacles.

C. LEED Opportunities: This Section has opportunities for the following LEED points:

1. Materials and Resources Prerequisite 1 and Credits 2.1, 4.1 and 4.2 (10% and 20% Recycled Content – post-consumer/pre-consumer) and 5.1 (Regional Materials)
2. Indoor Environmental Quality Credit 4.1.
3. Greenguard Certified - Low Emitting Materials
4. Renewable Materials
5. FSC Certified Wood

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fixed seminar tables. Include electrical characteristics.

B. LEED Submittals:

1. Certificates for Credit MR 6 Credit MR 7: Chain-of-custody certificates certifying that wood and wood-based materials comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body. Include statement indicating cost for each certified wood product.
2. Product Data for Credit IEQ 4.4: For each composite wood product, documentation indicating that product contains no urea formaldehyde.
3. Laboratory Test Reports for Credit IEQ 4: For composite wood products
4. Recycled Content Summary:

a. Steel:
   1) average % by weight: 28%
   2) Recycled content: 28%
   3) % Post Consumer: 18%
   4) % Pre Consumer: 17%
   5) Recyclable: Yes

b. Particle Board:
   1) average % by weight: 54%
   2) Recycled content: 100%
   3) % Post Consumer: 40%
   4) % Pre Consumer: 60%
   5) Recyclable: No

c. Laminate:
   1) average % by weight: 9%
   2) Recycled content: 10%
   3) % Post Consumer: 0%
   4) % Pre Consumer: 10%
   5) Recyclable: Yes

5. Greenguard Certification
6. Certified Wood
7. No-Added Urea Formaldehyde

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Table Layout: Show Table layout, aisle widths, and row-lettering scheme, table widths, and table support base and pedestal spacing in each row. Coordinate base and pedestal locations with number of seats per row. See Drawings for seat count per row.
   2. Accessories: Show accessories, including locations of, electrical devices, accessibility provisions, and attachments to other work. Coordinate electrical device locations with number of seats per row. See Drawings for seat count per row.
   3. Wiring Diagrams: For power, signal, and control wiring.

D. Samples for Initial Selection: For each type of exposed finish, color, texture, and pattern indicated. All finishes (wood, laminate, veneer, metal and plastic) as selected by architect from manufacturer's full range of standard and premium color and finishes.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
   1. Plastic Laminate: Manufacturer's standard-size unit, not less than 3 inches (75 mm) square.
   2. Baked-on Coating Finishes: Manufacturer's standard-size unit, not less than 3 inches (75 mm) square.
   3. Aluminum Finishes: Manufacturer's standard-size unit, not less than 3 inches (75 mm) square.
   4. Wood and Plywood Materials and Finishes: Manufacturer's standard-size unit, not less than 3 inches (75 mm) square.
5. Row-Letter and Table-Number Plates: Full-size units with letters and numbers marked.
7. Exposed Fasteners: Full-size units of each type.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.
B. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For fixed seminar tables to include in maintenance manuals. Include the following:
   1. Precautions for cleaning materials and methods that could be detrimental to table finishes and performance.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials from the same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Power Receptacles: Furnish a quantity of full-size units equal to 5 percent of amount installed.

1.7 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of table required, including accessories and mounting components, from single source from single manufacturer.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
   1. Build mockups for the following types of fixed seminar tables including finishes, and accessories:
      a. Typical row with continuous modesty panel and end panel
      b. Typical row without modesty and end panels
   2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
D. Preinstallation Conference: Conduct conference at Project site.
1.8  PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install tables until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary or permanent HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Field Measurements: Verify actual dimensions of table layout and construction contiguous with tables by field measurements before fabrication.

1.9  COORDINATION

A. Coordinate layout and installation of electrical wiring and devices with table layout to ensure that floor junction boxes for electrical devices are accurately located to allow connection without exposed conduit.

1. Coordinate wiring and power receptacles installed in tables with requirements in Division 26 Sections.

1.10 WARRANTY

A. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of fixed seminar tables that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

   a. Structural failures including base and pedestals.
   b. Faulty operation of electrical components.
   c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.

2. Warranty Periods: As follows, from date of Substantial Completion.

   a. Structural: Lifetime.
   b. Electrical Components: Ten years.

PART 2 - PRODUCTS

2.1  MATERIALS AND FINISHES

A. Steel: ASTM A 36/A 36M plates, shapes, and bars; ASTM A 513 mechanical tubing; ASTM A 1008/A 1008M cold-rolled sheet; and ASTM A 1011 hot-rolled sheet and strip.

B. Cast Iron: ASTM A 48/A 48M, Class 25 (Class 175), gray iron castings free of blow holes and hot checks with parting lines ground smooth.

C. Cast Aluminum: ASTM B 85 aluminum-alloy die castings.
D. Metal Finish: Finish exposed metal parts with manufacturer's standard minimum 1.5-mil (0.04-mm) thick, epoxy baked-on powder coating.

   1. Color: As selected by Architect from manufacturer's full range of standard and premium colors.

E. Certified Wood: Fabricate tables with wood components produced from wood obtained from Retain option in first three paragraphs below if required for LEED-NC, LEED-CI, or LEED-CS Credit IEQ 4.4.

F. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.

G. Concealed Plywood: HPVA HP-1 hardwood plywood, made with adhesive containing no urea formaldehyde, or DOC PS 1 softwood plywood, as standard with manufacturer.

H. Hardwood Lumber and Veneer Faces: Cherry selected to be free of visible defects.

   1. Stain and Finish: As selected by Architect from manufacturer's full range of standard and premium stains and finishes.

I. Plastic Laminate: NEMA LD 3, Grade VGS for vertical surfaces and Grade HGS for horizontal surfaces.

   1. Color and Pattern: As selected by Architect from manufacturer's full range of standard and premium color and pattern.

2.2 FIXED SEMINAR TABLES

A. Fixed Seminar Tables: Interior seminar tables in permanent arrangement shown on Drawings.

   1. Basis-of-Design Product: Subject to compliance with requirements, provide KI "Fixed Worksurface Solutions".

B. Table Mounting Base and Pedestal:

   1. Basis-of-Design Product: Subject to compliance with requirements, provide KI basic (rectangular) base style.

C. Continuous Straight Table Top:

   1. Basis-of-Design Product: Subject to compliance with requirements, provide KI "Fixed Worksurface Solutions".

      a. Laminate with 34S edge (square wood band): As selected by Architect from manufacturer's full range.
      b. Size: see Drawings for custom row length; depth 24"
      c. Note: modesty panels only occur at edge of floor riser, no modesty panels at intermediate rows of tables

D. Table Height: 29" high; compliant with ADA.

E. Modesty Panels: Unitized.
   a. Perforated wood with 34S edge (square wood band): As selected by Architect from manufacturer's full range.
   b. Size: see Drawings for custom height of modesty panel to correspond with stepped risers at Lecture Hall.
   c. Note: modesty panels only occur at edge of floor riser, no modesty panels at intermediate rows of tables

F. End Panels:
      a. Perforated wood with 34S edge (square wood band): As selected by Architect from manufacturer's full range.
      b. Size: see Drawings for custom height of end panel to correspond with and follow profile of stepped risers at Lecture Hall.
      c. Note: end panels only occur at edge of floor riser, no end panels at intermediate rows of tables

G. Power Service Package: Manufacturer's standard service to individual tables including terminal devices and wiring with 18 inches (457 mm) of extra length and as follows.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide KI “PowerUp System”. Each module encloses one duplex receptacle (two power outlets).
   2. Location: See Drawings
   3. Quantity: One module per two seats (200 seats total; round up quantity for rows with an odd number of seats – total required 102).
   5. Seminar tables with “PowerUp” system: an eight-wire, four-circuit pre-wired harness is wired to the building power source and handles up to 24 laptops or 12 PC’s per power infeed. “PowerUp” components are completely enclosed below the worksurface within durable, tamper-resistant troughs and shrouds. Only the access module is visible on the worksurface.

H. Row-Letter and Table-Number Plates: Manufacturer's standard.
   1. Material: Stainless steel with black embossed characters.
   3. Row ID is not shown on Drawings. Row letter designation plates shall be mounted to end panels. Seat Number designation plates shall be recessed into wood table edge at each seat location, centered in edge. [C]

I. Seating: non-fixed individual chairs (not in contract)

2.3 FABRICATION

A. Floor Attachments: Fabricate to conform so that base and pedestals, tabletop, modesty and end panels are plumb, and, tables are maintained at same height above finish floor throughout Project.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine floors, risers, and other adjacent work and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine locations of electrical connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install tables in locations indicated and fastened securely to substrates according to manufacturer's written installation instructions.

   1. Install base and pedestals plumb.

B. Install wiring conductors and cables concealed in components of tables and accessible for servicing.

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections.

   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

   2. Tests for Power Receptacles: As specified in Division 26 Sections.

B. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust tables so that they are aligned with each other in straight rows.

B. Verify that all components and devices are operating properly.

C. Repair minor abrasions and imperfections in finishes with coating that matches factory-applied finish.

3.5 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:

   1. Aluminum
2. Plastic Materials and Gaskets
3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
   1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

END OF SECTION 12 61 00
SECTION 12 9300 - SITE FURNISHINGS [C]

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Metal Benches.
   2. Wood Benches
   3. Bicycle racks.
   4. Trash receptacles.
   5. Vehicular Bollards.
   6. Pedestrian Bollards
   7. Emergency Call box
   8. Lawn Terrace Step Handrails

B. Related Sections include the following:
   1. Division 3 Section "Cast-in-Place Concrete" for installation of pipe sleeves cast
      installation of anchor bolts cast in concrete footings.

C. Products furnished, but not installed under this Section, include anchor bolts and cast in
   concrete footings.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Initial Selection: For units with factory-applied color finishes.

C. Samples for Verification: For each type of exposed finish required, prepared on Samples of
   size indicated below.
   1. Size: Not less than 6-inch long linear components and 4-inch square sheet components.
   2. Paint samples for benches and receptacles matching PSU Facilities campus standards.

D. Product Schedule: For site furnishings. Use same designations indicated on Drawings.

E. Material Certificates: For site furnishings, signed by manufacturers.

F. Maintenance Data: For site furnishings to include in maintenance manuals.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of site furnishing(s) through one source from a single
   manufacturer.
1.4 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Bench Replacement Slats  No fewer than two full-size units for each size indicated.
2. Trash Receptacle Inner Containers: 5 full-size units for each size indicated, but no fewer than 2 units.
3. Anchors:  One per assembly

PART 2 - PRODUCTS

2.1 HANDRAIL MATERIALS

A. University Campus Standard Aluminum: Alloy and temper recommended by aluminum producer and finisher for brushed aluminum finish indicated; free of surface blemishes and complying with the following:

1. Rolled or Cold-Finished Bars, Rods, and Wire: ASTM B 211M.
2. Extruded Bars, Rods, Wire, Profiles, and Tubes: ASTM B 221M.
4. Sheet and Plate: ASTM B 209M.
5. Castings: ASTM B 26/B 26M.

B. Anchors, Fasteners, Fittings, and Hardware: Stainless steel and Manufacturer's standard, corrosion-resistant-coated; commercial quality, tamperproof, vandal and theft resistant as per details.

C. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107; recommended in writing by manufacturer, for exterior applications.

D. Erosion-Resistant Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound; resistant to erosion from water exposure without needing protection by a sealer or waterproof coating; recommended in writing by manufacturer, for exterior applications.

2.2 BENCHES

A. Metal Bench: University Campus Standard.
2. Model: Plainwell, Horizontal Strap; backed with arms 72" length,
3. Finish: Black powdercoated,
4. Quantity: 1

B. Wood Bench: University Campus Standard,
2. Model: ’Monarch’, Teak Bench, 72” Length
3. Quantity: 6
4. Installation Method: Attached to Stainless Steel dowel epoxy into concrete base, as shown on the attached details.

2.3 SEATING AND TABLES

A. Café Tables:
1. Type: As Manufactured by Landscape Forms, Inc: Heavy Gauge ‘STEELHEAD’ Type with perforated metal top framed by 1-1/2” tube. Size shall be 42” diameter. Provide the quad freestanding table legs.
2. Finish: Stainless Steel with clear Pangard II polyester powdercoat protection. [C]
3. Quantity: 6
4. Movable, no attachment.

B. Chairs:
1. Type: As Manufactured by Landscape Forms, Inc: Heavy Gauge ‘TRAVERSE’ Chairs without arms, with 7/8” diameter tubular steel frame with perforated metal seat inserts.
2. Finish: Stainless Steel with clear Pangard II polyester powdercoat protection. [C]
3. Quantity: 24
4. Movable, no attachment.

2.4 BICYCLE RACKS

A. Type: University Campus Standard,
2. Model: Cora Bike Rack, Expo # 7510,
3. Size: 6Ft long, 74-3/8” pin to pin; 34” height. 30” depth,
4. Color: Comet Black,

B. Quantity: 4

C. Installation Method: Bolted to cast-in place concrete pad.

2.5 TRASH RECEPTACLES

A. Type: University Campus Standard,
2. Model: Midtown 32 with Lid, # MT3D-32/Lid=LID32,
3. Receptacle with door, elevated legs and elevated lid,
4. Size: 32 gallon,
5. Color: Black powdercoated

B. Quantity: 4. [C]

C. Installation Method: Bolted to concrete pads as per manufactures recommendation.
2.6 PEDESTRIAN BOLLARDS-POST AND CHAIN

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

B. Post: University Campus Standard,
   2. PSU Aluminum Fence Post
      a. Model 14424
      b. Description: 5 Ft. tall, ball-topped with chain rings; post to be spaced 9Ft. on center.
      c. Size: 5 Ft. overall length (3 Ft Exposed)
   3. Finish: Ridge Black Powdercoated

C. Chain: University Campus Standard
   1. 1/4” grade 30 proof coil chain; black vinyl coated.

2.7 EMERGENCY CALL BOX

A. Type: University Campus Standard,
   1. Manufacturer: Code Blue Corporation, 92 East 64th Street Holland, MI 49423, Phone 800-205-7186, Web: www.codeblue.com
   2. Model: CB-5,
   3. Description: Freestanding type; with lighted faceplate; Blue beacon,
   4. Size- Diam.-8-3/4” / Ht.-9’-6”,

B. Quantity: 1

C. Installation Method: Attached to embedded bolts in concrete footing as per manufactures recommendations.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance.

   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturers written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.

B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.
C. Install site furnishings level, plumb, true, and securely anchored and positioned at locations indicated on Drawings.

D. Post Setting: Set cast-in support posts in concrete footing with smooth top, shaped to shed water. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at correct angle and are aligned and at correct height and spacing. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.

E. Pipe Sleeves for Removable Vehicular Bollards: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

3.3 CLEANING

A. After completing site-furnishing installation, inspect components. Remove spots, dirt, and debris. Repair damaged finishes to match original finish or replace component.

END OF SECTION-12 9300
SECTION 14 20 00 – ELEVATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes Machine Room-Less (MRL) passenger elevators.

B. Related Requirements:
   1. Division 01 Section “Temporary Facilities and Controls” for temporary use of elevators for construction purposes.
   2. Division 03 Section “Cast-in-Place Concrete” for setting sleeves, inserts, and anchoring devices in concrete.
   3. Division 04 Section “Unit Masonry” for setting sleeves, inserts, and anchoring devices in masonry and for grouting elevator entrance frames installed in masonry walls.
   4. Division 05 Section “Metal Fabrications” for the following:
      a. Attachment plates and angle brackets for supporting guide-rail brackets.
      b. Hoist beams.
      c. Structural-steel shapes for subsills.
      d. Pit ladders.
      e. Cants in hoistways made from steel sheet.
   5. Division 09 painting Sections for field painting of hoistway entrance doors and frames.
   6. Division 22 Section “Sump Pumps” for sump pumps, sumps, and sump covers in elevator pits.
   7. Division 26 Sections for electrical service for elevators to and including fused disconnect switches at machine room door and standby power source, transfer switch, and connection from auxiliary contacts in transfer switch to elevator controllers.
   8. Division 27 Section “Communications Horizontal Cabling” for telephone service for elevators.
   9. Division 28 Section “Digital, Addressable Fire-Alarm System” for smoke detectors in elevator lobbies to initiate emergency recall operation and heat detectors in shafts and machine rooms to disconnect power from elevator equipment before sprinkler activation and for connection to elevator controllers.

1.3 DEFINITIONS

A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.

B. Service Elevator: A passenger elevator that is also used to carry freight.
1.4 ACTION SUBMITTALS

A. Product Data: Include capacities, sizes, performances, operations, electrical characteristics and connection requirements, safety features, controls, finishes, operating fixtures, operating panels, and similar information.

B. Shop Drawings:
   1. Include plans, elevations, sections, and large-scale details indicating service at each landing, control room layout, coordination with building structure, relationships with other construction, and locations of equipment.
   2. Include large-scale layout of car-control station and standby power operation control panel.
   3. Indicate maximum dynamic and static loads imposed on building structure at points of support, and maximum and average power demands.
   4. Field measure locations of specified equipment prior to ordering shop drawings. Verify field measurements are as indicated on shop drawings prior to submitting.

C. Samples for Initial Selection: For finishes involving color selection.

D. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes; 3-inch- (75-mm-) square Samples of sheet materials; and 4-inch (100-mm) lengths of running trim members.

E. Cut sheets: Include cut sheets of all fixtures, and all lighting, including luminaries, lamps and ballast controls.

F. All submittals shall be in PDF format.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and control closet layout and dimensions, as shown on Drawings, and electrical service, as shown and specified, are adequate for elevator system being provided.

C. Sample Warranty: For special warranty.

D. All submittals shall be in PDF format.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.

   1. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.
   2. Include parts listing with sources indicated, recommended parts inventory listing, emergency instructions, necessary maintenance tools, and similar information.

B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
C. Regulatory Requirements: In addition to local governing regulations, comply with the applicable provisions of ASME A17.1, 2000 Safety Code for Elevators and Escalators including all addenda through 2002.

1. NFPA 70.
2. As supplemented in this section.
3. The Americans with Disabilities Act (ADA).
4. ASTM A 36 – Structural Steel.
7. ASTM B221 Aluminum and aluminum alloy extruded bars, rods, wires, shapes, and tubes.

D. Continuing Maintenance: The elevator contractor shall furnish full elevator equipment maintenance for a period of twelve (12) months after Substantial Completion. Full maintenance shall include regular monthly examinations of the installation by competent personnel and shall include all necessary adjustments, repairs, lubricating, cleaning and the needed supplies, etc., too keep the equipment in first class condition, except for misuse, accidents, or negligence not caused by the elevator contractor. The elevator contractor shall supply 24 hour 7 days per week emergency callback service during the maintenance period. A yearly full maintenance quotation based on 24-hour callback service and a full parts warranty shall accompany this installation quotation.

E. All submittals shall be in PDF format.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Elevator service company specializing in performing the work of this section and approved by the elevator equipment manufacturer. Installer shall be on Penn State University Pre-Qualification List.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.9 COORDINATION

A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.

B. Coordinate locations and dimensions of other work relating to electric traction elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

1.10 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.

1. The elevator contractor shall guarantee that the materials and workmanship of the apparatus installed by him under these specifications shall be first-class in every respect. The
contractor will repair or replace any defective components, not due to ordinary wear and tear or improper use, which may develop within one (1) year from date of Substantial Completion. Written warranties shall be provided to the University before final payment.

2. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide products by the following:
   1. Hollister Whitney MRL (Basis of specification)
   2. Port Elevator Inc, Williamsport, PA
   3. Hollister Whitney / GAL
   4. Approved equal

2.2 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.

B. Accessibility Requirements: Comply with Section 407 in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.

2.3 ELEVATORS

A. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturer's standard components shall be used, as included in standard elevator systems and as required for complete system.

B. New MRL machine shall be installed with a Permanent Magnet Gearless AC Traction Machine. Machine shall meet the following:
   1. Permanent magnet gearless traction machine designed for use with a machine-room-less elevator.
   2. 3-phase, 28 pole, synchronous AC gearless motor.
   3. Quantity and type: One (1)
   4. MRL Traction passenger
   5. Capacity: 3500 pounds
   6. Speed: 150 feet per minute
   7. Travel: Basement to Four, distance of approx 56'-0"
   8. Landings: Six (6)
   9. Openings: Five (5) front (1) rear
   10. Operation: Selective collective
   11. Platform size: 7'-0" wide x 6'-7 1/2" deep
   12. Hoistway entrance: Size: 3'-6" wide x 7'-0" high
   13. Type: Single Speed Side Opening – stainless steel
   14. Additional features:
      a. In car directional lanterns.
      b. Gongs.
Controller – Elevator System’s non-proprietary microprocessor-based controller shall be provided, including necessary starting switches together with all, relays, switches, and solid state components required for operation. Microprocessor shall have opto-isolated inputs and outputs. Shall be isolated with Dry Relay contacts. Controller shall have all diagnostic and trouble shooting readouts located directly on the unit. Controller shall have the ability to be replaced by a unit of different model or manufacturer without the necessity of replacing any other related items (door operators, selectors, car station, hall buttons etc). The control system shall include a microprocessor for processing, adjusting and diagnostics. The system shall provide comprehensive means to access the computer memory for elevator adjusting and diagnostic purposes and shall have permanent indicators to show elevator status as an integral part of the controller. Status indicators shall be provided on the controller to indicate when the safety circuit is open, when the door locks are open, when the elevator is running at high speed, with the elevator is on independent service, when the elevator is on fireman’s service, when the elevator out of service timer has elapsed, and when the elevator has failed to successfully complete it’s intended movement. A means shall also be provided for the displaying of other special or error conditions that are detected by the microprocessor without the use of any hand held or portable device. Changing of operational parameters shall be possible without the use of removable devices also. Full set of manuals including parameter lists, faults, settings, passwords and instructions on full use of the processor as well as wiring diagrams shall be included.

1. Controller manufacturers: Subject to compliance with requirements. Provide controller by one of the following manufacturers:
   a. GAL
   b. Elevator Systems
   c. Virginia Controls
   d. University design professional approved equal

2. Remote Monitoring System: Provide and install an interactive system to monitor and manage the elevator equipment. The data collection, data storage and real-time monitoring portion of the system shall be based on Microsoft Windows, and able to run on Windows 95 or later, and Windows NT 4.0 or later operating systems compatible with University systems. The system shall be network-based and be capable of interfacing with all makes and types of elevator control systems. System shall be compatible with any type or age of elevator. The system shall collect data via serial data connections. The system shall be capable of operating on any TCP/IP based network system. The addition of unlimited monitoring terminals shall be possible on the network. Monitoring terminals shall operate “peer to peer” without a single server, and the failure of a single network device shall not affect the operation of the rest of the system. The system shall provide multiple banks, including multiple buildings, on a single monitoring terminal screen. The system shall be capable of simultaneous monitoring of at least one hundred elevator units on a single monitoring station. The system shall be capable of real-time display of all monitored status points on all monitored equipment. Fault and event notification screens and audible alarms shall be immediately displayed on selected monitoring station, based on Boolean logical combinations of the monitored status points. Different vault and event tables shall be defined on a per-bank basis. The system shall collect and store all status, fault and event information for later reporting and analysis. The system shall provide statistical analysis of hall call response times, traffic patterns, fault conditions, service logs and security usage in graphical and tabular format. The system shall maintain a record of every status point change occurring on the monitored equipment, and provide the ability to replay these events in a simulation at a later time in real-time, slow speed, single step, reverse, or fast forward. These features may be revised as the requirements of the building change. Some of these interactive controls may include but are not limited to: security floor lockouts, entering car and hall calls, Fireman’s return service, lobby recall. System shall have the capability to interconnect and monitor all elevator emergency phones. The system shall display and record the following information for each monitored unit: (The following is intended as a guideline - connections to
each status point mentioned on every control system may be impractical. Serial data links may include many more points.) Applies to both hydraulic and traction elevators.

a. Individual car status - expandable menus - including but are not limited to: Direction of travel, Independent service, Fire service, Position of elevator, Door status (open, opening, closing, closed), Door dwell time, Power on/off, Door detector, Safety circuit, Door zone, Stop switch, Alarm button, Registered Car Calls

b. Data ports – Provide one serial data port for connection of an onsite laptop computer, and one cat5 port for future network connection for each elevator controller.

c. Network wiring to be provided by the GC.

d. Contractor to provide interface device to communicate with Elevator controller and University network

D. Motor Control: Variable frequency AC type motor controller.

   1. Limit total harmonic distortion to 5% Per IEEE 519.
   2. Provide means for absorbing regenerated power when elevator system is operating on standby power.

E. Automatic two-way leveling: An automatic two-way leveling device shall be provided so that the car will approach landing stops at reduced speed from either direction of travel. The leveling device shall, within its zone, be entirely independent of the operating device and shall automatically stop and maintain the car approximately level with the landing, regardless of change in load.

F. Restricted opening of hoistway or car doors: When the car is outside the unlocking zone, the doors must be arranged so that the hoistway doors or car doors cannot be opened more than 4” from inside the car. The doors shall be opening able from outside the car with a special tool.

G. Selective Collective Operation: The momentary pressing on one or more car buttons shall send the car to the designated landings in the order in which the landings are reached by the car, irrespective of the sequence in which the buttons are pressed. During this operation the car shall answer calls from the landings which are in the prevailing direction of travel and each call shall be canceled when answered. With the momentary pressing of a hall button above the car, the car shall start up and answer any up calls as they are reached by the car irrespective of the sequence in which the buttons are pressed. The car shall not stop at floors where down buttons only are pressed. Similarly, the car shall start down to answer calls below the car and shall not stop where up calls only are registered. When traveling up, the car shall reverse at the highest call and proceed to answer calls below it. Similarly, when traveling down, the car shall reverse at the lowest call and answer calls above it. Should both an up and down call be registered at an intermediate landing, only the call corresponding to the direction in which the car is traveling shall be canceled upon the stopping of the car at that landing.

H. Car enclosure: The cab shall be similar to the following:

   1. Flush design hollow metal car doors #4 stainless steel finish.
   2. Threshold silver nickel
   3. Entrance columns #4 stainless steel
   4. Front & back panel #4 stainless finish
   5. Side panels: Phenolic raised panels with stainless steel base, trim and reveals.
   7. Hands-free flush mount telephone in compartment
   8. Pad buttons
   9. Fan
   10. Floor finish: Slate.
   12. Vandal Resistant stainless steel signals and buttons with 100,000-hour life LED type indicators.
13. Lighting – Dimmable LED down lighting to provide 19 foot candles minimum at the floor level. Lighting color temp. is 3,000K. 50,000 hour life (to 70% output). Provide occupancy dimming when car is not in use.
   a. LED cab lighting shall also double as emergency lighting.
   b. Suggested Manufacturers:
      1) Man-D-Tec
      2) Cab-Lite (Electronic Controls Incorporated)

14. Cab moving pads installed throughout each elevator for the protection of car interiors.

I. Master door operator: A GAL MOVFR master gearless door operator with AC current motor shall be provided to open and close the car and hoistway doors simultaneously, at a maximum speed of not less than 1 \(\text{feet per second}\). Door movement shall be cushioned or checked at both limits of travel. Electro-mechanical switches and adjustable resistors shall control speed and limits. Electro-mechanical interlock shall be provided on each hoistway door to prevent the operation of the elevator unless all doors are closed and locked. An electric contact shall be provided on the car door to prevent the operation of the elevator unless the car door is closed. The door operator shall be arranged so that, in case of interruption or failure of electric power from any cause, the doors can be readily operated by hand from within the car. Emergency devices and keys for opening the doors from the landing shall be provided as required by the local codes. The doors shall open automatically when the car is leveling at the respective landings, and shall close after a predetermined time interval or immediately on pressing a car button. A “door open” button shall be provided in the car, the momentary pressing of which shall reopen the doors and reset the time interval. Provide clutch lock mechanism to keep doors from opening between floors.

J. Car door protective device – Adams Gatekeeper or GAL MOVFR. When in their full open position, the doors shall be unable to initiate closing if one or more of the beams are interrupted by a person or object. If one or more of the beams are interrupted while the doors are closing, the doors shall stop, then reverse to open. The doors shall reclose after a brief time. Supply a GAL MOVFR programming tool.

K. Door hangers and tracks: Hangers and tracks shall be provided at each car and hoistway entrance. Tracks shall be standard GAL with the working surface contoured to match the sheaves. The hangers shall be designed for power operation and have provisions for vertical and lateral adjustment. Hangers shall be designed for two-point suspension of the door panel. Hanger sheaves shall be polyurethane with pre-lubricated and sealed for life bearings. Car door hangers shall have minimum 3\(\frac{3}{8}\)" diameter sheaves. Hoistway door hangers shall have minimum 3\(\frac{5}{8}\)" diameter sheaves. Zone Clutch lock system shall be utilized to prevent opening of car doors from inside the car when the elevator is out of the door zone.

L. Car frame and platform: The car frame, which supports the elevator platform and enclosure, shall be made of structural steel members. Platform shall consist of a steel frame filled with suitable sub-floor and a finished floor of others. Underside of platform shall be properly fireproofed.

M. Cables: New Hoist and governor cables. New cable Shackles with new wedge clamp shackles. Maintenance to include shortening new cables to compensate for stretching. Shortening of cables to occur by the contractor prior to the end of the one-year maintenance period.

N. Keyed stop switch: A keyed stop switch shall be provided in the car, designated to cut off current supply to motor and bring the car to rest independent of the regular operating devices.

O. Car operating panel – Adams Elevator Equipment or GAL Manufacturing: a flush mounted operating panel shall be furnished in the car containing call registration buttons for each landing, emergency stop switch, alarm button, door open, door close, photo eye, fan, and light switch. Mount panel at heights complying with ASME A17.1. Emergency lighting shall be provided using the cab lighting. All buttons shall be 100,000-hour life LED type vandal resistant stainless steel indicators. All cover plates shall be engraved with the fire logo, “In Case of Fire Use Stairs”, the no smoking logo, and
"No Smoking". Furnish and install 'Best' key switches for floor cutouts and independent service features. Penn State elevator number in the panel face.

P. Hall buttons: Adams Elevator Equipment or GAL Manufacturing: A riser of flush mounted buttons shall be provided. A single button shall be furnished at each terminal and up down buttons at all intermediate landings. Button plates shall be flush mount and shall be large enough to cover holes left by existing plates. Use 100,000-hour life LED type indicators. Buttons shall be stainless steel vandal resistant. Hall plate to be engraved with ANSI fire service operation details.

Q. Terminal limit switches: Terminal limit switches shall be provided in the hoistway designed to automatically stop the car at each terminal landings.

R. Car position indicator: An digital position indicator shall be provided in the car and on the egress level landing, directly over the entrance or incorporated in the egress floor hall station. Floor arrival and passing gong as well as direction indication shall be incorporated in position indicator.

S. Car guide rails: Designed to span from floor to floor without intermediate supports.

T. Car guide shoes: The top and bottom of the car frames shall be provided with new roller guide shoes type of adequate design to sustain the loads imposed.

U. New Speed governors and tail sheaves: A car speed-governor conforming to the requirements of ASMI A17.1, Section 206 shall be provided to activate the car safety.

V. Hoistway Entrances: New entrances shall be stainless steel to match new stainless steel hoistway doors.

W. Car safety: A car safety shall be provided which will conform to the requirements of ANSI A17.1, Section 205. The safety shall be of the type, which can be released only by moving the car in the up direction. To return a car to normal operation after a safety set.

X. Hoistway Doors: New hoistway doors shall be provided with cutouts and reinforcements at door equipment bolt locations, emergency door access holes shall include escutcheons.

Y. Elevator two-way communications system: Provide and install a two-way communication system to comply with ANSI ASME A17.1 section 2.27. Furnish and install a "hands free" two-way conversation analog telephone system between the elevator car and a location in the building that is readily accessible by emergency personnel. An additional means of communication must be provided between the elevator and University Police Services headquarters. A separate means of two-way conversation must be provided in the elevator machine room for communication to the elevator car.

1. Provide and install an analog ADA compliant, hands-free indoor emergency phone, flush mounted with AUX inputs/outputs and voice location identifier
   a. Suggested manufacturer and model: Talk-A-Phone; ETP-100EBV"AUX" phone

2. Furnish and install a two-way conversation telephone system between the elevator car and a location in the “egress floor level lobby” that is easily accessible by emergency personnel. The telephone must be housed in a steel “Best” key core lockable cabinet. The cabinet must protrude no more than 4” into the pedestrian corridor as per ICC/ANSI A117.1-1998.
   a. Suggested stainless Steel box manufacturer and model: Talk-A-Phone; ETP-SMB/PSU
   b. Suggested telephone manufacturer and model: Talk-A-Phone; 68429 analog panel mount phone

3. Furnish and install a two-way conversation telephone system between the elevator car and the elevator machine room.
a. Suggested manufacturer and model:
   Talk-A-Phone; 68429 analog panel mount phone

4. Additional components: provide and install all necessary peripheral components to complete
   the elevator two-way communications system.
   a. a. provide and install an analog telephone line consolidator in the elevator machine
      room that will connect the analog phone lines going to the elevator car, “lobby” phone,
      and the “machine room” phone.
      1) Suggested manufacturer and model:
         Talk-A-Phone “EC-8” 8 Channel Consolidator

b. Raceways between elevator machine room controller and “Lobby” phone location:
   (Existing Construction):
   1) All raceways installed between the elevator controller and lobby phone shall be
      concealed within the existing building construction where possible. Walls shall
      be “fished” using a ¾” flexible metal conduit from ceiling to the location of the
      phone device box. Raceways above ceilings shall be concealed where
      suspended ceilings are existing, using ¾” EMT conduit with compression type
      fittings. Where concealment above ceilings is not possible, raceways shall
      be surface mounted and painted to match surrounding finishes, routed in a neat
      inconspicuous manner. Raceways shall be installed in accordance with the 2002
      National Electrical Code.

c. Telephone device boxes:
   1) Contractor shall coordinate final device box requirements with University based
      on phone type selected. Contractor shall provide a single gang device box flush
      mounted in wall at a height as directed by the University at final location of the
      lobby phone.

Z. Flashing Fire Sign: Back lit flashing signs matching other elevator fixtures to alert waiting
   passengers that the elevators have been taken out service due to an emergency.

AA. Keys: Upon the initial acceptance of work specified by the Contract Documents on the unit
   of vertical transportation equipment, the contractor shall deliver to the owner, four (4) keys for each
   new key-operated device that is provided. NOTE: All key operated devices should be “best” core
   compatible.

BB. Furnish and install deflector sheave guards on all deflector sheaves.

CC. Hoistway door jamb plates shall be installed on the door frames of each landing. Plates shall have
   numerical floor designation and Braille markings as per ADA requirements.

DD. Smoke Sensors: Tie into existing smart alarm system. It shall be the elevator contractor's
   responsibility to have the smoke and alarm system readdressed as required. Smoke sensors are to
   be located within ten (10) feet of the elevator entrance at each floor. Provide and install a smoke
   sensor in the machine room. Upon activation of any sensor, the elevator shall return to the egress
   floor level on fireman’s recall as per code. Upon activation of the egress landing smoke sensor,
   elevator shall recall to an alternate floor. Provide alarm and contacts for connection to building fire
   alarm system.

EE. Provide control wiring to the smoke damper as shown on mechanical drawings. Smoke damper
   provided and installed by mechanical contractor.

FF. Provide quilted car pads in all cars fitted to protect the interior finish of each car.

GG. Counterweight Guides: New counterweight guides with new roller guides.

HH. Emergency stop switches: Provide new emergency stop switches in the hoistway. One pushbutton
    switch is to be located in the pit and is to be accessible from the door entering the pit. The other
    pushbutton switch is to be located in the machine space accessible from the over-speed governor.
II. Ascending car overspeed and unintended car movement protection: A device shall be provided to prevent the car from striking the hoistway overhead structure. Electrical power failure or mechanically operated switch failure shall not render the device inoperative. Once actuated, the device shall remain actuated until manually reset. A device shall be provided to prevent unintended car movement away from the landing when the hoistway door and car door are open.

JJ. Access Door: Provide 24” x 24” fire rated access door to allow access to rear side of motor, if required based on final configuration and orientation of elevator. Provide non-combustible fixed ladder meeting ANSI A14.3 to reach access door.

2.4 FINISH MATERIALS

A. General: Provide the following materials for exposed parts of elevator car enclosures, car doors, hoistway entrance doors and frames, and signal equipment as indicated.

B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.

C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, commercial steel, Type B, pickled.

D. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.

E. Stainless-Steel Bars: ASTM A 276, Type 304.

F. Stainless-Steel Tubing: ASTM A 554, Grade MT 304.

G. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063.

I. Phelolic Panel: See Division 6 Section "Interior Architectural Millwork" for phenolic panel information.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Examine hoistways, hoistway openings, pits, and machine rooms as constructed; verify critical dimensions; and examine supporting structure and other conditions under which elevator work is to be installed.

B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions.

B. Coordinate work with building occupants.
C. Provide construction signs during work times.

D. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualifications of welding operators.

E. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.

F. Lubricate operating parts of systems, including ropes, as recommended by manufacturers.

G. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay final adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.

H. Leveling Tolerance: 1/8 inch (3 mm), up or down, regardless of load and travel direction.

I. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.

J. Locate hall signal equipment for elevators as follows unless otherwise indicated:
   1. Place hall lanterns either above or beside each hoistway entrance.
   2. Mount hall lanterns at a minimum of 72 inches (1829 mm) above finished floor.

3.3 FIELD QUALITY CONTROL

A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.

B. Tests to include full load safety test and empty car safety test. Adjust car leveling upon each test.

C. Prior to end of 12-month maintenance period, contractor will again perform full load safety test and empty car safety test. Adjust car leveling upon each test.

D. Operating Test: Load elevator to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next. Record temperature rise of elevator machine during 30-minute test period. Record failure to perform as required.

E. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators. A minimum of 48 hours notice is required prior to the elevator inspection and testing of any elevator systems.

F. Contractor is to provide the University with the initial inspection certificate and a copy of the initial inspection report.

3.4 PROTECTION

A. Temporary Use: Comply with the following requirements for elevator used for construction purposes:
1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
2. Provide strippable protective film on entrance and car doors and frames.
3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
5. Do not load elevators beyond their rated weight capacity.
6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

B. Provide final protection and maintain conditions, in a manner acceptable to elevator manufacturer and installer that ensure elevators are without damage or deterioration at the time of Substantial Completion.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate, adjust, and maintain elevator(s). Contractor shall instruct the University’s personnel in proper use, operation, and daily maintenance of elevators. Review emergency provisions and train Owner's personnel in procedures to follow in identifying sources of operational failures or malfunctions.

B. Check operation of each elevator with Owner's personnel present before date of Substantial Completion and again not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

3.6 RECORD DOCUMENTS

A. Provide the University with (2) hard copies and (2) electronic copy on disc of “As Built” adjustments reflecting setup after final adjustments are made. Include all wiring numbering and labeling, and any changes made from the original design documents. Drawings are to be laminated both sides for protection. Prints to be hole punched and bound with two metal rings in flip chart fashion. Contractor to provide a metal cabinet to store the as built drawings in the elevator machine room. Cabinet to be Grainger #1ufc1 36”x 30’x 18”.

3.7 WASTE MANAGEMENT

A. Minimize packaging required for material delivery without compromising protection of materials while either in transit to the project site or being stored on site.

B. Separate waste (if any) in accordance with the Construction Waste Management Plan. Place in designated areas for reuse or recycling. If recycling options are available locally or through manufacturer, recycle as a minimum, the following materials:
   1. Aluminum
   2. Plastic Materials and Gaskets
   3. Corrugated cardboard packaging.

C. Separate the following categories for disposal and place in designated areas for hazardous materials:
1. Treated, stained, painted or contaminated wood.

D. Preference is to be given to suppliers/installers who take back waste for reuse or recycling.

SECTION 21 05 17 - SLEEVES AND SLEEVE SEALS FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Sleeves.
   2. Stack-sleeve fittings.
   3. Sleeve-seal systems.

PART 2 - PRODUCTS

2.1 SLEEVES
A. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends. (For exterior walls.)
B. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint. (For interior use only.)
C. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
   1. Underdeck Clamp: Clamping ring with setscrews.
2.3 SLEEVE-SEAL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Advance Products & Systems, Inc.
2. Metraflex Company (The).
3. Pipeline Seal and Insulator, Inc.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Plastic.
3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

2.4 GROUT

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.

1. Sleeves are not required for core-drilled holes.

C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.

1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
2. Cut sleeves to length for mounting flush with both surfaces.
   a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
D. Install sleeves for pipes passing through interior partitions.
   1. Cut sleeves to length for mounting flush with both surfaces.
   2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07 Section "Joint Sealants."

E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.2 STACK-SLEEVE-FITTING INSTALLATION

A. Install stack-sleeve fittings in new slabs as slabs are constructed.
   1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07 Section "Sheet Metal Flashing and Trim."
   3. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
   4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   5. Using grout, seal the space around outside of stack-sleeve fittings.

B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

END OF SECTION 21 05 17
SECTION 21 05 18 - ESCUTCHEONS FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Escutcheons.
   2. Floor plates.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

A. One-Piece, Cast-Brass Type: With polished, chrome-plated and rough-brass finish and setscrew fastener.
B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
D. Split-Casting Brass Type: With polished, chrome-plated and rough-brass finish and with concealed hinge and setscrew.
E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed and exposed-rivet hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. Escutcheons for New Piping:
   a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
   b. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
   c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
   d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
   e. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with rough-brass finish.
   f. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with rough-brass finish.

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. New Piping: One-piece, floor-plate type.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 21 0518
SECTION 21 12 00 - FIRE-SUPPRESSION STANDPIPES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Pipes, fittings, and specialties.
   2. Fire-protection valves.
   3. Hose connections.
   4. Monitors.
   5. Fire-department connections.
   6. Alarm devices.
   7. Pressure gages.

B. Related Sections:
   1. Division 21 Section "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler piping.
   2. Division 28 Section "Digital, Addressable Fire-Alarm System" for alarm devices not specified in this Section.

1.3 DEFINITIONS

A. Standard-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure 175 psig maximum.

1.4 SYSTEM DESCRIPTIONS

A. Manual Wet-Type, Class I Standpipe System: Includes NPS 2-1/2 hose connections. Has small water supply to maintain water in standpipes. Piping is wet, but water must be pumped into standpipes to satisfy demand.

1.5 PERFORMANCE REQUIREMENTS

A. Standard-Pressure, Fire-Suppression Standpipe System Component: Listed for 175-psig minimum working pressure.

B. Delegated Design: Design fire-suppression standpipes, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
1. Available fire-hydrant flow test data is available on the Fire Protection drawings cover sheet. Water pressure available is adequate to supply all sprinklers through-out the building. The Fire Department will need to utilize a pumper truck to provide adequate pressure for the upper-floor hose-connections.

C. Fire-suppression standpipe design shall be approved by authorities having jurisdiction.

1. Minimum residual pressure at each hose-connection outlet is as follows:
   a. NPS 2-1/2 Hose Connections: 100 psig.

2. Maximum residual pressure at required flow at each hose-connection outlet is as follows unless otherwise indicated:
   a. NPS 2-1/2 Hose Connections: 175 psig.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For fire-suppression standpipes. Include plans, elevations, sections, details, and attachments to other work.

   1. Wiring Diagrams: For power, signal, and control wiring.

C. Delegated-Design Submittal: For standpipe systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Fire-suppression standpipes, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

   1. Domestic water piping.
   2. Compressed air piping.
   3. HVAC hydronic piping.
   4. HVAC ductwork.
   5. Electrical and data wire tray assemblies.

B. Qualification Data: For qualified Installer and professional engineer.

C. Approved Standpipe Drawings: Working plans, prepared according to NFPA 14, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.

D. Welding certificates.

F. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire-suppression standpipes specialties to include in emergency, operation, and maintenance manuals.

1.9 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer's responsibilities include designing, fabricating, and installing fire-suppression standpipes and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.

   a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

B. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. NFPA Standards: Fire-suppression standpipe equipment, specialties, accessories, installation, and testing shall comply with NFPA 14, "Installation of Standpipe and Hose Systems."

1.10 PROJECT CONDITIONS

A. Interruption of Existing Campus Water Service: The fire-suppression system shall be served by a combined fire-suppression/domestic water service entrance. Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:

   1. Notify Construction Manager no fewer than two days in advance of proposed interruption of fire-suppression standpipe service.
   2. Do not proceed with interruption of fire-suppression standpipe service without Construction Manager's written permission.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

2.2 STEEL PIPE AND FITTINGS
A. Standard Weight, Galvanized- and Black-Steel Pipe: ASTM A 53/A 53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.

B. Schedule 30, Galvanized- and Black-Steel Pipe: ASTM A 135; ASTM A 795/A 795M, Type E; or ASME B36.10M, wrought steel; with wall thickness not less than Schedule 30 and not more than Schedule 40. Pipe ends may be factory or field formed to match joining method.

C. Schedule 10, Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, Schedule 10 in NPS 5 and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10, plain end.

E. Galvanized, Steel Couplings: ASTM A 865, threaded.

G. Malleable- or Ductile-Iron Unions: UL 860.

I. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.

K. Grooved-Joint, Steel-Pipe Appurtenances:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Tyco Fire & Building Products LP.
      b. Victaulic Company.
   2. Pressure Rating: 175 psig minimum.
   4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.3 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free.
   1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
   2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.4 LISTED FIRE-PROTECTION VALVES

A. General Requirements:
   1. Valves shall be UL listed or FM approved.

B. Ball Valves:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Anvil International, Inc.
      b. Victaulic Company.
   2. Standard: UL 1091 except with ball instead of disc.
   3. Valves NPS 1-1/2 and Smaller: Bronze body with threaded ends.
   4. Valves NPS 2 and NPS 2-1/2: Bronze body with threaded ends or ductile-iron body with grooved ends.
   5. Valves NPS 3: Ductile-iron body with grooved ends.

C. Iron Butterfly Valves:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Anvil International, Inc.
      b. Kennedy Valve; a division of McWane, Inc.
      c. NIBCO INC.
      d. Tyco Fire & Building Products LP.
      e. Victaulic Company.
   2. Standard: UL 1091.
   4. Body Material: Cast or ductile iron.
   5. Style: Lug or wafer.

D. Check Valves:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Kennedy Valve; a division of McWane, Inc.
c. NIBCO INC.
d. Potter Roemer.
e. Reliable Automatic Sprinkler Co., Inc.
f. Tyco Fire & Building Products LP.
g. Victaulic Company.
h. Viking Corporation.

4. Type: Swing check.
5. Body Material: Cast iron.
6. End Connections: Flanged or grooved.

E. Iron OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. NIBCO INC.
   b. Tyco Fire & Building Products LP.
   c. Watts Water Technologies, Inc.

4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.

2.5 TRIM AND DRAIN VALVES

A. General Requirements:

2. Pressure Rating: 175 psig minimum.

B. Angle Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Fire Protection Products, Inc.
   b. United Brass Works, Inc.

C. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Fire-End & Croker Corporation.
   c. Kennedy Valve; a division of McWane, Inc.
d. NIBCO INC.
e. Potter Roemer.
f. Tyco Fire & Building Products LP.
g. Victaulic Company.

D. Globe Valves:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers
      offering products that may be incorporated into the Work include, but are not limited to,
      the following:
         a. Fire Protection Products, Inc.
         b. United Brass Works, Inc.

2.6 SPECIALTY VALVES

A. General Requirements:
      published by FM Global, listing.
   2. Pressure Rating:
      a. Standard-Pressure Piping Specialty Valves: 175 psig minimum.
   3. Body Material: Cast or ductile iron.
   4. Size: Same as connected piping.
   5. End Connections: Flanged or grooved.

B. Alarm Valves:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers
      offering products that may be incorporated into the Work include, but are not limited to,
      the following:
      a. Reliable Automatic Sprinkler Co., Inc.
      b. Tyco Fire & Building Products LP.
      c. Victaulic Company.
      d. Viking Corporation.
   3. Design: For horizontal or vertical installation.
   4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, and
      fill-line attachment with strainer.
   5. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
   6. Drip Cup Assembly: Pipe drain with check valve to main drain piping.

C. Automatic (Ball Drip) Drain Valves:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers
      offering products that may be incorporated into the Work include, but are not limited to,
      the following:
      a. Reliable Automatic Sprinkler Co., Inc.
      b. Tyco Fire & Building Products LP.
4. Type: Automatic draining, ball check.

2.7 HOSE CONNECTIONS

A. Nonadjustable-Valve Hose Connections:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Fire-End & Croker Corporation.
   c. NIBCO INC.
   d. Potter Roemer.
   e. Tyco Fire & Building Products LP.

2. Standard: UL 668 hose valve for connecting fire hose.
3. Pressure Rating: 300 psig minimum.
4. Material: Brass or bronze.
5. Size: NPS 1-1/2 or NPS 2-1/2, as indicated.
6. Inlet: Female pipe threads.
7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
8. Pattern: Angle or gate.

2.8 MONITORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Fire-End & Croker Corporation.
3. Potter Roemer.

B. Type: Stationary.

C. Nozzle: UL 401, NPS 2-1/2, brass, adjustable from fog spray to straight stream to shutoff.

D. Horizontal Rotation: 360 degrees with locking device.

E. Vertical Rotation: 80-degree elevation and 60-degree depression with locking device.

F. Waterway: Double brass or stainless-steel tube.

G. Waterway Size: NPS 2-1/2 minimum.

I. Operation: Lever.

J. Base Inlet Size: NPS 2-1/2.

K. Finish: Red-painted body with brass trim.

2.9 FIRE-DEPARTMENT CONNECTIONS

A. Yard-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   
   
   b. Fire-End & Croker Corporation.

3. Type: Exposed, freestanding.

6. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.

7. Caps: Brass, lugged type, with gasket and chain.

10. Number of Inlets: Two.

12. Sleeve Height: 18 inches.

13. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."

2.10 ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections. Refer to Division 28 Section “Digital, Addressable Fire-Alarm System.”

B. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   b. Potter Electric Signal Company.

   c. Viking Corporation.

4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-
adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: Paddle operated.
7. Design Installation: Horizontal or vertical.

C. Pressure Switches:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Tyco Fire & Building Products LP.
   c. Viking Corporation.

3. Type: Electrically supervised water-flow switch with retard feature.
5. Design Operation: Rising pressure signals water flow.

D. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Kennedy Valve; a division of McWane, Inc.
   b. Potter Electric Signal Company.

3. Type: Electrically supervised.
5. Design: Signals that controlled valve is in other than fully open position.

2.11 PRESSURE GAGES

A. Basis-of-Design is "Quality" series gage as manufactured by Marsh Instrument Company. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. AMETEK; U.S. Gauge Division.
2. Ashcroft Inc.

B. Standard: UL 393.

C. Dial Size: 3-1/2- to 4-1/2-inch diameter.

D. Pressure Gage Range: 0 to 250 psig minimum.

E. Water System Piping Gage: Include "WATER" label on dial face.

PART 3 - EXECUTION
3.1 EXAMINATION

A. Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.

B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SERVICE-ENTRANCE PIPING

A. Connect fire-suppression (standpipe and sprinkler) piping to combined fire-suppression/domestic water water-service piping at service entrance into building.

B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories at connection to fire-suppression water-service piping.

3.3 PIPING INSTALLATION

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.

B. Piping Standard: Comply with requirements in NFPA 14 for installation of fire-suppression standpipe piping.

C. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

D. Install drain valves on standpipes. Extend drain piping to outside of building.

E. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or outside building.

F. Install alarm devices in piping systems.

G. Install hangers and supports for standpipe system piping according to NFPA 14. Comply with requirements in NFPA 13 for hanger materials.

H. Install pressure gages on riser or feed main and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

I. Fill wet-type standpipe system piping with water.

J. Install sleeves for piping penetrations of walls, ceilings, and floors.
K. Install sleeve seals for piping penetrations of concrete walls and slabs.

L. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.4 JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system’s pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.

G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

H. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

I. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to “Quality Assurance” Article.
   1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

3.5 VALVE AND SPECIALTIES INSTALLATION

A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 14 and authorities having jurisdiction.

B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
D. Specialty Valves:
   1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.

3.6 HOSE-CONNECTION INSTALLATION
A. Install hose connections adjacent to standpipes.
B. Install freestanding hose connections for access and minimum passage restriction.
C. Install NPS 2-1/2 hose-connection valves with NPS 1-1/2 threaded reducers and chained caps.
D. Install NPS 2-1/2 hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 reducer adapter and flow-restricting device.
E. Install wall-mounted-type hose connections in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Division 10 Section "Fire Extinguisher Cabinets."

3.7 MONITOR INSTALLATION
A. Install monitors on standpipe piping.

3.8 FIRE-DEPARTMENT CONNECTION INSTALLATION
A. Install wall-type, fire-department connections.
B. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Division 03 Section "Cast-in-Place Concrete."
   1. Install three protective pipe bollards around each fire-department connection. Comply with requirements for bollards in Division 05 Section "Metal Fabrications."
C. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

3.9 IDENTIFICATION
A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 14.
B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
C. Fire protection piping shall be painted red (Rust-Oleum #1210, or approved equal). Refer to Division 09 Section "Interior Painting."

3.10 FIELD QUALITY CONTROL
A. Perform tests and inspections.

B. Tests and Inspections:

1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect standpipe systems according to NFPA 14, "System Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Coordinate with fire-alarm tests. Operate as required.
6. Verify that equipment hose threads are same as local fire-department equipment.

C. Fire-suppression standpipe system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.11 PIPING SCHEDULE

A. Piping from water main, through the combined service entrance to the backflow preventer: Black-steel, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded joints.

B. Standard-pressure, wet-type, fire-suppression standpipe piping, shall be one of the following:

1. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
2. Standard-weight or Schedule 30, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
3. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
4. Schedule 10, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
5. Schedule 10, black-steel pipe with plain ends; welding fittings; and welded joints.

C. Standard-pressure, piping subject to alternate wetting and drying (drain piping, test piping, Siamese connections between the Siamese shall be and check valves wet-type, fire-suppression standpipe piping, shall be the following:

1. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints, and properly sloped to completely drain.

END OF SECTION 21 12 00
SECTION 21 13 13 - WET-PIPE SPRINKLER SYSTEMS [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Fire-department connections.
4. Sprinklers.
5. Alarm devices.
7. Control panels.
8. Pressure gages.

B. Related Sections:

1. Division 21 Section "Fire-Suppression Standpipes" for standpipe piping.
2. Division 28 Section "Digital, Addressable Fire-Alarm System" for alarm devices not specified in this Section.

1.3 DEFINITIONS

A. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175 psig maximum.

1.4 SYSTEM DESCRIPTIONS

A. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.

1.5 PERFORMANCE REQUIREMENTS

A. Standard-Pressure Piping System Component: Listed for 175-psig minimum working pressure.

B. Delegated Design: Design sprinkler system(s), including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
C. Sprinkler system design shall be approved by authorities having jurisdiction.

1. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.

2. Sprinkler Occupancy Hazard Classifications:
   a. Building Service Areas: Ordinary Hazard, Group 1.
   b. Electrical Equipment Rooms: Ordinary Hazard, Group 1.
   c. General Storage Areas: Ordinary Hazard, Group 1.
   d. Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
   e. Office and Public Areas: Light Hazard.

3. Minimum Density for Automatic-Sprinkler Piping Design:
   a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. area.
   b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. area.

4. Maximum Protection Area per Sprinkler: Per UL listing.
5. Maximum Protection Area per Sprinkler:
   a. Office Spaces: 225 sq. ft.
   b. Storage Areas: 130 sq. ft.
   c. Mechanical Equipment Rooms: 130 sq. ft.
   d. Electrical Equipment Rooms: 130 sq. ft.
   e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.

6. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:
   a. Light-Hazard Occupancies: 100 gpm for 30 minutes.
   b. Ordinary-Hazard Occupancies: 250 gpm for 60 to 90 minutes.

1.6 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.
B. Color Selection Charts: Provide full custom color palette for Architect to select colors for concealed head covers. Colors shall be factory applied.
C. Shop Drawings: For wet-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.
   1. Wiring Diagrams: For power, signal, and control wiring.
D. Delegated-Design Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Domestic water piping.
2. Compressed air piping.
3. HVAC hydronic piping.
4. HVAC ductwork.
5. Electrical and data wire tray assemblies.
6. Items penetrating finished ceiling include the following:
   a. Lighting fixtures.
   b. Air outlets and inlets.
   c. Ceiling mounted A/V equipment.

B. Qualification Data: For qualified Installer and professional engineer.

C. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.

D. Welding certificates.

E. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."

F. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, and maintenance manuals.

1.9 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
      a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

B. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
   1. NFPA 13, "Installation of Sprinkler Systems."

1.10 PROJECT CONDITIONS
A. Interruption of Existing Campus Water Service: The fire-suppression system shall be served by a combined fire-suppression/domestic water service entrance. Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:

1. Notify Construction Manager no fewer than two days in advance of proposed interruption of fire-suppression standpipe service.
2. Do not proceed with interruption of fire-suppression standpipe service without Construction Manager's written permission.

1.11 COORDINATION

A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

2.2 STEEL PIPE AND FITTINGS

A. Standard Weight, Steel Pipe: ASTM A 53/A 53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.

2.3 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free.

1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.4 LISTED FIRE-PROTECTION VALVES

A. General Requirements:
1. Valves shall be UL listed or FM approved.

B. Ball Valves:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Anvil International, Inc.
   b. Victaulic Company.
2. Standard: UL 1091 except with ball instead of disc.
3. Valves NPS 1-1/2 and Smaller: Bronze body with threaded ends.
4. Valves NPS 2 and NPS 2-1/2: Bronze body with threaded ends or ductile-iron body with grooved ends.
5. Valves NPS 3: Ductile-iron body with grooved ends.

2.5 TRIM AND DRAIN VALVES

A. General Requirements:
2. Pressure Rating: 175 psig minimum.

B. Angle Valves:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Fire Protection Products, Inc.
   b. United Brass Works, Inc.

2.6 SPECIALTY VALVES

A. General Requirements:
2. Pressure Rating:
   a. Standard-Pressure Piping Specialty Valves: 175 psig minimum.
   b. High-Pressure Piping Specialty Valves: 250 psig minimum.
3. Body Material: Cast or ductile iron.
4. Size: Same as connected piping.
5. End Connections: Flanged or grooved.

B. Alarm Valves:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Victaulic Company.

3. Design: For horizontal or vertical installation.
4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, and fill-line attachment with strainer.
5. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
6. Drip Cup Assembly: Pipe drain with check valve to main drain piping.

2.7 FIRE-DEPARTMENT CONNECTIONS

A. Yard-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

3. Type: Exposed, freestanding.
6. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lug swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
10. Number of Inlets: Two.
12. Sleeve Height: 18 inches.
13. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."

2.8 SPRINKLER SPECIALTY PIPE FITTINGS

A. Branch Outlet Fittings:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Tyco Fire & Building Products LP.
   b. Victaulic Company.

4. **Body Material:** Ductile-iron housing with EPDM seals and bolts and nuts.

5. **Type:** Mechanical-T and -cross fittings.

6. **Configurations:** Snap-on and strapless, ductile-iron housing with branch outlets.

7. **Size:** Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.

8. **Branch Outlets:** Grooved, plain-end pipe, or threaded.

**B. Flow Detection and Test Assemblies:**

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Reliable Automatic Sprinkler Co., Inc.
   b. Tyco Fire & Building Products LP.
   c. Victaulic Company.

3. **Pressure Rating:** 175 psig minimum.

4. **Body Material:** Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.

5. **Size:** Same as connected piping.

6. **Inlet and Outlet:** Threaded.

**C. Branch Line Testers:**

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   b. Fire-End & Croker Corporation.
   c. Potter Roemer.

2. **Standard:** UL 199.

3. **Pressure Rating:** 175 psig.

4. **Body Material:** Brass.

5. **Size:** Same as connected piping.

6. **Inlet:** Threaded.

7. **Drain Outlet:** Threaded and capped.

8. **Branch Outlet:** Threaded, for sprinkler.

**D. Sprinkler Inspector’s Test Fittings:**

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Tyco Fire & Building Products LP.
   b. Victaulic Company.
   c. Viking Corporation.

4. Body Material: Cast- or ductile-iron housing with sight glass.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.

2.9 SPRINKLERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Reliable Automatic Sprinkler Co., Inc.
2. Tyco Fire & Building Products LP.

B. General Requirements:

4. Pressure Rating for High-Pressure Automatic Sprinklers: 250 psig minimum.

C. Automatic Sprinklers with Heat-Responsive Element:

2. Nonresidential Applications: UL 199.
3. Characteristics: Nominal 1/2-inch orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

D. Sprinkler Finishes:

1. Chrome plated.
2. Bronze.
3. Painted.

E. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Chrome-plated steel, one piece, flat.
2. Sidewall Mounting: Chrome-plated steel, one piece, flat.

F. Sprinkler Guards:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. Tyco Fire & Building Products LP.  
b. Victaulic Company.  
c. Viking Corporation.
2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

2.10 ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections. Refer to Division 28 Section “Digital, Addressable Fire-Alarm System.”

2.11 PRESSURE GAGES

A. Basis-of-Design is “Quality” type gage as manufactured by Marsh Instrument Company. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. AMETEK; U.S. Gauge Division.
2. Ashcroft Inc.

B. Standard: UL 393.

C. Dial Size: 3-1/2- to 4-1/2-inch diameter.

D. Pressure Gage Range: 0 to 250 psig minimum.

E. Water System Piping Gage: Include "WATER" label on dial face.

PART 3 - EXECUTION

3.1 SERVICE-ENTRANCE PIPING

A. Connect fire-suppression (standpipe and sprinkler) piping to combined fire-suppression/domestic water water-service piping at service entrance into building.

B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories at connection to fire-suppression water-service piping.

3.2 PIPING INSTALLATION

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.

B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.

C. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

D. Install unions adjacent to each valve in pipes NPS 2 and smaller.
E. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

F. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.

G. Install sprinkler piping with drains for complete system drainage.

H. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.

I. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.

J. Install alarm devices in piping systems.

K. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13.

L. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

M. Fill sprinkler system piping with water.

N. Install sleeves for piping penetrations of walls, ceilings, and floors.

O. Install sleeve seals for piping penetrations of concrete walls and slabs.

P. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.3 JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

H. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.

I. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to “Quality Assurance” Article.

1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

J. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.

K. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

L. Steel-Piping, Pressure-Sealed Joints: Join Schedule 5 steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.

3.4 VALVE AND SPECIALTIES INSTALLATION

A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.

B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

D. Specialty Valves:

1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.

3.5 SPRINKLER INSTALLATION

A. Install sprinklers in suspended ceilings in center of narrow dimension of acoustical ceiling panels.

B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
C. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

3.6 FIRE-DEPARTMENT CONNECTION INSTALLATION

A. Install yard-type, fire-department connections in concrete slab support. Comply with requirements for concrete in Division 03 Section "Cast-in-Place Concrete."

1. Install three protective pipe bollards around each fire-department connection. Comply with requirements for bollards in Division 05 Section "Metal Fabrications."

B. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

3.7 IDENTIFICATION

A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

C. Fire protection piping shall be painted red (Rust-Oleum #1210, or approved equal). Refer to Division 09 Section "Interior Painting."

3.8 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Coordinate with fire-alarm tests. Operate as required.
6. Coordinate with fire-pump tests. Operate as required.
7. Verify that equipment hose threads are same as local fire-department equipment.

C. Sprinkler piping system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.9 CLEANING

A. Clean dirt and debris from sprinklers.

B. Remove and replace sprinklers with paint other than factory finish.
3.10 PIPING SCHEDULE

A. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.

B. Piping from water main, through the combined service entrance to the backflow preventer: Black-steel, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded joints.

C. Standard-pressure, wet-type, fire-suppression standpipe piping, shall be one of the following:

   1. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
   2. Standard-weight or Schedule 30, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   3. Standard-weight or Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
   4. Schedule 10, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
   5. Schedule 10, black-steel pipe with plain ends; welding fittings; and welded joints.

D. Standard-pressure, piping subject to alternate wetting and drying (drain piping, test piping, Siamese connections between the Siamese shall be) and check valves wet-type, fire-suppression standpipe piping, shall be the following:

   1. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints, and properly sloped to completely drain.

3.11 SPRINKLER SCHEDULE

A. Use sprinkler types in subparagraphs below for the following applications:

   1. Rooms without Ceilings: Upright sprinklers.
   2. Rooms with Suspended Ceilings: Concealed sprinklers.

B. Provide sprinkler types in subparagraphs below with finishes indicated.

   1. Concealed Sprinklers: Rough brass, with factory-painted custom factory colored cover plate.
   2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
   3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
   4. Residential Sprinklers: Dull chrome.
   5. Upright Pendent and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION 21 13 13
SECTION 22 05 13 - COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.3 COORDINATION
A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
   1. Motor controllers.
   2. Torque, speed, and horsepower requirements of the load.
   3. Ratings and characteristics of supply circuit and required control sequence.
   4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS
A. Comply with requirements in this Section except when stricter requirements are specified in plumbing equipment schedules or Sections.
B. Comply with NEMA MG 1 unless otherwise indicated.

2.2 MOTOR CHARACTERISTICS
A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
2.3 POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.

B. Efficiency: Energy efficient, as defined in NEMA MG 1.

C. Service Factor: 1.15.

D. Multispeed Motors: Variable torque.
   1. For motors with 2:1 speed ratio, consequent pole, single winding.
   2. For motors with other than 2:1 speed ratio, separate winding for each speed.

E. Multispeed Motors: Separate winding for each speed.

F. Rotor: Random-wound, squirrel cage.

G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

H. Temperature Rise: Match insulation rating.

I. Insulation: Class F.

J. Code Letter Designation:
   1. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
   2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
   3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
   4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
   5. Shaft Grounding: Mercotac electrical slip rings or Aegis grounding rings to be installed by motor or equipment manufacturer or installed in the field by contractor.

2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
1. Permanent-split capacitor.
2. Split phase.
3. Capacitor start, inductor run.
4. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 22 05 13
SECTION 22 05 16 - EXPANSION LOOPS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Pipe loops and swing connections.
   2. Alignment guides and anchors.

1.3 PERFORMANCE REQUIREMENTS
A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

PART 2 - PRODUCTS

2.1 ALIGNMENT GUIDES AND ANCHORS
A. Alignment Guides:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Flex-Hose Co., Inc.
      b. Metraflex, Inc.
   2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.
B. Anchor Materials:
   1. Steel Shapes and Plates: ASTM A 36/A 36M.
   2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
   4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.

PART 3 - EXECUTION

3.1 PIPE LOOP AND SWING CONNECTION INSTALLATION

A. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.
B. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.
C. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

3.2 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
C. Attach guides to pipe and secure guides to building structure.
D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
E. Anchor Attachments:
   2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.
F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
   1. Anchor Attachment to Steel Structural Members: Attach by welding.
   2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION 22 05 16
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Sleeves.
   2. Stack-sleeve fittings.
   3. Sleeve-seal systems.

PART 2 - PRODUCTS

2.1 SLEEVES
A. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends. (For exterior walls.)
B. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint. (For interior use only.)
C. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
   1. Underdeck Clamp: Clamping ring with setscrews.
2.3 SLEEVE-SEAL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Advance Products & Systems, Inc.
2. Metraflex Company (The).
3. Pipeline Seal and Insulator, Inc.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Plastic.
3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

2.4 GROUT

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.

1. Sleeves are not required for core-drilled holes.

C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.

1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
2. Cut sleeves to length for mounting flush with both surfaces.
   a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
D. Install sleeves for pipes passing through interior partitions.
   1. Cut sleeves to length for mounting flush with both surfaces.
   2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07 Section "Joint Sealants."

E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.2 STACK-SLEEVE-FITTING INSTALLATION

A. Install stack-sleeve fittings in new slabs as slabs are constructed.
   1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07 Section "Sheet Metal Flashing and Trim."
   3. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
   4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   5. Using grout, seal the space around outside of stack-sleeve fittings.

B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

SECTION 22 05 18 - ESCUTCHEONS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Escutcheons.
      2. Floor plates.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS
   A. One-Piece, Cast-Brass Type: With polished, chrome-plated and rough-brass finish and
      setscrew fastener.
   B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and
      spring-clip fasteners.
   C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
   D. Split-Casting Brass Type: With polished, chrome-plated and rough-brass finish and with
      concealed hinge and setscrew.
   E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed and exposed-rivet
      hinge, and spring-clip fasteners.

2.2 FLOOR PLATES
   A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
   B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION
   A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. Escutcheons for New Piping:
   a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
   b. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
   c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
   d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
   e. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with rough-brass finish.
   f. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with rough-brass finish.

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

   1. New Piping: One-piece, floor-plate type.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 22 05 18
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Liquid-in-glass thermometers.
      2. Dial-type pressure gages.
      4. Test plugs.
   B. Related Sections:
      1. Division 21 fire-suppression piping Sections for fire-protection pressure gages.
      2. Division 22 Section "Domestic Water Piping" for water meters inside the building.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated.

1.4 INFORMATIONAL SUBMITTALS
   A. Product Certificates: For each type of meter and gage, from manufacturer.

1.5 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 LIQUID-IN-GLASS THERMOMETERS
   A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:
      1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
3. Case: Cast aluminum; 7-inch nominal size unless otherwise indicated.
4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Window: Glass.
8. Stem: Aluminum and of length to suit installation.
   a. Design for Thermowell Installation: Bare stem.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.2 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Basis-of-Design is "Quality" series gage as manufactured by Marsh Instrument Company. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. AMETEK, Inc.; U.S. Gauge.
   b. Trerice, H. O. Co.
   c. Weiss Instruments, Inc.

3. Case: Liquid-filled type(s); Stainless steel; 4-1/2-inch nominal diameter, except for in mechanical spaces which shall utilize 6-inch nominal diameter on steam and condensate systems.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.3 GAGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with NPS 1/2, ASME B1.20.1 pipe threads and piston-type surge-dampening device. Include extension for use on insulated piping.

B. Valves: Brass or stainless-steel needle, with NPS 1/2, ASME B1.20.1 pipe threads.
2.4 TEST PLUGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Miljoco Corporation.
2. Trerice, H. O. Co.
3. Weiss Instruments, Inc.

B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.

F. Core Inserts: EPDM self-sealing rubber.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

B. Install valve and snubber in piping for each pressure gage for fluids.

C. Install test plugs in piping tees.

D. Install thermometers in the following locations:

1. Inlets and outlets of each domestic water heat exchanger.
2. Cold water and hot water inlets, and hot water outlets of each mixing valve.

E. Install pressure gages in the following locations:

1. Building water service entrance into building.
2. Suction and discharge of each domestic water pump.
3. Inlet and outlet of make-up water pressure reducing valves (e.g. heating hot water make-up).
4. Compressed air service entrance to Bridge Building.
5. Compressed air at each load.
6. Air compressor discharge at new air compressor in Henderson North.

3.2 CONNECTIONS

A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.
3.3 ADJUSTING
A. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE
A. Thermometers at inlets and outlets of each domestic water heat exchanger shall be one of the following:
   1. Industrial-style, liquid-in-glass type.
   2. and Test plug with EPDM self-sealing rubber inserts.
B. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE
A. Scale Range for Domestic Hot-Water Piping: 0 to 250 deg F.

3.6 PRESSURE-GAGE SCHEDULE
A. Pressure gages at discharge of each water service into building shall be the following:
   1. Liquid-filled, direct-mounted, metal case.
   2. and Test plug with EPDM self-sealing rubber inserts.
B. Pressure gages at suction and discharge of each domestic water pump shall be[ one of] the following:
   1. Liquid-filled, direct-mounted, metal case.
   2. and Test plug with EPDM self-sealing rubber inserts.

3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE
A. Scale Range for Water Service Piping: 0 to 160 psi.
B. Scale Range for Domestic Water Piping: 0 to 160 psi.
C. Scale Range for Compressed Air Piping: 0 to 160 psi.

END OF SECTION 22 05 19
SECTION 22 05 23 - GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following general-duty valves:
   1. Bronze ball valves.
   2. Iron ball valves.
   4. Iron swing check valves.
   5. Bronze gate valves.
   7. Bronze globe valves.
   8. Iron globe valves.

B. Related Sections include the following:
   1. Division 21 fire-suppression piping and fire pump Sections for fire-protection valves.
   2. Division 22 Section "Identification for Plumbing Piping and Equipment" for valve tags and charts.
   3. Division 22 piping Sections for specialty valves applicable to those Sections only.

1.3 DEFINITIONS
A. The following are standard abbreviations for valves:
   1. CWP: Cold working pressure.
   2. PTFE: Polytetrafluoroethylene plastic.
   3. TFE: Tetrafluoroethylene plastic.

1.4 ACTION SUBMITTALS
A. All valves for this project shall be from one manufacturer. Multiple manufacturers are listed to provide the contractor with the ability to competitively price the project, but is not to allow the contractor to use more than one manufacturer on the project.

B. Product Data: For each type of valve indicated. Include body, seating, and trim materials; valve design; pressure and temperature classifications; end connections; arrangement; dimensions; and required clearances. Include list indicating valve and its application. Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories.
1.5 QUALITY ASSURANCE

A. ASME Compliance for Ferrous Valves: ASME B16.10 and ASME B16.34 for dimension and design criteria.

B. NSF Compliance: NSF 61 for valve materials for potable-water service.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set angle, gate, and globe valves closed to prevent rattling.
4. Set ball and plug valves open to minimize exposure of functional surfaces.
5. Set butterfly valves closed or slightly open.
6. Block check valves in either closed or open position.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. All valves for this project shall be from one manufacturer. Multiple manufacturers are listed to provide the contractor with the ability to competitively price the project, but is not to allow the contractor to use more than one manufacturer on the project.

B. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.

2.2 VALVES, GENERAL

A. Refer to Part 3 "Valve Applications" Article for applications of valves.

B. Bronze Valves: NPS 2 and smaller with threaded ends, unless otherwise indicated.

C. Ferrous Valves: NPS 2-1/2 and larger with flanged ends, unless otherwise indicated.
D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

E. Valve Sizes: Same as upstream pipe, unless otherwise indicated.

F. Valve Actuators:
   1. Handwheel: For valves other than quarter-turn types.
   2. Lever Handle: For quarter-turn valves NPS 6 and smaller.

G. Valves in Insulated Piping: With 2-inch stem extensions and the following features:
   1. Gate Valves: With rising stem.
   2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.

H. Valve-End Connections:
   1. Flanged: With flanges according to ASME B16.1 for iron valves.
   2. Solder Joint: With sockets according to ASME B16.18.
   3. Threaded: With threads according to ASME B1.20.1

I. Valve Bypass and Drain Connections: MSS SP-45.

2.3 BRONZE BALL VALVES

A. Two-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:
   1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Crane Co.; Crane Valve Group; Crane Valves.
      b. NIBCO INC.
      c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
   2. Description:
      b. SWP Rating: 150 psig.
      c. CWP Rating: 600 psig.
      d. Body Design: Two piece.
      e. Body Material: Bronze.
      f. Ends: Threaded.
      g. Seats: PTFE or TFE.
      h. Stem: Stainless steel.
      i. Ball: Stainless steel, vented.
      j. Port: Full.

2.4 IRON BALL VALVES

A. Class 125, Iron Ball Valves:
1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   b. CWP Rating: 200 psig.
   d. Body Material: ASTM A 126, gray iron.
   e. Ends: Flanged.
   f. Seats: PTFE or TFE.
   g. Stem: Stainless steel.
   h. Ball: Stainless steel.
   i. Port: Full.

2.5  **BRONZE SWING CHECK VALVES**

A. Class 125, Bronze Swing Check Valves with Bronze Disc:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   a. Standard: MSS SP-80, Type 3.
   b. CWP Rating: 200 psig.
   c. Body Design: Horizontal flow.
   e. Ends: Threaded.
   f. Disc: Bronze.

2.6  **IRON SWING CHECK VALVES**

A. Class 125, Iron Swing Check Valves with Metal Seats:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
2. Description:
   a. Standard: MSS SP-71, Type I.
   b. CWP Rating: 200 psig.
   c. Body Design: Clear or full waterway.
   d. Body Material: ASTM A 126, gray iron with bolted bonnet.
   e. Ends: Flanged.
   f. Trim: Bronze.
   g. Gasket: Asbestos free.

2.7 BRONZE GATE VALVES

A. Class 125, RS Bronze Gate Valves:
   1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Crane Co.; Crane Valve Group; Crane Valves.
      b. NIBCO INC.
      c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   a. Standard: MSS SP-80, Type 2.
   b. CWP Rating: 200 psig.
   d. Ends: Threaded or solder joint.
   e. Stem: Bronze.
   f. Disc: Solid wedge; bronze.
   g. Packing: Asbestos free.
   h. Handwheel: Malleable iron, bronze, or aluminum.

2.8 IRON GATE VALVES

A. Class 125, OS&Y, Iron Gate Valves:
   1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Crane Co.; Crane Valve Group; Crane Valves.
      b. NIBCO INC.
      c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   a. Standard: MSS SP-70, Type I.
   b. CWP Rating: 200 psig.
   c. Body Material: ASTM A 126, gray iron with bolted bonnet.
   d. Ends: Flanged.
   e. Trim: Bronze.
   f. Disc: Solid wedge.
2.9 BRONZE GLOBE VALVES

A. Class 125, Bronze Globe Valves with Bronze Disc:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   a. Standard: MSS SP-80, Type 1.
   b. CWP Rating: 200 psig.
   d. Ends: Threaded or solder joint.
   e. Stem and Disc: Bronze.
   f. Packing: Asbestos free.
   g. Handwheel: Malleable iron, bronze, or aluminum.

2.10 IRON GLOBE VALVES

A. Class 125, Iron Globe Valves:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   a. Standard: MSS SP-85, Type I.
   b. CWP Rating: 200 psig.
   c. Body Material: ASTM A 126, gray iron with bolted bonnet.
   d. Ends: Flanged.
   e. Trim: Bronze.
   f. Packing and Gasket: Asbestos free.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance.
1. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

C. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

D. Examine threads on valve and mating pipe for form and cleanliness.

E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

F. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE APPLICATIONS

A. Refer to piping Sections for specific valve applications. If valve applications are not indicated, use the following:

1. Shutoff Service: Ball valves shall be the primary type. Large line sizes may use gate valves.
2. Throttling Service: Globes valves shall be the primary type, but ball valves with characterizing discs may be used.
3. Pump Discharge: Bronze swing check valves with bronze or nonmetallic disc. Triple duty valves shall not be used.

B. If valves with specified CWP ratings are not available, the same types of valves with higher CWP ratings may be substituted.

C. Select valves with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.3 Low-Pressure, Compressed-Air Piping:

A. Pipe NPS 2 and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Ball Valves: Two piece, full port, brass with stainless-steel trim.
3. Bronze Swing Check Valves: Class 125, bronze disc.

B. Pipe NPS 2-1/2 and Larger:
1. Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
2. Iron Swing Check Valves: Class 125, metal seats.
3. Iron Gate Valves: Class 125, OS&Y.

3.4 Domestic Water Piping:

A. Pipe NPS 2 and Smaller:
   1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
   2. Ball Valves: Two piece, full port, brass with stainless-steel trim.
   3. Bronze Swing Check Valves: Class 125, bronze disc.
   4. Bronze Gate Valves: Class 125, RS.
   5. Bronze Globe Valves: Class 125, bronze disc.

B. Pipe NPS 2-1/2 and Larger:
   1. Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
   2. Iron Ball Valves: Class 125.
   3. Iron Swing Check Valves: Class 125, metal seats.
   4. Iron Gate Valves: Class 125, OS&Y.

3.5 VALVE INSTALLATION

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

C. Locate valves for easy access and provide separate support where necessary.

D. Install valves in horizontal piping with stem at or above center of pipe.

E. Install valves with bonnet in an upright position to minimize deterioration and corrosion of the bonnet and packing.

F. Install valves in position to allow full stem movement.

G. Install check valves for proper direction of flow and as follows:
   1. Swing Check Valves: In horizontal position with hinge pin level.

3.6 JOINT CONSTRUCTION

A. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

3.7 ADJUSTING
A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

END OF SECTION 22 05 23
SECTION 22 05 29 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Metal pipe hangers and supports.
   2. Trapeze pipe hangers.
   3. Metal framing systems.
   4. Thermal-hanger shield inserts.
   5. Fastener systems.
   6. Pipe positioning systems.
   7. Equipment supports.

1.3 DEFINITIONS
A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.4 PERFORMANCE REQUIREMENTS
A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
   1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
   2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.5 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

B. Shop Drawings: Show fabrication and installation details and include calculations for the following; include Product Data for components:
   1. Trapeze pipe hangers.
2. Metal framing systems.
3. Pipe stands.
4. Equipment supports.

C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of trapeze hangers.
2. Design Calculations: Calculate requirements for designing trapeze hangers.

1.6 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.7 QUALITY ASSURANCE

A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.

B. Stainless-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.

C. Copper Pipe Hangers:

1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
2.2 TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Allied Tube & Conduit.
   b. Cooper B-Line, Inc.
   c. Flex-Strut Inc.
   d. GS Metals Corp.
   e. Thomas & Betts Corporation.
   f. Unistrut Corporation; Tyco International, Ltd.
   g. Wesanco, Inc.

2. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
4. Channels: Continuous slotted steel channel with inturned lips.
5. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.

2.4 THERMAL-HANGER SHIELD INSERTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Carpenter & Paterson, Inc.
3. ERICO International Corporation.
5. PHS Industries, Inc.
6. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
7. Piping Technology & Products, Inc.
8. Rilco Manufacturing Co., Inc.
9. Value Engineered Products, Inc.

B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: ASTM C 552, Type II cellular glass with 100-psig minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

B. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.6 PIPE POSITIONING SYSTEMS

A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.7 EQUIPMENT SUPPORTS

A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.8 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.

D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

E. Fastener System Installation:
   1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
   2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

F. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture. See Division 22 plumbing fixture Sections for requirements for pipe positioning systems for plumbing fixtures.

G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

J. Install lateral bracing with pipe hangers and supports to prevent swaying.

K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and within 12-inches of changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

N. Insulated Piping:
   1. Attach clamps and spacers to piping.
      a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
      b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.

2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
   a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
   a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

4. Shield Dimensions for Pipe: Not less than the following:
   a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
   b. NPS 4: 12 inches long and 0.06 inch thick.
   c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.

5. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make bearing surface smooth.

C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.3 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.
3.4 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.5 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
   
   1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.6 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.

D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Use carbon-steel pipe hangers and supports metal trapeze pipe hangers and metal framing systems and attachments for general service applications.

F. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.

G. Use padded hangers for piping that is subject to scratching.

H. Use thermal-hanger shield inserts for insulated piping and tubing.

I. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

   1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
   2. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 6, requiring clamp flexibility and up to 4 inches of insulation.
   3. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 6 if little or no insulation is required.
   4. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
5. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 6.
6. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 6.
7. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 6.
8. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 6.
9. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 6.
11. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
12. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 6, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
13. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 6, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
14. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 6 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
15. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 6, from two rods if longitudinal movement caused by expansion and contraction might occur.
16. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 6, from single rod if horizontal movement caused by expansion and contraction might occur.
17. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 2 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
18. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
19. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 6 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

J. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 6.
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 6 if longer ends are required for riser clamps.

K. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
L. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. C-Clamps (MSS Type 23): For structural shapes.
7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
   a. Light (MSS Type 31): 750 lb.
   b. Medium (MSS Type 32): 1500 lb.
   c. Heavy (MSS Type 33): 3000 lb.
13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

M. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

N. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

O. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

P. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

Q. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.
R. No holes shall be burned or drilled in structural steel for hanger rod supports.

END OF SECTION 22 05 29
SECTION 22 05 53 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Equipment labels.
   2. Pipe labels.
   3. Valve tags.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.
B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
C. Valve numbering scheme.
D. Valve Schedules: For each piping system to include in maintenance manuals.

1.4 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
B. Coordinate installation of identifying devices with locations of access panels and doors.
C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Metal Labels for Equipment:
   1. Material and Thickness: Black micarta laminate, and having predrilled or stamped holes for attachment hardware.
   2. Minimum Label Size: Length and width vary for required label content, but not less than 2 by 1 inch.
3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Self-Adhesive Pipe Labels: Printed vinyl-backed cloth with contact-type, permanent-adhesive backing.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.

2. Lettering Size: At least 1-1/2 inches.

2.3 VALVE TAGS

A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.

1. Tag Material: 1-inch x 2-inch black micarta laminated tags, and having predrilled or stamped holes for attachment hardware.

2. Fasteners: 10-gauge Brass S-hook.

B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag, and in accordance with design drawing abbreviations), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

2. Valve schedule shall be mounted in a glass-front frame.

PART 3 - EXECUTION
3.1 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of paint, identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 PIPE AND EQUIPMENT COLOR CODING

A. Piping Color-Coding: Painting of piping is specified in Division 09 Section "Interior Painting." Paint the piping as indicated below:

1. Compressed air: Yellow with green band.
2. Potable Water: Green.
5. Drain lines: Aluminum with red bands.

B. Equipment Color-Coding:
1. Air tanks (compressed): Yellow with green band.

3.3 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

C. For equipment in finished areas the equipment tags shall be located inside an access door.

3.4 PIPE LABEL INSTALLATION

A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.
2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 15 feet along each run.

B. Pipe Label Color Schedule:

1. Low-Pressure, Compressed-Air Piping:
   a. Background Color: Yellow.
   b. Letter Color: Black.
2. Domestic Water Piping:
   a. Background Color: Green.
   b. Letter Color: Black.

3. Sanitary Waste and Storm Drainage Piping:
   b. Letter Color: Black.

3.5 VALVE-TAG INSTALLATION

A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag all valves as indicated below:

1. Valve-Tag Size and Shape: 1 inch x 2 inch
2. Valve-Tag Color: Black
3. Letter Color: White

END OF SECTION 220553
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes insulating the following plumbing piping services:
   1. Domestic cold-water piping.
   2. Domestic hot-water piping.
   3. Domestic recirculating hot-water piping.
   4. Roof drains and rainwater leaders.
   5. Supplies and drains for handicap-accessible lavatories and sinks.
   6. Domestic hot water steam-to-hot water generator.
   7. Domestic recirculating hot water pump.
B. Related Sections:
   1. Division 22 Section "Identification for Plumbing Piping and Equipment" for color coded painting requirements of the systems.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).
B. LEED Submittals:
   1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content and chemical components.

1.4 INFORMATIONAL SUBMITTALS
A. Field quality-control reports.

1.5 QUALITY ASSURANCE
A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having
jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

C. Comply with the following applicable standards and other requirements specified for miscellaneous components:

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.8 SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Equipment Insulation" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. CertainTeed Corp.; SoftTouch Duct Wrap.
   b. Johns Manville; Microlite.
   c. Knauf Insulation; Friendly Feel Duct Wrap.
   d. Manson Insulation Inc.; Alley Wrap.
   e. Owens Corning; SOFTR All-Service Duct Wrap.

G. Mineral-Fiber, Preformed Pipe Insulation:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Fibrex Insulations Inc.; Coreplus 1200.
   b. Johns Manville; Micro-Lok.
   c. Knauf Insulation; 1000-Degree Pipe Insulation.
   d. Manson Insulation Inc.; Alley-K.
   e. Owens Corning; Fiberglas Pipe Insulation.

2. Type I, 850 Deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   b. Eagle Bridges - Marathon Industries; 225.
   d. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

1. **Products:** Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   
   b. Eagle Bridges - Marathon Industries; 225.
   d. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

### 2.3 MASTICS

**A.** Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

**B.** Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.

1. **Products:** Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   
   b. Vimasco Corporation; 749.

2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.

**C.** Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.

1. **Products:** Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   
   b. Eagle Bridges - Marathon Industries; 550.
   e. Vimasco Corporation; WC-1/WC-5.

2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: 60 percent by volume and 66 percent by weight.
2.4 SEALANTS

A. Joint Sealants:
   1. Materials shall be compatible with insulation materials, jackets, and substrates.
   2. Service Temperature Range: Minus 100 to plus 300 deg F.
   3. Color: White or gray.
   4. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: Minus 40 to plus 250 deg F.
   6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.5 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
   1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
   2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
   3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

2.6 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. ABI, Ideal Tape Division; 428 AWF ASJ.
      b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
      c. Compac Corporation; 104 and 105.
      d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
   2. Width: 3 inches.
   3. Thickness: 11.5 mils.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. ABI, Ideal Tape Division; 491 AWF FSK.
   b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
   c. Compac Corporation; 110 and 111.
   d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.

2. Width: 3 inches.
3. Thickness: 6.5 mils.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

2.7 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. ITW Insulation Systems; Gerrard Strapping and Seals.
   b. RPR Products, Inc.; Insul-Mate Strapping and Seals.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 1/2 inch wide with wing seal.

B. Staples: Outward-clinching insulation staples, nominal 3/4-inch wide, stainless steel or Monel.

C. Wire: 0.080-inch nickel-copper alloy.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2.8 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.

1. Verify that systems to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.
H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
   4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

O. For above-ambient services, do not install insulation to the following:
   1. Testing agency labels and stamps.
   2. Nameplates and data plates.
   3. Cleanouts.

3.4 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
   1. Seal penetrations with flashing sealant.
   2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
   3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
   4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
C. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

1. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.

D. Insulation Installation at Floor Penetrations:

1. Pipe: Install insulation continuously through floor penetrations.
2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."

3.5 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

A. Mineral-Fiber, Pipe, and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
3. Protect exposed corners with secured corner angles.
4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
   a. Do not weld anchor pins to ASME-labeled pressure vessels.
   b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
   c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
   d. Do not overcompress insulation during installation.
   e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
   f. Impale insulation over anchor pins and attach speed washers.
   g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
7. Stagger joints between insulation layers at least 3 inches.
8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
   1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
   2. Seal longitudinal seams and end joints.

C. Insulation Installation on Pumps:
   1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
   2. Fabricate boxes from galvanized steel, at least 0.040 inch thick.
   3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.6 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
   2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
   3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
   5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.

9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.

2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.

3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.

4. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.7 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.

3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.

4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.8 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch-thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.
3.9 FINISHES

A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 painting Sections.

   1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as indicated in Division 22 Section “Plumbing Piping and Equipment Identification.” Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless-steel jackets.

3.10 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

   1. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.11 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

   1. Drainage piping located in crawl spaces.
   2. Underground piping.
   3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.12 INDOOR PIPING INSULATION SCHEDULE

A. Domestic Cold, Hot and Recirculated Hot Water:

   1. NPS 1-1/4 and Smaller: Insulation shall be the following:
a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch thick.

2. NPS 1-1/2 and Larger: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.

B. Stormwater and Overflow, Roof Drain and Overflow Bodies and Horizontal Piping:
   1. All Pipe Sizes: Insulation shall be one of the following:
      a. Flexible Elastomeric: 1 inch thick.
      b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.

C. Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities:
   1. All Pipe Sizes: Insulation shall be the following:
      a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch thick.
      b. Provide and install protective shielding guards on hot and cold water supplies and waste piping.

D. Floor Drains, Traps, and Sanitary Drain Piping within 10 Feet of Drain Receiving Condensate and Equipment Drain Water below 60 Deg F:
   1. All Pipe Sizes: Insulation shall be the following:
      a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch thick.

3.13 EQUIPMENT INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.

B. Insulate indoor and outdoor equipment that is not factory insulated.

C. Steam-to-hot-water converter insulation shall be one of the following:
   1. Mineral-Fiber Blanket: 2 inches thick and 3-lb/cu. ft. nominal density.
   4. Mineral-Fiber Preformed Pipe Insulation, Type I: 2 inches thick.

D. Domestic hot-water pump insulation shall be one of the following:
   1. Mineral-Fiber Blanket: 1 inch thick and 3-lb/cu. ft. nominal density.
   2. Mineral-Fiber Board: 1 inch thick and 3-lb/cu. ft. nominal density.

E. Domestic hot-water storage tank insulation shall be one of the following, of thickness to provide an R-value of 12.5:
SECTION 22 08 00 – PLUMBING SYSTEM COMMISSIONING

PART 1 - GENERAL

1.1 WORK INCLUDED

   A. Systems and equipment Start-Up and Functional Performance Testing.
   B. Validation of proper and thorough installation of Division 23 systems and equipment.
   C. Generic Start-Up Documentation for mechanical systems and equipment.
   D. Development of final Start-Up Documentation for mechanical systems and equipment.
   E. System Start-Up and Turn-Over procedures.
   F. Systems balancing verification.
   G. Coordination and execution of Training Events.

1.2 GENERAL DESCRIPTION

   A. Commissioning (Cx) is the process of ensuring that (i) all building systems are installed and perform interactively according to the design intent; (ii) that systems are efficient and cost effective and meet the Owner’s operational needs; (iii) that the installation is accurately documented; and (iv) that the Operators are adequately trained. Commissioning serves as a tool to minimize post-occupancy operational problems, and establishes testing and communication protocols to advance the building systems from installation to optimized, fully-dynamic operation.

   B. Commissioning Authority (CxA) shall work with the Contractor and the design engineers to direct and oversee the Cx process and perform Functional Performance Testing.

   C. The Commissioning Plan outlines the Cx process beyond the Construction Contract, including design phase activities and design team/owner responsibilities. The specification Sections dictate all requirements of the commissioning process relative to the construction contract. The Cx Plan is not part of the construction contract, although it is available for reference at the request of the Contractor.

   D. This Section outlines the Cx procedures specific to the Division 23 Contractors. Requirements common to all Sections are specified in Section 01 91 00 and Section 01 91 10. This Section and other sections of the specification details the Contractor’s responsibilities relative to the Cx process.

1.3 SCOPE

   A. The following are included in the Scope of Commissioning on this project:

   B. Plumbing Systems
       1. General Plumbing Fixtures
       2. Domestic HW heaters
1.4 RELATED WORK AND DOCUMENTS
   A. The Cx process references many related Sections, particularly Section 01 91 00 - General Commissioning. It is important for all Contractors subject to the Cx process to be familiar with Section 01 91 00.
   B. Refer to Section 01 91 00 for a complete list of Sections on Related Work.

1.5 DEFINITIONS AND ABBREVIATIONS
   A. Refer to Section 01 91 00 for a complete list of Definitions and Abbreviations.

1.6 REFERENCE STANDARDS
   A. Refer to Section 01 91 00 for a complete list of Reference Standards.

1.7 DOCUMENTATION
   A. In addition to the documentation required in Section 01 91 00, Contractor shall provide to the CxA the following per the procedures specified herein, in the Cx Plan, and in other Sections of the specification.

1.8 SEQUENCING AND SCHEDULING
   A. Refer Section 01 91 00.

1.9 COORDINATION MANAGEMENT PROTOCOLS
   A. Coordination responsibilities and management protocols relative to Cx are initially defined in Section 01 91 00 and the Commissioning Plan, but shall be refined and documented in the Construction Phase Cx Kick-Off meeting. Contractor shall have input in the protocols and all Parties will commit to scheduling obligations. The CxA will record and distribute.

1.10 CONTRACTOR RESPONSIBILITIES
   A. Refer to Section 01 91 00: Detailed Contractor responsibilities common to all Divisions are specified in Section 01 91 00. The following are additional responsibilities or notable responsibilities specific to Division 22.
   B. Construction Phase
      1. Provide skilled technicians qualified to perform the work required.
      2. Provide factory-trained and authorized technicians where required by the Contract Documents.
      3. Prepare and submit required draft Start-Up Documentation and submit along with the manufacturer’s application, installation and start-up information.
      4. Provide assistance to the CxA in preparation of the specific Functional Performance Test (FPT) procedures. Contractors, subcontractors and vendors shall review FPT procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits to be used during the tests. Damage caused to equipment performed in accordance with the approved procedures will be the responsibility of the Contractor.
      5. Thoroughly complete and inspect installation of systems and equipment as detailed throughout Contract Documents, as required by reference or industry standards, and as specifically indicated elsewhere this Section.
6. Start-Up, test/adjust/balance, and Turn-Over systems and equipment prior to functional performance testing by the CxA. Approved Start-Up Documentation shall be in accordance with Contract Documents, reference or industry standards, and specifically in Part I of this Section.

7. Record Start-Up on approved Start-Up Documentation forms and certify that the systems and equipment have been started and or tested in accordance with the requirements specified above and in Section 01 09 00. Each task or item shall be indicated with the Party actually performing the task or procedure.

C. Acceptance Phase
1. Assist CxA in functional performance testing. Assistance will generally include the following:
   a. Manipulate systems and equipment to facilitate Functional Performance Testing (as specified in Section 01 91 00 and Section 01 91 10);
   b. Provide any specialized instrumentation necessary for Functional Performance Testing;

D. Warranty Phase
1. Maintain record documentation of any configurations, set ups, parameters etc, that change throughout the period.
2. Provide representative for off season testing as required by CxA.
3. Respond to Warranty issues as required by Division 1 and the General Conditions.

1.11 EQUIPMENT SUPPLIER RESPONSIBILITIES
A. Refer to Section 01 91 00.

1.12 CONTRACTOR NOTIFICATION AND SCHEDULING
A. Refer to Section 01 91 00.

1.13 START-UP DOCUMENTATION
A. Refer to Section 01 91 00.

1.14 EQUIPMENT NAMEPLATE DATA
A. Refer to Section 01 91 00.

1.15 FUNCTIONAL PERFORMANCE TESTING
A. Contractor shall participate in the initial samples of Functional Performance Testing as stipulated in Section 01 91 00 and Section 01 91 10.

1.16 FPT ACCEPTANCE CRITERIA
A. Acceptance criteria for tests are indicated in Section 01 91 10 and in the specification Sections applicable to the systems being tested. Generally, unless indicated otherwise, the criteria for acceptance will be that specified with the individual system, equipment, component, or device.
1.17 **TRAINING**

A. Contractors, Subcontractor, Vendors, and other applicable Parties shall prepare and conduct training sessions on the installed systems and equipment they are responsible for per the requirements of Section 01 91 00 and the individual Specifications.

1.18 **SYSTEMS MANUAL AND O&M DOCUMENTATION CONTENT - PREPARATION AND LOGISTICS**

A. Refer to Section 01 91 00 the individual Specifications.

**PART 2 - PRODUCTS**

2.1 **INSTRUMENTATION**

A. General: All testing equipment used by any Party shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. If not otherwise noted, the following minimum requirements apply:

B. Temperature sensors and digital thermometers shall have a certified calibration within the past year and a resolution of + or - 0.1°F.

C. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

D. All equipment shall be calibrated according to the manufacturer’s recommended intervals. Calibration tags shall be affixed or certificates readily available.

E. Standard Testing Instrumentation: Standard instrumentation used for testing air and water flows, temperatures, humidity, noise levels, amperage, voltage, and pressure differential in air and water systems shall be provided by CxA.

F. Special Tools: Special equipment, tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment, according to these Contract Documents shall be included in the base bid price to the Contractor and turned over to the Owner upon project completion.

2.2 **WEB-BASED COMMISSIONING PORTAL**

A. All general and major subcontractors participating in the Cx process shall use the web-based Cx Portal (‘Portal’) to document the Cx procedures. The Portal is a Web-based Internet hub used to electronically collaborate and coordinate activities and deliverables throughout the Cx process. The Portal is hosted by the CxA and shall be accessible to all Parties participating in the Cx program. The Portal provides a common location to store Start-Up Documentation, Functional Performance Tests and results, project documents and deliverables. It also serves as a collaborative email hub to facilitate, automate, and track communications between Parties relating to the Cx process.

B. Refer to Section 01 91 00 the individual Specifications for additional information and requirements for using the Portal.
2.3 TEST KITS FOR METERS AND GAUGES

A. Test kits for meters and gauges shall be provided to the Owner new and in good condition. Previously used kits will be unacceptable. Kits shall be submitted prior to the Acceptance Phase. Kits included shall be as a minimum:
1. Digital indication of temperature and pressure with associated sensors to work with the P/T test ports
2. Companion readout kit (with fittings) for calibrated balancing valve with ranges as required by all devices on this project

PART 3 - EXECUTION

3.1 GENERIC START-UP DOCUMENTATION - GENERAL

A. Part III of this Section outlines ‘generic’ or minimally acceptable Start-Up Documentation (which are defined to include both ‘Start-Up Checks’ and ‘Start-Up Tests’) and individual systems training requirements for systems and equipment. These procedures are the direct responsibility of the Contractor as a basic element of validating that the installation is correct per normal quality control practices. These items shall provide a minimally acceptable guideline for required Contractor development of Start-Up Documentation. Contractor shall synthesize these minimum requirements along with their own internal quality control practices, those of the manufacturer, and any applicable codes and standards to develop specific and itemized final Start-Up Documentation specific to the equipment and systems installed on this project.

B. Section 01 91 00 defines the systems and equipment Start-Up process in detail and provides definitions for Start-Up Documentation, including the generic Start-Up Documentation provided below.

3.2 START-UP DOCUMENTATION COMMON TO ALL SYSTEMS

A. The following Start-Up Documentation (Checklists and Tests) shall be considered common to all systems:
1. Checkout shall proceed from lower level devices to larger components to the entire system operation.
2. Verify labeling is affixed per specification and visible.
3. Verify prerequisite procedures are done.
4. Inspect for damage and ensure none is present.
5. Verify system is installed per the manufacturer’s recommendations.
6. Verify system has undergone Start-Up per the manufacturer’s recommendations.
7. Verify that access is provided for inspection, operation and repair.
8. Verify that access is provided for eventual replacement of the equipment.
9. Verify that record drawings, submittal data and O&M documentation accurately reflect the installed systems.
10. Verify all gauges and test ports are provided as required by contract documents and manufacturer’s recommendations.
11. Verify all recorded nameplate data is accurate.
12. Verify that the installation ensures safe operation and maintenance.
13. Verify specified replacement material/attic stock has been provided as required by the Contract Documents.
14. Verify all rotating and moving parts are properly lubricated.
15. Verify all monitoring and ensure all alarms are active and set per Owner’s requirements.
16. Complete all nameplate data and confirm that ratings conform to the design documents.
3.3 VALVES

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions:
   1. Operate all valves, manual and automatic, through their full stroke. Ensure smooth operation through full stroke and appropriate sealing or shutoff.
   2. Verify actuators are properly installed with adequate clearance.
   3. Verify all valves are labeled per the construction documents. Confirm that concealed valves are indicated on the finished building surface.
   4. For automatic pneumatically-operated valves, verify spring range and adjust pilot positioners where applicable.
   5. For electronically operated valves, check the stroke and range.
   6. For all automated valves controlled by a program, ensure that the minimum and maximum stroke and ranges on the valves are coordinated with the limits entered in the program.

3.4 METERS AND GAUGES

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions:
   1. Adjust faces of meters and gauges to proper angle for best visibility.
   2. Clean windows of meters and gauges and factory-finished surfaces. Replace cracked and broken windows, and repair scratched and marred surfaces with manufacturer's touch-up paint.
   3. For meters and gauges requiring temporary manual connection of read-out device such as pressure taps on a flow measuring device, ensure threads are clean and that connection can be made easily.
   4. Meters and gauges requiring manual connection of readout device shall be installed with adequate access to allow connection of device with normal tools.

3.5 MECHANICAL IDENTIFICATION

A. Start-Up Checks: Perform the following checks:
   1. Verify all valve tags, piping, duct, and equipment labeling corresponds with drawings and indexes and meets requirements specified. Correct any deficiencies for all piping and duct systems.
   2. Adjusting: Relocate any mechanical identification device which has become visually blocked by work of this division or other divisions.
   3. Cleaning: Clean face of identification devices, and glass frames of valve charts.

3.6 MECHANICAL INSULATION

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Examine all piping, systems and equipment specified to be insulated.
   1. Ensure quality of insulation. Patch and repair all insulation damaged after installation.
   2. Ensure the integrity of vapor barrier around all cold surfaces.
3.7 PIPING - GENERAL

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: These procedures apply to all installed piping systems, including underground site utilities.
   1. Inspect all piping for proper installation, adequate support (with appropriate vibration isolation where applicable) and adequate isolation valves for required service.
   2. Submit welding certifications as required by the applicable specification section or referenced ASME specification.
   3. Submit certified welding inspection results per the applicable specification section or referenced ASME specification. ASME B31.1 requires 100% inspection based on pressure class.
   4. Provide notification of pipe cleaning and flushing activities.
   5. Flush and clean all piping and clean all strainers. Provide documentation of all related procedures.
   6. Ensure adequate drainage is provided at low points and venting is provided at high points.
   7. Ensure facilities to effectively drain and fill the system are in place.
   8. Ensure air is thoroughly removed from the system as applicable.
   9. Ensure all piping is adequately supported and anchored to allow expansion. Bump across-the-line pumps and inspect for excessive pipe movement.
   10. Provide notification of pressure testing.
   11. Pressure and/or leak test all applicable systems in accordance with the requirements in the applicable sections, ASME B 31.1 and 39.1 as applicable.
   12. Sterilize applicable piping systems as specified in the individual Sections and as required by regulatory authorities.
   13. Submit pressure test reports that document the pressure testing results with certification of the results.
   14. Verify the operation of applicable safety relief valves, operating controls, safety controls, etc. to ensure a safe installation.
   15. Set and adjust fill, pressure, or level controls to the required setting.

3.8 AC MOTORS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions:
   1. Verify proper alignment, installation, and rotation.
   2. Verify properly sized overloads are in place

C. Start-Up Tests: Perform the following tests, measurements, or procedures during start-up and as specified in manufacturer's instructions:
   1. Measure insulation resistance, phase balance, and resistance to ground.
   2. Measure voltage available to all phases. Measure amps and RPM after motor has been placed in operation and is under load.
   3. Record all motor nameplate data.

3.9 BEARINGS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.
B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions. This applies to all bearings on fans, pumps, compressors, and other equipment installed under this Division.
   1. Check alignment as applicable.
   2. Lubricate all bearings per the manufacturer’s instructions. When bearing is used for temporary conditioning, lubricate on manufacturer’s recommended frequency and document it.

C. Start-Up Tests: Perform the following tests, measurements, or procedures during start-up and as specified in manufacturer's instructions:
   1. Use infrared thermometer to measure temperature at peak conditions. Ensure temperature is below manufacturer’s recommendations.
   2. For bearings in drives with motors over 10 HP, use a vibration meter and measure the maximum peak-to-peak acceleration. Compare it to the Vibration Severity Chart. Rectify any condition causing severity indicated as “Rough” or worse.

3.10 PUMPS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Refer to ‘AC Motors’ in this Section.

C. Refer to ‘Bearings’ in this Section.

D. Refer to Division 23 Section "Testing, Adjusting, and Balancing" for detailed requirements for testing, adjusting, and balancing hydronic systems.

E. Start-Up Checks: Perform the following checks during start-up:
   1. Check suction lines connections for tightness to avoid drawing air into the pump.
   2. Clean and lubricate all bearings.
   3. Check motor for proper rotation. Rotation shall match direction of rotation marked on pump casing.
   4. Check that pump is free to rotate by hand. For pumps handling hot liquids, pump shall be free to rotate with the pump hot and cold. If the pump is bound or even drags slightly, do not operate the pump until the cause of the trouble is determined and corrected.
   5. Clean associated strainers.
   6. Check that the proper overloads have been installed in the starter and are the correct size.
   7. Verify that the integrity of the vibration isolation is maintained throughout the support and the connections.
   8. Align pump within manufacturers recommended tolerances.
   9. Ensure all associated piping has been cleaned, tested, and deaerated.
  10. Verify that all thermometers and gauges are installed, are clean and undamaged, and are functional.

F. Start-Up Tests: Perform the following tests, measurements, or procedures during start-up:
   1. Start the pump per the manufacturer’s instructions.
   2. Check the general mechanical operation of the pump and motor.
   3. Verify that checkvalve seal is appropriate.
   4. Check noise and vibration levels and ensure they are within the manufacturer’s recommended tolerances.
   5. Check that the NPSH (Net Positive Suction Head) is within that allowable for the operating condition.
6. Refer to Division 23 Section "Testing, Adjusting, and Balancing" for detailed requirements for testing, adjusting, and balancing hydronic systems.

3.11 CONTROLLERS AND CONTROL PANELS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up:
   1. Ensure devices are properly installed with adequate clearance for maintenance and with clear labels in accordance with the record drawings.
   2. Ensure that terminations are safe, secure and labeled in accordance with the record drawings.
   3. Check power supplies for proper voltage ranges and loading.
   4. Ensure that wiring and tubing are run in a neat and workman-like manner, either bound or enclosed in trough.
   5. Check for adequate signal strength and acceptable bandwidth utilization on communication networks.
   6. Check for stand-alone performance of controllers by disconnecting the controller from the LAN. Verify the event is annunciated at Operator Interfaces. Verify that the controlling LAN reconfigures as specified in the event of a LAN disconnection.
   7. Ensure that all outputs and devices fail to their proper positions/states.
   8. Ensure that buffered and/or volatile information is retained through power outage.
   9. With all system and communications operating normally and all trends functioning, sample and record update/annunciation times for critical alarms fed from the panel to the Operator Interface.
  10. Check for adequate grounding of all BAS panels and devices.
  11. Run self diagnostic routines and ensure they are functional
  12. Check the memory allocation and loading to ensure adequate and excess capacity is available and that it will not affect control functionality.

3.12 PLUMBING FIXTURES

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up:
   1. Inspect each installed fixture for damage. Replace damaged fixtures and components.
   2. Test fixtures to demonstrate proper operation upon completion of installation and after units are water pressurized. Replace malfunctioning fixtures and components, then retest. Repeat procedure until all units operate properly.
   3. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.
   4. Operate and adjust disposers, hot water dispensers, and controls. Replace damaged and malfunctioning units and controls.
   5. Adjust water pressure at drinking fountains, electric water coolers, and faucets, shower valves, and flushometers having controls, to provide proper flow and stream.
   6. Replace washers of leaking and dripping faucets and stops.
   7. Clean fixtures, fittings, and spout and drain strainers with manufacturers’ recommended cleaning methods and materials.

3.13 WATER HEATERS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.
B. General: Provide the services of a factory-authorized service representative to test and inspect unit installation, provide start-up service, and demonstrate and train Owner's maintenance personnel as specified below.
   1. Check for adequate combustion air.
   2. Check for piping connections leaks.
   3. Check for clear vent.
   4. Test and adjust operating and safety controls. Replace damaged and malfunctioning controls and equipment.

C. Training: Train Owner's maintenance personnel on procedures and schedules related to start-up and shutdown, troubleshooting, servicing, and preventative maintenance. Review data in Operating and Maintenance Manuals.

3.14 ROOM/ZONE CHECKOUT

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Contractor shall complete a checklist acknowledging completion of Div. 22 responsibilities for all rooms. Checklist shall include items such as the following as applicable:

C. Rooms with Plumbing Fixtures
   1. Plumbing fixtures clean and operational.
   2. Hot water available at fixture within the specified timeframe.

3.15 SEQUENCING ILLUSTRATION

A. Reference Section 01 91 00.

END OF SECTION 220800
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Under-building-slab and aboveground domestic water pipes, tubes, and fittings inside buildings.
      2. Encasement for piping.

1.3 ACTION SUBMITTALS
   A. Product Data: For transition fittings and dielectric fittings.

1.4 INFORMATIONAL SUBMITTALS
   A. System purging and disinfecting activities report.
   B. Field quality-control reports.

1.5 FIELD CONDITIONS
   A. Interruption of Existing Campus Water Service: The fire-suppression system shall be served by a combined fire-suppression/domestic water service entrance. Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
      1. Notify Construction Manager no fewer than two days in advance of proposed interruption of fire-suppression standpipe service.
      2. Do not proceed with interruption of fire-suppression standpipe service without Construction Manager's written permission.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS
   A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
B. Potable-water piping and components shall comply with NSF 14 and NSF 61. Plastic piping components shall be marked with "NSF-pw."

2.2 COPPER TUBE AND FITTINGS

A. Hard Copper Tube: ASTM B 88, Type L water tube, drawn temper.

B. Soft Copper Tube: ASTM B 88, Type K water tube, annealed temper.

C. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.

E. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.

F. Copper Unions:
   1. MSS SP-123.
   4. Solder-joint or threaded ends.

G. Copper Pressure-Seal-Joint Fittings:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Elkhart Products Corporation.
      b. NIBCO Inc.
      c. Viega.
   2. Fittings for NPS 2 and Smaller: Wrought-copper fitting with EPDM-rubber, O-ring seal in each end.
   3. Fittings for NPS 2-1/2 to NPS 4: Cast-bronze or wrought-copper fitting with EPDM-rubber, O-ring seal in each end.

2.3 DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe:
   1. AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

B. Standard-Pattern, Mechanical-Joint Fittings:
   1. AWWA C110/A21.10, ductile or gray iron.
   2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2.4 GALVANIZED-STEEL PIPE AND FITTINGS

A. Galvanized-Steel Pipe:
   1. ASTM A 53/A 53M, Type E, Grade B, Standard Weight.
   2. Include ends matching joining method.

C. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.

D. Malleable-Iron Unions:
   1. ASME B16.39, Class 150.
   2. Hexagonal-stock body.
   4. Threaded ends.

E. Flanges: ASME B16.1, Class 125, cast iron.

2.5 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials:
   1. AWWA C110/A21.10, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
   2. Full-face or ring type unless otherwise indicated.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys.

D. Flux: ASTM B 813, water flushable.

2.6 ENCASEMENT FOR PIPING

A. Standard: ASTM A 674 or AWWA C105/A21.5.

B. Form: Sheet or tube.

C. Color: Black or natural.

2.7 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Capitol Manufacturing Company; member of the Phoenix Forge Group.
   b. Central Plastics Company.
   c. Matco-Norca.
   d. Watts; a division of Watts Water Technologies, Inc.
   e. Wilkins; a Zurn company.

3. Factory-fabricated, bolted, companion-flange assembly.

4. Pressure Rating: 125 psig minimum at 180 deg F.

5. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

C. Dielectric-Flange Insulating Kits:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Advance Products & Systems, Inc.
   b. Calpico, Inc.
   c. Central Plastics Company.
   d. Pipeline Seal and Insulator, Inc.

2. Nonconducting materials for field assembly of companion flanges.

4. Gasket: Neoprene or phenolic.

5. Bolt Sleeves: Phenolic or polyethylene.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.

B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."

C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.

D. Install underground copper tube and ductile-iron pipe in PE encasement according to ASTM A 674 or AWWA C105/A21.5.

E. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gages in Division 22 Section "Meters and Gages for Plumbing Piping" and with
requirements for drain valves and strainers in Division 22 Section "Domestic Water Piping Specialties."

F. Install shutoff valve immediately upstream of each dielectric fitting.

G. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements for pressure-reducing valves in Division 22 Section "Domestic Water Piping Specialties."

H. Install domestic water piping level without pitch and plumb.

I. Rough-in domestic water piping for water-meter and associated strainer installation according to Pennsylvania State University’s requirements. Provide full-size bypass around meter and install strainer and meter.

J. The meter and strainer will be provided by Utility Services.

K. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.

L. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

M. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

N. Install piping to permit valve servicing.

O. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.

P. Install piping free of sags and bends.

Q. Install fittings for changes in direction and branch connections.

R. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

S. Install pressure gages on suction and discharge piping for each plumbing pump. Comply with requirements for pressure gages in Division 22 Section "Meters and Gages for Plumbing Piping."

T. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Division 22 Section "Domestic Water Pumps."

U. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements for thermometers in Division 22 Section "Meters and Gages for Plumbing Piping."

V. Install sleeves for piping penetrations of walls, ceilings, and floors.

W. Install sleeve seals for piping penetrations of concrete walls and slabs.

X. Install escutcheons for piping penetrations of walls, ceilings, and floors.
3.2 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

D. Brazed Joints for Copper Tubing: Comply with CDA's "Copper Tube Handbook," "Brazed Joints" chapter.

E. Soldered Joints for Copper Tubing: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."

F. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.

G. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

3.3 DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings or unions.

C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.

D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.4 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements for pipe hanger, support products, and installation in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."
   1. Vertical Piping: MSS Type 8 or 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
   3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
   4. Base of Vertical Piping: MSS Type 52, spring hangers.
B. Support vertical piping and tubing at base and at each floor.

C. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.

D. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
4. NPS 2-1/2: 108 inches with 1/2-inch rod.
5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
6. NPS 6: 10 feet with 5/8-inch rod.

E. Install supports for vertical copper tubing every 10 feet.

F. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
2. NPS 1-1/2: 108 inches with 3/8-inch rod.
3. NPS 2: 10 feet with 3/8-inch rod.
4. NPS 2-1/2: 11 feet with 1/2-inch rod.
5. NPS 3 and NPS 3-1/2: 12 feet with 1/2-inch rod.
6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
7. NPS 6: 12 feet with 3/4-inch rod.

G. Install supports for vertical steel piping every 15 feet.

H. Install hangers for stainless-steel piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
2. NPS 1-1/2: 108 inches with 3/8-inch rod.
3. NPS 2: 10 feet with 3/8-inch rod.
4. NPS 2-1/2: 11 feet with 1/2-inch rod.
5. NPS 3 and NPS 3-1/2: 12 feet with 1/2-inch rod.
6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
7. NPS 6: 12 feet with 3/4-inch rod.

I. Install supports for vertical stainless-steel piping every 15 feet.

J. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.5 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.

C. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
1. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.

2. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code. Comply with requirements for connection sizes in Division 22 plumbing fixture Sections.

3. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

3.6 IDENTIFICATION

A. Identify system components. Comply with requirements for identification materials and installation in Division 22 Section "Identification for Plumbing Piping and Equipment."

B. Label pressure piping with system operating pressure.

3.7 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Piping Inspections:
   a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
   b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
      1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
      2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
   c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
   d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

2. Piping Tests:
   a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
   b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
   c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
   d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.

f. Prepare reports for tests and for corrective action required.

B. Domestic water piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.8 ADJUSTING

A. Perform the following adjustments before operation:

1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to fully open position.
3. Open throttling valves to proper setting.
4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
   a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
   b. Adjust calibrated balancing valves to flows indicated.
5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
8. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.9 CLEANING

A. Clean and disinfect potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
   a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
   b. Fill and isolate system according to either of the following:
      1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
      2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
   c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
   d. Repeat procedures if biological examination shows contamination.
   e. Submit water samples in sterile bottles to authorities having jurisdiction.

B. Clean non-potable domestic water piping as follows:
1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:
   a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
   b. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.
C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.
D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

3.10 PIPING SCHEDULE

A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
C. Under-building-slab, domestic water, building-service piping, NPS 3 and smaller, shall be the following:
   1. Soft copper tube, ASTM B 88, Type K; wrought-copper, solder-joint fittings; and brazed joints.
D. Under-building-slab, domestic water, building-service piping, NPS 4 to NPS 6, shall be one of the following:
   1. Soft copper tube, ASTM B 88, Type K; wrought-copper, solder-joint fittings; and brazed joints.
   2. Mechanical-joint, ductile-iron pipe; standard-pattern, mechanical-joint fittings; and mechanical joints.
E. Under-building-slab, combined domestic water, building-service, and fire-service-main piping, shall be the following:
   1. Mechanical-joint, ductile-iron pipe; standard-pattern, mechanical-joint fittings; and mechanical joints.
F. Under-building-slab, domestic water piping, NPS 2 and smaller, shall be the following:
   1. Soft copper tube, ASTM B 88, Type L; wrought-copper, solder-joint fittings; and brazed joints.
G. Aboveground domestic water piping, NPS 2 and smaller, shall be one of the following:
   1. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.
   2. Hard copper tube, ASTM B 88, Type L; cast- or wrought-copper, solder-joint fittings; and soldered joints.
3. Hard copper tube, ASTM B 88, Type L; copper pressure-seal-joint fittings; and pressure-sealed joints.

H. Aboveground domestic water piping, NPS 2-1/2 to NPS 4, shall be one of the following:
   1. Hard copper tube, ASTM B 88, Type L; cast- or wrought-copper, solder-joint fittings; and soldered joints.
   2. Hard copper tube, ASTM B 88, Type L; copper pressure-seal-joint fittings; and pressure-sealed joints.
   3. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.

I. Aboveground domestic water piping, NPS 5 to NPS 6, shall be one of the following:
   1. Hard copper tube, ASTM B 88, Type L; cast- or wrought-copper, solder-joint fittings; and soldered joints.
   2. Hard copper tube, ASTM B 88, Type L; grooved-joint, copper-tube appurtenances; and grooved joints.
   3. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.

J. Aboveground, combined domestic water-service and fire-service-main piping,, shall be the following:
   1. Plain-end, ductile-iron pipe; grooved-joint, ductile-iron-pipe appurtenances; and grooved joints.

3.11 VALVE SCHEDULE

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
   1. Shutoff Duty: Use ball or gate valves for piping NPS 2 and smaller. Use butterfly, ball, or gate valves with flanged ends for piping NPS 2-1/2 and larger.
   2. Throttling Duty: Use ball or globe valves for piping NPS 2 and smaller. Use butterfly or ball valves with flanged ends for piping NPS 2-1/2 and larger.

B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

END OF SECTION 22 11 16
SECTION 22 11 19 - DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Vacuum breakers.
   2. Backflow preventers.
   5. Temperature-actuated, water mixing valves.
   7. Hose bibs.
   8. Wall hydrants.
  10. Drain valves.
  12. Air vents.
  14. Flexible connectors.

B. Related Requirements:
   1. Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers, pressure gages, and flow meters in domestic water piping.
   2. Division 22 Section "Domestic Water Piping" for water meters.
   3. Division 22 Section "Pressure Water Coolers" for water filters for water coolers.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For domestic water piping specialties.
   1. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

A. Potable-water piping and components shall comply with NSF 61.

2.2 PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig unless otherwise indicated.

2.3 VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
   b. Cash Acme; a division of Reliance Worldwide Corporation.
   c. Conbraco Industries, Inc.
   d. FEBCO; a division of Watts Water Technologies, Inc.
   e. Rain Bird Corporation.
   f. Toro Company (The); Irrigation Div.
   g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   h. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.

3. Size: NPS 1/4 to NPS 3, as required to match connected piping.
5. Inlet and Outlet Connections: Threaded.

B. Hose-Connection Vacuum Breakers:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Arrowhead Brass Products.
   b. Cash Acme; a division of Reliance Worldwide Corporation.
   c. Conbraco Industries, Inc.
   d. Legend Valve.
   e. MIFAB, Inc.
   f. Prier Products, Inc.
   g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   h. Woodford Manufacturing Company; a division of WCM Industries, Inc.
5. Finish: Chrome or nickel plated.

2.4 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:
   1. Manufacturer: The only allowable manufacturer of backflow preventers is Conbraco Industries. No substitutions shall be allowed.
   3. Operation: Continuous-pressure applications.
   4. Accessories:
      a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
      b. Valves NPS 2-1/2 and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.

B. Dual-Check-Valve Backflow Preventers:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Conbraco Industries, Inc.
      b. Legend Valve.
      c. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
      d. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
   3. Operation: Continuous-pressure applications.

C. Hose-Connection Backflow Preventers:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Conbraco Industries, Inc.
      b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
      c. Woodford Manufacturing Company; a division of WCM Industries, Inc.
   3. Operation: Up to 10-foot head of water back pressure.
   4. Inlet Size: NPS 1/2 or NPS 3/4.
   5. Outlet Size: Garden-hose thread complying with ASME B1.20.7.
   6. Capacity: At least 3-gpm flow.

D. Backflow-Preventer Test Kits:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Conbraco Industries, Inc.
   b. FEBCO; a division of Watts Water Technologies, Inc.
   c. Flomatic Corporation.
   d. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.

2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

### 2.5 WATER PRESSURE-REDUCING VALVES

A. Water Regulators:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Cash Acme; a division of Reliance Worldwide Corporation.
   b. Conbraco Industries, Inc.
   c. Honeywell International Inc.
   d. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
   f. 

5. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and NPS 3.

### 2.6 BALANCING VALVES

A. Copper-Alloy Calibrated Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   b. Flo Fab Inc.
   c. ITT Corporation; Bell & Gossett Div.
   d. NIBCO Inc.
   e. TAC.
   f. TACO Incorporated.
   g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.

2. Type: Y-pattern globe valve with two readout ports and memory-setting indicator.
4. Size: Same as connected piping, but not larger than NPS 2.
5. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.
B. Cast-Iron Calibrated Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Flo Fab Inc.
   c. ITT Corporation; Bell & Gossett Div.
   d. NIBCO Inc.
   e. TAC.
   f. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.

2. Type: Adjustable with Y-pattern globe valve, two readout ports, and memory-setting indicator.

3. Size: Same as connected piping, but not smaller than NPS 2-1/2.

C. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

D. Memory-Stop Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Conbraco Industries, Inc.
   b. Crane Co.; Crane Valve Group; Crane Valves.
   c. Crane Co.; Crane Valve Group; Jenkins Valves.
   d. Crane Co.; Crane Valve Group; Stockham Div.
   e. Hammond Valve.
   f. Milwaukee Valve Company.
   g. NIBCO Inc.
   h. Red-White Valve Corp.

2. Standard: MSS SP-110 for two-piece, copper-alloy ball valves.

3. Pressure Rating: 400-psig minimum CWP.

4. Size: NPS 2 or smaller.

5. Body: Copper alloy.

6. Port: Standard or full port.

7. Ball: Chrome-plated brass.

8. Seats and Seals: Replaceable.

9. End Connections: Solder joint or threaded.

2.7 TEMPERATURE-ACTUATED, WATER MIXING VALVES

A. Water-Temperature Limiting Devices:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Cash Acme; a division of Reliance Worldwide Corporation.
c. Conbraco Industries, Inc.
d. Honeywell International Inc.
e. Legend Valve.
f. Leonard Valve Company.
g. Powers; a division of Watts Water Technologies, Inc.
h. Symmons Industries, Inc.
i. TACO Incorporated.
j. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
k. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.

4. Type: Thermostatically controlled, water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded union inlets and outlets.
7. Accessories: Check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Valve Finish: Chrome plated.

B. Individual-Fixture, Water Tempering Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Cash Acme; a division of Reliance Worldwide Corporation.
   b. Conbraco Industries, Inc.
   c. Honeywell International Inc.
   d. Lawler Manufacturing Company, Inc.
   e. Leonard Valve Company.
   f. Powers; a division of Watts Water Technologies, Inc.
   g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
   h. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.

2. Standard: ASSE 1016, thermostatically controlled, water tempering valve.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.
5. Temperature Control: Adjustable.
6. Inlets and Outlet: Threaded.
7. Finish: Rough or chrome-plated bronze.
8. Tempered-Water Setting: 105 deg F.
9. Tempered-Water Design Flow Rate: 0.5 gpm.

2.8 STRainers FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers:

1. Pressure Rating: 125 psig minimum unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved, epoxy coated and for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations unless otherwise indicated.
5. Perforation Size:
a. Strainers NPS 2 and Smaller: 0.020 inch.
b. Strainers NPS 2-1/2 to NPS 4: 0.045 inch.
c. Strainers NPS 5 and Larger: 0.10 inch.

2.9 HOSE BIBBS

A. Hose Bibbs:

4. Supply Connections: NPS 1/2 or NPS 3/4 threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Wheel handle or operating key.
14. Include operating key with each operating-key hose bibb.
15. Include integral wall flange with each chrome- or nickel-plated hose bibb.

2.10 WALL HYDRANTS

A. Nonfreeze Wall Hydrants:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. MIFAB, Inc.
   c. Prier Products, Inc.
   e. Tyler Pipe; Wade Div.
   f. Watts Drainage Products.
   g. Woodford Manufacturing Company; a division of WCM Industries, Inc.
   h. Zurn Industries, LLC; Plumbing Products Group; Light Commercial Products.
   i. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
4. Operation: Loose key.
5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
6. Inlet: NPS 3/4 or NPS 1.
7. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
8. Box: Deep, flush mounted with cover.
9. Box and Cover Finish: Chrome plated.
12. Operating Keys(s): One with each wall hydrant.

B. Nonfreeze, Hot- and Cold-Water Wall Hydrants:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Prier Products, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products.
   f. Woodford Manufacturing Company; a division of WCM Industries, Inc.
   g. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.

4. Operation: Loose key.
5. Casing and Operating Rods: Of length required to match wall thickness. Include wall clamps.
6. Inlet: NPS 3/4 or NPS 1.
7. Outlet: Concealed.
8. Box: Deep, flush mounted with cover.
10. Vacuum Breaker:
   a. Nonremovable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052.
   b. Garden-hose thread complying with ASME B1.20.7 on outlet.

2.11 POST HYDRANTS

A. Nonfreeze, Nondraining-Type Sanitary Roof Post Hydrants:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Woodford Manufacturing Company; a division of WCM Industries, Inc
   b. Murdock-Super Secur; a division of Acorn Engineering Company.

2. Operation: Lever-piston operating mechanism and nondraining water-storage reservoir, designed without drain.
3. Length: As required for burial of valve below frost line.
4. Inlet: NPS 1 threaded.
5. Outlet:
   a. NPS 1 outlet and coupling plug for 1-inch hose.
b. NPS 1 by NPS 3/4 adapter with nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
c. Garden-hose thread complying with ASME B1.20.7 on outlet.
d. NPS 1 by NPS 3/4 adapter with nonremovable, drainable, hose-connection backflow preventer complying with ASSE 1052.
e. Garden-hose thread complying with ASME B1.20.7 on outlet.

2.12 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:

2. Pressure Rating: 400-psig minimum CWP.
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.
8. Inlet: Threaded or solder joint.

2.13 WATER-HAMMER ARRESTERS

A. Water-Hammer Arresters <Insert drawing designation if any>:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. AMTROL, Inc.
   b. Josam Company.
   c. MIFAB, Inc.
   d. Precision Plumbing Products, Inc.
   e. Sioux Chief Manufacturing Company, Inc.
   g. Tyler Pipe; Wade Div.
   h. Watts Drainage Products.
   i. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
3. Type: Metal bellows.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

2.14 AIR VENTS

A. Bolted-Construction Automatic Air Vents:

1. Body: Bronze.
2. Pressure Rating and Temperature: 125-psig minimum pressure rating at 140 deg F.
3. Float: Replaceable, corrosion-resistant metal.

B. Welded-Construction Automatic Air Vents:
2. Pressure Rating: 150-psig minimum pressure rating.
3. Float: Replaceable, corrosion-resistant metal.

2.15 TRAP-SEAL PRIMER DEVICE
A. Waterless, Trap-Seal Primer Device:
1. Basis-of-Design Product: Subject to compliance with requirements, provide ProSet Trap Guard® or comparable product by the following, but is not limited to:
   a. Sure Seal Manufacturing.
5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

2.16 SPECIALTY VALVES
A. Comply with requirements for general-duty metal valves in Division 22 Section "General-Duty Valves for Plumbing Piping."

2.17 FLEXIBLE CONNECTORS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Flex-Hose Co., Inc.
2. Flexicraft Industries.
3. Flex Pression, Ltd.
4. Flex-Weld Incorporated.
5. Hyspan Precision Products, Inc.
7. Metraflex, Inc.
8. Proco Products, Inc.
9. TOZEN Corporation.
10. Unaflex.
11. Universal Metal Hose; a Hyspan company.
B. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.

2. End Connections NPS 2 and Smaller: Threaded copper pipe or plain-end copper tube.
3. End Connections NPS 2-1/2 and Larger: Flanged copper alloy.

C. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.

2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.
3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

2.18 WATER METERS

A. The water meter and strainer to be installed by the contractor will be provided by University Park Utility Water Services:

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.

1. Locate backflow preventers in same room as connected equipment or system.
2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
3. Do not install bypass piping around backflow preventers.

B. Install water regulators with inlet and outlet shutoff valves and bypass with memory-stop balancing valve. Install pressure gages on inlet and outlet.

C. Install water-control valves with inlet and outlet shutoff valves and bypass with globe valve. Install pressure gages on inlet and outlet.

D. Install balancing valves in locations where they can easily be adjusted.

E. Install temperature-actuated, water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.

1. Install cabinet-type units recessed in or surface mounted on wall as specified.

F. Install Y-pattern strainers for water on supply side of each control valve water pressure-reducing valve solenoid valve and pump.

G. Set nonfreeze, nondraining-type post hydrants on roof and secured per manufacturer's recommendations.
H. Install water-hammer arresters in water piping according to PDI-WH 201.
I. Install air vents at high points of water piping. Install drain piping and discharge onto floor drain.
J. Floor drains shall be protected using waterless trap primers (ProSet Trap Guard ®).

3.2 CONNECTIONS
A. Comply with requirements for piping specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
B. Comply with requirements for ground equipment in Division 26 Section "Grounding and Bonding for Electrical Systems."
C. Fire-retardant-treated-wood blocking is specified in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables" for electrical connections.

3.3 LABELING AND IDENTIFYING
A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
   1. Pressure vacuum breakers.
   2. Reduced-pressure-principle backflow preventers.
   5. Primary, thermostatic, water mixing valves.
B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL
A. Perform the following tests and inspections:
   1. Test each pressure vacuum breaker and reduced-pressure-principle backflow preventer according to authorities having jurisdiction and the device's reference standard.
B. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.
C. Prepare test and inspection reports.

3.5 ADJUSTING
A. Set field-adjustable pressure set points of water pressure-reducing valves.
B. Set field-adjustable flow set points of balancing valves.
C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.

END OF SECTION 22 11 19
SECTION 22 11 23 - DOMESTIC WATER PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Horizontally mounted, in-line, close-coupled centrifugal pumps.
   B. Related Sections include the following:
      1. Division 22 Section "Domestic-Water Packaged Booster Pumps" for booster systems.
      2. Division 33 Section "Water Supply Wells" for well pumps.

1.3 DEFINITIONS
   A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or
      for remote-control, signaling power-limited circuits.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated. Include materials of construction, rated
      capacities, certified performance curves with operating points plotted on curves, operating
      characteristics, electrical characteristics, and furnished specialties and accessories.
   B. LEED Submittals:
      1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with
         applicable requirements in ASHRAE/IESNA 90.1, without amendments, Section 7 -
         "Service Water Heating."

1.5 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For domestic water pumps to include in operation and
      maintenance manuals.

1.6 QUALITY ASSURANCE
   A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70,
      by a qualified testing agency, and marked for intended location and application.
B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.
B. Protect bearings and couplings against damage.
C. Comply with pump manufacturer's written rigging instructions for handling.

PART 2 - PRODUCTS

2.1 HORIZONTALLY MOUNTED, IN-LINE, CLOSE-COUPLING CENTRIFUGAL PUMPS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Armstrong Pumps Inc.
   2. Bell & Gossett Domestic Pump; ITT Corporation.
   3. TACO Incorporated.

B. Description: Factory-assembled and -tested, in-line, single-stage, close-coupled, overhung-impeller centrifugal pumps designed for installation with pump and motor shaft mounted horizontal.

C. Performance: Refer to schedule on Plumbing Drawings.

D. Pump Construction:

   1. Casing: Radially split with threaded companion-flange connections for pumps with NPS 2 pipe connections and flanged connections for pumps with NPS 2-1/2 pipe connections.
   2. Impeller: Statically and dynamically balanced, closed, and keyed to shaft.
   3. Shaft and Shaft Sleeve: Steel shaft with deflector, with copper-alloy shaft sleeve. Include water slinger on shaft between motor and seal.
   4. Seal: Mechanical, with carbon-steel rotating ring, stainless-steel spring, ceramic seat, and rubber bellows and gasket.
   5. Bearings: Oil-lubricated; bronze-journal or ball type.
   6. Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.

E. Motor: Single speed, with grease-lubricated ball bearings; and resiliently or rigidly mounted to pump casing.

2.2 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 Section "Common Motor Requirements for Plumbing Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

2.3 CONTROLS

A. Thermostats: Electric; adjustable for control of hot-water circulation DHWP-1 pump.
   1. Type: Water-immersion temperature sensor, for installation in piping.
   2. Range: 65 to 200 deg F.
   3. Enclosure: NEMA 250, Type 4X.
   4. Operation of Pump: On or off.
   5. Transformer: Provide if required.
   7. Settings: Start pump at 105 deg F and stop pump at 120 deg F.

B. Timers: Electric, for control of hot-water circulation DHWP-1 pump.
   1. Type: Programmable, seven-day clock with manual override on-off switch.
   2. Enclosure: NEMA 250, Type 1, suitable for wall mounting.
   3. Operation of Pump: On or off.
   4. Transformer: Provide if required.
   5. Power Requirement: 24-V ac.
   6. Programmable Sequence of Operation: Up to two on-off cycles each day for seven days.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

3.2 PUMP INSTALLATION

A. Comply with HI 1.4.

B. Install horizontally mounted, in-line, close-coupled centrifugal pumps with shaft(s) horizontal.

C. Install continuous-thread hanger rods and spring hangers with vertical-limit stop of size required to support pump weight.
   1. Comply with requirements for vibration isolation devices specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment." Fabricate brackets or supports as required.
   2. Comply with requirements for hangers and supports specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

D. Install thermostats in hot-water return piping.

E. Install timers on wall in mechanical room adjacent to the water heater.
F. Coordinate control points, and sequences, with the building automation contractor.

3.3 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Section "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps to allow service and maintenance.

C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
   1. Install flexible connectors adjacent to pumps in suction and discharge piping of the following pumps:
      a. Horizontally mounted, in-line, close-coupled centrifugal pumps.
      b. Comply with requirements for flexible connectors specified in Division 22 Section "Domestic Water Piping."
   2. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping. Comply with requirements for valves specified in Division 22 Section "General-Duty Valves for Plumbing Piping" and comply with requirements for strainers specified in Division 22 Section "Domestic Water Piping Specialties."
   3. Install pressure gage and snubber at suction of each pump and pressure gage and snubber at discharge of each pump. Install at integral pressure-gage tappings where provided or install pressure-gage connectors in suction and discharge piping around pumps. Comply with requirements for pressure gages and snubbers specified in Division 22 Section "Meters and Gages for Plumbing Piping."

D. Comply with Division 26 Sections for electrical connections, and wiring methods.

E. Connect thermostats, and timers to pumps that they control.

F. Coordinate with the automatic temperatures controls contractor for monitoring and control of DHWP-1 from front end.

3.4 IDENTIFICATION

A. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment" for identification of pumps.

3.5 STARTUP SERVICE

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Check piping connections for tightness.
   3. Clean strainers on suction piping.
   4. Set thermostats and timers for automatic starting and stopping operation of pumps.
   5. Perform the following startup checks for each pump before starting:
a. Verify bearing lubrication.
b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
c. Verify that pump is rotating in the correct direction.

6. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
7. Start motor.
8. Open discharge valve slowly.
9. Adjust temperature settings on thermostats.
10. Adjust timer settings.

3.6 ADJUSTING

A. Adjust domestic water pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust initial temperature set points.

C. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION 22 11 23
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Pipe, tube, and fittings.
      2. Specialty pipe fittings.

1.3 PERFORMANCE REQUIREMENTS
   A. Components and installation shall be capable of withstanding the following minimum working
      pressure unless otherwise indicated:

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated.
   B. Shop Drawings: For solvent drainage system. Include plans, elevations, sections, and details.

1.5 INFORMATIONAL SUBMITTALS
   A. Field quality-control reports.

1.6 QUALITY ASSURANCE
   A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS
   A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting
      materials, and joining methods for specific services, service locations, and pipe sizes.
2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 74, Service and Extra Heavy class.

B. Gaskets: ASTM C 564, neoprene rubber.

C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 888 or CISPI 301.

B. CISPI, Hubless-Piping Couplings:
   2. Description: Stainless-steel corrugated shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

C. Heavy-Duty, Hubless-Piping Couplings:
   2. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.

B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at indicated slopes.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.
J. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

K. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

L. Install soil and waste drainage and vent piping at the following minimum slopes unless otherwise indicated:

1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.
3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

N. Install encasement on underground piping according to ASTM A 674 or AWWA C105.

O. Plumbing Specialties:

1. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with requirements for cleanouts specified in Division 22 Section "Sanitary Waste Piping Specialties."
2. Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Division 22 Section "Sanitary Waste Piping Specialties."

P. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

Q. Install sleeves for piping penetrations of walls, ceilings, and floors.

R. Install sleeve seals for piping penetrations of concrete walls and slabs.

S. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.2 JOINT CONSTRUCTION

B. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
3.3 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements for pipe hanger and support devices and installation specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
2. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
3. Vertical Piping: MSS Type 8 or Type 42, clamps.
4. Install individual, straight, horizontal piping runs:
   a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
   b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
5. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls.
   Support pipe rolls on trapeze.
6. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Support horizontal piping and tubing within 12 inches of each fitting, valve, and coupling.

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
2. NPS 3: 60 inches with 1/2-inch rod.
3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.

F. Install supports for vertical cast-iron soil piping every 15 feet.

G. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.4 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect soil and waste piping to exterior sanitary sewerage piping.

C. Connect drainage and vent piping to the following:

1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
5. Comply with requirements for cleanouts and drains specified in Division 22 Section "Sanitary Waste Piping Specialties."
6. Equipment: Connect drainage piping as indicated. Provide shutoff valve if indicated and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 and larger.

D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

3.5 IDENTIFICATION

A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.6 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.
3.7  PIPING SCHEDULE

A. Aboveground, soil and waste piping shall be the following:

1. Service class, hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.

B. Aboveground, vent piping shall be the following:

1. Service class, hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.

C. Underground, soil, waste, and vent piping shall be the following:

1. Extra Heavy class, cast-iron soil piping; gaskets; and gasketed joints.

END OF SECTION 22 13 16
SECTION 22 13 19 - SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cleanouts.
2. Floor drains.
4. Flashing materials.

B. Related Requirements:

1. Division 22 Section "Storm Drainage Piping Specialties" for storm drainage piping inside the building, drainage piping specialties, and drains.
2. Division 33 Section "Storm Utility Drainage Piping" for storm draining piping and piping specialties outside the building.

1.3 ACTION SUBMITTALS

A. Shop Drawings: Show fabrication and installation details for frost-resistant vent terminals.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.6 COORDINATION
A. Coordinate size and location of roof penetrations.

PART 2 - PRODUCTS

2.1 CLEANOUTS

A. Exposed Metal Cleanouts:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   b. MIFAB, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
3. Size: Same as connected drainage piping
4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk or raised-head, brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Metal Floor Cleanouts:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   b. Oatey.
   c. Sioux Chief Manufacturing Company, Inc.
   e. Tyler Pipe; Wade Div.
   f. Watts Drainage Products Inc.
   g. Zurn Plumbing Products Group; Light Commercial Operation.
   h. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
7. Outlet Connection: Spigot.
8. Closure: Brass plug with tapered threads.
9. Adjustable Housing Material: Cast iron with threads.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Medium Duty.
13. Riser: ASTM A74, Extra-Heavy class, cast-iron drainage pipe fitting and riser to cleanout.
15. Size: Same as connected branch.
17. Closure: Stainless steel with seal.
18. Riser: Stainless-steel drainage pipe fitting to cleanout.

C. Cast-Iron Wall Cleanouts:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. MIFAB, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk or raised-head, brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

2.2 FLOOR DRAINS

A. Cast-Iron Floor Drains. Refer to schedule on Plumbing Drawings for sizes and basis of design manufacturers:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. MIFAB, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Light Commercial Operation.
   g. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.6.3.
5. Seepage Flange: Required.
6. Anchor Flange: Required.
7. Clamping Device: Required.
8. Outlet: Bottom or Side.
10. Sediment Bucket: Not required.
2.3 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Air-Gap Fittings:
   1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
   2. Body: Bronze or cast iron.
   3. Inlet: Opening in top of body.
   4. Outlet: Larger than inlet.
   5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

B. Sleeve Flashing Device:
   1. Description: Manufactured, cast-iron fitting, with clamping device, that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 2 inches above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
   2. Size: As required for close fit to riser or stack piping.

C. Stack Flashing Fittings:
   1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
   2. Size: Same as connected stack vent or vent stack.

D. Frost-Proof Vent Terminals:
   1. Description: Manufactured or shop-fabricated assembly constructed of copper, lead-coated copper, or galvanized steel.
   2. Design: To provide 1-inch enclosed air space between outside of pipe and inside of flashing collar extension, with counterflashing.

E. Sewer Gas and Sewage Backup Protection for Floor Drains: ProSet Systems, Inc Trap Guard®:
   1. Material: Smooth, soft, flexible, elastomeric PVC material molded into shape of duck’s bill, open on top with curl closure at bottom.
   2. Allows wastewater to open and adequately discharge floor drain through its interior.
   3. Closes and returns to original molded shape after wastewater discharge is complete.

2.4 FLASHING MATERIALS

A. Neoprene rubber boots with stainless steel clamps.

B. Fasteners: Metal compatible with material and substrate being fastened.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
2. Locate at each change in direction of piping greater than 45 degrees.
3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
4. Locate at base of each vertical soil and waste stack.

B. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

C. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

D. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
   1. Position floor drains for easy access and maintenance.
   2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
      a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.
      b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.
      c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.

3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

E. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.

F. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.

G. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.

H. Install wood-blocking reinforcement for wall-mounting-type specialties.

I. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

3.2 CONNECTIONS
A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 FLASHING INSTALLATION
A. Install flashing for piping passing through roofs with neoprene rubber boots and stainless steel clamps.

3.4 LABELING AND IDENTIFYING

A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.5 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 13 19
SECTION 22 14 13 - FACILITY STORM DRAINAGE PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Pipe, tube, and fittings.
B. Related Sections:
   1. Division 22 Section "Sump Pumps" for storm drainage pumps.
   2. Division 33 Section "Storm Utility Drainage Piping" for storm drainage piping outside the building.

1.3 PERFORMANCE REQUIREMENTS
A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
   1. Storm Drainage Piping: 10-foot head of water.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.5 INFORMATIONAL SUBMITTALS
A. Field quality-control reports.

1.6 QUALITY ASSURANCE
A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS
A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 74, Service and Extra Heavy class.
B. Gaskets: ASTM C 564, neoprene rubber.
C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 888 or CISPI 301.
B. CISPI, Hubless-Piping Couplings:
   2. Description: Stainless-steel corrugated shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.
C. Heavy-Duty, Hubless-Piping Couplings:
   2. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations from layout are approved on coordination drawings.
B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
E. Install piping at indicated slopes.
F. Install piping free of sags and bends.
G. Install fittings for changes in direction and branch connections.
H. Install piping to allow application of insulation.

I. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

J. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

K. Install storm drainage piping at the following minimum slopes unless otherwise indicated:
   1. Building Storm Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
   2. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.

L. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
   1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.

M. Plumbing Specialties:
   1. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping. Comply with requirements for cleanouts specified in Division 22 Section "Storm Drainage Piping Specialties."
   2. Install drains in storm drainage gravity-flow piping. Comply with requirements for drains specified in Division 22 Section "Storm Drainage Piping Specialties."

N. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

O. Install sleeves for piping penetrations of walls, ceilings, and floors.

P. Install sleeve seals for piping penetrations of concrete walls and slabs.

Q. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.2 JOINT CONSTRUCTION

B. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

3.3 HANGER AND SUPPORT INSTALLATION
A. Comply with requirements for pipe hanger and support devices and installation specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
2. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
3. Vertical Piping: MSS Type 8 or Type 42, clamps.
4. Individual, Straight, Horizontal Piping Runs:
   a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
   b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
5. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls.
   Support pipe rolls on trapeze.
6. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Support horizontal piping and tubing within 12 inches of each fitting and coupling.

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

   1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
   2. NPS 3: 60 inches with 1/2-inch rod.
   3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
   4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.

F. Install supports for vertical cast-iron soil piping every 15 feet.

G. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.4 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

C. Connect storm drainage piping to roof drains and storm drainage specialties.

   1. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.
   2. Comply with requirements for cleanouts and drains specified in Division 22 Section "Storm Drainage Piping Specialties."

D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

3.5 IDENTIFICATION
A. Identify exposed storm drainage piping. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.6 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test storm drainage piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Test Procedure: Test storm drainage piping on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts until completion of inspection, water level must not drop. Inspect joints for leaks.
4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

3.7 PIPING SCHEDULE

A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.

B. Aboveground storm drainage piping shall be the following:

1. Service class, hubless, cast-iron soil pipe and fittings; CISPI, hubless-piping couplings; and coupled joints.

C. Underground storm drainage piping shall be the following:

1. Extra Heavy class, cast-iron soil piping; gaskets; and gasketed joints.

END OF SECTION 22 14 13
SECTION 22 14 23 - STORM DRAINAGE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Roof drains.
   2. Miscellaneous storm drainage piping specialties.
   3. Cleanouts.
   4. Through-penetration firestop assemblies.
   5. Flashing materials.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.4 QUALITY ASSURANCE
A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 METAL ROOF DRAINS
A. Cast-Iron, Small-Sump, General-Purpose Roof Drains RD-1:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Marathon Roofing Products.
      c. MIFAB, Inc.
      e. Tyler Pipe.
      f. Watts Water Technologies, Inc.
      g. Zurn Plumbing Products Group; Light Commercial Products Operation.
      h. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.6.4, for general-purpose roof drains.
5. Combination Flashing Ring and Gravel Stop: Required.
6. Outlet: Bottom.
7. Extension Collars: Required.
8. Underdeck Clamp: Required.
10. Sump Receiver Plate: Not required.
12. Wire Mesh: Not required.

B. Cast-Iron, Small-Sump, Overflow Standpipe Roof Drains OD-1:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Marathon Roofing Products.
   c. MIFAB, Inc.
   e. Tyler Pipe.
   f. Watts Water Technologies, Inc.
   g. Zurn Plumbing Products Group; Light Commercial Products Operation.
   h. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.6.4, for general-purpose roof drains.
5. Combination Flashing Ring and Gravel Stop: Required.
6. Outlet: Bottom.
7. Extension Collars: Required.
8. Underdeck Clamp: Required.
10. Sump Receiver Plate with adjustable Bronze Standpipe: Required.
12. Wire Mesh: Not required.

C. Cast-Iron, Medium-Sump, Planting Area Roof Drains RD-2:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Marathon Roofing Products.
   c. MIFAB, Inc.
   d. Portals Plus; Commercial Products Group of Hart & Cooley, Inc.
   f. Tyler Pipe.
   g. Watts Water Technologies, Inc.
   h. Zurn Plumbing Products Group; Light Commercial Products Operation.
   i. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.6.4, for general-purpose roof drains.
5. Combination Flashing Ring and Gravel Stop: Not required.
7. Outlet: Bottom.
8. Extension Collars: Required.
10. Expansion Joint: Not required.
11. Sump Receiver Plate: Not required.
15. Vandal-Proof Dome: Required.
16. Water Dam: Not required.

D. Cast-Iron, Floor Drains AD-2:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. MIFAB, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Light Commercial Operation.
   g. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.6.3.
5. Seepage Flange: Required.
6. Anchor Flange: Required.
7. Clamping Device: Required.
10. Sediment Bucket: Not required.
12. Grate Shape: Square.

2.2 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

A. Overflow Drain Nozzles DSN:

1. Description: Cast Bronze body with threaded inlet and bronze wall flange with mounting holes. Drip edge lip extending 4 inches from the face of the building
2. Size: Same as connected conductor.

2.3 CLEANOUTS

A. Exposed Metal Cleanouts:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. MIFAB, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
3. Size: Same as connected drainage piping
4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk or raised-head, brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Metal Floor Cleanouts:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Oatey.
   c. Sioux Chief Manufacturing Company, Inc.
   e. Tyler Pipe; Wade Div.
   f. Watts Drainage Products Inc.
   g. Zurn Plumbing Products Group; Light Commercial Operation.
   h. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
7. Outlet Connection: Spigot.
8. Closure: Brass plug with tapered threads.
9. Adjustable Housing Material: Cast iron with threads.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Medium Duty.
13. Riser: ASTM A 74, Extra-Heavy class, cast-iron drainage pipe fitting and riser to cleanout.
15. Size: Same as connected branch.
17. Closure: Stainless steel with seal.
18. Riser: Stainless-steel drainage pipe fitting to cleanout.

C. Cast-Iron Wall Cleanouts:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. MIFAB, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Specification Drainage Operation.

2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk or raised-head, brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

2.4 FLASHING MATERIALS

B. Fasteners: Metal compatible with material and substrate being fastened.

C. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.

D. Solder: ASTM B 32, lead-free alloy.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Roofing materials are specified in Division 07 Sections.
   1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
   2. Install expansion joints, if indicated, in roof drain outlets.
   3. Position roof drains for easy access and maintenance.

B. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.

C. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
   1. Use cleanouts the same size as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
   2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
   3. Locate cleanouts at minimum intervals of 50 feet.
   4. Locate cleanouts at base of each vertical soil and waste stack.
D. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

E. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

F. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.

G. Install through-penetration firestop assemblies in plastic conductors at concrete floor penetrations.

H. Install sleeve flashing device with each conductor passing through floors with waterproof membrane.

3.2 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 FLASHING INSTALLATION

A. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.

1. Pipe Flashing: Sleeve type, matching the pipe size, with a minimum length of 10 inches and with skirt or flange extending at least 8 inches around pipe.

2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.

3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.

B. Set flashing on floors and roofs in solid coating of bituminous cement.

C. Secure flashing into sleeve and specialty clamping ring or device.

D. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.4 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 14 23
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Packaged drainage-pump units.
2. Submersible effluent pumps.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Wiring Diagrams: For power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

C. Comply with pump manufacturer's written rigging instructions for handling.

PART 2 - PRODUCTS
2.1 PACKAGED DRAINAGE-PUMP UNITS

A. Packaged Submersible Drainage-Pump Units:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Bell & Gossett Domestic Pump; ITT Corporation.
   b. Goulds Pumps; ITT Corporation.
   c. Grundfos Pumps Corp.
   d. Zoeller Company.

2. Description: Factory-assembled and -tested, automatic-operation, basin-mounted, sump-pump unit.

3. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller centrifugal pump as defined in HI 1.1-1.2 and HI 1.3.

5. Impeller: Brass.

6. Pump Seal: Mechanical.

8. Power Cord: Three-conductor, waterproof cable of length required but not less than 72 inches, with grounding plug and cable-sealing assembly for connection at pump.

9. Pump Discharge Piping: Factory or field fabricated, galvanized, ASTM A 53/A 53M, Schedule 40, steel pipe with ASME B16.4, Class 125, gray iron threaded fittings.

11. Basin: None

2.2 SUBMERSIBLE EFFLUENT PUMPS

A. Submersible, Quick-Disconnect, Effluent Pumps:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Stancor, Inc.
   c. Zoeller Company.

2. Description: Factory-assembled and -tested effluent-pump unit with guide-rail supports.

3. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal effluent pump as defined in HI 1.1-1.2 and HI 1.3.

4. Pump Casing: Cast iron, with open inlet, and discharge fittings for connection to guide-rail support.

5. Impeller: Statically and dynamically balanced, ASTM A 48/A 48M, Class No. 25 A cast iron, closed or semiopen design for clear wastewater, and keyed and secured to shaft.

7. Seals: Mechanical.

8. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.

9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
a. Motor Housing Fluid: Oil.

10. Controls:
   a. Enclosure: NEMA 3R.
   b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
   c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps
      if one cannot handle load.
   d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater
      than 60 inches.
   e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell;
      120-V ac, with transformer and contacts for remote alarm bell.

11. Control-Interface Features:
   b. Building Automation System Interface: Auxiliary contacts in pump controls for
      interface to building automation system and capable of providing the following:
      1) On-off status of pump.
      2) Alarm status.

12. Guide-Rail Supports:
   b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or
      other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
   c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting
      guide rails and stationary elbow.
   d. Pump Yoke: Motor-mounted or casing-mounted yokes or other attachments for
      aligning pump during connection of flanges.
   e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning
      device.
   f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-
      elbow flange and support attached to baseplate.
   g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

2.3 SUMP-PUMP BASINS AND BASIN COVERS

A. Basins: Factory-fabricated, watertight, cylindrical, basin sump with top flange and sidewall
   openings for pipe connections.
   2. Reinforcement: Mounting plates for pumps, fittings, and accessories.
   3. Anchor Flange: Same material as or compatible with basin sump, cast in or attached to
      sump, in location and of size required to anchor basin in concrete slab.

B. Basin Covers: Fabricate metal cover with openings having gaskets, seals, and bushings; for
   access to pumps, pump shafts, control rods, discharge piping, vent connections, and power
   cables.
   1. Reinforcement: Steel or cast iron, capable of supporting foot traffic for basins.
   2. Cover Material: Galvanized steel or other corrosion-resistant metal compatible with
      attached guide-rail supports.
3. Cover Diameter: Not less than outside diameter of basin top flange.
4. Manhole Required in Cover: Yes.
5. Vent Required in Cover: Yes.

2.4 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 Section "Common Motor Requirements for Plumbing Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

B. Motors for submersible pumps shall be hermetically sealed.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavation and filling are specified in Division 31 Section "Earth Moving."

3.2 EXAMINATION

A. Examine roughing-in for plumbing piping to verify actual locations of storm drainage piping connections before sump pump installation.

3.3 INSTALLATION

A. Pump Installation Standards: Comply with HI 1.4 for installation of sump pumps.
B. Coordinate control points, and sequences, with the building automation contractor.

3.4 LABELING AND IDENTIFICATION

A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.5 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Section "Facility Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to equipment to allow service and maintenance.
C. Coordinate with the automatic temperature controls contractor to provide a status of pump operation, high level alarm, and general fault.

3.6 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:
   1. Perform each visual and mechanical inspection.
   2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Pumps and controls will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.7 ADJUSTING

A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust control set points.

END OF SECTION 22 14 29
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes piping and related specialties for general-service compressed-air systems operating at 200 psig or less.
B. Related Sections include the following:
   1. Division22 Section "General-Service Packaged Air Compressors and Receivers" for general-service air compressors and accessories.

1.3 DEFINITIONS
A. Low-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures of 150 psig or less.

1.4 ACTION SUBMITTALS
A. Product Data: For the following:
   1. Flexible pipe connectors.
   2. Pressure regulators. Include rated capacities and operating characteristics.

1.5 INFORMATIONAL SUBMITTALS
A. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For general-service compressed-air piping specialties to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE
A. ASME Compliance:
1.8 PROJECT CONDITIONS

A. Interruption of Existing Compressed-Air Service: Do not interrupt compressed-air service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary compressed-air service according to requirements indicated:

1. Notify Construction Manager no fewer than two days in advance of proposed interruption of compressed-air service.
2. Do not proceed with interruption of compressed-air service without Construction Manager's written permission.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

A. Schedule 40, Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B, black or hot-dip zinc coated with ends threaded according to ASME B1.20.1.

2.2 VALVES

A. Metal Ball, Check, Gate, and Globe Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping."

2.3 FLEXIBLE PIPE CONNECTORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Flex-Hose Co., Inc.
2. Hyspan Precision Products, Inc.
3. Metraflex, Inc.

B. Stainless-Steel-Hose Flexible Pipe Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.

2. End Connections, NPS 2 and Smaller: Threaded steel pipe nipple.
3. End Connections, NPS 2-1/2 and Larger: Flanged steel nipple.

2.4 SPECIALTIES

A. Air-Line Pressure Regulators: Diaphragm or pilot operated, bronze body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for 200-psig minimum inlet pressure, unless otherwise indicated.
PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Low-Pressure Compressed-Air Distribution Piping: Use the following piping materials for each size range:

1. Schedule 40, galvanized-steel pipe; threaded, malleable-iron fittings; and threaded joints.

3.2 VALVE APPLICATIONS

A. General-Duty Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for metal general-duty valves.

1. Metal General-Duty Valves: Use valve types specified in "Valve Applications" Article in Division 22 Section "General-Duty Valves for Plumbing Piping" according to the following:

   a. Low-Pressure Compressed Air: Valve types specified for low-pressure compressed air.
   b. Equipment Isolation NPS 2 and Smaller: Safety-exhaust, copper-alloy ball valve with exhaust vent and pressure rating at least as great as piping system operating pressure.

3.3 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.

E. Install piping adjacent to equipment and machines to allow service and maintenance.

F. Install air and drain piping with 1 percent slope downward in direction of flow.

G. Equipment and Specialty Flanged Connections:

1. Use steel companion flange with gasket for connection to steel pipe.
2. Use cast-copper-alloy companion flange with gasket and brazed joint for connection to copper tube. Do not use soldered joints for connection to air compressors or to equipment or machines producing shock or vibration.
H. Install eccentric reducers where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.

I. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.

J. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver. Comply with requirements in Division22 Section "Meters and Gages for Plumbing Piping."

K. Install piping to permit valve servicing.

L. Install piping free of sags and bends.

M. Install fittings for changes in direction and branch connections.

N. Install sleeves for piping penetrations of walls, ceilings, and floors

O. Install sleeve seals for piping penetrations of concrete walls and slabs.

P. Install escutcheons for piping penetrations of walls, ceilings, and floors.

3.4 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

3.5 VALVE INSTALLATION

A. General-Duty Valves: Comply with requirements in Division22 Section "General-Duty Valves for Plumbing"

B. Install shutoff valves and unions at compressed-air piping to air compressors.

C. Install shutoff valve at inlet to each automatic drain valve, filter, lubricator, and pressure regulator.

D. Install check valves to maintain correct direction of compressed-air flow to and from compressed-air piping specialties and equipment.

3.6 FLEXIBLE PIPE CONNECTOR INSTALLATION
A. Install flexible pipe connectors in discharge piping and in inlet air piping from remote air-inlet filter of each air compressor.

B. Install bronze-hose flexible pipe connectors in copper compressed-air tubing.

C. Install stainless-steel-hose flexible pipe connectors in steel compressed-air piping.

3.7 SPECIALTY INSTALLATION

A. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.

B. Install air-main pressure regulators in compressed-air piping at or near air compressors.

C. Install air-line pressure regulators in branch piping to equipment.

D. Install automatic drain valves on aftercoolers, receivers, and dryers. Discharge condensate onto nearest floor drain.

E. Install coalescing filters in compressed-air piping at or near air compressors and upstream from mechanical filters. Mount on wall at locations indicated.

F. Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters. Mount on wall at locations indicated.

G. Install air-line lubricators in branch piping to machine tools. Mount on wall at locations indicated.

H. Install quick couplings at piping terminals for hose connections.

I. Install hose assemblies at hose connections.

3.8 CONNECTIONS

A. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment and machine.

3.9 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements in Division22 Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices.

B. Vertical Piping: MSS Type 8 or 42, clamps.

C. Individual, Straight, Horizontal Piping Runs:
   1. 100 Feet or Less: MSS Type 1, adjustable, steel clevis hangers.
   2. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.

D. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
E. Base of Vertical Piping: MSS Type 52, spring hangers.

F. Support horizontal piping within 12 inches of each fitting and coupling.

G. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

H. Install hangers for Schedule 40, steel piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1/4 to NPS 1/2: 96 inches with 3/8-inch rod.
2. NPS 3/4 to NPS 1-1/4: 84 inches with 3/8-inch rod.
3. NPS 1-1/2: 12 feet with 3/8-inch rod.
4. NPS 2: 13 feet with 3/8-inch rod.

I. Install supports for vertical, Schedule 40, steel piping every 15 feet.

3.10 LABELING AND IDENTIFICATION

A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.11 FIELD QUALITY CONTROL

A. Perform field tests and inspections.

B. Tests and Inspections:

1. Piping Leak Tests for Metal Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen to pressure of 50 psig above system operating pressure, but not less than 150 psig. Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
2. Repair leaks and retest until no leaks exist.
3. Inspect pressure regulators for proper operation.

C. Prepare test reports.

END OF SECTION 22 15 13
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following general-service compressed-air equipment and related accessories:

1. Air compressors and receivers.
2. Air-inlet filters.
3. Compressed-air dryers.
4. Compressed-air filter assemblies.

B. Related Sections include the following:

1. Division 22 Section "General-Service Compressed-Air Piping" for compressed-air piping, valves, and related specialties.

1.3 DEFINITIONS

A. Actual Air: Air delivered from air compressors. Flow rate is delivered compressed air measured in acfm.

B. Standard Air: Free air at 68 deg F and 1 atmosphere (29.92 in. Hg) before compression or expansion and measured in scfm.

1.4 SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following compressed-air equipment:

1. Air compressors, including receivers and intake filters.
2. Compressed-air dryers.
3. Compressed-air filter assemblies.

B. Product Certificates: Certificates of shop inspection and data report for receiver tanks as required by ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. Startup service reports.
D. Operation and Maintenance Data: For the following compressed-air equipment and
accessories to include in emergency, operation, and maintenance manuals:

1. Air compressors.
2. Compressed-air dryers.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70,
Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for
intended use.

B. ASME Compliance: Fabricate and label receiver tanks to comply with ASME Boiler and
Pressure Vessel Code: Section VIII, Division 1.

C. Comply with NFPA 70, "National Electrical Code."

1.6 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged
with protective covering for storage and identified with labels describing contents.

1. Air-Compressor Inlet-Filter Element Units: 4 required.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply for
product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers
offering products that may be incorporated into the Work include, but are not limited to,
the manufacturers specified.

2.2 PACKAGED AIR COMPRESSORS AND RECEIVERS

A. Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled;
continuous-duty air compressors and receivers that deliver air of quality equal to intake air.

B. Control Panels: Automatic control station with load control and protection functions. Comply
with NEMA ICS 2 and UL 508.

1. Mounting and Wiring: Factory installed and connected as an integral part of equipment
package.
2. Enclosure: NEMA ICS 6, Type 12 control panel, unless otherwise indicated.
3. Motor Controllers: Full-voltage, combination-magnetic type with undervoltage release
feature and motor-circuit-protector-type disconnecting means and short-circuit protective
device.
a. Control Voltage: 120-V ac or less, using integral control power transformer.
b. Motor Overload Protection: Overload relay in each phase.
c. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.

1) Automatic control switches to alternate lead-lag compressors for duplex air compressors.

4. Instrumentation: Include receiver pressure gage, discharge-air pressure gage, air-filter maintenance indicator, hour meter, compressor discharge-air temperature gages, and control transformer.

C. Motors: Comply with requirements in Division 23 Section "Motors."

D. Receivers: Steel tank constructed according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1; rated for working pressure at least as high as highest discharge pressure of connected compressors; and bearing appropriate code symbols. Include safety valve, pressure gage, automatic drain, and pressure-reducing valve.

E. Fabricate base and attachment to pressure vessel with reinforcement strong enough to resist packaged equipment movement during a seismic event when base is anchored to building structure.

2.3 RECIPROCATING AIR COMPRESSORS

A. Lubricated, Reciprocating Air Compressors: Duplex unit.

1. Manufacturers:
   a. Quincy Compressor.

2. Compressor(s): Single-stage, lubricated, reciprocating-piston type with lubricated compression chamber and crankcase.
   b. Number of Compressors: Two.
   c. Motor Size (Each Compressor): 3 hp, 500 rpm, 3 phase, 60 Hz.
   d. Actual-Air Capacity of Each Air Compressor: 10 acfm delivered, continuous duty.
   e. Discharge Air Pressure: 100 psig.
   f. Combined high discharge-air temperature and low lubrication-oil pressure switch, submerged gear-type oil pump, and oil filter.
   g. Belt guards totally enclosing pulleys and belts.

   a. Orientation: Horizontal arrangement.
   b. Capacity: 120 gal..
   c. Pressure Rating: 125 psig minimum.

2.4 AIR-INLET FILTERS

A. Description: Combination inlet filter-silencer, suitable for remote installation, for each air compressor.

1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
2. Capacity: Match capacity of air compressor, with collection efficiency of 99 percent retention of particles larger than 10 microns.

2.5 COMPRESSED-AIR DRYERS

A. Refrigerant-Type Dryers: Noncycling, air-cooled, electric-motor-driven unit with steel enclosure and capability to deliver 35 deg F, 100-psig air at dew point. Include automatic ejection of condensate from airstream, step-down transformers, disconnect switches, inlet and outlet pressure gages, thermometers, automatic controls, and filters.

1. Manufacturers:
   a. Hankison International.
2. Capacity: Match maximum capacity of connected air compressor.
3. Inlet Filter: 5 microns.
4. Outlet Filter: 1 micron.

2.6 ACCESSORIES

A. General: Include accessories with working-pressure rating not less than system pressure at location where used, and compatible with equipment and piping system used.

2.7 SPECIALTIES

A. Safety Valves: ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, construction; National Board certified, labeled, and factory sealed; constructed of bronze body with poppet safety valve for compressed-air service.

1. Pressure Settings: Higher than discharge pressure and same or lower than receiver pressure rating.

B. Automatic Drain Valves: mechanical-operation type with corrosion-resistant metal body and internal parts, rated for 200-psig minimum working pressure, capable of automatic discharge of collected condensate.

C. Pressure Regulators: Aluminum alloy or plastic body, diaphragm operated, direct acting, spring loaded, manual pressure-setting adjustment, and rated for 125-psig inlet pressure, unless otherwise indicated.
PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

A. Install air compressors on concrete bases. Install units level, plumb, and anchored to substrate in locations indicated. Maintain manufacturers' recommended clearances. Orient equipment so controls and devices are accessible for servicing.

1. Anchor packaged equipment to concrete base.
   a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
   b. Install epoxy-coated anchor bolts for supported equipment; extend through concrete base and anchor into structural concrete floor.
   c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   d. Install anchor bolts to elevations required for proper attachment to supported equipment.

B. Vibration Isolation: Install restrained spring isolators with a minimum deflection of 1". Vibration isolation devices and installation requirements are specified in Division 23 Section "Mechanical Vibration and Seismic Controls."

C. Vibration Isolation: Mount equipment with motors larger than 5 hp on vibration isolation equipment base as specified in Division 23 Section "Mechanical Vibration and Seismic Controls."

D. Maintain manufacturer's recommended clearances for service and maintenance.

E. Install the following devices on compressed-air equipment:
   1. Thermometer, Pressure Gage, and Safety Valve: Install on each compressed-air receiver.
   2. Pressure Regulators: Install downstream from air compressors, dryers, purification units, and filter assemblies.

3.2 LABELING AND IDENTIFICATION

A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance, with a minimum of three 90 degree elbows in different planes.
C. Connect piping to air compressors and receivers, except safety relief valve connections, with flexible pipe connectors of materials suitable for service. Flexible pipe connectors and their installation are specified in Division 22 Section "General-Service Compressed-Air Piping."

D. Ground equipment according to Division 26 Section "Grounding and Bonding."

E. Connect wiring according to Division 26 Section "Conductors and Cables."

F. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 STARTUP SERVICE

A. Engage a factory-authorized service representative to test, inspect, and adjust components and equipment installation and to perform startup service.

B. Perform the following final checks:
   1. Verify that specified tests of piping systems are complete.
   2. Check for piping connection leaks.
   3. Check for lubricating oil in lubricated-type equipment.
   4. Check belt drives for proper tension.
   5. Verify that air-compressor inlet filters and piping are clear.
   6. Check for equipment vibration-control supports and flexible pipe connectors and verify that equipment is properly attached to substrate.
   7. Check safety valves for correct settings. Ensure that settings are greater than air-compressor discharge pressure but not greater than rating of system components.
   8. Test operation of equipment safety controls and devices.

C. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

D. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Complete installation and startup checks according to manufacturer's written instructions.

F. Prepare written report documenting testing procedures and results.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain general-service compressed-air equipment. Refer to Division 1 Sections.

END OF SECTION 22 15 19
SECTION 22 35 00 - DOMESTIC-WATER HEAT EXCHANGERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:

1.3 ACTION SUBMITTALS
A. Product Data: For each type and size of domestic-water heat exchanger indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Shop Drawings:
   1. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS
A. Product Certificates: For each type of shell-and-tube, domestic-water heat exchanger, from manufacturer.
B. Domestic-Water, Heat-Exchanger Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.
C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For domestic-water heat exchangers to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label heat-exchanger storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.7 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate with the automatic temperature controls contractor to provide domestic hot water supply temperature out, as well as interfacing the control of the steam inlet valve.

PART 2 - PRODUCTS

2.1 SHELL-AND-TUBE, DOMESTIC-WATER HEAT EXCHANGERS

A. Shell-and-Tube, Heating-Fluid-in-U-Tube-Coil, Domestic-Water Heat Exchangers:

1. The contractor shall provide a Patterson-Kelley PK-06D water heater. No substitutions will be allowed.

2. Description: Tankless, packaged assembly of heat-exchanger coil, controls, and specialties for heating domestic water in shell with steam in coil.

3. Construction: ASME-code, negligible-capacity, copper-lined, carbon-steel or copper-alloy shell with 150-psig minimum working-pressure rating.

   b. Shell Tappings: Factory fabricated of materials compatible with domestic-water, heat-exchanger shell. Attach tappings to shell before testing and labeling.

      1) NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
      2) NPS 2-1/2 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

   c. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire shell and nozzle except connections and controls.

4. Heat-Exchanger Coil: Copper, double-wall U tubes for heating fluid. Include tube pressure rating equal to or greater than heating-fluid supply pressure.

5. Temperature Control: Adjustable thermostat that operates steam-control valve and is capable of maintaining outlet-water temperature within 5 deg F of setting.

6. Safety Control: Automatic, high-temperature-limit cutoff device or system.

7. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select one relief valve with sensing element that extends into shell.
8. Miscellaneous Components for Steam Unit: Strainers, steam-control valve, steam trap, valves, pressure gage, thermometer, and piping. Include components fitted for pneumatic control.

PART 3 - EXECUTION

3.1 DOMESTIC-WATER, HEAT-EXCHANGER INSTALLATION

A. Domestic-Water, Heat-Exchanger Mounting: Install domestic-water heat exchangers on concrete base. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.
5. Anchor heat exchangers to substrate.

B. Install domestic-water heat exchangers level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

1. Install shutoff valves on domestic-water-supply piping to heat exchangers and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
2. Install shutoff valves on steam and condensate piping to heat exchangers. Comply with requirements for shutoff valves specified in Division 23 Section "General-Duty Valves for HVAC Piping."

C. Install temperature and pressure relief valves in top portion of shells of domestic-water heat exchangers. Use relief valves with sensing elements that extend into shells. Extend relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

D. Install heat-exchanger drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for domestic-water heat exchangers that do not have tank drains. Comply with requirements for hose-end drain valves specified in Division 22 Section "Domestic Water Piping Specialties."

E. Install thermometer on each domestic-water, heat-exchanger, inlet and outlet piping, and install thermometer on each domestic-water, heat-exchanger, heating-fluid inlet and outlet piping. Comply with requirements for thermometers specified in Division 22 Section "Meters and Gages for Plumbing Piping."

F. Install pressure gages on domestic-water, heat-exchanger, heating-fluid piping. Comply with requirements for pressure gages specified in Division 22 Section "Meters and Gages for Plumbing Piping."
G. Fill domestic-water heat exchangers with water.

H. Coordinate control points, and sequences, with the building automation contractor.

3.2 CONNECTIONS
A. Comply with requirements for piping specified in Division 22 Section "Domestic Water Piping."

B. Comply with requirements for heating hot-water piping specified in Division 23 Section "Hydronic Piping."

C. Comply with requirements for steam and condensate piping specified in Division 23 Section "Steam and Condensate Heating Piping."

D. Drawings indicate general arrangement of piping, fittings, and specialties.

E. Where installing piping adjacent to domestic-water heat exchangers, allow space for service and maintenance of heat exchangers. Arrange piping for easy removal of domestic-water heat exchangers.

3.3 IDENTIFICATION
A. Identify system components. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.4 FIELD QUALITY CONTROL
A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
   2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Domestic-water heat exchangers will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

C. Prepare test and inspection reports.

END OF SECTION 22 35 00
SECTION 22 40 00 - PLUMBING FIXTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following conventional plumbing fixtures and related components:

1. Faucets for lavatories showers and sinks.
2. Flushometers.
3. Toilet seats.
4. Protective shielding guards.
5. Fixture supports.
7. Urinals.
8. Lavatories.
10. Service sinks.

B. Related Sections include the following:

1. Division 22: "Domestic Water Piping Specialties" for backflow preventers, floor drains, and specialty fixtures not included in this Section.
2. Division 22 Section "Drinking Fountains."

1.3 SUBMITTALS

A. Product Data: For each type of plumbing fixture indicated. Include selected fixture and trim, fittings, accessories, appliances, appurtenances, equipment, and supports. Indicate materials and finishes, dimensions, construction details, and flow-control rates.

B. Shop Drawings: Diagram power, signal, and control wiring.

C. Operation and Maintenance Data: For plumbing fixtures to include in emergency, operation, and maintenance manuals.

D. Warranty: Special warranty specified in this Section.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain plumbing fixtures, faucets, and other components of each category through one source from a single manufacturer.
1. Exception: If fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for that category.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

F. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.

G. Comply with the following applicable standards and other requirements specified for plumbing fixtures:
   2. Vitreous-China Fixtures: ASME A112.19.2M.

H. Comply with the following applicable standards and other requirements specified for lavatory and sink faucets:
   1. Backflow Protection Devices for Faucets with Side Spray: ASME A112.18.3M.
   2. Backflow Protection Devices for Faucets with Hose-Thread Outlet: ASME A112.18.3M.
   5. Hose-Connection Vacuum Breakers: ASSE 1011.

I. Comply with the following applicable standards and other requirements specified for shower faucets:
   1. Backflow Protection Devices for Hand-Held Showers: ASME A112.18.3M.
   2. Combination, Pressure-Equalizing and Thermostatic-Control Antiscald Faucets: ASSE 1016.

J. Comply with the following applicable standards and other requirements specified for miscellaneous fittings:

2. Brass and Copper Supplies: ASME A112.18.1.

K. Comply with the following applicable standards and other requirements specified for miscellaneous components:

2. Floor Drains: ASME A112.6.3.
4. Off-Floor Fixture Supports: ASME A112.6.1M.

PART 2 - PRODUCTS

2.1 LAVATORY FAUCETS

A. Lavatory Faucets:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. American Standard Companies, Inc.
   b. Delta Faucet Company.
   c. Kohler Co.
   d. Speakman Company.
   e. T & S Brass and Bronze Works, Inc.

2.2 SHOWER FAUCETS

A. Shower Faucets:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. American Standard Companies, Inc.
   b. Central Brass Manufacturing Company.
   c. Chicago Faucets.Delta Faucet Company.
   d. Kohler Co.
2.3 SINK FAUCETS

A. Sink Faucets:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. American Standard Companies, Inc.
   b. Chicago Faucets.
   c. Delta Faucet Company.
   d. Elkay Manufacturing Co.
   e. Kohler Co.
   f. Speakman Company.
   g. T & S Brass and Bronze Works, Inc.

2.4 FLUSHOMETERS

A. Flushometers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   b. Sloan Valve Company.
   c. TOTO USA, Inc.
   d. Zurn Plumbing Products Group; Commercial Brass Operation.

2.5 TOILET SEATS

A. Toilet Seats:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. American Standard Companies, Inc.
   b. Bemis Manufacturing Company.
   c. Church Seats.
   d. Kohler Co.
   e. Olsonite Corp.

2.6 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Piping Enclosures:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. TRUEBRO, Inc.

2. Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.

2.7 FIXTURE SUPPORTS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Josam Company.
2. MIFAB Manufacturing Inc.
4. Tyler Pipe; Wade Div.
5. Watts Drainage Products Inc.; a div. of Watts Industries, Inc.

B. Water-Closet Supports:

1. Description: Combination carrier designed for wall-mounting, water-closet-type fixture. Include single or double, vertical or horizontal, hub-and-spigot or hubless waste fitting as required for piping arrangement; faceplates; couplings with gaskets; feet; and fixture bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.

C. Urinal Supports:

1. Description: Type I, urinal carrier with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture for wall-mounting, urinal-type fixture. Include steel uprights with feet.

D. Lavatory Supports:

1. Description: Type II, lavatory carrier with concealed arms and tie rod for wall-mounting, lavatory-type fixture. Include steel uprights with feet.

E. Sink Supports:

1. Description: Type II, sink carrier with hanger plate, bearing studs, and tie rod for sink-type fixture. Include steel uprights with feet.

2.8 WATER CLOSETS

A. Water Closets:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. American Standard Companies, Inc.
   b. Crane Plumbing, L.L.C./Fiat Products.
   c. Kohler Co.
   d. TOTO USA, Inc.
2.9 URINALS

A. Urinals:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. American Standard Companies, Inc.
   b. Crane Plumbing, L.L.C./Fiat Products.
   c. Kohler Co.
   d. TOTO USA, Inc.

2.10 LAVATORIES

A. Lavatories:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. American Standard Companies, Inc.
   b. Crane Plumbing, L.L.C./Fiat Products.
   c. Kohler Co.
   d. TOTO USA, Inc.

2.11 KITCHEN SINKS

A. Kitchen Sinks:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   a. Dayton Products, Inc.
   b. Elkay Manufacturing Co.
   c. Just Manufacturing Company.
   d. Kohler Co.

2.12 SERVICE BASINS

A. Service Basins:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

   b. Precast Terrazzo Enterprises, Inc.
   c. Zurn Plumbing Products Group; Light Commercial Operation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before plumbing fixture installation.
B. Examine cabinets, counters, floors, and walls for suitable conditions where fixtures will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

A. Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions.

B. Install off-floor supports, affixed to building substrate, for wall-mounting fixtures.
   1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
   2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
   3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.

C. Install back-outlet, wall-mounting fixtures onto waste fitting seals and attach to supports.

D. Install wall-mounting fixtures with tubular waste piping attached to supports.

E. Install counter-mounting fixtures in and attached to casework.

F. Install fixtures level and plumb according to roughing-in drawings.

G. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
   1. Exception: Use ball, gate, or globe valves if supply stops are not specified with fixture. Valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."

H. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.

I. Install tubular waste piping on drain outlet of each fixture to be indirectly connected to drainage system.

J. Install flushometer valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.

K. Install toilet seats on water closets.

L. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

M. Install water-supply flow-control fittings with specified flow rates in fixture supplies at stop valves.

N. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

O. Install shower flow-control fittings with specified maximum flow rates in shower arms.
P. Install traps on fixture outlets.
   1. Exception: Omit trap on fixtures with integral traps.
   2. Exception: Omit trap on indirect wastes, unless otherwise indicated.

Q. Install escutcheons at piping wall ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings.

R. Seal joints between fixtures and walls, floors, and countertops using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Sealants are specified in Division 07 Section "Joint Sealants."

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.

B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.

C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.

D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

E. Install fresh batteries in sensor-operated mechanisms.

3.5 ADJUSTING

A. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.

B. Adjust water pressure at faucets and flushometer valves to produce proper flow and stream.

C. Replace washers and seals of leaking and dripping faucets and stops.

D. Install fresh batteries in sensor-operated mechanisms.
3.6 CLEANING

A. Clean fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials. Do the following:

1. Remove faucet spouts and strainers, remove sediment and debris, and reinstall strainers and spouts.
2. Remove sediment and debris from drains.

B. After completing installation of exposed, factory-finished fixtures, faucets, and fittings, inspect exposed finishes and repair damaged finishes.

3.7 PROTECTION

A. Provide protective covering for installed fixtures and fittings.

B. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 22 40 00
SECTION 22 47 16 - PRESSURE WATER COOLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes pressure water coolers and related components.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of pressure water cooler.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS
A. Maintenance Data: For pressure water coolers to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 PRESSURE WATER COOLERS
A. Pressure Water Coolers EWC-1: Flush to wall.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Elkay Manufacturing Co.
      b. Halsey Taylor.
      c. Haws Corporation.
   2. Standards:
      a. Comply with NSF 61.
b. Comply with ASHRAE 34, "Designation and Safety Classification of Refrigerants," for water coolers. Provide HFC 134a (tetrafluoroethane) refrigerant unless otherwise indicated.

3. Cabinet: All stainless steel.

4. Style: Bi-Level, each level with individual bubblers to accommodate standing users as well as providing barrier free access.

5. Bubbler: One, with adjustable stream regulator, located on deck.

6. Control: Push button.

7. Drain: Grid with NPS 1-1/4 tailpiece.

10. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards, with capacity sized for unit peak flow rate.

11. Cooling System: Electric, with precooler, hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.

   a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

PART 3 - EXECUTION

3.1 EXAMINATION

   A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.

   B. Examine walls and floors for suitable conditions where fixtures will be installed.

   C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

   A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.

   B. Set freestanding pressure water coolers on floor.

   C. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.

   D. Install mounting frames, affixed to building construction, and attach recessed, pressure water coolers to mounting frames.

   E. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ballvalve. Install valves in locations where they can be easily reached for operation. Valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
F. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.

G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Division 22 Section "Escutcheons for Plumbing Piping."

H. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07 Section "Joint Sealants."

3.3 CONNECTIONS

A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

B. Comply with water piping requirements specified in Division 22 Section "Domestic Water Piping."

C. Install ball, gate, or globe shutoff valve on water supply to each fixture. Install valve upstream from filter for water cooler. Comply with valve requirements specified in Division 22 Section "General-Duty Valves for Plumbing Piping."

D. Comply with soil and waste piping requirements specified in Division 22 Section "Sanitary Waste and Vent Piping."

3.4 ADJUSTING

A. Adjust fixture flow regulators for proper flow and stream height.

B. Adjust pressure water-cooler temperature settings.

3.5 CLEANING

A. After installing fixture, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.

B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.

C. Provide protective covering for installed fixtures.

D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 22 47 16
SECTION 22 52 00 - WATER FEATURE MECHANICAL SYSTEM

PART 1 – GENERAL

1.1 SCOPE OF WORK

Furnish all labor, materials, supplies, equipment and tools, and perform all operations in connection with and incidental to the complete installation of the mechanical system for the water feature. The work shall include, but not be limited to, the following:

A. Supply and installation of supply and return piping between the sump basin and the water feature.

B. Supply and installation of submersible pump, all piping, valves, and necessary fittings.

C. Coordination with project electrical engineer and general contractor for required electrical service connections at each control system location. Supply and installation of all electrical controls for the pump and automatic level controls.

D. Supply and installation of water feature fittings and balance valves.

E. Supply of an O&M manual for the water feature.

F. Coordination with the general contractor for required connections to the storm sewer for drains and overflows.

G. Coordination with project architect, structural engineer, and general contractor for routing and installation of required piping, fittings, and structural penetrations.

H. Compliance with all local health department codes, regulations, and requirements.

I. Start-up, testing, and training of new system and demonstration of performance to the Owner’s Representative.

J. Replacement of unsatisfactory materials or equipment.

K. Submission of review and record drawings.

L. Submission of all installation, operation, and maintenance manuals.

M. Maintenance period.

N. Guarantee/warranty of equipment.

1.2 SUBMITTALS

Make submittals to the Owner's Representative. Do not commence affected work until the Owner's Representative makes review in writing.

A. Provide single submittal package for review by authorized client representatives, in accordance with General Conditions of project specifications.
B. Shop Drawings: Submit each shop drawing called for in the specifications or installation
details. Show products and materials required for proper installation, their relative locations,
and critical dimensions. Note additions to or modifications from the installation detail.

C. Manufacturer's Data: Submit for approval manufacturer's catalog cuts, specifications, and
operating instructions for all equipment supplied prior to installation.

D. Maintenance Manual: Submit four (4) copies of a bound maintenance manual that includes all
manufacturers' data listed above and recommended operating procedures, adjustments,
system trouble shooting, and preventive maintenance procedures for all equipment supplied.

1.3 RULES AND REGULATIONS

A. Work and materials shall be in accordance with the National Electric Code (Specifically Article
680), Uniform Plumbing Code as published by the Western Plumbing Officials Association,
NEMA, and other applicable state or local laws or regulations. Nothing in these drawings or
specifications is to be construed to permit work that would not conform to these codes.

B. When the construction documents call for materials or construction of a better quality or larger
size than required by the above-mentioned rules and regulations, provide the quality and size
required by the construction documents.

1.4 TESTING AND START-UP

A. Start-Up: When all piping and electrical connections have been completed, the water feature
control system manufacturer's representative shall start, operate, and adjust the mechanical
system to satisfy performance demands as specified. The representative shall conduct 8
hours of training of the operating personnel to familiarize them with the mechanical system
operation, maintenance, and adjustment.

B. Notify the Owner's Representative three days in advance of Start-Up testing.

C. Hydrostatic Pressure Test: Subject all buried piping, valves, and joints to a hydrostatic
pressure equal to twice the shut-off pressure of the pump used.

D. Performance Testing: The complete pump assembly shall operate without vibration throughout
the range of operating conditions. The pump shall be given a running test of normal start and
stop conditions under load.

E. All defects shall be corrected and adjustments made at the expense of the contractor. Tests
shall be repeated until satisfactory results are obtained.

F. Repair or replace faulty equipment or leaks in piping and fitting assemblies. Cement or
caulking to seal leaks is prohibited.

G. Provide a 2 hour training session for maintenance personnel at startup.

1.5 TIME AND COMPLETION

A. Schedule and coordinate the delivery of materials and equipment to achieve the earliest
completion of work within the bounds of construction and progress schedules.
1.6 COORDINATION WITH OTHER SPECIALTIES

A. Obtain copies of the landscape, site utility drawings, electrical drawings, and architectural drawings before commencing with any construction.

B. Coordinate construction with other work to expedite construction schedule and to minimize conflicts between trades.

1.7 GUARANTEE/WARRANTY AND REPLACEMENT

The purpose of this guarantee/warranty is to insure that the Owner receives materials of prime quality, installed and maintained in a thorough and careful manner.

A. For a period of one year from commencement of the formal maintenance period, guarantee/warranty water feature mechanical system equipment and workmanship against defects. Fill and repair depressions. Restore landscape or structural features damaged by the settlement of trenches or excavations. Repair damage to the premises caused by a defective item. Make repairs within seven days of notification from the Owner’s Representative.

B. Contract documents govern replacements identically as with new work. Make replacements at no additional cost to the contract price.

C. Guarantee/warranty applies to originally installed materials and equipment and replacements made during the guarantee/warranty period.

PART 2 – MATERIALS

2.1 QUALITY

Materials used in the system shall be new and without flaws or defects of any type, and shall be the best of their class and kind.

2.2 SUBSTITUTIONS

A. Certain manufacturers and part numbers may be referenced in the construction documents. No substitutions for specified materials will be accepted in the base bid, except where specifically noted in contract documents.

B. Alternative bid proposals which propose a complete prefabricated packaged mechanical and electrical components may be submitted for consideration by the Owner. Alternative proposals must be fully supported by manufacturer's catalog data, tables and/or calculations showing compatibility/comparability with the specified material, and may or may not be approved following the selection of the contractor.

1. Acceptable manufacturers for water feature components:
   c. Engineer approved equal.

C. Provide complete submittals of all manufacturers’ data showing compliance with the Contract Documents.
D. In making a request for a substitution, the Contractor represents that he:
   1. Has investigated the proposed substitution and found that it is the same or better quality, level, capacity, function, or appearance than the specified product, and can demonstrate that to the Engineer.
   2. Will coordinate the installation and make all modifications that may be required for complete installation and operation of the system, without additional cost to the owner.
   3. The Engineer and the Owner will determine acceptability of the proposed substitution and will notify Contractor of acceptance or rejection.

E. Pipe sizes referenced in the construction documents are minimum sizes, and may be increased at the option of the Contractor.

2.3 PIPE, VALVES, AND FITTINGS

A. Supply and Return Pipe and Fittings:
   1. Furnish rigid, unplasticized polyvinyl chloride (PVC) 1120, 1220 National Sanitation Foundation (NSF) approved pipe, extruded from material meeting the requirements of Cell Classification 12454-A or 12454-B, ASTM Standard D1784 for buried pipe installed in landscaped areas outside of the building footprint unless otherwise noted.
      a. Use Schedule 40 PVC conforming to the dimensions and tolerances established by ASTM Standard D2241.
      b. Use solvent weld pipe for all pipe. Use Schedule 40, Type 1, PVC solvent weld fittings conforming to ASTM Standards D2466 and D1784. Use primer approved by the pipe manufacturer. Solvent cement to conform to ASTM Standard D2564.
   2. Joint sealant: Use only Teflon-type tape pipe joint sealant on plastic threads. Use non-hardening, nontoxic pipe joint sealant formulated for use on water-carrying pipes on metal threaded connections.

B. Specialized Pipe and Fittings:
   1. Copper pipe: Type “K” rigid (or soft where specified) conforming to ASTM Standard B88. Fittings shall be wrought copper or cast bronze, soldered or threaded per the installation details. Solder shall be 95% tin and 5% antimony.
   2. Assemblies calling for threaded pipe connections shall utilize PVC Schedule 80 nipples and PVC Schedule 40 threaded fittings.
   3. Use PVC Schedule 80 male adapters for PVC pipe, use copper male adapters or soldered connections for copper pipe.
   4. Use Link Seal or equal for all pipe penetrations through an existing concrete slab or wall.

C. Isolation/Regulating Valves:
   1. For Valve sizes 3-inch and smaller on PVC pipe use full-port ball valve, constructed with bronze body, chrome ball, and TFE seats or Engineer approved equal.

2.1 WATER FEATURE FITTINGS

A. Waterstop Flanges:
   1. Furnish waterstop assembly with NPT male threaded connection and bonding lug for grounding and bonding connection.
   2. Furnish fittings for all pipe penetrations into water feature and sump basin.

B. Water Level Sensor Assembly:
   1. Furnish water level control sensor for water fill on/off, and low water cut-off as shown in the details.
2. Furnish unit constructed with brass, bronze, PVC, and stainless steel components.

3. Furnish water level control panel and solenoid operated water fill valve.

4. Acceptable Model and Manufacturer:
   a. Furnish water level control panel, wire, and all required fittings and hardware as manufactured by Roman Fountains, Inc.

C. Overflow Assembly:
   1. Provide brushed copper standpipe overflow drain as shown in details.

2.2 SUBMERSIBLE PUMP

A. Furnish a 1/3 HP submersible circulation pump constructed with an integral suction screen and a single speed motor. The pump shall be selected to provide a minimum design flow of 35 gallons per minute at 25 feet of head.

B. Furnish a pump with a continuously rising performance curve.

C. Furnish a union and isolation valve downstream of the pump and within the sump basin for removal of pump for winterization, cleaning, and maintenance.

D. Furnish NEMA 4X control enclosure with single phase, 120 volt starter, Hand-Off-Automatic control switch, and 24 VAC control relay for operation of pump.

2.3 CONTROL SYSTEM WIRING

A. Power Wire:
   1. Electric wire from the power source to the water feature controller shall be solid or stranded copper, Type TC Round Jacketed multi conductor cable with ground, direct burial, UL listed. Power wires shall be black, white, and green in color. Size as presented in the drawings. If the control system changes, the Contractor is responsible for verifying that the power wire sizes shown on the drawings are compatible and adequate for the control system being used.
   2. Splices: Use 3M 82-A Series with Split Bolts or Butt Connectors.
   4. Warning tape: Inert plastic film highly resistant to alkalis, acids, or other destructive chemical components likely to be encountered in soils. Three inches wide, colored yellow, and imprinted with "CAUTION: BURIED ELECTRIC LINE BELOW."

B. Control Wire:
   1. Use American Wire Gauge (AWG) No. 14 solid copper, Type UF or PE cable, UL listed for direct underground burial from the satellite control unit to each valve-in-head sprinkler. Common wire: Use American Wire Gauge (AWG) No. 12 solid copper, Type UF or PE cable, UL listed for direct underground burial from the satellite control unit to each valve-in-head sprinkler.
   2. Color: Use white for common ground wire. Use easily distinguished colors for other control wires. Spare control wires shall be of a color different from that of the active control wire. Wire color shall be continuous over its entire length.
   4. Warning tape: Inert plastic film highly resistant to alkalis, acids, or other destructive chemical components likely to be encountered in soils. Three inches wide, colored yellow, and imprinted with "CAUTION: BURIED ELECTRIC LINE BELOW."
PART 3 – EXECUTION

3.1 INSPECTIONS AND REVIEWS

A. Site Inspections:
   1. Verify site conditions and note irregularities affecting work of this section. Report irregularities to the Owner's Representative prior to beginning work.
   2. Beginning work of this section implies acceptance of existing conditions.

B. Utility Locates ("Call Before You Dig"):
   1. Arrange for and coordinate with local authorities the location of all underground utilities.
   2. Repair any underground utilities damaged during construction. Make repairs at no additional cost to the contract price.

C. System Operation and Performance Review: Notify the Owner's Representative two days in advance of review.
   1. Operate pump systems, filter system, water display, and all other components of the system. Verify proper operation of all equipment.
   2. Modifications will be identified by the Owner's Representative.

3.2 EXCAVATION, TRENCHING, AND BACKFILLING

A. Excavate to permit the pipes to be laid at the intended elevations and to permit work space for installing connections and fittings.

B. Minimum cover (distance from top of pipe or control wire to finish grade) is 24-inches over supply and return pipe and over electrical conduit.

C. Backfill only after lines have been reviewed and tested.

D. Excavated material is generally satisfactory for backfill. Backfill shall be free from rubbish, vegetable matter, and stones larger than 2-inches in maximum dimension. Remove material not suitable for backfill. Backfill placed next to pipe shall be free of sharp objects which may damage the pipe.

E. Backfill unsleeved pipe in either of the following manners:
   1. Backfill and puddle the lower half of the trench. Allow to dry 24 hours. Backfill the remainder of the trench in 6-inch layers. Compact to density of surrounding soil.
   2. Backfill the trench by depositing the backfill material equally on both sides of the pipe in 6-inch layers and compacting to the density of surrounding soil.

F. Dress backfilled areas to original grade. Dispose of excess backfill off site.

G. Where utilities conflict with other utility trenching and pipe work, contact the Owner's Representative for trench depth adjustments.

H. Bore for sleeves under obstructions that cannot be removed. Employ equipment and methods designed for horizontal boring.
3.3 ASSEMBLING PIPE AND FITTINGS

A. General:
   2. Keep ends of assembled pipe capped. Remove caps only when necessary to continue assembly.
   3. Trenches may be curved to change direction or avoid obstructions within the limits of the curvature of the pipe. No deflection should occur at a pipe joint.

B. PVC Pipe and Fittings:
   1. Use only strap-type friction wrenches for threaded plastic pipe.
   2. PVC Solvent Weld Pipe:
      a. Use primer and solvent cement. Join pipe in a manner recommended by the manufacturer and in accordance with accepted industry practices.
      b. Cure for 30 minutes before handling and 24 hours before allowing water in pipe.
      c. Snake pipe from side to side within the trench.
   3. Fittings: The use of cross type fittings is not permitted.

C. Specialized Pipe and Fittings
   1. Copper Pipe:
      a. Buff surfaces to be joined to a bright finish. Coat with solder flux.
      b. Solder so that a continuous bead shows around the joint circumference.
   2. Insert a dielectric union wherever a copper-based metal (copper, brass, bronze) and an iron-based metal (iron, galvanized steel, stainless steel) are joined.
   3. PVC Threaded Connections:
      a. Use only factory-formed threads. Field-cut threads are not permitted.
      b. Use only Teflon-type tape.
      c. When connection is plastic-to-metal, the plastic component shall have male threads and the metal component shall have female threads.
   4. Make metal-to-metal, threaded connections with Teflon-type tape or pipe joint compound applied to the male threads only.

3.4 INSTALLATION OF WATER FEATURE FITTINGS

A. Grounding: Insure that all pool fittings and components are properly grounded per NEC article 680.

B. Waterstop Flanges:
   1. Install at all pipe penetrations into pool structures
   2. Install according to manufacturer's details and instructions.

C. Water Level Sensor Assembly:
   1. Install as shown in the details.
   2. Install unit to maintain a water level in the sump basin as shown in the details.
   3. Run control wire and conduit from water level control panel in vault lid to water level sensor in basin.
   4. Install according to manufacturer's details and instructions.
D. Make-up Water Solenoid Valve
   1. Install as shown in the details.
   2. Run control wire and conduit from make-up water solenoid valve to water level control panel in the 022B room in the L0 level of the Bridge Replacement Building.
   3. Ensure backflow preventer is installed upstream of ¾-inch make-up water supply point-of-connection.
   4. Install according to manufacturer's details and instructions.

E. Overflow Assembly:
   1. Install where indicated on the drawings.
   2. Install according to manufacturer’s details and instructions.

3.5 INSTALLATION OF SUBMERSIBLE PUMP

A. Install pump where indicated on drawings. Locate system to ensure proper maintenance access.

B. Anchor submersible pump to the sump basin concrete floor using appropriate anchor bolts and stainless steel hardware.

C. Make piping connections to supply pipe as shown.
   1. Flush all piping prior to operating system.

D. Install per the manufacturer’s recommendations.

E. Operate system and make any necessary adjustments prior to Owner’s review.

3.6 INSTALLATION OF CONTROL SYSTEM WIRING

A. Power Wire:
   1. Route power wire as directed on plans. Install with a minimum number of field splices. If a power wire must be spliced, make splice with recommended connector, installed per wire manufacturer's recommendations. Locate all splices in a separate 12-inch valve box. Coil 4 feet of wire in valve box.
   2. All power wire shall be laid in trenches. The use of a vibratory plow is not permitted.
   3. Green wire shall be used as the common ground wire from power source.
   4. Carefully backfill around power wire to avoid damage to wire insulation or wire connectors.
   5. Install the conduit with a continuous run of warning tape, placed in the backfill, 6-inches above the conduit.

B. Control Wire:
   1. Bundle control wires where two or more are in the same trench. Bundle with pipe wrapping tape spaced at 10-foot intervals.
   2. Control wiring may be chiseled into the soil utilizing a vibratory plow device specifically manufactured for pipe pulling and wire installation. Appropriate chisel must be used so that wire is fed into a chute on the chisel, and wire is not subject to pulling tension. Minimum burial depth must equal minimum cover previously listed.
   3. Provide a 24-inch excess length of wire in an 8-inch diameter loop at each 90 degree change of direction, at both ends of sleeves, and at 100-foot intervals along continuous runs of wiring. Do not tie wiring loop.
4. If a control wire must be spliced, make splice with wire connectors and waterproof sealant, installed per the manufacturer's instructions. Locate splice in a separate 12-inch standard valve box.

5. Protect wire with a continuous run of warning tape placed in the backfill six inches above the wiring.

3.7 INSTALLATION OF OTHER COMPONENTS

A. Tools: Prior to the Pre-Maintenance Review, supply to the Owner operating keys, servicing tools, test equipment, and any other items indicated on the drawings.

B. Other Materials: Install other materials or equipment shown on the drawings or installation details to be part of the mechanical system, even though such items may not have been referenced in these specifications.

3.8 PROJECT RECORD (AS-BUILT) DRAWINGS

A. The Contractor is responsible for documenting changes to the design. Maintain on-site and separate from documents used for construction, one complete set of contract documents as Project Documents. Keep documents current. Do not permanently cover work until as-built information is recorded.

B. Record pipe and wiring network alterations. Record work that is installed differently than shown on the construction drawings. Record accurate reference dimensions, measured from at least two permanent reference points.

C. Prior to construction completion, obtain from the Owner's Representative a reproducible mylar copy of the drawings. Mylars or CAD data files compatible with AutoCAD software, can be purchased from the Engineer. Cost of mylar reproducible drawings or AutoCAD data files on a compact disc is $50 per project set. Using technical drafting pen or CAD, duplicate information contained on the project drawings maintained on site. Label each sheet "Record Drawing".

D. Turn over the "Record Drawings" to the Owner's Representative. Completion of the Record Drawings will be a prerequisite for the Review at the completion of the water feature mechanical system installation.

3.9 MAINTENANCE

A. Upon completion of Final Review, maintain water feature mechanical and control systems for a duration of 30 calendar days. Make periodic examinations and adjustments to the mechanical system components so as to achieve the most desirable operating conditions.

3.10 CLEANUP

A. Upon completion of work, remove from the site all machinery, tools, excess materials, and rubbish.

B. Remove all debris and foreign material from the construction area prior to operating the system.

END OF SECTION 22 52 00
SECTION 23 05 13 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.3 COORDINATION
   A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
      1. Motor controllers.
      2. Torque, speed, and horsepower requirements of the load.
      3. Ratings and characteristics of supply circuit and required control sequence.
      4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS
   A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.

   B. Comply with NEMA MG 1 unless otherwise indicated.

2.2 MOTOR CHARACTERISTICS
   A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.

   B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS
   A. Description: NEMA MG 1, Design B, medium induction motor.
B. Efficiency: Energy efficient, as defined in NEMA MG 1.

C. Service Factor: 1.15.

D. Multispeed Motors: Variable torque.
   1. For motors with 2:1 speed ratio, consequent pole, single winding.
   2. For motors with other than 2:1 speed ratio, separate winding for each speed.

E. Multispeed Motors: Separate winding for each speed.

F. Rotor: Random-wound, squirrel cage.

G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

H. Temperature Rise: Match insulation rating.

I. Insulation: Class F.

J. Code Letter Designation:
   1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
   2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
   2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
   3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
   4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
   5. Shaft Grounding: Mercotac electrical slip rings or Aegis grounding rings to be installed by motor or equipment manufacturer or installed in the field by contractor.

2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
   1. Permanent-split capacitor.
   2. Split phase.
   3. Capacitor start, inductor run.
   4. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 23 05 13
SECTION 23 05 14 - VARIABLE-FREQUENCY MOTOR CONTROLLERS FOR HVAC EQUIPMENT [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary
   Conditions and Division 01 Specification Sections, apply to this Section.

1.2 COMPLIANCE WITH SPECIFICATIONS
A. Complete compliance with all requirements of this specification is required. If any supplier takes
   exception to any of the requirements of this specification, the deviations from the specification
   requirements shall be clearly explained on the submittal documents.

1.3 REFERENCES
A. Institute of Electrical and Electronic Engineers:
   1. IEEE C62.41 - Recommended Practice on Surge Voltages in Low-Voltage AC Power
      Circuits.

B. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   2. NEMA FU1 - Low Voltage Cartridge Fuses.
   3. NEMA ICS 7 - Industrial Control and Systems: Adjustable Speed Drives.
   4. NEMA ICS 7.1 – Safety Standards for Construction and Guide for Selection, Installation,
      and Operation of Adjustable Speed Drive Systems.

1.4 SUBMITTALS
A. Submit product data for Variable Frequency Drive (VFD) with bid price. Include manufacturer,
   dimensions, ratings, listings, elementary power and control wiring diagrams and data on
   features and components. Any exceptions to the specification shall be clearly noted in the
   submittal.

B. Submit startup test report.

1.5 WARRANTY
A. The VFD shall be warranted by the manufacturer for a period of 30 months from date of
   shipment. The warranty shall include parts, labor, travel costs, and living expenses incurred by
   the manufacturer to provide factory authorized service.

1.6 QUALITY ASSURANCE
A. The VFD and options shall comply with the applicable requirements of the latest standards of
   ANSI, IEEE, and the National Electrical Code.
B. The VFD and options shall be tested to ANSI/UL Standard 508 and listed by a nationally recognized testing agency such as UL or ETL.

C. To ensure quality and minimize infantile failures at the jobsite, the VFD shall be burned in for 24-hours by the manufacturer.

D. All features shall be functionally tested at the factory for proper operation.

1.7 COORDINATION

A. All VFDs provided for this project shall be from the same manufacturer. Coordinate VFD manufacturer selection among all vendors supplying equipment with VFDs.

1.8 MAINTENANCE MATERIALS

A. Furnish two of each filter.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Square D
   2. Allen Bradley
   3. ABB
   4. General Electric
   5. Cutler-Hammer
   6. Or approved equal.

B. Furnish complete variable speed drive(s) as specified herein. All standard and optional features requested shall be included within the VFD enclosure unless otherwise specified. Drives shall be for variable torque load, unless otherwise noted.

C. The variable speed drives shall convert three-phase, 60 HZ utility power to adjustable voltage and frequency, three-phase, AC power for step less motor speed control from 10% to 100% of the motor's 60 Hz speed. Input voltage shall be as specified in the schedule.

D. The VFD power input stage shall convert three-phase AC line power to a fixed DC bus voltage. This will be accomplished with a solid state three-phase full-wave diode rectifier with metal oxide varistor (MOV) three-phase protection. Displacement power factor shall not be less than 0.95 throughout the speed range. Input line inductors (3%) shall be included on the line side of the power input state.

E. The VFD output power shall vary frequency to the motor from 6 to 60 Hz with resultant motor speed varying at the motor nameplate rated speed, with output voltage variation from zero to motor rated voltage for optimum volts per hertz (V/Hz) ratio for fan and pump loads. Output current shall be rated 110% of motor full load amps (FLA) for 1 minute based upon VFD's variable torque FLA rating. The output must be a voltage source type generating a sine coded PWM waveform utilizing an asynchronous carrier frequency (output transistor switching
frequency is to be independent of drive output frequency). This carrier frequency shall be adjustable to minimize harmonically induced noise or vibration.

2.2 FEATURES

A. The VFD shall include the following features:
   1. The VFD shall be housed in a NEMA 1 enclosure.
   2. The following display/control parameters shall be located on the front of the enclosure:
      a. Hand/Off/Auto selector to start and stop the motor. In the auto position, the drive shall start/stop from a remote contact closure. In the auto position, motor speed shall be determined by the follower signal. In the manual position, motor speed shall be determined by manual adjustment.
      b. Power on indication that the VFD is being supplied by the power line.
      c. Fault indication that the VFD has tripped on a fault condition.
      d. Display shall indicate load parameters such as load percent, frequency or running load amps.
   3. A set of form C, dry contacts to indicate when the VFD is in the run mode.
   4. A set of form C, dry contacts to indicate when the VFD is in the fault mode.
   5. Terminations for safety interlocks such as freeze and smoke shut-down.
   6. For a fault condition other than a ground fault, short circuit or internal fault, an auto restart function shall provide up to 6 programmable restart attempts. The time delay before restart attempts shall be a minimum of 30 seconds. This function permits automatic restarting after the drive controller detects a fault, provided that the other operating functions are correct, a run command is present, and the fault has disappeared. This shall be a function that is field selectable.
   7. The VFD shall include a door interlocked, padlockable, instantaneous-only circuit breaker.
   8. The following bypass features shall be included for fans or pumps that do not have a standby system or standby equipment:
      a. Manual bypass shall provide all the circuitry necessary to transfer the motor from the VFD to the power line, or from the line to the controller while the motor is at zero speed.
      b. The AC Drive shall include mechanically and electrically interlocked isolation and bypass contactors complete with thermal overload relay, VFD/OFF/BYPASS switch and TEST/NORMAL selector switch.
      c. Motor overload protection shall be provided in both the controller mode and the bypass mode.
      d. The operator shall have full control of the bypass starter by operation of the VFD/OFF/BYPASS selector switch.
      e. In the AUTOMATIC mode of operation the isolation and bypass contactors shall be sequenced by the 110 volt rated auto start contact provided by user.
      f. A TEST/NORMAL selector switch shall provide test operation of the power converter while operating the motor in bypass.
      g. A pilot light shall indicate whether motor is operating in drive or bypass mode.
   9. Speed Reference Input: Shall accept both a manual speed signal and a 0-10 VDC speed reference analog input signal from the Building Automation System (BAS).
   10. Feedback Signal: Provide 0-5 VDC or 0-20 mA analog output signal to indicate actual operating speed of VFD. Output signal shall be fed into the BAS.

2.3 PROTECTIVE FEATURES

A. The VFD shall include the following protective features:
   1. Protection against input transient voltage spikes.
2. Separate overload protection for each motor controlled.
3. Protection against input power under voltage, over voltage, and phase loss.
4. Protection against output current overload and over current.
5. Protection against over temperature within the VFD enclosure.
6. Protection against over voltage on the DC bus.
7. DC bus discharge circuit for protection of service personnel.
8. Insensitive to incoming power phase sequence.

2.4 ADJUSTMENTS:

A. The VFD shall include the following adjustments inside the enclosure:
   1. Maximum speed, adjustable 50-100% base speed.
   2. Minimum speed, adjustable 0-50% base speed.
   3. Acceleration time, adjustable 3 to 1800 seconds.
   4. Deceleration time, adjustable 3 to 1800 seconds with override circuit to prevent nuisance trips if decel time is set too short.
   5. Current limit, adjustable 0-100%.

2.5 SERVICE CONDITIONS

A. The VFD shall be designed to operate within the following service conditions:
   1. Ambient temperature, 0-40°C (32 to 104°F).
   2. 0 to 95% relative humidity, non-condensing.
   3. Elevation to 1,000 meters (3,300 feet) without derating.
   4. AC line voltage variation, -10% to +10% of nominal.

PART 3 - EXECUTION

3.1 START UP SERVICE:

A. The manufacturer shall provide start up service by a factory trained service technician. The service technician shall verify correct installation, start up the drive, and check for proper operation.

3.2 TESTING

A. After check out and start up of drive(s) by manufacturer, the University will monitor the voltage and current percent Total Harmonic Distortion (THD) at the input of each drive installed. The Electrical Contractor shall provide manpower to assist the University with the operation of the drives during testing.

3.3 TRAINING

A. The manufacturer shall have regularly scheduled maintenance and training schools on the equipment supplied.

END OF SECTION 23 05 14
SECTION 23 05 16 - EXPANSION LOOPS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Pipe loops and swing connections.
   2. Alignment guides and anchors.

1.3 PERFORMANCE REQUIREMENTS
A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

PART 2 - PRODUCTS

2.1 ALIGNMENT GUIDES AND ANCHORS
A. Alignment Guides:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Flex-Hose Co., Inc.
      b. Metraflex, Inc.
   2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.

B. Anchor Materials:
   1. Steel Shapes and Plates: ASTM A 36/A 36M.
   2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
   4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.

PART 3 - EXECUTION

3.1 PIPE LOOP AND SWING CONNECTION INSTALLATION

A. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.

B. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.

C. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

3.2 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.

B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.

C. Attach guides to pipe and secure guides to building structure.

D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

E. Anchor Attachments:

2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.

F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.

1. Anchor Attachment to Steel Structural Members: Attach by welding.

2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.

G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION 23 05 16
SECTION 23 05 17 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Sleeves.
   2. Stack-sleeve fittings.
   3. Sleeve-seal systems.

PART 2 - PRODUCTS

2.1 SLEEVES
A. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends. (For exterior walls.)
B. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint. (For interior use only.)
C. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
   1. Underdeck Clamp: Clamping ring with setscrews.
2.3 SLEEVE-SEAL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Advance Products & Systems, Inc.
2. Metraflex Company (The).
3. Pipeline Seal and Insulator, Inc.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Plastic.
3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

2.4 GROUT

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.

1. Sleeves are not required for core-drilled holes.

C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.

1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
2. Cut sleeves to length for mounting flush with both surfaces.
   a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
D. Install sleeves for pipes passing through interior partitions.
   1. Cut sleeves to length for mounting flush with both surfaces.
   2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07 Section "Joint Sealants."

E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.2 STACK-SLEEVE-FITTING INSTALLATION

A. Install stack-sleeve fittings in new slabs as slabs are constructed.
   1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
   2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07 Section "Sheet Metal Flashing and Trim."
   3. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
   4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   5. Using grout, seal the space around outside of stack-sleeve fittings.

B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07 Section "Penetration Firestopping."

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

END OF SECTION 23 05 17
SECTION 23 0518 - ESCUTCHEONS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Escutcheons.
   2. Floor plates.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

A. One-Piece, Cast-Brass Type: With polished, chrome-plated and rough-brass finish and setscrew fastener.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.

C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

D. Split-Casting Brass Type: With polished, chrome-plated and rough-brass finish and with concealed hinge and setscrew.

E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed and exposed-rivet hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. Escutcheons for New Piping:
   a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
   b. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
   c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
   d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
   e. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass or split-casting brass type with rough-brass finish.
   f. Bare Piping in Equipment Rooms: One-piece, cast-brass or split-casting brass type with rough-brass finish.

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. New Piping: One-piece, floor-plate type.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 23 05 18
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Bimetallic-actuated thermometers.
   2. Liquid-in-glass thermometers.
   3. Dial-type pressure gages.
   4. Gage attachments.
   5. Test plugs.
   6. Venturi flowmeters.
B. Related Sections:
   1. Division 23 Section "Steam and Condensate Heating Piping" for steam and condensate meters.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.
B. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS
A. Product Certificates: For each type of meter and gage, from manufacturer.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 BIMETALLIC-ACTUATED THERMOMETERS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Ashcroft Inc.
2. Ernst Flow Industries.
3. Marsh Bellofram.
5. Trerice, H. O. Co.
6. Weiss Instruments, Inc.

C. Case: Liquid-filled type(s); stainless steel with 5-inch nominal diameter.

D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.

E. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.

F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.

G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.

H. Window: Plain glass.

I. Ring: Stainless steel.

J. Element: Bimetal coil.

K. Pointer: Dark-colored metal.

L. Accuracy: Plus or minus 1 percent of scale range.

2.2 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Miljoco Corporation.
   b. Trerice, H. O. Co.
   c. Weiss Instruments, Inc.

3. Case: Cast aluminum; 7-inch nominal size unless otherwise indicated.

4. Case Form: Adjustable angle unless otherwise indicated.

5. Tube: Glass with magnifying lens and red organic liquid.

6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.

7. Window: Glass.

8. Stem: Aluminum and of length to suit installation.
   a. Design for Thermowell Installation: Bare stem.

10. **Accuracy:** Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

### 2.3 DUCT-THERMOMETER MOUNTING BRACKETS

A. **Description:** Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.

### 2.4 PRESSURE GAGES

A. **Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:**

1. **Basis-of-Design** is “Quality” series gage as manufactured by Marsh Instrument Company. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   
   a. AMETEK, Inc.; U.S. Gauge.
   b. Trerice, H. O. Co.
   c. Weiss Instruments, Inc.

2. **Standard:** ASME B40.100.
3. **Case:** Liquid-filled type(s); Stainless steel; 4-1/2-inch nominal diameter, except for in mechanical spaces which shall utilize 6-inch nominal diameter on steam and condensate systems.
4. **Pressure-Element Assembly:** Bourdon tube unless otherwise indicated.
5. **Pressure Connection:** Brass, with NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. **Movement:** Mechanical, with link to pressure element and connection to pointer.
7. **Dial:** Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. **Pointer:** Dark-colored metal.
9. **Window:** Glass.
10. **Ring:** Stainless steel.
11. **Accuracy:** Grade A, plus or minus 1 percent of middle half of scale range.

### 2.5 GAGE ATTACHMENTS

A. **Snubbers:** ASME B40.100, brass; with NPS 1/2, ASME B1.20.1 pipe threads and piston-type surge-dampening device. Include extension for use on insulated piping.

B. **Siphons:** Loop-shaped section of steel pipe with NPS 1/2 pipe threads.

C. **Valves:** Brass or stainless-steel needle, with NPS 1/2, ASME B1.20.1 pipe threads.

### 2.6 TEST PLUGS

A. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Miljoco Corporation.
2. Trerice, H. O. Co.
3. Weiss Instruments, Inc.
B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.

F. Core Inserts: EPDM self-sealing rubber.

2.7 FLOWMETERS

A. Venturi Flowmeters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. ABB; Instrumentation and Analytical.
   b. Gerand Engineering Co.
   c. Hyspan Precision Products, Inc.
   d. Preso Meters; a division of Racine Federated Inc.
   e. S. A. Armstrong Limited; Armstrong Pumps Inc.
   f. Victaulic Company.

2. Description: Flowmeter with calibrated flow-measuring element, hoses or tubing, fittings, valves, indicator, and conversion chart.

3. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.

   a. Design: Differential-pressure-type measurement for water.
   b. Construction: Bronze, brass, or factory-primed steel, with brass fittings and attached tag with flow conversion data.
   d. Minimum Temperature Rating: 250 deg F.
   e. End Connections for NPS 2 and Smaller: Threaded.
   f. End Connections for NPS 2-1/2 and Larger: Flanged or welded.
   g. Flow Range: Flow-measuring element and flowmeter shall cover operating range of equipment or system served.

5. Permanent Indicators: Meter suitable for wall or bracket mounting, calibrated for connected flowmeter element, and having 6-inch-diameter, or equivalent, dial with fittings and copper tubing for connecting to flowmeter element.
   a. Scale: Gallons per minute.
   b. Accuracy: Plus or minus 1 percent between 20 and 80 percent of scale range.

6. Portable Indicators: Hand-held, differential-pressure type, calibrated for connected flowmeter element and having two 12-foot hoses, with carrying case.
   a. Scale: Gallons per minute.
   b. Accuracy: Plus or minus 2 percent between 20 and 80 percent of scale range.
7. Display: Shows rate of flow, with register to indicate total volume in gallons.
9. Operating Instructions: Include complete instructions with each flowmeter.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.
B. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.
C. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
D. Install valve and snubber in piping for each pressure gage for fluids (except steam).
E. Install valve and syphon fitting in piping for each pressure gage for steam.
F. Install test plugs in piping tees.
G. Install flow indicators in piping systems in accessible positions for easy viewing.
H. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.
I. Install flowmeter elements in accessible positions in piping systems.
J. Install permanent indicators on walls or brackets in accessible and readable positions.
K. Install connection fittings in accessible locations for attachment to portable indicators.
L. Install thermometers in the following locations:
   1. Inlet and outlet of each hydronic coil in air-handling units.
   2. Inlets and Outlets of each hydronic heat exchanger.
   3. Outside-, return-, supply-, and mixed-air ducts.
   5. Steam service entrance to the building.
   6. Condensate service exit from the building.
M. Install pressure gages in the following locations:
   1. Suction and discharge of each pump.
   2. Steam service entrance to the building.
   3. Condensate service exit from the building.
   4. Expansion Tank connection to water system.

3.2 CONNECTIONS

A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.
B. Connect flowmeter-system elements to meters.
C. Connect flowmeter transmitters to meters.

3.3 ADJUSTING
A. After installation, calibrate meters according to manufacturer's written instructions.
B. Adjust faces of meters and gages to proper angle for best visibility.

3.4 THERMOMETER SCHEDULE
A. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems, each steam-to-hot water heat exchanger, utility service entrance shall be the following:
   1. Industrial-style, liquid-in-glass type.
B. Thermometers at outside-, return-, supply-, and mixed-air ducts shall be the following:
   1. Liquid-filled, bimetallic-actuated type.
C. Thermometer stems shall be of length to match thermowell insertion length.

3.5 THERMOMETER SCALE-RANGE SCHEDULE
A. Scale Range for Chilled-Water Piping: 0 to 100 deg F.
B. Scale Range for Heating, Hot-Water Piping: 30 to 240 deg F.
C. Scale Range for Steam and Steam-Condensate Piping: 50 to 400 deg F.
D. Scale Range for Air Ducts: 30 to 240 deg F.

3.6 PRESSURE-GAGE SCHEDULE
A. Pressure gages at suction and discharge of each pump shall be the following:
   1. Liquid-filled, direct-mounted, metal case.
   2. Test plug with EPDM self-sealing rubber inserts.

3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE
A. Scale Range for Chilled-Water Piping: 0 to 100 psi.
B. Scale Range for Heating, Hot-Water Piping: 0 to 100 psi.
C. Scale Range for Steam Piping: 0 to 30 psi.

3.8 FLOWMETER SCHEDULE
A. Flowmeters for Chilled-Water Piping: Venturi type.
B. Flowmeters for Heating, Hot-Water Piping: Venturi type.

END OF SECTION 23 05 19
SECTION 23 05 23 - GENERAL-DUTY VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Brass ball valves.
   2. Bronze ball valves.
   3. Iron ball valves.
   5. Bronze swing check valves.
   8. Iron, plate-type check valves.
  10. Iron gate valves.
  13. Chainwheels.

B. Related Sections:
   1. Division 23 HVAC piping Sections for specialty valves applicable to those Sections only.
   2. Division 23 Section "Identification for HVAC Piping and Equipment" for valve tags and schedules.

1.3 DEFINITIONS

A. CWP: Cold working pressure.
B. EPDM: Ethylene propylene copolymer rubber.
C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
D. NRS: Nonrising stem.
E. OS&Y: Outside screw and yoke.
F. RS: Rising stem.
G. SWP: Steam working pressure.
1.4 ACTION SUBMITTALS
   A. Product Data: For each type of valve indicated.

1.5 QUALITY ASSURANCE
   A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
   B. ASME Compliance:
      1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
      2. ASME B31.1 for power piping valves.
      3. ASME B31.9 for building services piping valves.

1.6 DELIVERY, STORAGE, AND HANDLING
   A. Prepare valves for shipping as follows:
      1. Protect internal parts against rust and corrosion.
      2. Protect threads, flange faces, grooves, and weld ends.
      3. Set angle, gate, and globe valves closed to prevent rattling.
      4. Set ball and plug valves open to minimize exposure of functional surfaces.
      5. Set butterfly valves closed or slightly open.
      6. Block check valves in either closed or open position.
   B. Use the following precautions during storage:
      1. Maintain valve end protection.
      2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
   C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.1 MANUFACTURERS
   A. All valves for this project shall be from one manufacturer. Multiple manufacturers are listed to provide the contractor with the ability to competitively price the project, but is not to allow the contractor to use more than one manufacturer on the project.
   B. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
      1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.
2.2 GENERAL REQUIREMENTS FOR VALVES

A. Refer to HVAC valve schedule articles for applications of valves.

B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

C. Valve Sizes: Same as upstream piping unless otherwise indicated.

D. Valve Actuator Types:
   1. Gear Actuator: For quarter-turn valves NPS 8 and larger.
   2. Handwheel: For valves other than quarter-turn types.
   3. Handlever: For quarter-turn valves NPS 6 and smaller.
   4. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

E. Valves in Insulated Piping: With 2-inch stem extensions and the following features:
   1. Gate Valves: With rising stem.
   2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.

F. Valve-End Connections:
   1. Flanged: With flanges according to ASME B16.1 for iron valves.
   2. Grooved: With grooves according to AWWA C606.
   4. Threaded: With threads according to ASME B1.20.1.

G. Valve Bypass and Drain Connections: MSS SP-45.

2.3 BRONZE BALL VALVES

A. Two-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim:
   1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Crane Co.; Crane Valve Group; Crane Valves.
      b. NIBCO INC.
      c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
   2. Description:
      b. SWP Rating: 150 psig.
      c. CWP Rating: 600 psig.
      d. Body Design: Two piece.
      e. Body Material: Bronze.
      f. Ends: Threaded.
2.4 IRON BALL VALVES

A. Class 125, Iron Ball Valves:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   b. CWP Rating: 200 psig.
   d. Body Material: ASTM A 126, gray iron.
   e. Ends: Flanged.
   f. Seats: PTFE or TFE.
   g. Stem: Stainless steel.
   h. Ball: Stainless steel.
   i. Port: Full.

2.5 HIGH-PERFORMANCE BUTTERFLY VALVES

A. Class 150, Single-Flange, High-Performance Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Flowseal.
   b. NIBCO INC.

2. Description:
   a. Standard: MSS SP-68.
   b. CWP Rating: 285 psig at 100 deg F.
   c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
   d. Body Material: Carbon steel, cast iron, ductile iron, or stainless steel.
   e. Seat: Reinforced PTFE or metal.
   f. Stem: Stainless steel; offset from seat plane.
   g. Disc: Carbon steel.
   h. Service: Bidirectional.
2.6 **BRONZE SWING CHECK VALVES**

A. Class 125, Bronze Swing Check Valves with Bronze Disc:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   
a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

   a. Standard: MSS SP-80, Type 3.
   b. CWP Rating: 200 psig.
   c. Body Design: Horizontal flow.
   e. Ends: Threaded.
   f. Disc: Bronze.

2.7 **IRON SWING CHECK VALVES**

A. Class 125, Iron Swing Check Valves with Metal Seats:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   
a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:

   a. Standard: MSS SP-71, Type I.
   b. CWP Rating: 200 psig.
   c. Body Design: Clear or full waterway.
   d. Body Material: ASTM A 126, gray iron with bolted bonnet.
   e. Ends: Flanged.
   f. Trim: Bronze.
   g. Gasket: Asbestos free.

2.8 **IRON, CENTER-GUIDED CHECK VALVES**

A. Class 125, Iron, Compact-Wafer, Center-Guided Check Valves with Metal Seat:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   b. NPS 2-1/2 to NPS 12, CWP Rating: 200 psig.
   c. NPS 14 to NPS 24, CWP Rating: 150 psig.
   d. Body Material: ASTM A 126, gray iron.
   e. Style: Compact wafer.
   f. Seat: Bronze.

B. Class 125, Iron, Dual-Plate Check Valves with Metal Seat:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Crane Co.; Crane Valve Group; Crane Valves.
      b. NIBCO INC.
      c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
   2. Description:
      b. NPS 2-1/2 to NPS 12, CWP Rating: 200 psig.
      c. NPS 14 to NPS 24, CWP Rating: 150 psig.
      e. Body Material: ASTM A 126, gray iron.
      f. Seat: Bronze.

2.9 BRONZE GATE VALVES

A. Class 125, RS Bronze Gate Valves:
   1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Crane Co.; Crane Valve Group; Crane Valves.
      b. NIBCO INC.
      c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
   2. Description:
      a. Standard: MSS SP-80, Type 2.
      b. CWP Rating: 200 psig.
      d. Ends: Threaded or solder joint.
      e. Stem: Bronze.
      f. Disc: Solid wedge; bronze.
      g. Packing: Asbestos free.
      h. Handwheel: Malleable iron, bronze, or aluminum.
2.10 IRON GATE VALVES

A. Class 125, OS&Y, Iron Gate Valves:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   a. Standard: MSS SP-70, Type I.
   b. CWP Rating: 200 psig.
   c. Body Material: ASTM A 126, gray iron with bolted bonnet.
   d. Ends: Flanged.
   e. Trim: Bronze.
   f. Disc: Solid wedge.
   g. Packing and Gasket: Asbestos free.

2.11 BRONZE GLOBE VALVES

A. Class 125, Bronze Globe Valves with Bronze Disc:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. NIBCO INC.
   c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Description:
   a. Standard: MSS SP-80, Type 1.
   b. CWP Rating: 200 psig.
   d. Ends: Threaded or solder joint.
   e. Stem and Disc: Bronze.
   f. Packing: Asbestos free.
   g. Handwheel: Malleable iron, bronze, or aluminum.

2.12 IRON GLOBE VALVES

A. Class 125, Iron Globe Valves:

1. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install chainwheels on operators for ball butterfly gate and globe valves NPS 4 and larger and more than 72 inches above floor. Extend chains to 60 inches above finished floor.

F. Install check valves for proper direction of flow and as follows:

1. Swing Check Valves: In horizontal position with hinge pin level.
2. Center-Guided and Plate-Type Check Valves: In horizontal or vertical position, between flanges.
3. Lift Check Valves: With stem upright and plumb.
3.3 **ADJUSTING**

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 **GENERAL REQUIREMENTS FOR VALVE APPLICATIONS**

A. If valve applications are not indicated, use the following:

1. Shutoff Service: Ball, butterfly, or gate valves.
4. Pump-Discharge Check Valves:
   a. NPS 2 and Smaller: Bronze swing check valves with bronze disc.
   b. NPS 2-1/2 and Larger: Iron swing check valves with lever and weight or with spring or iron, center-guided, metal-seat check valves.

B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.

C. Select valves, except wafer types, with the following end connections:

1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.5 **CHILLED-WATER VALVE SCHEDULE**

A. Pipe NPS 2 and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Ball Valves: Two piece, full port, brass with stainless-steel trim.
3. Bronze Swing Check Valves: Class 125, bronze disc.
4. Bronze Gate Valves: Class 125, RS, bronze.
5. Bronze Globe Valves: Class 125, bronze disc.

B. Pipe NPS 2-1/2 and Larger:

1. Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
2. Iron Ball Valves, NPS 2-1/2 to NPS 6: Class 150.
3. High-Performance Butterfly Valves: Class 150, single flange.
4. Iron Swing Check Valves: Class 125, metal seats.
5. Iron, Center-Guided Check Valves, NPS 2-1/2 to NPS 24: Class 125, metal seat.
6. Iron, Plate-Type Check Valves: Class 125; dual plate; metal seat.
7. Iron Gate Valves: Class 125, OS&Y

3.6 HEATING-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:
   1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
   2. Ball Valves: Two piece, full port, bronze with stainless-steel trim.
   3. Bronze Swing Check Valves: Class 125, bronze disc.
   4. Bronze Gate Valves: Class 125, RS.
   5. Bronze Globe Valves: Class 125, bronze disc.

B. Pipe NPS 2-1/2 and Larger:
   1. Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
   2. Iron Ball Valves, NPS 2-1/2 to NPS 4: Class 150.
   3. Iron Swing Check Valves: Class 125, metal seats.
   4. Iron, Center-Guided Check Valves, NPS 2-1/2 to NPS 24: Class 125, metal seat.
   5. Iron, Plate-Type Check Valves: Class 125; dual plate; metal seat.
   6. Iron Gate Valves: Class 125, OS&Y.

3.7 LOW-PRESSURE STEAM VALVE SCHEDULE (15 PSIG OR LESS)

A. Pipe NPS 2 and Smaller:
   1. Ball Valves: Two piece, full port, bronze with stainless-steel trim.
   2. Bronze Gate Valves: Class 125, RS.

B. Pipe NPS 2-1/2 and Larger:
   1. Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
   2. Iron Ball Valves, NPS 2-1/2 to NPS 6: Class 150.
   3. High-Performance Butterfly Valves: Class 150, single flange.
   4. Iron Gate Valves: Class 125, OS&Y.
   5. Iron Globe Valves, NPS 2-1/2 to NPS 6: Class 125.

3.8 STEAM-CONDENSATE VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:
   1. Ball Valves: Two piece, full port, bronze with stainless-steel trim.
   2. Bronze Swing Check Valves: Class 125, bronze disc.
   3. Bronze Gate Valves: Class 125, RS.
   4. Bronze Globe Valves: Class 125, bronze disc.

B. Pipe NPS 2-1/2 and Larger:
   1. Iron Valves: May be provided with threaded ends instead of flanged ends.
2. Iron Ball Valves: Class 150.
3. High-Performance Butterfly Valves: Class 150, single flange.
4. Iron Swing Check Valves: Class 125, metal seats.
5. Iron Gate Valves: Class 125, OS&Y.

END OF SECTION 23 05 23
SECTION 23 05 29 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Thermal-hanger shield inserts.
4. Fastener systems.

B. Related Sections:
1. Division 05 Section "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Division 23 Section "Vibration Controls for HVAC Piping and Equipment" for vibration isolation devices.
3. Division 23 Section "Metal Ducts" for duct hangers and supports.

1.3 DEFINITIONS
A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

1.4 PERFORMANCE REQUIREMENTS
A. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.5 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.6 QUALITY ASSURANCE
PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:
   1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
   2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
   3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
   4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.

B. Copper Pipe Hangers:
   1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.

2.2 TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.3 THERMAL-HANGER SHIELD INSERTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Carpenter & Paterson, Inc.
   3. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
   4. Piping Technology & Products, Inc.

B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: ASTM C 552, Type II cellular glass with 100-psig minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
2.4 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.5 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

C. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

D. Fastener System Installation:

1. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

E. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

F. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
G. Install lateral bracing with pipe hangers and supports to prevent swaying.

H. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

I. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

J. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

K. Insulated Piping:
   1. Attach clamps and spacers to piping.
      a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
      b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
      c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
   2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
      a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
   3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
      a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
   4. Shield Dimensions for Pipe: Not less than the following:
      a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
      b. NPS 4: 12 inches long and 0.06 inch thick.
      c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
      d. NPS 8: 24 inches long and 0.075 inch thick.
   5. Pipes NPS 8: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
   6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.2 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.3 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.4 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09 painting Sections.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.5 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.

C. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

D. Use carbon-steel pipe hangers and supports and attachments for general service applications.

E. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.

F. Use padded hangers for piping that is subject to scratching.

G. Use thermal-hanger shield inserts for insulated piping and tubing.
H. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
5. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
6. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
7. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
8. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
9. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
10. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.

I. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.

J. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.

K. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. C-Clamps (MSS Type 23): For structural shapes.
6. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
7. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
8. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
a. Light (MSS Type 31): 750 lb.
b. Medium (MSS Type 32): 1500 lb.
c. Heavy (MSS Type 33): 3000 lb.

L. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

M. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

N. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

END OF SECTION 23 05 29
SECTION 23 05 48 - VIBRATION CONTROLS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Housed spring mounts.
2. Elastomeric hangers.
3. Spring hangers.
4. Pipe riser resilient supports.

1.3 DEFINITIONS

C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 ACTION SUBMITTALS

A. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.

B. Delegated-Design Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system has been examined for excessive stress and that none will exist.

1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control test reports.
1.6 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Ace Mountings Co., Inc.
2. Amber/Booth Company, Inc.
4. Isolation Technology, Inc.
7. Vibration Eliminator Co., Inc.
8. Vibration Isolation.

B. Housed Spring Mounts: Housed spring isolator with integral seismic snubbers.

1. Housing: Ductile-iron or steel housing to provide all-directional seismic restraint.
2. Base: Factory drilled for bolting to structure.
3. Snubbers: Vertically adjustable to allow a maximum of 1/4-inch travel up or down before contacting a resilient collar.

C. Elastomeric Hangers: Single or double-deflection type, fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range.

D. Spring Hangers: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.

1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
7. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

E. Pipe Riser Resilient Support: All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch- thick neoprene. Include steel and neoprene vertical-limit
stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig and for equal resistance in all directions.

F. Resilient Pipe Guides: Telescopic arrangement of 2 steel tubes or post and sleeve arrangement separated by a minimum of 1/2-inch thick neoprene. Where clearances are not readily visible, a factory-set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction shall be fitted. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

2.2 FACTORY FINISHES

A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.

1. Powder coating on springs and housings.
2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
3. Baked enamel or powder coat for metal components on isolators for interior use.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by.

B. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.3 VIBRATION-CONTROL DEVICE INSTALLATION

A. Comply with requirements in Division 07 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.

B. Equipment Restraints:

1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.

C. Piping Restraints:

1. Comply with requirements in MSS SP-127.
2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
3. Brace a change of direction longer than 12 feet.

D. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

3.4 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:
   1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
   2. The contractor shall hire a third-party vibration analyst to conduct baseline vibration signature tests of all rotating machinery.
   3. This Third-party Vibration Contractor shall collect from the Mechanical Contractor the various manufacturer’s recommended vibration levels.
   4. The Vibration Contractor shall utilize an accelerometer to determine the vibration levels of all rotating machinery and equipment.
   5. Vibration pick-ups shall be placed on bearing caps on the horizontal, vertical, and axial directions, or on the equipment supporting structure if the bearing caps are concealed.
   6. The University’s Commissioning Agent shall witness and/or verify the accuracy of the test results of the Vibration Contractor’s test results.
   7. All equipment while operating shall not exceed a self-excite RMS radial velocity of greater than 0.10 inches/second.
   8. Where equipment exceeds the manufacturer’s recommended levels or the levels specified, the Contractor shall make corrections to reduce the vibration frequencies and amplitudes to meet the recommendations.
   9. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days’ advance notice.
  11. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
  12. Test to 90 percent of rated proof load of device.
  14. Measure isolator deflection.
  15. Verify snubber minimum clearances.
  16. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

3.5 ADJUSTING

A. Adjust isolators after piping system is at operating weight.
B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

C. Adjust active height of spring isolators.

D. Adjust restraints to permit free movement of equipment within normal mode of operation.

END OF SECTION 23 05 48
SECTION 23 05 53 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Equipment labels.
      2. Pipe labels.
      3. Duct labels.
      4. Valve tags.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product indicated.
   B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
   C. Valve numbering scheme.
   D. Valve Schedules: For each piping system to include in maintenance manuals.

1.4 COORDINATION
   A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
   B. Coordinate installation of identifying devices with locations of access panels and doors.
   C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS
   A. Labels for Equipment:
      1. Material and Thickness: Black micarta laminate, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2 by 1 inch.
3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 PIPE AND DUCT LABELS

A. General Requirements for Manufactured Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Self-Adhesive Labels: Printed vinyl-backed cloth with contact-type, permanent-adhesive backing.

C. Label Contents: Include identification of service using same designations or abbreviations as used on Drawings, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
2. Lettering Size: At least 1-1/2 inches.

2.3 VALVE TAGS

A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.

1. Tag Material: 1-inch x 2-inch black micarta laminated tags, and having predrilled or stamped holes for attachment hardware.
2. Fasteners: 10-gauge Brass S-hook.

B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag, and in accordance with design drawing abbreviations), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.
2. Valve schedule shall be mounted in a glass-front frame.

PART 3 - EXECUTION
3.1 PREPARATION
A. Clean piping and equipment surfaces of substances that could impair bond of paint, identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 Pipe and Equipment Color Coding
A. Piping Color-Coding: Painting of piping is specified in Division 09 Section "Interior Painting." Paint the piping as indicated below:
   1. Chilled Water: Green with White band.
   2. Heating Hot Water: Green
   3. Refrigerant: Yellow with Black bands
   4. Steam: Yellow.
   5. Condensate: Green with red band.
   6. Drain lines: Aluminum with red bands.

B. Equipment Color-Coding:

3.3 EQUIPMENT LABEL INSTALLATION
A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

C. For equipment in finished areas the equipment tags shall be located inside an access door.

3.4 PIPE LABEL INSTALLATION
A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Near each valve and control device.
   2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
   3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   4. At access doors, manholes, and similar access points that permit view of concealed piping.
   5. Near major equipment items and other points of origination and termination.
   6. Spaced at maximum intervals of 15 feet along each run.

B. Pipe Label Color Schedule:
   1. Low Pressure Steam:
      a. Background Color: Yellow.
      b. Letter Color: Black.
2. Chilled, Heating Hot Water, and Condensate Piping:
   a. Background Color: Green.
   b. Letter Color: Black.

3. Refrigerant Piping:
   a. Background Color: Yellow.
   b. Letter Color: Black.

3.5 DUCT LABEL INSTALLATION
1. Install self-adhesive duct labels with permanent adhesive on air ducts.

   B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 15 feet in each space where ducts are exposed or concealed by removable ceiling system.

3.6 VALVE-TAG INSTALLATION

   A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

   B. Valve-Tag Application Schedule: Tag all valves as indicated below:

      1. Valve-Tag Size and Shape: 1 inch x 2 inch
      2. Valve-Tag Color: Black
         a. Letter Color: White

END OF SECTION 23 05 53
SECTION 23 05 93 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Balancing Air Systems:
      a. Constant-volume air systems.
      b. Variable-air-volume systems.
   2. Balancing Hydronic Piping Systems:
      a. Variable-flow hydronic systems.

1.3 ACTION SUBMITTALS
A. LEED Submittals:
   1. Air-Balance Report for Prerequisite IEQ 1: Documentation of work performed for ASHRAE 62.1, Section 7.2.2 - "Air Balancing."
   2. TAB Report for Prerequisite EA 2: Documentation of work performed for ASHRAE/IESNA 90.1,Section 6.7.2.3 - "System Balancing."

1.4 INFORMATIONAL SUBMITTALS
A. Qualification Data: Within 15 days of Contractor's Notice to Proceed, submit documentation that the TAB contractor and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
B. Certified TAB reports.
C. Instrument calibration reports, to include the following:
   1. Instrument type and make.
   2. Serial number.
   3. Application.
   4. Dates of use.
   5. Dates of calibration.

1.5 QUALITY ASSURANCE
A. TAB Contractor Qualifications: Engage a TAB entity certified by AABC NEBB or TABB.

1. TAB Field Supervisor: Employee of the TAB contractor and certified by AABC NEBB or TABB.
2. TAB Technician: Employee of the TAB contractor and who is certified by AABC NEBB or TABB as a TAB technician.

B. TAB Conference: Meet with Construction Manager and Commissioning Authority on approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Require the participation of the TAB field supervisor and technicians. Provide seven days' advance notice of scheduled meeting time and location.

1. Agenda Items:
   b. The TAB plan.
   c. Coordination and cooperation of trades and subcontractors.
   d. Coordination of documentation and communication flow.

C. Certify TAB field data reports and perform the following:

1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.

D. TAB Report Forms: Use standard TAB contractor's forms approved by Engineer.

E. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

F. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."

G. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."

1.6 PROJECT CONDITIONS

A. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

1.7 COORDINATION

A. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.

B. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

PART 2 - PRODUCTS (Not Applicable)
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems’ designs that may preclude proper TAB of systems and equipment.

B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.

C. Examine the approved submittals for HVAC systems and equipment.

D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they meet the leakage class of connected ducts as specified in Division 23 Section “Metal Ducts” and are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.

F. Examine equipment performance data including fan and pump curves.
   1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
   2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.

H. Examine test reports specified in individual system and equipment Sections.

I. Examine HVAC equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.

J. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.

K. Examine strainers. Verify that startup screens are replaced by permanent screens with indicated perforations.

L. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.

M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

N. Examine system pumps to ensure absence of entrained air in the suction piping.
O. Examine operating safety interlocks and controls on HVAC equipment.

P. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.2 PREPARATION

A. Prepare a TAB plan that includes strategies and step-by-step procedures.

B. Complete system-readiness checks and prepare reports. Verify the following:

1. Permanent electrical-power wiring is complete.
2. Hydronic systems are filled, clean, and free of air.
3. Automatic temperature-control systems are operational.
4. Equipment and duct access doors are securely closed.
5. Balance, smoke, and fire dampers are open.
6. Isolating and balancing valves are open and control valves are operational.
7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
8. Windows and doors can be closed so indicated conditions for system operations can be met.

3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.

1. Comply with requirements in ASHRAE 62.1, Section 7.2.2 - "Air Balancing."

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.

1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Division 23 Section "HVAC Insulation."

C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.

D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.
C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.

E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling-unit components.

L. Verify that air duct system is sealed as specified in Division 23 Section “Metal Ducts.”

3.5 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.

1. Measure total airflow.

   a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.

2. Measure fan static pressures as follows to determine actual static pressure:

   a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
   b. Measure static pressure directly at the fan outlet or through the flexible connection.
   c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
   d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.

3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.

   a. Report the cleanliness status of filters and the time static pressures are measured.

4. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.

5. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
6. Comply with requirements in Division 23 Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
7. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.

1. Measure airflow of submain and branch ducts.
   a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.

2. Measure static pressure at a point downstream from the balancing damper, and adjust volume dampers until the proper static pressure is achieved.
3. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.

C. Measure air outlets and inlets without making adjustments.

1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.

D. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using branch volume dampers rather than extractors and the dampers at air terminals.

1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.6 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a minimum set-point airflow with the remainder at maximum-airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.

B. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:

1. Set outdoor-air dampers at minimum, and set return- and exhaust-air dampers at a position that simulates full-cooling load.
2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
3. Measure total system airflow. Adjust to within indicated airflow.
4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.

   a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.

6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.

   a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.

8. Record final fan-performance data.

C. Pressure-Dependent, Variable-Air-Volume Systems without Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:

1. Balance variable-air-volume systems the same as described for constant-volume air systems.
2. Set terminal units and supply fan at full-airflow condition.
3. Adjust inlet dampers of each terminal unit to indicated airflow and verify operation of the static-pressure controller. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
4. Readjust fan airflow for final maximum readings.
5. Measure operating static pressure at the sensor that controls the supply fan if one is installed, and verify operation of the static-pressure controller.
6. Set supply fan at minimum airflow if minimum airflow is indicated. Measure static pressure to verify that it is being maintained by the controller.
7. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.

   a. If air outlets are out of balance at minimum airflow, report the condition but leave the outlets balanced for maximum airflow.

8. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.

   a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

D. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.

2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.

3. Set terminal units at full-airflow condition.

4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.

5. Adjust terminal units for minimum airflow.

6. Measure static pressure at the sensor.

7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

3.7 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

A. Prepare test reports with pertinent design data, and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against the approved pump flow rate. Correct variations that exceed plus or minus 5 percent.

B. Prepare schematic diagrams of systems' "as-built" piping layouts.

C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:

1. Open all manual valves for maximum flow.
2. Check liquid level in expansion tank.
3. Check makeup water-station pressure gage for adequate pressure for highest vent.
4. Check flow-control valves for specified sequence of operation, and set at indicated flow.
5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
6. Set system controls so automatic valves are wide open to heat exchangers.
7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

3.8 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

A. Set variable frequency drive control to meet design conditions rather than using balancing valves to impose pressure drop.

B. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.

3.9 PROCEDURES FOR HEAT EXCHANGERS

A. Measure water flow through all circuits.
B. Adjust water flow to within specified tolerances.
C. Measure inlet and outlet water temperatures.
D. Measure inlet steam pressure.
E. Check settings and operation of safety and relief valves. Record settings.

3.10 PROCEDURES FOR MOTORS
A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:
   1. Manufacturer's name, model number, and serial number.
   4. Efficiency rating.
   5. Nameplate and measured voltage, each phase.
   6. Nameplate and measured amperage, each phase.
   7. Starter thermal-protection-element rating.
B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

3.11 PROCEDURES FOR CONDENSING UNITS
A. Verify proper rotation of fans.
B. Measure entering- and leaving-air temperatures.
C. Record compressor data.

3.12 PROCEDURES FOR HEAT-TRANSFER COILS
A. Measure, adjust, and record the following data for each water coil:
   1. Entering- and leaving-water temperature.
   2. Water flow rate.
   3. Water pressure drop.
   4. Dry-bulb temperature of entering and leaving air.
   5. Wet-bulb temperature of entering and leaving air for cooling coils.
   6. Airflow.
   7. Air pressure drop.
B. Measure, adjust, and record the following data for each refrigerant coil:
   1. Dry-bulb temperature of entering and leaving air.
   2. Wet-bulb temperature of entering and leaving air.
   3. Airflow.
   4. Air pressure drop.
   5. Refrigerant suction pressure and temperature.
3.13 **TOLERANCES**

A. Set HVAC system's air flow rates and water flow rates within the following tolerances:

1. Supply, Return, and Exhaust Fans and Equipment with Fans:  Plus or minus 10 percent.
2. Air Outlets and Inlets:  Plus or minus 10 percent.
3. Heating-Water Flow Rate:  Plus or minus 10 percent.
4. Cooling-Water Flow Rate:  Plus or minus 10 percent.

3.14 **REPORTING**

A. Initial Construction-Phase Report:  Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices.  Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing.  Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

B. Status Reports:  Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures.  Include a list of deficiencies and problems found in systems being tested and balanced.  Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.15 **FINAL REPORT**

A. General:  Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.

1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
2. Include a list of instruments used for procedures, along with proof of calibration.

B. Final Report Contents:  In addition to certified field-report data, include the following:

1. Pump curves.
2. Fan curves.
3. Manufacturers’ test data.
4. Field test reports prepared by system and equipment installers.
5. Other information relative to equipment performance; do not include Shop Drawings and product data.

C. General Report Data:  In addition to form titles and entries, include the following data:

1. Title page.
2. Name and address of the TAB contractor.
3. Project name.
4. Project location.
5. Architect's name and address.
6. Engineer's name and address.
7. Contractor's name and address.
9. Signature of TAB supervisor who certifies the report.
10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
11. Summary of contents including the following:
   a. Indicated versus final performance.
   b. Notable characteristics of systems.
   c. Description of system operation sequence if it varies from the Contract Documents.
12. Nomenclature sheets for each item of equipment.
13. Data for terminal units, including manufacturer's name, type, size, and fittings.
14. Notes to explain why certain final data in the body of reports vary from indicated values.
15. Test conditions for fans and pump performance forms including the following:
   a. Settings for outdoor-, return-, and exhaust-air dampers.
   b. Conditions of filters.
   c. Cooling coil, wet- and dry-bulb conditions.
   d. Face and bypass damper settings at coils.
   e. Fan drive settings including settings and percentage of maximum pitch diameter.
   f. Inlet vane settings for variable-air-volume systems.
   g. Settings for supply-air, static-pressure controller.
   h. Other system operating conditions that affect performance.

D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
   1. Quantities of outdoor, supply, return, and exhaust airflows.
   2. Water and steam flow rates.
   3. Duct, outlet, and inlet sizes.
   4. Pipe and valve sizes and locations.
   5. Terminal units.

E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
   1. Unit Data:
      a. Unit identification.
      b. Location.
      c. Make and type.
      d. Model number and unit size.
      e. Manufacturer's serial number.
      f. Unit arrangement and class.
      g. Discharge arrangement.
      h. Sheave make, size in inches, and bore.
      i. Center-to-center dimensions of sheave, and amount of adjustments in inches.
      j. Number, make, and size of belts.
      k. Number, type, and size of filters.
   2. Motor Data:
      a. Motor make, and frame type and size.
      b. Horsepower and rpm.
      c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.

3. Test Data (Indicated and Actual Values):
   a. Total air flow rate in cfm.
   b. Total system static pressure in inches wg.
   c. Fan rpm.
   d. Discharge static pressure in inches wg.
   e. Filter static-pressure differential in inches wg.
   f. Preheat-coil static-pressure differential in inches wg.
   g. Cooling-coil static-pressure differential in inches wg.
   h. Heating-coil static-pressure differential in inches wg.
   i. Outdoor airflow in cfm.
   j. Return airflow in cfm.
   k. Outdoor-air damper position.
   l. Return-air damper position.
   m. Vortex damper position.

F. Apparatus-Coil Test Reports:
   1. Coil Data:
      a. System identification.
      b. Location.
      c. Coil type.
      d. Number of rows.
      e. Fin spacing in fins per inch o.c.
      f. Make and model number.
      g. Face area in sq. ft.
      h. Tube size in NPS.
      i. Tube and fin materials.
      j. Circuiting arrangement.

   2. Test Data (Indicated and Actual Values):
      a. Air flow rate in cfm.
      b. Average face velocity in fpm.
      c. Air pressure drop in inches wg.
      d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
      e. Return-air, wet- and dry-bulb temperatures in deg F.
      f. Entering-air, wet- and dry-bulb temperatures in deg F.
      g. Leaving-air, wet- and dry-bulb temperatures in deg F.
      h. Water flow rate in gpm.
      i. Water pressure differential in feet of head or psig.
      j. Entering-water temperature in deg F.
      k. Leaving-water temperature in deg F.
      l. Refrigerant expansion valve and refrigerant types.
      m. Refrigerant suction pressure in psig.
      n. Refrigerant suction temperature in deg F.

G. Fan Test Reports: For supply, return, and exhaust fans, include the following:
   1. Fan Data:
a. System identification.
b. Location.
c. Make and type.
d. Model number and size.
e. Manufacturer's serial number.
f. Arrangement and class.
g. Sheave make, size in inches, and bore.
h. Center-to-center dimensions of sheave, and amount of adjustments in inches.

2. Motor Data:

a. Motor make, and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
g. Number, make, and size of belts.

3. Test Data (Indicated and Actual Values):

a. Total airflow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Suction static pressure in inches wg.

H. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:

1. Report Data:

a. System and air-handling-unit number.
b. Location and zone.
c. Traverse air temperature in deg F.
d. Duct static pressure in inches wg.
e. Duct size in inches.
f. Duct area in sq. ft.
g. Indicated air flow rate in cfm.
h. Indicated velocity in fpm.
i. Actual air flow rate in cfm.
j. Actual average velocity in fpm.
k. Barometric pressure in psig.

I. Air-Terminal-Device Reports:

1. Unit Data:

a. System and air-handling unit identification.
b. Location and zone.
c. Apparatus used for test.
d. Area served.
e. Make.
f. Number from system diagram.
g. Type and model number.
h. Size.
i. Effective area in sq. ft.

2. Test Data (Indicated and Actual Values):
   a. Air flow rate in cfm.
   b. Air velocity in fpm.
   c. Preliminary air flow rate as needed in cfm.
   d. Preliminary velocity as needed in fpm.
   e. Final air flow rate in cfm.
   f. Final velocity in fpm.
   g. Space temperature in deg F.

J. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:

1. Unit Data:
   a. System and air-handling-unit identification.
   b. Location and zone.
   c. Room or riser served.
   d. Coil make and size.
   e. Flowmeter type.

2. Test Data (Indicated and Actual Values):
   a. Air flow rate in cfm.
   b. Entering-water temperature in deg F.
   c. Leaving-water temperature in deg F.
   d. Water pressure drop in feet of head or psig.
   e. Entering-air temperature in deg F.
   f. Leaving-air temperature in deg F.

K. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:

1. Unit Data:
   a. Unit identification.
   b. Location.
   c. Service.
   d. Make and size.
   e. Model number and serial number.
   f. Water flow rate in gpm.
   g. Water pressure differential in feet of head or psig.
   h. Required net positive suction head in feet of head or psig.
   i. Pump rpm.
   j. Impeller diameter in inches.
   k. Motor make and frame size.
   l. Motor horsepower and rpm.
   m. Voltage at each connection.
   n. Amperage for each phase.
   o. Full-load amperage and service factor.
   p. Seal type.

2. Test Data (Indicated and Actual Values):
a. Static head in feet of head or psig.
b. Pump shutoff pressure in feet of head or psig.
c. Actual impeller size in inches.
d. Full-open flow rate in gpm.
e. Full-open pressure in feet of head or psig.
f. Final discharge pressure in feet of head or psig.
g. Final suction pressure in feet of head or psig.
h. Final total pressure in feet of head or psig.
i. Final water flow rate in gpm.
j. Voltage at each connection.
k. Amperage for each phase.

L. Instrument Calibration Reports:
   1. Report Data:
      a. Instrument type and make.
      b. Serial number.
      c. Application.
      d. Dates of use.
      e. Dates of calibration.

3.16 INSPECTIONS

A. Initial Inspection:
   1. After testing and balancing are complete, operate each system and randomly check
      measurements to verify that the system is operating according to the final test and
      balance readings documented in the final report.
   2. Check the following for each system:
      a. Measure airflow of at least 10 percent of air outlets.
      b. Measure water flow of at least 5 percent of terminals.
      c. Measure room temperature at each thermostat/temperature sensor. Compare the
         reading to the set point.
      d. Verify that balancing devices are marked with final balance position.
      e. Note deviations from the Contract Documents in the final report.

B. Final Inspection:
   1. After initial inspection is complete and documentation by random checks verifies that
      testing and balancing are complete and accurately documented in the final report,
      request that a final inspection be made by Commissioning Authority.
   2. The TAB contractor's test and balance engineer shall conduct the inspection in the
      presence of Commissioning Authority.
   3. Commissioning Authority shall randomly select measurements, documented in the final
      report, to be rechecked. Rechecking shall be limited to either 10 percent of the total
      measurements recorded or the extent of measurements that can be accomplished in a
      normal 8-hour business day.
   4. If rechecks yield measurements that differ from the measurements documented in the
      final report by more than the tolerances allowed, the measurements shall be noted as
      "FAILED."
5. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.

C. TAB Work will be considered defective if it does not pass final inspections. If TAB Work fails, proceed as follows:

1. Recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
2. If the second final inspection also fails, Owner may contract the services of another TAB contractor to complete TAB Work according to the Contract Documents and deduct the cost of the services from the original TAB contractor's final payment.

D. Prepare test and inspection reports.

3.17 ADDITIONAL TESTS

A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION 23 05 93
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes insulating the following duct services:

1. Indoor, concealed supply, return, and relief air.
2. Indoor, exposed ductwork within mechanical rooms (all duct services except exhaust).

B. Related Sections:

1. Division 23 Section "HVAC Piping Insulation."

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
1.6 DELIVERY, STORAGE, AND HANDLING
   A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION
   A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
   B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
   C. Coordinate installation and testing of heat tracing.

1.8 SCHEDULING
   A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
   B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS
   A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and articles for where insulating materials shall be applied.
   B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
   C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
   D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
   E. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
      1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
         a. CertainTeed Corp.; SoftTouch Duct Wrap.
         b. Johns Manville; Microlite.
         c. Knauf Insulation; Friendly Feel Duct Wrap.
d. Manson Insulation Inc.; Alley Wrap.
e. Owens Corning; SOFTR All-Service Duct Wrap.

F. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. CertainTeed Corp.; Commercial Board.
   b. Fibrex Insulations Inc.; FBX.
   c. Johns Manville; 800 Series Spin-Glas.
   d. Knauf Insulation; Insulation Board.
   e. Manson Insulation Inc.; AK Board.
   f. Owens Corning; Fiberglas 700 Series.

2.2 FIRE-RATED INSULATION SYSTEMS

A. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a 2-hour fire rating by an NRTL acceptable to authorities having jurisdiction.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. CertainTeed Corp.; FlameChek.
   b. Johns Manville; Firetemp Wrap.
   c. Thermal Ceramics; FireMaster Duct Wrap.
   d. 3M; Fire Barrier Wrap Products.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   b. Eagle Bridges - Marathon Industries; 225.
   d. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   b. Eagle Bridges - Marathon Industries; 225.
   d. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   b. Eagle Bridges - Marathon Industries; 550.
   e. Vimasco Corporation; WC-1/WC-5.

2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: 60 percent by volume and 66 percent by weight.

2.5 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   b. Eagle Bridges - Marathon Industries; 405.
c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
d. Mon-Eco Industries, Inc.; 44-05.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.6 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
5. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.7 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. ABI, Ideal Tape Division; 428 AWF ASJ.
   b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
   c. Compac Corporation; 104 and 105.
   d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
2. Width: 3 inches.
3. Thickness: 11.5 mils.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lb/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
2. Width: 3 inches.
3. Thickness: 6.5 mils.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

2.8 SECUREMENTS

A. Bands:
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. ITW Insulation Systems; Gerrard Strapping and Seals.
   b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 1/2 inch wide with wing seal or closed seal.

B. Insulation Pins and Hangers:
1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      1) AGM Industries, Inc.; CWP-1.
      2) GEMCO; CD.
      3) Midwest Fasteners, Inc.; CD.
      4) Nelson Stud Welding; TPA, TPC, and TPS.

2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch-diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      1) AGM Industries, Inc.; CHP-1.
      2) GEMCO; Cupped Head Weld Pin.
      3) Midwest Fasteners, Inc.; Cupped Head.
      4) Nelson Stud Welding; CHP.

3. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
a. **Products:** Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1. AGM Industries, Inc.; RC-150.
2. GEMCO; R-150.

b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

C. **Staples:** Outward-clinching insulation staples, nominal 3/4-inch wide, stainless steel or Monel.

D. **Wire:** 0.062-inch soft-annealed, stainless steel.

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

---

**PART 3 - EXECUTION**

3.1 **EXAMINATION**

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.

1. Verify that systems to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 **PREPARATION**

A. **Surface Preparation:** Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.3 **GENERAL INSTALLATION REQUIREMENTS**

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.

B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Keep insulation materials dry during application and finishing.

G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

H. Install insulation with least number of joints practical.

I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.

J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

K. Install insulation with factory-applied jackets as follows:
   1. Draw jacket tight and smooth.
   2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
   3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
      a. For below ambient services, apply vapor-barrier mastic over staples.
   4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
   5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.

L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.4 PENETRATIONS

A. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
B. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire
damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper
sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.

1. Comply with requirements in Division 07 Section "Penetration Firestopping" and fire-resistive joint sealers.

C. Insulation Installation at Floor Penetrations:

1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper
sleeves and externally insulate damper sleeve beyond floor to match adjacent duct
insulation. Overlap damper sleeve and duct insulation at least 2 inches.
2. Seal penetrations through fire-rated assemblies. Comply with requirements in
Division 07 Section "Penetration Firestopping."

3.5 INSTALLATION OF MINERAL-FIBER INSULATION

A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit
area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and
transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head,
capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of
vertical ducts as follows:
   a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal
centerline of duct. Space 3 inches maximum from insulation end joints, and 16
inches o.c.
   b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c.
each way, and 3 inches maximum from insulation joints. Install additional pins to
hold insulation tightly against surface at cross bracing.
   c. Pins may be omitted from top surface of horizontal, rectangular ducts and
plenums.
   d. Do not overcompress insulation during installation.
   e. Impale insulation over pins and attach speed washers.
   f. Cut excess portion of pins extending beyond speed washers or bend parallel with
insulation surface. Cover exposed pins and washers with tape matching insulation
facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous
unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with
insulation by removing 2 inches from one edge and one end of insulation segment.
Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch
o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-
barrier mastic, and sealant at joints, seams, and protrusions.
   a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-
barrier seal.
   b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot
intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped
pattern over insulation face, along butt end of insulation, and over the surface.
Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.

5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.

6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.

7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.

2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

   a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.

   b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.

   c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.

   d. Do not overcompress insulation during installation.

   e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

   a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.

   b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.6 FIRE-RATED INSULATION SYSTEM INSTALLATION

A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.

B. Insulate duct access panels and doors to achieve same fire rating as duct.

C. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Division 07 Section "Penetration Firestopping."

3.7 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Inspect ductwork, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.

C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.8 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply, return, relief and outdoor air.
2. Indoor, exposed supply, return, relief and outdoor air.
3. All outside air duct within the building is exposed within mechanical spaces.
4. The only duct not requiring insulation is exhaust duct.

B. Items Not Insulated:

1. Exhaust ducts.
2. Factory-insulated flexible ducts.
3. Factory-insulated plenums and casings.
4. Flexible connectors.
5. Vibration-control devices.
6. Factory-insulated access panels and doors.

3.9 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. Concealed, round and rectangular supply, return, and relief air duct insulation shall be the following:
1. Mineral-Fiber Blanket: 2 inches thick and 1.5-lb/cu. ft nominal density.

B. Exposed, round and rectangular air duct and plenum insulation shall be the following:

1. Mineral-Fiber Board: 2 inches thick and 6-lb/cu. ft nominal density.

C. Exposed, outdoor-air duct and plenum insulation shall be the following:

1. Mineral-Fiber Board: 2 inches thick and 6-lb/cu. ft nominal density.

END OF SECTION 23 07 13
SECTION 23 07 19 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes insulating the following HVAC piping systems:
   1. Condensate drain piping, indoors.
   2. Chilled-water piping, indoors.
   3. Heating hot-water piping, indoors.
   4. Steam and steam condensate piping, indoors.

B. Related Sections:
   1. Division 23 Section "Duct Insulation."

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any).

B. LEED Submittals:
   1. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.

1.4 INFORMATIONAL SUBMITTALS

A. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

B. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing and inspecting agency acceptable to
authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.8 SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Mineral-Fiber, Preformed Pipe Insulation:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Fibrex Insulations Inc.; Coreplus 1200.
   b. Johns Manville; Micro-Lok.
   c. Knauf Insulation; 1000-Degree Pipe Insulation.
   d. Manson Insulation Inc.; Alley-K.
   e. Owens Corning; Fiberglas Pipe Insulation.

2. Type I, 850 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

3. Type II, 1200 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2 INSULATING CEMENTS

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Ramco Insulation, Inc.; Super-Stik.

1. Products: Subject to compliance with requirements, [available products that may be incorporated into the Work include, but are not limited to, the following]:
   a. Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote.

2.3 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   b. Eagle Bridges - Marathon Industries; 225.
   d. Mon-Eco Industries, Inc.; 22-25.
2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   b. Eagle Bridges - Marathon Industries; 225.
   d. Mon-Eco Industries, Inc.; 22-25.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   b. Eagle Bridges - Marathon Industries; 550.
   e. Vimasco Corporation; WC-1/WC-5.

2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: 60 percent by volume and 66 percent by weight.

2.5 SEALANTS

A. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.6 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
   1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2.7 FIELD-APPLIED FABRIC-REINFORCING MESH

A. Woven Glass-Fiber Fabric: Approximately 2 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in. for covering pipe and pipe fittings.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

B. Woven Polyester Fabric: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in., in a Leno weave, for pipe.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      b. Vimasco Corporation; Elastafab 894.

2.8 FIELD-APPLIED CLOTHS

A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

2.9 TAPES
A. **ASJ Tape:** White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. **Products:** Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. ABI, Ideal Tape Division; 428 AWF ASJ.
   b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
   c. Compac Corporation; 104 and 105.
   d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.

2. **Width:** 3 inches.
3. **Thickness:** 11.5 mils.
4. **Adhesion:** 90 ounces force/inch in width.
5. **Elongation:** 2 percent.
6. **Tensile Strength:** 40 lbf/inch in width.
7. **ASJ Tape Disks and Squares:** Precut disks or squares of ASJ tape.

### 2.10 SECUREMENTS

A. **Bands:**

1. **Products:** Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. ITW Insulation Systems; Gerrard Strapping and Seals.
   b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.

2. **Stainless Steel:** ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 1/2 inch minimum wide with wing seal or closed seal.
3. **Aluminum:** ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch minimum wide with wing seal or closed seal.
4. **Springs:** Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. **Staples:** Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.

C. **Wire:** 0.062-inch soft-annealed, galvanized steel.

1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
1. Verify that systems to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:
   1. Draw jacket tight and smooth.
   2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
      a. For below-ambient services, apply vapor-barrier mastic over staples.
   4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
   5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

P. For above-ambient services, do not install insulation to the following:
   1. Vibration-control devices.
   2. Testing agency labels and stamps.
   3. Nameplates and data plates.
   5. Handholes.
   6. Cleanouts.

3.4 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

1. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.

F. Insulation Installation at Floor Penetrations:

1. Pipe: Install insulation continuously through floor penetrations.
2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."

3.5 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.

4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.

6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.

9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.

2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.

3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.

4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:
   1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
   2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
   3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
   4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:
   1. Install preformed pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
   4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.
   2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.
   2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
   3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   4. Install insulation to flanges as specified for flange insulation application.

3.7 FINISHES

A. Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 painting Sections.
   1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

B. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

3.8 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

   1. Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.9 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
   
   1. Drainage piping located in crawl spaces.
   2. Underground piping.
   3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.10 INDOOR PIPING INSULATION SCHEDULE

A. Condensate and Equipment Drain Water below 60 Deg F:

   1. All Pipe Sizes: Insulation shall be the following:

      a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch thick.

B. Chilled Water:

   1. NPS 3 and Smaller: Insulation shall be one of the following:

      b. Mineral-Fiber, Preformed Pipe, Type I: 1 inch thick.

   2. NPS 4 to NPS 12: Insulation shall be one of the following:

      b. Mineral-Fiber, Preformed Pipe, Type I: 1-1/2 inches thick.

C. Heating-Hot-Water Supply and Return, 200 Deg F and Below:
1. NPS 6 and Smaller: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe, Type I: 1 inch thick.

D. Steam and Steam Condensate, 350 Deg F and Below:

1. NPS 1 and Larger: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe, Type I or II: 3 inches thick.
   2. Equipment needing service such as steam traps, heat exchangers, control valves, etc:
      a. Removable-reusable Insulation Covers, material appropriate for application, Ohio Valley Industrial Services (www.ovisinc.com), or equal.

END OF SECTION 23 07 19
SECTION 23 08 00 – HVAC SYSTEM COMMISSIONING

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Systems and equipment Start-Up and Functional Performance Testing.
B. Validation of proper and thorough installation of Division 23 systems and equipment.
C. Generic Start-Up Documentation for mechanical systems and equipment.
D. Development of final Start-Up Documentation for mechanical systems and equipment.
E. System Start-Up and Turn-Over procedures.
F. Systems balancing verification.
G. Coordination and execution of Training Events.

1.2 GENERAL DESCRIPTION

A. Commissioning (Cx) is the process of ensuring that (i) all building systems are installed and perform interactively according to the design intent; (ii) that systems are efficient and cost effective and meet the Owner’s operational needs; (iii) that the installation is accurately documented; and (iv) that the Operators are adequately trained. Commissioning serves as a tool to minimize post-occupancy operational problems, and establishes testing and communication protocols to advance the building systems from installation to optimized, fully-dynamic operation.

B. Commissioning Authority (CxA) shall work with the Contractor and the design engineers to direct and oversee the Cx process and perform Functional Performance Testing.

C. The Commissioning Plan outlines the Cx process beyond the Construction Contract, including design phase activities and design team/owner responsibilities. The specification Sections dictate all requirements of the commissioning process relative to the construction contract. The Cx Plan is not part of the construction contract, although it is available for reference at the request of the Contractor.

D. This Section outlines the Cx procedures specific to the Division 23 Contractors. Requirements common to all Sections are specified in Section 01 91 00 and Section 01 91 10. This Section and other sections of the specification details the Contractor’s responsibilities relative to the Cx process.

1.3 SCOPE

A. The following systems and equipment are included in the Scope of Commissioning for this project:

B. Mechanical/HVAC Systems: All Division 23 equipment and systems are subject to commissioning, including but not limited to the systems listed below. All components and devices (sensors, valves, etc.) that make up these systems are included.
   1. Air Handling Units (AHU)
   2. VAV terminal units
   3. Fan Coil Units (FCU)
4. CHW Hydronic Pumping System
5. HW Hydronic Pumping System
6. Converters
7. Steam Systems
8. Supply, Return, Relief, Exhaust Air systems

C. Building Automation Systems (BAS)
   1. The entire BAS shall be subject to commissioning, including all hardware components, software, networking, programming and engineering services, and controls documentation.

1.4 RELATED WORK AND DOCUMENTS

A. The Cx process references many related Sections, particularly Section 01 91 00 - General Commissioning. It is important for all Contractors subject to the Cx process to be familiar with Section 01 91 00.

B. Refer to Section 01 91 00 for a complete list of Sections on Related Work.

1.5 DEFINITIONS AND ABBREVIATIONS

A. Refer to Section 01 91 00 for a complete list of Definitions and Abbreviations.

1.6 REFERENCE STANDARDS

A. Refer to Section 01 91 00 for a complete list of Reference Standards.

1.7 DOCUMENTATION

A. Documentation shall be as required in Section 01 91 00. In addition, Contractor shall also provide to the CxA the following per the procedures specified herein, in the Cx Plan, and in other Sections of the specification:
   1. Factory Test Reports: Contractor shall provide any factory testing documentation or certified test reports required by the specifications. These shall be provided prior to the Acceptance Phase. Factory Test Reports should be provided in PDF electronic format. These may include but are not limited to:
      a. Air Handling Units
      b. Variable Frequency Drives
      c. Fans Capacity
      d. Fan Sound Power Levels
      e. Pump Capacity
   2. Field Testing Agency Reports (other than TAB): Provide all documentation of work of independent testing agencies required by the specification. These shall be provided prior to Acceptance Phase. Field Testing Agency Reports should be provided in PDF electronic format. These may include but are not limited to:
      a. Pipe Pressure Testing
      b. Duct Leakage Testing
      c. Vibration Testing
      d. Water Treatment
   3. TAB Plan: The Testing, Adjusting, and Balancing Plan shall include the following:
      a. Certifications on all instruments to be used throughout the testing. Certification must be documented within the previous 6 months.
      b. Résumés and Certification of individuals who will be balancing the systems.
      c. Detailed step-by-step plans for each procedure to be performed by the TAB Contractor.
d. Sample forms to be used for each measurement.
e. Sample balancing report.

4. Piping Cleaning, Flush, and Fill Plan: Contractor shall provide this document in accordance with details in this Section. CxA will review.

5. Temporary Operating and Conditioning Plan: Contractor shall provide in accordance with details in this Section. CxA will review.

6. Completed TAB Reports. CxA will review prior to FPT.

1.8 SEQUENCING AND SCHEDULING

A. Refer to Section 01 91 00.

1.9 COORDINATION MANAGEMENT PROTOCOLS

A. Coordination responsibilities and management protocols relative to Cx are initially defined in Section 01 91 00 and the Cx Plan, but shall be refined and documented in the Construction Phase Cx Kick-Off Meeting. Contractor shall have input into the protocols to be used and all Parties will commit to scheduling obligations. The CxA will record and distribute.

1.10 CONTRACTOR RESPONSIBILITIES

A. Refer to Section 01 91 00: Detailed Contractor responsibilities common to all Divisions are specified in Section 01 91 00. The following are additional responsibilities or notable responsibilities specific to Division 23.

B. Construction Phase
1. Provide skilled technicians qualified to perform the work required.
2. Provide factory-trained and authorized technicians where required by the Contract Documents.
3. Prepare and submit required draft Start-Up Documentation and submit along with the manufacturer’s application, installation and start-up information.
4. Provide assistance to the CxA in preparation of the specific Functional Performance Test (FPT) procedures. Contractors, subcontractors and vendors shall review FPT procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits to be used during the tests. Damage caused to equipment performed in accordance with the approved procedures will be the responsibility of the Contractor.
5. Thoroughly complete and inspect installation of systems and equipment as detailed throughout Contract Documents, as required by reference or industry standards, and as specifically indicated elsewhere this Section.
6. Start-Up, test/adjust/balance, and Turn-Over systems and equipment prior to functional performance testing by the CxA. Approved Start-Up Documentation shall be in accordance with Contract Documents, reference or industry standards, and specifically elsewhere in Part I of this Section.
7. Record Start-Up on approved Start-Up Documentation forms and certify that the systems and equipment have been started and or tested in accordance with the requirements specified above and in Section 01 09 00. Each task or item shall be indicated with the Party actually performing the task or procedure.
8. TAB: As outlined in Section 23 05 93. Specifically as it relates to Cx:
   a. Attend Construction Phase Cx Kick-Off Meeting and Cx progress meetings beginning within 3 months of start of TAB work;
   b. Submit TAB Plan as indicated above;
   c. Meet with Cx team to review TAB procedures and documentation required;
   d. Demonstrate TAB procedures for repetitive tasks (zone balancing, AHU adjusting) as called for by the CxA;
   e. Participate in Action List dialogue;
   f. Provide all documentation electronically.
C. Acceptance Phase
1. Assist CxA in Functional Performance Testing. Assistance will typically include the following:
   a. Manipulate systems and equipment to facilitate Functional Performance Testing (as specified in Section 01 91 00 and Section 01 91 10);
   b. Provide any specialized instrumentation necessary for Functional Performance Testing;
   c. Manipulate BAS and other control systems to facilitate Functional Performance Testing (as specified in Section 01 91 00 and Section 01 91 10);
   d. Provide a TAB technician to work at the direction of CxA for up to 8 hours beyond assistance specified above.
   e. Provide a BAS technician to work at the direction of CxA for up to 16 hours beyond assistance specified above.

D. Warranty Phase
1. Maintain record documentation of any configurations, setpoints, parameters, etc. that change throughout the Warranty Period.
2. Provide representative for off-season testing as required by CxA.
3. Respond to warranty issues as required by Division 01 and the General Conditions.

1.11 EQUIPMENT SUPPLIER RESPONSIBILITIES
A. Refer to Section 01 91 00.

1.12 CONTRACTOR NOTIFICATION AND SCHEDULING
A. Refer to Section 01 91 00.

1.13 START-UP DOCUMENTATION
A. Refer to Section 01 91 00.

1.14 EQUIPMENT NAMEPLATE DATA
A. Refer to Section 01 91 00.

1.15 PIPING CLEANING, FLUSH, AND FILL PLAN
A. Contractors shall provide a “Piping Cleaning, Flush, and Fill Plan” to the CxA that provides a descriptive narrative and supporting calculations of the means and methods that will be used to clean out, flush, and fill the piping systems. CxA will review and post the final approved document to the Portal.

B. The “Piping Cleaning, Flush, and Fill Plan” shall incorporate and be inclusive of all requirements of individual Sections relating to piping and pipe cleaning and flushing. In addition to the requirements of any other related Section, this document shall consist of the following at a minimum for each individual hydronic loop:
   1. Overview schematic diagram of each of the hydronic systems, showing individual flow components such as chillers, boilers, pumps, heat exchangers, cooling towers, control valves, and strainers.
   2. Narrative and illustration indicating the equipment that will either participate or be bypassed by fluid flow during the clean and flush process.
   3. For equipment to be bypassed, description of the means for providing the bypass, including the type, size, and length of hoses or piping to be used.
4. Description of how flow is to be induced (permanent pumps, temporary pumps, etc.) and flow rates to be imposed during the flush process.
5. Calculation of resultant flow velocities in various portions of the piping system, with specific identification of the minimum velocity sections of the piping loop. Velocities should generally be shown to be above a 7 feet-per-second minimum speed to provide for adequate capability to flush and carry debris through the system to the appropriate strainer or clean-out location.
6. Description of cleaning methods and materials to be used to flush the system. Description shall include cleaning material and concentration, details of the cleaning process including duration of circulation and flushing intervals, criteria for determining a “clean” flush, and name and qualifications of cleaning or chemical treatment subcontractors to be used.
7. Identification and discussion of any isolated sections or ‘dead-legs’ that will be present, including means to provide cleaning and flushing for these sections.
8. Details of the strainers to be used for the flush and clean process, as well as final strainers to be used after cleaning. Contractor shall clean all strainers prior to turning over the system for commissioning.
9. If the cleaning and flushing process is to be phased in sections, details should be provided to clarify how clean sections will be protected as other sections are flushed.

1.16 TEMPORARY OPERATION AND CONDITIONING PLAN

A. Contractor shall be allowed to use permanent building equipment to provide temporary conditioning ONLY upon the approval of the A/E, Owner, and the CxA. Approval for such will only be given upon acceptance of a detailed Temporary Operating and Conditioning Plan provided by the individually involved subcontractors and compiled by the CM. This Temporary Operating and Conditioning Plan shall be a required element of the Construction IAQ Management Plan required for the LEED Credit EQ 3.1. The Temporary Operating and Conditioning Plan shall consider/address the following at a minimum:
1. Indicate that the full Start-Up protocol, including development and documentation of Start-Up Documentation as required by the specification will be performed for the temporary start-up. The Temporary Conditioning Plan shall include the Start-Up Documentation to be used, which shall be the same as those that will be used for final Start-Up.
2. Contractor shall address how equipment will be maintained in good, clean condition. Specifically address:
   a. Temporary Filtering of Air: Air filters used for construction shall be as or more effective than those specified for permanent use. Contractor shall remove construction filters and replace with new filters prior to FPT. Filters shall be maintained and replaced at the specified final pressure drop. Contractor shall install a manegelic gauge for visual indication of pressure drop as well as setting and adjusting the loaded filter DP switch for monitoring on the BAS.
   b. Temporary Filtering of Water and Condensate: Construction strainers shall be used while circulating fluid during construction. Construction strainer shall be finer than that specified for final strainers.
   c. Sealing/Filtering of Open Ducts: Address that all open ducts shall be either sealed or protected with filter media. Return or exhaust systems shall not be used during construction unless otherwise approved.
   d. Lubrication and Maintenance: Contractor shall maintain the systems and equipment in accordance with the manufacturer’s instructions. Contractor shall coordinate lubricants used with Owner’s operators. Frequency of lubrication and inspection shall be as recommended by manufacturer’s literature. Applicable maintenance lubrication schedules shall be included in the Plan. Draft maintenance logs shall be submitted with Plan and completed as maintenance is performed.
e. Operation Outside of Normal Ranges: Systems and equipment shall not be operated outside the range of specified conditions. The Temporary Conditioning Plan shall address how the Contractor will ensure that operation will not harm the equipment.

f. Emergency Condition Identification and Response Protocols: The Temporary Conditioning Plan shall address protocols for responding to equipment malfunctions and or harmful operation. Automatic safety and remote enunciation shall be in place to protect people and property. Temporary operation shall not be allowed until there is an automatic communication/enunciation medium such as a phone connection or an Internet connection. At a minimum, an alarm on the equipment used for temporary service shall be automatically sent to the Contractor’s 24 hour monitoring service and to the Owners help desk. The Contractor shall respond to and be responsible for securing conditions within the building. Owner shall assess the situation and as necessary secure utilities feeding the building from isolation points outside of the building.

3. Campus Utility Impact: The Temporary Conditioning Plan shall address the expected impact on the campus utilities involved in the temporary conditioning equipment. Specifically address:
   a. How the systems will be controlled to both ensure they are operating in range, and to avoid energy waste or inefficient conditions;
   b. Project the range of loads and flows to be imposed on the campus systems. For cooling, indicate how you will ensure a temperature split of at least 12°F;
   c. For campus chilled water connections, the bridge connection and automatic control of the bridge-related sequences shall be installed, functional and tested.

4. Building Protection: Address how the system will be controlled to avoid humidity conditions that could either promote mold growth or cause corrosion.

5. Equipment Reconditioning: Address with specific means and methods how the equipment used for temporary conditioning will be reconditioned to like-new condition. Belts, seals, bearings, couplings, or other parts that wear more than 3% of their expected life shall be replaced.

6. Cleaning: Address how ducts, pipes, coils, converters, air handling equipment, terminal units, etc. shall be cleaned prior to Turn-Over.

7. Operations Log: Contractor responsible for operating the equipment shall maintain a log of all activities associated with operating and maintaining equipment. Log shall be submitted to Owner on a frequency specified by the Owner.

8. Operating System Alterations: The Temporary Conditioning Plan shall address specific protocol for doing work on the systems.

9. Damages: Any material, device, component, or equipment that is assessed as damaged or as having a substantially shortened life as a result of temporary conditioning operation shall be replaced by the Contractor at no cost to the Owner or to the project.

10. Segregation: Where only portions of a system are to be used, Contractor shall specifically indicate how the used portion will be isolated from the unused portion. The Temporary Conditioning Plan shall address how to ensure that the reduced operation condition will be maintained within acceptable ranges, and/or how capacity will be throttled to keep all operating parameters in recommended ranges.

1.17 TRAINING EVENTS AND TRAINING PLAN

A. Contractors, subcontractor, vendors, and other applicable Parties shall prepare and conduct training sessions on the installed systems and equipment they are responsible for per the requirements of Section 01 91 00 and the individual Specifications.

1.18 SYSTEMS MANUAL AND O&M DOCUMENTATION CONTENT - PREPARATION AND LOGISTICS

A. Refer to Section 01 91 00 the individual Specifications.
1.19 BAS TRENDING REQUIREMENTS
A. Trending requirements are as specified in Section 01 91 00 and Section 23 08 01
B. The BAS Contractor shall configure and analyze all trends required under Section 23 02 01.

1.20 FUNCTIONAL PERFORMANCE TESTING
A. Contractor shall participate in the initial samples of Functional Performance Testing as stipulated in Section 01 91 00 and Section 01 91 10.

1.21 FPT ACCEPTANCE CRITERIA
A. Acceptance criteria for tests are indicated in Section 01 91 10 and in the specification Sections applicable to the systems being tested. Unless indicated otherwise, the criteria for acceptance will typically be that specified with the individual system, equipment, component, or device.

PART 2 - PRODUCTS
2.1 INSTRUMENTATION
A. General: All testing equipment used by any Party shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. If not otherwise noted, the following minimum requirements apply:

B. Temperature sensors and digital thermometers shall have a certified calibration within the past year and a resolution of +/- 0.1°F.

C. Pressure sensors shall have an accuracy of +/- 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

D. All equipment shall be calibrated according to the manufacturer’s recommended intervals. Calibration tags shall be affixed or certificates readily available.

E. Standard Testing Instrumentation: Standard instrumentation used for testing air and water flows, temperatures, humidity, noise levels, amperage, voltage, and pressure differential in air and water systems related to functional testing shall be provided by CxA.

F. Special Tools: Special equipment, tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment, according to these Contract Documents shall be included in the base bid price to the Contractor and turned over to the Owner upon project completion.

2.2 WEB-BASED COMMISSIONING PORTAL
A. All general and major subcontractors participating in the Cx process shall use the web-based Cx Portal (‘Portal’) to document the Cx procedures. The Portal is a Web-based Internet hub used to electronically collaborate and coordinate activities and deliverables throughout the Cx process. The Portal is hosted by the CxA and shall be accessible to all Parties participating in the Cx program. The Portal provides a common location to store Start-Up Documentation, Functional Performance Tests and results, project documents and deliverables. It also serves as a collaborative email hub to facilitate, automate, and track communications between Parties relating to the Cx process.
B. Refer to Section 01 91 00 the individual Specifications for additional information and requirements for using the Portal.

2.3 TEST KITS FOR METERS AND GAUGES

A. Test kits for meters and gauges shall be provided to the Owner new and in good condition. Previously used kits will be unacceptable. Kits shall be submitted prior to the Acceptance Phase. Kits included shall be as a minimum:
   1. Digital indication of temperature and pressure with associated sensors to work with the P/T test ports
   2. Companion readout kit (with fittings) for calibrated balancing valve with ranges as required by all devices on this project

PART 3 - EXECUTION

3.1 GENERIC START-UP DOCUMENTATION - GENERAL

A. Part III of this Section outlines ‘generic’ or minimally acceptable Start-Up Documentation (which are defined to include both ‘Start-Up Checks’ and ‘Start-Up Tests’) and individual systems training requirements for systems and equipment. These procedures are the direct responsibility of the Contractor as a basic element of validating that the installation is correct per normal quality control practices. These items shall provide a minimally acceptable guideline for required Contractor development of Start-Up Documentation. Contractor shall synthesize these minimum requirements along with their own internal quality control practices, those of the manufacturer, and any applicable codes and standards to develop specific and itemized final Start-Up Documentation specific to the equipment and systems installed on this project.

B. Section 01 91 00 defines the systems and equipment Start-Up process in detail and provides definitions for Start-Up Documentation, including the generic Start-Up Documentation provided below.

3.2 START-UP DOCUMENTATION COMMON TO ALL SYSTEMS

A. The following Start-Up Documentation (Checklists and Tests) shall be considered common to all systems:
   1. Checkout shall proceed from lower level devices to larger components to the entire system operation.
   2. Verify labeling is affixed per specification and visible.
   3. Verify prerequisite procedures are done.
   4. Inspect for damage and ensure none is present.
   5. Verify system is installed per the manufacturer’s recommendations.
   6. Verify system has undergone Start-Up per the manufacturer’s recommendations.
   7. Verify that access is provided for inspection, operation and repair.
   8. Verify that access is provided for eventual replacement of the equipment.
   9. Verify that record drawings, submittal data and O&M documentation accurately reflect the installed systems.
  10. Verify all gauges and test ports are provided as required by contract documents and manufacturer’s recommendations.
  11. Verify all recorded nameplate data is accurate.
  12. Verify that the installation ensures safe operation and maintenance.
  13. Verify specified replacement material/attic stock has been provided as required by the Contract Documents.
  14. Verify all rotating and moving parts are properly lubricated.
  15. Verify all monitoring and ensure all alarms are active and set per Owner’s requirements.
  16. Complete all nameplate data and confirm that ratings conform to the design documents.
3.3 VALVES

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions:
   1. Operate all valves, manual and automatic, through their full stroke. Ensure smooth operation through full stroke and appropriate sealing or shutoff.
   2. Verify actuators are properly installed with adequate clearance.
   3. Verify all valves are labeled per the construction documents. Confirm that concealed valves are indicated on the finished building surface.
   4. For automatic pneumatically-operated valves, verify spring range and adjust pilot positioners where applicable.
   5. For electronically operated valves, check the stroke and range.
   6. For all automated valves controlled by a program, ensure that the minimum and maximum stroke and ranges on the valves are coordinated with the limits entered in the program.

3.4 METERS AND GAUGES

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions:
   1. Adjust faces of meters and gauges to proper angle for best visibility.
   2. Clean windows of meters and gauges and factory-finished surfaces. Replace cracked and broken windows, and repair scratched and marred surfaces with manufacturer's touch-up paint.
   3. For meters and gauges requiring temporary manual connection of read-out device such as pressure taps on a flow measuring device, ensure threads are clean and that connection can be made easily.
   4. Meters and gauges requiring manual connection of readout device shall be installed with adequate access to allow connection of device with normal tools.

3.5 MECHANICAL IDENTIFICATION

A. Start-Up Checks: Perform the following checks:
   1. Verify all valve tags, piping, duct, and equipment labeling corresponds with drawings and indexes and meets requirements specified. Correct any deficiencies for all piping and duct systems.
   2. Adjusting: Relocate any mechanical identification device which has become visually blocked by work of this division or other divisions.
   3. Cleaning: Clean face of identification devices, and glass frames of valve charts.

3.6 MECHANICAL INSULATION

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Examine all piping, systems and equipment specified to be insulated.
   1. Ensure quality of insulation. Patch and repair all insulation damaged after installation.
   2. Ensure the integrity of vapor barrier around all cold surfaces.
3.7 PIPING - GENERAL

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: These procedures apply to all installed piping systems, including underground site utilities.
   1. Inspect all piping for proper installation, adequate support (with appropriate vibration isolation where applicable) and adequate isolation valves for required service.
   2. Submit welding certifications as required by the applicable specification section or referenced ASME specification.
   3. Submit certified welding inspection results per the applicable specification section or referenced ASME specification. ASME B31.1 requires 100% inspection based on pressure class.
   4. Provide notification of pipe cleaning and flushing activities.
   5. Flush and clean all piping and clean all strainers. Provide documentation of all related procedures.
   6. Ensure adequate drainage is provided at low points and venting is provided at high points.
   7. Ensure facilities to effectively drain and fill the system are in place.
   8. Ensure air is thoroughly removed from the system as applicable.
   9. Ensure all piping is adequately supported and anchored to allow expansion. Bump across-the-line pumps and inspect for excessive pipe movement.
   10. Provide notification of pressure testing.
   11. Pressure and/or leak test all applicable systems in accordance with the requirements in the applicable sections, ASME B 31.1 and 39.1 as applicable.
   12. Sterilize applicable piping systems as specified in the individual Sections and as required by regulatory authorities.
   13. Submit pressure test reports that document the pressure testing results with certification of the results.
   14. Verify the operation of applicable safety relief valves, operating controls, safety controls, etc. to ensure a safe installation.
   15. Set and adjust fill, pressure, or level controls to the required setting.

3.8 AC MOTORS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions:
   1. Verify proper alignment, installation, and rotation.
   2. Verify properly sized overloads are in place.

C. Start-Up Tests: Perform the following tests, measurements, or procedures during start-up and as specified in manufacturer's instructions:
   1. Measure insulation resistance, phase balance, and resistance to ground.
   2. Measure voltage available to all phases. Measure amps and RPM after motor has been placed in operation and is under load.
   3. Record all motor nameplate data.

3.9 BEARINGS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.
B. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions. This applies to all bearings on fans, pumps, compressors, and other equipment installed under this Division.
   1. Check alignment as applicable.
   2. Lubricate all bearings per the manufacturer's instructions. When bearing is used for temporary conditioning, lubricate on manufacturer's recommended frequency and document it.

C. Start-Up Tests: Perform the following tests, measurements, or procedures during start-up and as specified in manufacturer's instructions:
   1. Use infrared thermometer to measure temperature at peak conditions. Ensure temperature is below manufacturer's recommendations.
   2. For bearings in drives with motors over 10 HP, use a vibration meter and measure the maximum peak-to-peak acceleration. Compare it to the Vibration Severity Chart. Rectify any condition causing severity indicated as "Rough" or worse.

3.10 VARIABLE SPEED DRIVES

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Provide the services of a factory authorized service representative to test and inspect unit installation, provide start-up service, and to demonstrate and train Owner's maintenance personnel as specified below.

C. Start-Up Checks: Perform the following checks during start-up and as specified in manufacturer's instructions:
   1. Check unit for shipping damage.
   2. Perform a point-to-point continuity test for all field installed wiring interconnections. Verify terminations of field-installed wiring.
   3. Check for proper torque on connections.
   4. Verify use of shielded cable where specified and check that shields have been terminated properly.
   5. Verify grounding.
   6. Check motor nameplate against drive input rating.
   7. Manually rotate motor shaft to ensure free rotation.
   8. Check that motor leads are not grounded.

D. Start-Up Tests: Perform the following tests, measurements, or procedures during start-up and as specified in manufacturer's instructions. Ensure device and system which drive is serving is configured to withstand the device operation specified below.
   1. Adjust the 'Minimum Voltage Adjustment' to enable starting but not to draw excessive power at start.
   2. Adjust the 'Volts/Hz Adjustment' to proper setting.
   3. Adjust the 'Acceleration and Deceleration Rates' to the specified times.
   4. Adjust 'Current Limiting' to coordinate with the overcorrect device and protect the motor.
   5. Set the 'Maximum and Minimum Speed' pots.
   6. Manually ramp fan speed from minimum to maximum and check for excessive noise and vibration.
   7. Determine any critical speeds to avoid and set these in the drive.
   8. Check for acceptable voltage and current distortion on the power system. Record the input and output voltages and currents showing the harmonic content as a percentage of the base frequency.
   9. Measure and record overall efficiency at 50%, 75%, and 100%.
   10. Record the motor terminal voltage.
E. **Training:** Train Owner's maintenance personnel on procedures and schedules related to start-up and shutdown, troubleshooting, servicing, and preventative maintenance. Review data in manufacturer's Operation and Maintenance Manuals.

### 3.11 HYDRONIC PIPING

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. **Start-Up Checks:** Perform the following checks during start-up:
   1. Prepare hydronic and test piping in accordance with applicable Section and ASME B 31.9 and/or B 31.1.
   2. Flush system with clean water in accordance with applicable Section.
   3. Clean strainers.
   4. Check expansion tanks to determine that they are not air-bound and that the system is completely full of water.
   5. Set automatic fill valves for required system pressure.
   6. Check air vents at high points of systems and determine if all are installed and operating freely (automatic type) or to bleed air completely (manual type).
   7. Set and coordinate automatic fill pressure and relief valve settings.

C. **Start-Up Tests:** Perform the following tests, measurements, or procedures during start-up:
   1. Chemical Treatment: Provide a water analysis prepared by the chemical treatment supplier to determine the type and level of chemicals required for prevention of scale and corrosion. Perform initial treatment after completion of system testing.

### 3.12 STEAM AND CONDENSATE PIPING

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. **Start-Up Checks:** Perform the following checks during start-up:
   1. Prepare and test steam and condensate piping in accordance with applicable Section and ASME B31.9 and or B31.1 as applicable.
   2. Flush the system with clean water.
   3. Remove, clean, and replace strainer screens.
   4. Gradually warm-up piping and connected equipment. Introduce steam to piping system by throttling valves.
   5. Take precautions to prevent water hammer or slugging in piping.
   6. Vent air and non-condensable gases from system.
   7. Supervise condensate removal at system traps. Temporarily, bypass traps if required.
   8. Verify complete condensate removal from piping and equipment and that traps are functioning properly.

### 3.13 REFRIGERANT PIPING

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. **Start-Up Checks:** Perform the following checks during start-up:
   1. Examine rough-in for refrigerant piping systems to verify actual locations of piping connections prior to installation.
   2. Inspect, test, and perform corrective action of refrigerant piping in accordance with ASME Code B31.5, Chapter VI.
3. Verify actual evaporator applications and operating conditions, and adjust thermostatic expansion valve to obtain proper evaporator superheat requirements.

4. Clean and inspect refrigerant piping systems in accordance with the applicable section.

5. Adjust controls and safeties. Replace damaged or malfunctioning controls and equipment with new materials and products.

C. Training: Train Owner's maintenance personnel on procedures and schedules related to start-up and shut-down, troubleshooting, servicing, and preventative maintenance of refrigerant piping valves and refrigerant piping specialties.

3.14 PUMPS

A. Include all applicable "Start-Up Checks Common to All Systems". Additional Start-Up Checks and Tests are as follows.

B. Refer to ‘AC Motors’ in this Section.

C. Refer to ‘Bearings’ in this Section.

D. Refer to Division 23 Section "Testing, Adjusting, and Balancing" for detailed requirements for testing, adjusting, and balancing hydronic systems.

E. Start-Up Checks: Perform the following checks during start-up:
   1. Check suction lines connections for tightness to avoid drawing air into the pump.
   2. Clean and lubricate all bearings.
   3. Check motor for proper rotation. Rotation shall match direction of rotation marked on pump casing.
   4. Check that pump is free to rotate by hand. For pumps handling hot liquids, pump shall be free to rotate with the pump hot and cold. If the pump is bound or even drags slightly, do not operate the pump until the cause of the trouble is determined and corrected.
   5. Clean associated strainers.
   6. Check that the proper overloads have been installed in the starter and are the correct size.
   7. Verify that the integrity of the vibration isolation is maintained throughout the support and the connections.
   8. Align pump within manufacturers recommended tolerances.
   9. Ensure all associated piping has been cleaned, tested, and deaerated.
   10. Verify that all thermometers and gauges are installed, are clean and undamaged, and are functional.

F. Start-Up Tests: Perform the following tests, measurements, or procedures during start-up:
   1. Start the pump per the manufacturer’s instructions.
   2. Check the general mechanical operation of the pump and motor.
   3. Verify that checkvalve seal is appropriate.
   4. Check noise and vibration levels and ensure they are within the manufacturer’s recommended tolerances.
   5. Check that the NPSH is with that allowable for the operating condition.
   6. Refer to Division 23 Section "Testing, Adjusting, and Balancing" for detailed requirements for testing, adjusting, and balancing hydronic systems.

3.15 STEAM-TO-HOT WATER CONVERTERS

A. Include all applicable "Start-Up Checks Common to All Systems". Additional Start-Up Checks and Tests are as follows.
B. Refer to Division 23 Section "Testing, Adjusting, and Balancing".

C. Start-Up Checks: Perform the following checks during start-up:
   1. Ensure converters are cleaned and flushed upon completion of installation in accordance with manufacturer's start-up instructions.

D. Start-Up Tests: Perform the following tests during start-up:
   1. Hydrostatically test assembled converter and piping in accordance with applicable sections of ASME Boiler and Pressure Vessel Code.
   2. Start-up converters in accordance with manufacturer's start-up instructions.
   3. Test controls and demonstrate compliance with requirements.
   4. Replace damaged or malfunctioning controls and equipment.
   5. Record all parameters (flow, temperatures, pressures, etc.) and tests and submit report.

3.16 STEAM CONDENSATE PUMPS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Start-up condensate pumping equipment in accordance with manufacturer's start-up instructions. Test controls and demonstrate compliance with requirements.
   1. Refer to AC Motors.
   2. Refer to Pumps.

3.17 TERMINAL UNITS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following inspections/checks during start-up:
   1. After construction is completed, including painting if applicable, clean unit exposed surfaces.
   2. Vacuum-clean terminal coils and inside of cabinets.
   3. Clean factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer's touch-up paint.
   4. Verify adequate access for maintenance.
   5. Check power and control voltages.
   6. Check rotation of fan where applicable.
   7. Check calibration and operation of the controlling elements.
   8. Check control valves for required close-off and fail position.
   9. Install new filter units for terminals requiring same.

3.18 VAV TERMINAL UNITS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Refer to and coordinate with Division 23 Section "Testing, Adjusting, and Balancing".

C. Start-Up Checks: Perform the following inspections/checks during start-up:
   1. After construction is completed, including painting if applicable, clean exposed unit surfaces.
   2. Clean factory-finished surfaces. Retouch any marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.
3. Ensure unit is properly supported and that integrity of vibration isolation has been maintained where applicable.
4. Ensure that air velocity sensor is correctly installed and that inlet/outlet restrictions for accurate measurements have been met.
5. Ensure air inlet is free of obstructions. Start fans and ensure proper rotation (as applicable). Measure and record motor amperage and voltage.
6. Ensure the coils are undamaged, combed, and vented.
7. Check the heating device and control to ensure functionality and proper installation. Check stroke and range on the valve and ensure it closes and seals tightly.

D. Start-Up Tests: Perform the following during start-up:
1. Calibrate and adjust the airflow control parameters. Set applicable min and max setpoints. Coordinate with the ATC contractor as necessary to obtain flow parameters required.
2. Install new filters where required.
3. Set all temperature and humidity setpoints to those as directed by Owner.
4. Record supply air temperature at full cooling and at full heating (compare both with current air handler temp)

3.19 CENTRAL-STATION AIR HANDLING UNITS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Provide the services of a factory-authorized service representative to test and inspect unit installation, provide startup service, and to demonstrate and train Owner's maintenance personnel as specified below.

C. References: The following additional Sections shall also apply:
1. Refer to AC Motors in this Section.
2. Refer to Fans in this Section.
3. Refer to Bearings in this Section.
4. Refer to Division 23 Section "Testing, Adjusting, and Balancing" for procedures for air-handling-system testing, adjusting, and balancing.
5. Refer to Division 23 Section “BAS Commissioning” for procedures for starting the controls related to the AHU.

D. Start-Up Checks: Perform the following inspections/checks during start-up:
1. Inspect the field assembly of components and installation of central-station air-handling units including piping, ductwork, and electrical connections.
2. Cleaning: Clean unit cabinet interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheel, fan cabinet, and coils entering air face. Ensure volatile irritants are contained and kept out of occupied spaces.
3. Adjust and lubricate dampers and linkages for proper damper operation.
4. For field fabricated units, ensure the sections are properly connected within acceptable tolerances.
5. Seal all penetrations to be air-tight and ensure access doors seat tightly.
6. Verify that unit is secure on mountings and supporting devices and connections for piping, ductwork, and electrical are complete.
7. Verify proper thermal overload protection is installed in motors, starters, and disconnects.
8. Ensure vibration isolation integrity is maintained throughout the AHU installation and its connections.
9. Tension all belts per the drive manufacturer’s recommendations.
10. Disconnect fan drive from motor and verify proper motor rotation direction and verify fan wheel free rotation and smooth bearings operations. Reconnect fan drive system, align belts, and install belt guards.
11. Lubricate bearings, pulleys, belts, and other moving parts with factory-recommended lubricants.

13. Install clean filters.

14. Ensure condensate drains properly and that trap is adequate.

15. Stroke all valves and damper to ensure free and full travel.

E. Start-Up Tests: Perform the following during start-up:
1. Pressure test units as required in the AHU specification

F. Training: Contractor shall train Owner's maintenance personnel including:
1. Procedures and schedules related to start-up and shutdown, troubleshooting, servicing, preventative maintenance, and how to obtain replacement parts.
2. Familiarization with contents of manufacturer's Operating and Maintenance Manuals.

3.20 FANS

A. Include all applicable "Start-Up Checks Common to All Systems". Additional Start-Up Checks and Tests are as follows.

B. References: The following additional Sections shall also apply:
1. Refer to AC Motors in this Section.
2. Refer to Bearings in this Section
3. Refer to Division 23 Section "Testing, Adjusting, and Balancing" for procedures for air-handling-system testing, adjusting, and balancing.
4. Refer to Division 23 Section "BAS Commissioning" for procedures for starting the controls related to the AHU.

C. Start-Up Checks: Perform the following inspections/checks during start-up:
1. Inspect the field assembly of components and installation of central-station air-handling units including piping, ductwork, and electrical connections.
2. Clean unit cabinet interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheel, fan cabinet, and coils entering air face. Ensure volatile irritants are contained and kept out of occupied spaces.
3. Adjust and lubricate dampers and linkages for proper damper operation.
4. Verify that unit is secure on mountings and supporting devices and connections for ductwork, and electrical are complete. Verify proper thermal overload protection is installed in motors, starters, and disconnects.
5. Ensure vibration isolation integrity is maintained with the fan installation and associated connections.
6. Disconnect fan drive from motor and verify proper motor rotation direction and verify fan wheel free rotation and smooth bearings operations. Reconnect fan drive system, align belts, and install belt guards.
7. Lubricate bearings, pulleys, belts, and other moving parts with factory-recommended lubricants.
8. Stroke all dampers to ensure free and full travel.

D. Training: Contractor shall train Owner's maintenance personnel including:
1. Procedures and schedules related to start-up and shut down, troubleshooting, servicing, preventative maintenance, and how to obtain replacement parts.
2. Familiarization with contents of manufacturer's Operating and Maintenance Manuals.
3.21 AIR CLEANING AND FILTERS

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Operate installed air filters to demonstrate compliance with requirements. Test for air leakage of unfiltered air while system is operating. Correct malfunctioning units at site, then retest to demonstrate compliance; otherwise remove and replace with new units, and proceed with re-testing.

3.22 METAL DUCTWORK

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Temporary Closure: At ends of ducts which are not connected to equipment or air distribution devices at time of ductwork installation, provide temporary closure using polyethylene film or other covering which will prevent entrance of dust and debris until time connections are to be completed.

C. Start-Up Checks: Perform the following checks during start-up and as specified:
   1. Clean ductwork internally of dust and debris, unit-by-unit as it is installed. Clean external surfaces of foreign substances which might cause corrosive deterioration of metal or, where ductwork is to be painted, might interfere with painting or cause paint deterioration.
   2. Strip protective paper from stainless ductwork surfaces if applicable, and repair finish wherever it has been damaged.

D. Start-Up Tests: In addition to specifications, perform the following as a minimum:
   1. Leakage Tests: After each duct system which is constructed for duct classes over 3" is completed, test for duct leakage in accordance with SMACNA HVAC Air Duct Leakage Test Manual. Repair leaks and repeat tests until total leakage is less than 1% of system design air flow.
   2. Balancing: Refer to Division-23 section "Testing, Adjusting, and Balancing" for air distribution balancing of metal ductwork; not work of this section. Seal any leaks in ductwork that become apparent in balancing process.

3.23 DUCTWORK ACCESSORIES

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified:
   1. Cleaning: Clean factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer's touch-up paint.

C. Start-Up Tests: In addition to specifications, perform the following as a minimum:
   1. Operate installed ductwork accessories to demonstrate compliance with requirements. Test for air leakage while system is operating. Repair or replace faulty accessories, as required to obtain proper operation and leak proof performance.
   2. Label access doors in accordance with Division 23 Section "Mechanical Identification".
   3. Adjusting: Adjust ductwork accessories for proper settings, install fusible links in fire dampers and adjust for proper action.
   4. Final positioning of manual dampers is specified in Division 23 Section "Testing, Adjusting, and Balancing".
5. Fire Damper Testing: For every fire damper, remove the fusible link and verify that the damper operates freely and closes tightly. Reinstall the fusible link.

3.24 AIR TERMINALS

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Upon completion of installation and prior to initial operation, check that air terminals are:
   1. Properly installed with the proper airflow direction.
   2. Properly supported with vibration isolation integrity maintained where applicable.
   3. Duct connections to air terminals are leak-tight.
   4. Operable dampers travel free.
   5. Airflow measuring devices are properly installed and connected.
   6. Repair or replace air terminals and duct connections as required to eliminate leaks, and retest to demonstrate compliance.
   7. Clean exposed factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer's touch-up paint.

3.25 BUILDING AUTOMATION AND CONTROL SYSTEMS

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Start-Up Checks: Perform the following checks during start-up and as specified:
   1. Cleaning: Clean factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer's touch-up paint.

C. Start-Up Tests: Refer to Section 230801 “BAS Commissioning”. This requires manufacturers authorized representative to start-up, test, adjust, and calibrate direct digital and other microprocessor-based control systems and demonstrate compliance with requirements. This will include verification of sequences, normal and emergency operations, calibration, interfaces, and interlocks, etc.

3.26 TESTING, ADJUSTING, AND BALANCING

A. Reference: Perform testing, adjusting, and balancing (TAB) procedures on each system identified, in accordance with the detailed procedures outlined in the respective section and the referenced standards.

B. Start-Up Checks: In addition to specifications, perform the following as a minimum:
   1. Cut insulation, ductwork, and piping for installation of test probes to the minimum extent necessary to allow adequate performance of procedures.
   2. Patch insulation, ductwork, and housings, using materials identical to those removed.
   3. Seal ducts and piping, and test for and repair leaks.
   4. Seal insulation to re-establish integrity of the vapor barrier.
   5. Mark equipment settings, including damper control positions, valve indicators, fan speed control levers, and similar controls and devices, to show final settings. Mark with paint or other suitable, permanent identification materials.
   6. Retest, adjust, and balance systems subsequent to significant system modifications, and resubmit test results.
   7. Test and adjust mechanical systems for sound and vibration in accordance with the detailed instructions of the referenced standards.
C. Training:
1. Train the Owner's maintenance personnel on troubleshooting procedures and on testing, adjusting, and balancing procedures.
2. Review for the Owner’s personnel the locations of TAB reports and data.

3.27 ROOM/ZONE CHECKOUT

A. Include all applicable ‘Start-Up Checks Common to All Systems’. Additional Start-Up Checks and Tests are as follows.

B. Contractor shall complete a checklist acknowledging completion of Div. 23 responsibilities for all rooms. Checklist shall include items such as the following as applicable:

C. Typical Room:
1. Diffusers, registers, and grilles installed and cleaned.
2. Zone controls in place and functional.
3. All terminal equipment functional, clean, and punched out.
4. Occupancy schedules entered with applicable control setpoints.

3.28 SEQUENCING ILLUSTRATION

A. Reference Section 01 91 00.

END OF SECTION 230800
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 23 08 01 – BUILDING AUTOMATION SYSTEM (BAS) COMMISSIONING

PART 1 - GENERAL

1.1 WORK INCLUDED

A. BAS Start-Up and Functional Performance Testing.

B. Validation of proper and thorough installation of BAS and associated equipment.

C. Generic Start-Up Documentation for BAS.

D. Development of final Start-Up Documentation for BAS.

E. Functional Performance Testing of BAS.

F. Coordination of BAS-related training.

G. Documentation of BAS Operation and Maintenance Documentation.

1.2 GENERAL DESCRIPTION

A. This section defines responsibilities of the Building Automation System Contractor to commission the BAS.

B. Commissioning (Cx) is the process of ensuring that (i) all building systems are installed and perform interactively according to the design intent; (ii) systems are efficient and cost effective and meet the Owner’s operational needs; (iii) that the installation is accurately documented; and (iv) that the Operators are adequately trained. Commissioning serves as a tool to minimize post-occupancy operational problems, and establishes testing and communication protocols to advance the building systems from installation to optimized, fully-dynamic operation.

C. Commissioning Authority (CxA) shall work with the Contractor and the design engineers to direct and oversee the Cx process and perform Functional Performance Testing.

D. The Commissioning Plan outlines the Cx process beyond the Construction Contract, including design phase activities and design team/owner responsibilities. The specification Sections dictate all requirements of the commissioning process relative to the construction contract. The Cx Plan is not part of the construction contract, although it is available for reference at the request of the Contractor.

1.3 SCOPE

A. The scope of Commissioning on this project shall include the entire BAS system.

1.4 RELATED WORK AND DOCUMENTS

A. The Cx process references many related Sections, particularly Section 01 91 00 - General Commissioning. It is important for all Contractors subject to the Cx process to be familiar with Section 01 91 00.

B. Refer to Section 01 91 00 for a complete list of Sections on Related Work.
C. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification sections, apply to work of this section.

1.5 DEFINITIONS AND ABBREVIATIONS

A. Refer to Section 01 91 00 for a complete list of Definitions and Abbreviations.

B. POT (Portable Operators Terminal): Portable operator workstation (typically a laptop computer) that has BAS software loaded and the capability to access, program, and edit the BAS.

C. HHD (Hand-Held Device): Portable device (typically with limited functionality) that is used to access components of the BAS. May be a standard PDA or proprietary device/interface.

1.6 REFERENCE STANDARDS

A. Refer to Section 01 91 00 for a complete list of Reference Standards.

1.7 CONTRACTOR RESPONSIBILITIES

A. General responsibilities of the BAS Contractor (BAC) are specified in Section 01 91 00. The following indicate additional specific responsibilities of the BAS Contractor.

B. Assist CxA in verification and Functional Performance Testing. Assistance will typically include the following:
   1. Establish trend logs of system operation as specified herein.
   2. Manipulate systems and equipment to facilitate Functional Performance Testing as outlined in Section 01 91 10 and Section 01 91 11. Typically, this will only be for initial samples of like systems.
   3. Provide POTs or operator workstations in locations convenient to testing activities as specified below.
   4. Provide CxA with appropriate passwords, keys, and access to control panels and workstations.
   5. Where control systems do not allow a test mode or the overriding of physical input values for testing, program an interim virtual point for all inputs that can be used to represent the point and be overridden for testing.

C. Provide a control technician to work at the direction of the CxA for software optimization assistance for a minimum of 16 hours during the Acceptance Phase of the project.

D. Controls Parameter Matrix: Contractor shall provide a form summarizing all setpoints and alarm parameters and alarming strategies for the Owner to complete. Organize a meeting to discuss the desired initial setpoints and alarm parameters. Contractor shall enter the requested setpoints and alarm parameters at completion of start-up and record the applicable settings in the Start-Up Documentation.

E. Final Systems Operation Training: The BAC shall train the Owner and Operators on whole-building operation and use of the BAS. This training shall focus primarily on BAS control of building systems and operation and its impact on building performance, and shall be conducted after Functional Completion. Additional information is provided in Section 01 91 00.

F. Compensate the Owner for any BAS Contractor site time incurred due to incompleteness of systems or equipment at time of Functional Performance Testing. All testing failures which require on-site time for retesting will be considered actual damages to the Owner. The contract sum shall be reduced by contract modification at a rate of $145 per worker-hour of on-site time.
necessary to retest failures. All parties under contract with the Owner who are affected by the retesting shall be included in the contract modification. Refer to Section 01 91 00 and 01 91 10 for more details.

1.8 SEQUENCING

A. Refer to Section 01 91 00.

B. The following list outlines the general sequence of events for Commissioning of the BAS.

1. Construction Phase:
   a. Collaborate on construction scheduling.
   b. Submit Product data and Shop Drawings, and receive approval.
   c. Meet with Cx Team to coordinate with all trades.
   d. Begin BAS installation.
   e. Submit refinement of generic Start-Up Documents incorporating manufacture-specific start-up requirements accompanied by manufacturers pre-printed start-up forms for all equipment provided by the BAS Contractor.
   f. Receive BAS Start-Up Documents approval from CxA.
   g. Submit Training Plan content.
   h. Receive approval of Training Plan content.
   i. Provide alarm list and receive approval.
   j. Provide sample graphics and receive approval.
   k. Complete BAS installation.
   l. Place systems under BAS control.
   m. Enter alarms as approved by Owner.
   n. Complete BAS graphics.
   o. Perform BAS system start up and complete Start-Up Documentation.
   p. Submit completed BAS Start-Up Documentation.
   q. Prepare and initiate trend log data storage and format trend graphs.
   r. Train Owner on BAS operation and maintenance.
   s. Formal BAS System Turn-Over Meeting.
   t. Submit commissioning BAS Software/Access and provide checkout technician level (monitoring, point override/test, and setpoint adjustment) password access to Owner and CxA.
   u. Receive BAS Start-Up Documentation approval and approval to schedule BAS demonstration of completeness.
   v. Demonstrate systems to CxA and Owner.
   w. Submit trend logs in format specified.
   x. Receive FPT or BAS demonstration approval and approval to schedule Acceptance Phase.

2. Acceptance Phase
   a. Demonstrate the systems are available and ready for functional testing which enables start of Functional Performance Testing.
   b. CxA performs Functional Performance Testing and BAS Contractor participates as outlined in 01 91 10.
   c. Two-week BAS Observation Period to witness stable BAS operation.
   d. Receive Functional Completion approval for the BAS.

3. Substantial Completion.

4. Warranty Phase
   a. Provide administrator access password access to Owner.
   b. Train Owner on final sequences and modes of operation (Final Systems Operation Training).
   c. Update Systems Manual content with any changes.
   d. Revise and re-submit record drawings and O&M manuals.
   e. Install framed control drawings.
f. Final Completion.
g. Opposite-season operational test and Functional Performance Testing.
h. Receive opposite-season operational test and FPT approval.
i. Revise and re-submit record drawings and O&M manuals.
j. Update framed control drawings.
k. Complete owner training.
l. End of Warranty Period.

PART 2 - PRODUCTS

2.1 INSTRUMENTATION

A. General: All testing equipment used by any Party shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. If not otherwise noted, the following minimum requirements apply:

B. Temperature sensors and digital thermometers shall have a certified calibration within the past year and a resolution of +/- 0.1°F.

C. Pressure sensors shall have an accuracy of +/- 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

D. All equipment shall be calibrated according to the manufacturer’s recommended intervals. Calibration tags shall be affixed or certificates readily available.

E. Standard Testing Instrumentation: Standard instrumentation used for testing air and water flows, temperatures, humidity, noise levels, amperage, voltage, and pressure differential in air and water systems related to functional testing shall be provided by CxA.

F. Special Tools: Special equipment, tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment, according to these Contract Documents shall be included in the base bid price to the Contractor and turned over to the Owner upon project completion.

1.2 WEB-BASED COMMISSIONING PORTAL

A. General: The Cx Portal (‘Portal’) is a Web-based Internet hub used to electronically collaborate and coordinate activities and deliverables throughout the Cx process. The Portal is hosted by the CxA and shall be accessible to all Parties participating in the Cx program. The Portal provides a common location to store Start-Up Documentation, Functional Performance Tests and results, project documents and deliverables. It also serves as a collaborative email hub to facilitate, automate, and track communications between Parties relating to the Cx process. The Portal uses a hierarchical object tree to represent building systems, components and devices. From this object tree, one can access associated information at and below the applicable level. All applicable elements of information are associated with the object tree. The Portal facilitates either completing information directly via the software or by printing forms to fill out in the field.

B. Participation: All general and major subcontractors participating in the Cx process shall participate in the use of the Portal to document the Cx procedures.

C. Requirements for Use: Options for accessing and interfacing with the Cx Portal are as follows:
   1. Print, Test, and File: Using this approach, Contractors simply go online to the Portal using a web browser, print checklists and tests as needed, fill them out in the field, and enter the results back into the Portal database when completed.
2. **Online in the Field:** The applicable documents can be accessed and filled out live and online if the Contractor has the means to access the Internet while working in the field using a local Wi-Fi network or wireless air card.

3. **Database Client:** At the Contractor's option, the CxA can provide the Contractor with a software tool that will allow the Contractor to download electronic test database files from the Portal, work on the database files in the field electronically (but offline), and later synchronize their entries with the master database on the Portal.

D. **Portal Training:** Included in the contract are two Contractor training sessions given by the CxA (one scheduled near the Construction Phase Cx Kickoff Meeting and one scheduled prior to the first equipment Start-Up). Contractors shall send at least one representative to at least one training session. Each Contractor is entitled to two hours phone technical support beyond training sessions.

### 1.3 TAB & COMMISSIONING PORTABLE OPERATORS TERMINAL

A. **Provide the CxA with all software, connection devices, licenses, passwords, etc. to facilitate connection to the BAS throughout the building.** Provide a license to graphic software, and all operating software necessary for testing and configuration of all control elements at all levels. License may be a temporary license that will expire after the completion of the Warranty Period. Options include:
   1. A laptop computer provided by BAS Contractor for dedicated use by the CxA throughout the Construction and Acceptance Phases. This would be turned over to the Owner at the end of the Acceptance Phase.
   2. **Browser access to the full graphic software:** CxA will provide laptop, however BAS Contractor shall set up the laptop to successfully connect.
   3. Licensed client software to be installed on CxA computer: BAS Contractor shall install the software and ensure it is functional.
   4. **Terminal Services session access to a graphic server with required CALs to allow use of all required software.** BAS Contractor shall configure the CxA computer to connect to the terminal session.

B. **Access to the BAS must be provided throughout the building as more fully defined as follows:**
   1. Full wireless connection to the graphic server throughout the building will be adequate.
   2. Network connection for full access to the graphic server within 50' of any point in the building.
   3. Exception to 1 and 2 above: An acceptable alternative to full building access to the graphic server relating to terminal controls shall be providing to the CxA the devices and software required to connect to local terminal controllers through a connection port in the space such as connection to a jack on the temperature sensor (basically what is required by TAB specified below). This does not apply to mechanical rooms as full graphic access is required in mechanical rooms.

C. **Provide software required by TAB to calibrate all flow sensors.** TAB will provide computer to be used as a portable operator's terminal. Any manufacturer specific hardware such as connection cables, converters, hand held devices, etc. shall be provided by the BAS Contractor.

D. **Connections shall be provided local to the device being calibrated.** For instance, for VAV boxes, connection of the operator’s terminal shall be either at the sensor as well as at the box. Otherwise a wireless system shall be provided to facilitate this local functionality.
PART 2 - EXECUTION

2.1 BAS START-UP TESTING, ADJUSTING, CALIBRATION

A. BAS work and/or systems shall be fully functioning prior to Demonstration and Acceptance Phase. Contractor shall start, test, adjust, and calibrate all work and/or systems under this contract, as described below:

1. Inspect the installation of all devices. Review the manufacturer’s installation instructions and validate that the device is installed in accordance with them.
2. Verify proper electrical voltages and amperages, and verify that all circuits are free from faults.
3. Verify integrity/safety of all electrical connections.
4. For the following control settings, initially use the control setting that was used by the existing BAS unless otherwise indicated. For AHUs that use a throttled outside air damper position when minimum outside air is required, Contractor shall mark existing minimum outside air damper position to allow replication by new BAS installation.
5. Coordinate with TAB Contractor to obtain and with CxA to fine tune control settings that are determined from balancing procedures. Record the following control settings as obtained from TAB Contractor, and note any TAB deficiencies in the BAS Start-Up Documentation:
   a. Optimum duct static pressure setpoints for VAV air handling units.
   b. Minimum outside air damper settings for air handling units.
   c. Optimum differential pressure setpoints for variable speed pumping systems.
   d. Calibration parameters for flow control devices such as VAV boxes and flow measuring stations. BAS Contractor shall provide hand held device as a minimum to the TAB and CxA to facilitate calibration. Connection for any given device shall be local to the device (i.e., at the VAV box or at the thermostat). HHD or POT shall allow querying and editing of parameters required for proper calibration and Start-Up.
6. Test, calibrate, and set all digital and analog sensing and actuating devices. Calibrate each instrumentation device by making a comparison between the BAS display and the reading at the device, using an instrument traceable to the National Bureau of Standards, which shall be at least twice as accurate as the device to be calibrated (e.g., if field device is +/-0.5% accurate, test equipment shall be +/-0.25% accurate over same range). Record the measured value and displayed value for each device in the BAS Start-Up Documentation.
7. Check and set zero and span adjustments for all transducers and transmitters.
8. For dampers and valves:
   a. Check for adequate installation including free travel throughout range and adequate seal.
   b. Where control loops are sequenced, check for proper control without overlap.
9. For actuators:
   a. Check to insure that device seals tightly when the appropriate signal is applied to the operator.
   b. Check for appropriate fail position, and that the stroke and range is as required and coordinated with the programmed ranges when it is operating under normal conditions.
   c. For pneumatic operators, adjust the operator spring compression as required to achieve close off. If positioner or volume booster is installed on the operator, calibrate per manufacturer’s procedure to achieve spring range indicated. Check split range positioners to verify proper operation. Record settings for each device.
   d. Check the stroke and range under actual loading conditions and validate that they correlate with programmed values.
   e. For sequenced electronic actuators, calibrate per manufacturer’s instructions to required ranges.
10. Check each digital control point by making a comparison between the control command at the CU and the status of the controlled device. Check each digital input point by making a comparison of the state of the sensing device and the OI display. Record the results for each device.

11. For outputs to reset other manufacturers devices (such as VSDs) and feedback from them, calibrate ranges to establish proper parameters. Coordinate with representative of the respective manufacturer and obtain their approval of the installation.

12. Verify proper sequences by using the approved Start-Up Documentation to record results. Verify proper sequence and operation of all specified functions.

13. Verify that all safety devices trip at appropriate conditions. Adjust setpoints accordingly.

14. Tune all control loops to obtain the fastest stable response without hunting, offset or overshoot. Record tuning parameters and response test results for each control loop in the BAS Start-Up Documentation. Except from a start-up, maximum allowable variance from setpoint for controlled variables under normal load fluctuations shall be as follows. Within 3 minutes of any step-change (for which the system has the capability to respond) in the control loop, the following tolerances shall be maintained (exceptions noted):
   a. Duct air temperature: ±1°F
   b. Zone temperature: ±3°F within 3 minutes and control within ±2°F
   c. Chilled water temperatures: ±1°F
   d. Hot water temperatures: ±2°F
   e. Duct air pressure: ±0.25” w.g.
   f. Water pressure: ±1 psid
   g. Duct relative humidity: ±3% when adding humidity
   h. Zone relative humidity: ±5% when adding humidity
   i. Terminal air flow control: ±5% of setpoint. This includes all VAV terminal control and exhausted BSCs, canopy hoods, ventilated cage racks, necropsy tables, and other scientific equipment with supply or exhaust ventilation.

15. For communication interfaces and BAS control panels:
   a. Ensure devices are properly installed with adequate clearance for maintenance and with clear labels in accordance with the record drawings.
   b. Ensure that terminations are safe, secure and labeled in accordance with the record drawings.
   c. Check power supplies for proper voltage ranges and loading.
   d. Ensure that wiring and tubing are run in a neat and workman-like manner, either bound or enclosed in trough.
   e. Check for adequate signal strength and acceptable bandwidth utilization on communication networks.
   f. Check for stand-alone performance of controllers by disconnecting the controller from the LAN. Verify the event is annunciated at Operator Interfaces. Verify that the controlling LAN reconfigures as specified in the event of a LAN disconnection.
   g. Ensure that all outputs and devices fail to their proper positions/states.
   h. Ensure that buffered and/or volatile information is retained through power outage.
   i. With all system and communications operating normally and all trends functioning, sample and record update/annunciation times for critical alarms fed from the panel to the Operator Interface.
   j. Check for adequate grounding of all BAS panels and devices.
   k. Run self diagnostic routines and ensure they are functional.
   l. Check the memory allocation and loading to ensure adequate and excess capacity is available and that it will not affect control functionality.

16. Coordinate desired initial alarm strategies with Owner’s Operators. Set all required alarms and document the initial settings in the Start-Up Documentation.

17. Coordinate all initial setpoints with Owner’s Operators. Ensure those setpoints are active.

18. For Operator Interfaces:
a. Verify that all elements on the graphics are functional and are properly bound to physical devices and/or virtual points, and that hot links or page jumps are functional and logical.
b. Output all specified BAS reports for review and approval.
c. Verify that the alarm printing and logging is functional and per requirements.
d. Verify that trend archiving to disk and provide a sample to the CxA for review.
e. Verify alarm enunciation functionality. Time delay from actual occurrence to the time updated or enunciated on the screen. Ensure it is per the specified requirements.
f. Verify that real time and historical trends are accessible and viewable in graph format.
g. Verify that paging/dial out alarm annunciation is functional.
h. Verify the functionality of remote OIs and that a robust connection can be established consistently.
i. Verify that required third party software applications required with the bid are installed and are functional.
j. Demonstrate open protocol and custom third party interfaces reliably communicate and check response time.
k. Verify response times and screen update and refresh times are per the requirements.
l. Verify that all custom programs are editable from the OI. Check upload, download, back up and restore capabilities of system configuration information as well as custom programs.
m. Verify schedules are set up and working.
n. Verify Owner stipulated security and permissions is set up and functional.
o. In concert with the Building Power Outage test, validate that critical GUI installations are properly powered by UPS and emergency outlets to keep it functional during a power outage. Validate that the space has adequate lighting to manage the building in the event of an outage.

19. Start-up and check out control air compressors and air drying and filtering systems in accordance with the appropriate section and with manufacturer’s instructions.
   a. Validate adequate deliver and pressures
   b. Validate adequate redundancy
   c. Validate max run time and cycle time vs manufacturer’s recommendations
   d. Validate that routing of the compressed air does not result in condensation at any point in the system when used with the specified drier
   e. Check all PRVs both primary and back up to ensure adequate functionality and maintenance of downstream pressure

21. Verify proper interface with control panels of equipment with self-contained controls that are being monitored by the BAS.

B. Submit Start-Up Documentation. This shall be completed, submitted, and approved prior to demonstration and Acceptance Phase.

2.2 SENSOR CHECKOUT AND CALIBRATION

A. General Checkout: Verify that all sensor locations are appropriate and are away from causes of erratic operation. Verify that sensors with shielded cable are grounded only at one end. For sensor pairs that are used to determine a temperature or pressure difference, make sure they are reading within 0.2°F of each other for temperature and within a tolerance equal to 2% of the reading of each other for pressure. Tolerances for critical applications may be tighter.

B. Calibration: Calibrate all sensors using one of the following procedures:
1. Sensors Without Transmitters—Standard Application. Make a reading with a calibrated test instrument within 6 inches of the site sensor at various points across the range. Verify that the sensor reading (via the permanent thermostat, gage or BAS) is within the tolerances specified for the sensor. If not, adjust offset and range, or replace sensor. Where sensors are subject to wide variations in the sensed variable, calibrate sensor within the highest and lowest 20% of the expected range.

2. Sensors With Transmitters—Standard Application. Disconnect sensor. Connect a signal generator in place of sensor. Connect ammeter in series between transmitter and BAS control panel. Using manufacturer’s resistance-temperature data, simulate minimum desired temperature. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the OI. Record all values and recalibrate controller as necessary to conform to tolerances. Reconnect sensor. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage or BAS) is within the tolerances specified. If not, replace sensor and repeat. For pressure sensors, perform a similar process with a suitable signal generator.

C. Sensor Tolerance: Sensors shall be within the tolerances specified for the device.

2.3 LOOP TUNING

A. For all control loops, Contractor shall tune the loops to ensure the fastest stable response without hunting, offset or overshoot with tolerances defined above. Contractor shall introduce upsets to the load when possible to affect response. Otherwise, setpoints can be changed to affect the response.

B. Generally tune loops during periods of high gain.

C. Document all parameters either by capturing text, short interval trends, or screen shots of trend graph documenting the final response.

2.4 COIL VALVE LEAK CHECK

A. Verify proper close off of the valves. Ensure the valve seats properly by simulating the maximum anticipated pressure difference across the circuit. Calibrate air temperature sensors on each side of coil to be within 0.5°F of each other. Via the OI, command the valve to close. Energize fans. After 5 minutes, observe air temperature difference across coil. If a temperature difference is indicated, and the piping surface temperature entering the coil is within 3°F of the water supply temp, leakage is probably occurring. If it appears that it is occurring, close the isolation valves to the coil to ensure the conditions change. If they do, this validates the valve is not closing. Remedy the condition by adjusting the stroke and range, increasing the actuator size/torque, replacing the seat, or replacing the valve as applicable.

2.5 VALVE STROKE SETUP AND CHECK

A. For all valve and actuator positions checked, verify the actual position against the OI readout.

B. Set pumps to normal operating mode. Command valve closed, verify that valve is closed, and adjust output zero signal as required. Command valve open, verify position is full open and adjust output signal as required. Command valve to a few intermediate positions. If actual valve position doesn’t reasonably correspond, replace actuator or add pilot positioner (for pneumatics)
2.6 **ALARM SETPOINT COORDINATION**

A. The Contractor shall prepare a list of all conceptual point types and recommend the types and recommended alarming strategies and setpoint for review of CxA and Owner. Owner shall use this alarm list to provide direction to Contractor for alarm strategies and setpoints. Alarm list shall be provided at least two months prior to the first functional test. Contractor shall have alarm setpoints entered prior to functional testing. Omitting an alarm setting, using the wrong strategy, or entering the wrong setpoints will be considered a failure from the perspective of the functional test.

2.7 **GRAPHIC COORDINATION**

A. The Contractor shall prepare all graphics (only one example graphic is required for typical systems like terminal units) with points embedded for review of CxA and Owner. Owner shall use these graphics to provide direction to Contractor for the required final graphic. All final graphics must be complete and active before functional testing. Any deviation from the approved graphics will be considered a failure from the perspective of the functional test.

2.8 **BAS DEMONSTRATION**

A. Demonstrate the operation of the BAS hardware, software, and all related components and systems to the satisfaction of the CxA and Owner. Schedule the demonstration with the Owner's representative 1 week in advance. Demonstration shall not be scheduled until all hardware and software submittals, and the Start-Up Test Report are approved. If the Work fails to be demonstrated to conform with Contract specifications, so as to require scheduling of additional site visits by the CxA for re-demonstration, Contractor shall reimburse Owner for costs of subsequent CxA site visits.

B. The Contractor shall supply all personnel and equipment for the demonstration, including, but not limited to, instruments, ladders, etc. Contractor supplied personnel must be competent with and knowledgeable of all project-specific hardware, software, and the HVAC systems. All training documentation and submittals shall be at the job site.

C. Demonstration shall typically involve small representative samples of systems/equipment randomly selected by the Owner and CxA.

D. The system shall be demonstrated following the same procedures used in the Start-Up Test by using the approved Commissioning Checklists. Demonstration shall include, but not necessarily be limited to, the following:
   1. Demonstrate that required software is installed on BAS workstations. Demonstrate that graphic screens, alarms, trends, and reports are installed as submitted and approved.
   2. Demonstrate that points specified and shown can be interrogated and/or commanded (as applicable) from all workstations, as specified.
   3. Demonstrate that remote dial-up communication abilities are in accordance with these Specifications.
   4. Demonstrate correct calibration of input/output devices using the same methods specified for the start-Up tests. A maximum of 10 percent of I/O points shall be selected at random by CxA and/or Owner for demonstration. Upon failure of any device to meet the specified end-to-end accuracy, an additional 10 percent of I/O points shall be selected at random by CxA for demonstration. This process shall be repeated until 100 percent of randomly selected I/O points have been demonstrated to meet specified end-to-end accuracy.
   5. Demonstrate that all BAS and other software programs exist at respective field panels. The BAS programming and point database shall be as submitted and approved.
   6. Demonstrate that all BAS programs accomplish the specified sequences of operation.
   7. Demonstrate that the panels automatically recover from power failures, as specified.
8. Demonstrate that the stand-alone operation of panels meets the requirements of these Specifications. Demonstrate that the panels’ response to LAN communication failures meets the requirements of these Specifications.

9. Identify access to equipment selected by CxA. Demonstrate that access is sufficient to perform required maintenance.

10. Demonstrate that required trend graphs and trend logs are set up per the requirements. Provide a sample of the data archive. Indicate the file names and locations.

E. BAS Demonstration shall be completed and approved prior to Functional Performance Testing. CxA shall determine if the system is ready for Functional Performance Testing and document any problems requiring Contractor attention.

1. If the systems are not ready for Functional Performance Testing, Contractor shall correct problems and provide notification to the Owner’s representative that all problems have been corrected. The Acceptance Period shall be restarted at a mutually scheduled time for an additional one week period. This process shall be repeated until CxA issues notice that the BAS is ready for Functional Performance Testing.

F. Any tests successfully completed during the BAS Demonstration will be recorded as ‘Passed’ for the Functional Performance Testing and will not have to be re-accomplished.

2.9 FUNCTIONAL PERFORMANCE TESTING

A. Requirements for assistance with Functional Performance Testing are specified in the Section 01 91 00, Section 23 08 00 and Section 26 08 00. Provide assistance during Functional Performance Testing per the Section 01 91 10.

2.10 BAS ACCEPTANCE PHASE AND OBSERVATION PERIOD

A. BAS Acceptance Phase: BAS Acceptance Phase consists of the Functional Performance Testing process of the BAS by the CxA and shall begin after approval of the BAS Demonstration and prior to issuance of Substantial Completion. Acceptance Phase for the BAS shall not be scheduled until all HVAC systems are in operation, the Start-Up Documentation has been reviewed, all required cleaning and lubrication has been completed (i.e., filters changed, piping flushed, strainers cleaned, etc.), and TAB report has been submitted and approved. Acceptance Phase and its approval to begin will be performed on a system-by-system basis if mutually agreed upon by Contractor and Owner.

B. BAS Observation Period: After Functional Performance Testing, the BAS shall be shown to operate properly for 2 weeks without malfunction, without alarm caused by control action or device failure, and with smooth and stable control of systems and equipment in conformance with these specifications. At the end of the two weeks, BAS Contractor shall forward the trend logs to the CxA for review.

C. During the Acceptance Phase, the Contractor shall maintain a hard copy log of all alarms generated by the BAS. For each alarm received, Contractor shall diagnose the cause of the alarm, and shall list on the log for each alarm, the diagnosed cause of the alarm, and the corrective action taken. If in the Contractor’s opinion, the cause of the alarm is not the responsibility of the Contractor, Contractor shall immediately notify the Owner's representative.

D. During the Acceptance Phase, the Contractor shall maintain all controller network and workstation hardware and software in a state that will allow remote access by CxA to trend logs as specified below.
2.11 BAS TREND REQUIREMENTS

A. The BAS Contractor shall configure and analyze all trends as listed below.

B. Trends are historical archives on computer disks that document the operation of the systems and equipment. Trends can be time-series (interval) recordings of system I/O parameters or change-of-value (COV) based trends that record when a system value changes by more than a specified threshold.

C. CxA will analyze trend logs of the system operating parameters to evaluate normal system functionality. The requirements of the trending are specified below. Contractor shall establish these trends, ensure they are being stored properly, and forward the data in electronic format to the CxA.

D. Data shall include a single row of field headings and the data thereafter shall be contiguous. Each record shall include a date and time field. Recorded parameters for a given piece of equipment or component shall be trended at the same time intervals and be presented in a maximum of two separate two dimensional formats with time being the vertical axis and field name being the horizontal axis. Data shall be forwarded in one of the following formats.

1. Microsoft Access Database (.mdb)
2. Microsoft Excel Spreadsheet (.xls)
3. Comma Separated Value (.csv or .txt), preferably with quotes delimiting text fields and # delimiting date/time fields.

E. Sample times indicated as COV (±) mean that the changed parameter only needs to be recorded whenever the value changes by the amount listed. When output to the trend file, the latest recorded value shall be listed along with the time increment record. If the BAS does not have the capability to record based on COV, the parameter shall be recorded based on the time interval common to other point trends for the system.

F. Contractor shall provide the CxA with required passwords, phone numbers, etc. to allow the CxA access to the trend log data and allow downloading to a remote location. Contractor shall also provide step-by-step written instructions for accessing the data.

G. Trending Requirements: All I/O points on primary equipment shall be trended throughout the Cx process on 10 min. intervals for analog values and change-of-value for binary values. Trends shall include but are not necessarily limited to the following points:

1. Outside air temperature
2. Outside air relative humidity
3. Outside air enthalpy
4. Cooling tons
5. All sensed hydronic temperatures
6. All sensed air temperatures and relative humidity measurements on primary equipment
7. All damper outputs on primary equipment
8. All valve outputs on primary equipment
9. All sensed fan volumes (flow) on primary equipment
10. All inputs and outputs to VSDs
11. Return (or exhaust) air temperature on each air handler
12. All safety indications
13. Status on all primary equipment
14. All air and water pressures on primary equipment or systems
15. Zone temperatures
16. Steam flow
17. Electricity consumption where monitored.
18. Natural gas flows
19. Converter steam valves and hot water temperatures
20. Steam supply pressures and temperatures.
21. Basically all points on primary equipment and selected sampling of terminal points unless approved otherwise

H. Trending used to document ongoing FPTs may occur at a more frequent interval. Consult with the CxA to determine the required intervals for functional testing and modify intervals as required.

2.12 TREND GRAPHS

A. Trend graphs shall be used during Functional Performance Testing to facilitate and document testing. Contractor shall prepare controller and workstation software to display graphical format trends throughout the Acceptance Phase. Trend graphs shall demonstrate compliance with contract documents. Trended values and intervals shall be the same as those specified for the Functional Performance Tests.

B. Lines shall be labeled and shall be distinguishable from each other by using either different line types or different line colors.

C. Indicate engineering units of the y-axis values; e.g. degrees F., inches w.c., Btu/lb, percent wide open, etc.

D. The y-axis scale shall be chosen so that all trended values are in a readable range. Do not mix trended values on one graph if their unit ranges are incompatible.

E. Trend outside air temperature, humidity, and enthalpy during each period in which any other points are trended.

F. All points trended for one HVAC subsystem (e.g. air handling unit, chilled water system, etc.) shall be trended simultaneously and on a common trend period.

G. Each graph shall be clearly labeled with HVAC subsystem title, date, and times.

H. This Contractor is responsible to set-up the trend graphs for each PID loop as described above.

2.13 WARRANTY PHASE - OPPOSITE SEASON TRENDING AND TESTING

A. Trending: Throughout the Warranty Phase, trend logs shall be maintained as required for the Acceptance Phase. BAS Contractor shall forward archived trend logs to the CxA for review upon CxA request. CxA will review these and notify BAS Contractor of any warranty work required.

B. Opposite Season Testing: Within 6 months of completion of the Acceptance Phase, CxA shall schedule and conduct Opposite Season Functional Performance Testing. The BAS Contractor shall support this testing and remedy any deficiencies identified.

2.14 SOFTWARE OPTIMIZATION ASSISTANCE

A. The Contractor shall provide the services of a BAS technician as specified above at the project site to be at the disposal of the CxA. The purpose of this requirement is to make changes, enhancements and additions to control unit and/or workstation software that have been identified by the CxA during the construction and commissioning of the project and that are beyond the specified Contract requirements. The cost for this service shall be included with the
bid. Requests for assistance shall be for contiguous or non-contiguous 8-hour days, unless otherwise mutually agreed upon by Contractor, CxA, and Owner. The Owner’s representative shall notify Contractor 2 days in advance of each day of requested assistance.

B. The BAS technician provided shall be thoroughly trained in the programming and operation of the controller and workstation software. If the BAS technician provided cannot perform every software task requested by the CxA in a timely fashion, Contractor shall provide additional qualified personnel at the project site as requested by the CxA to meet the total specified requirement on-site.

2.15 BAS OPERATOR TRAINING

A. Provide up to 6 complete sets of User Manuals (hard copy and one electronic copy) to be used for training.

B. BAS Contractor shall submit a Training Plan per the requirements of Div 01 to the CM who will forward it to the A/E and CxA for review.

C. On Site Training: Provide services of BAS Contractor’s qualified technical personnel for five 8-hour days to instruct Owners personnel in operation and maintenance of the BAS. Instruction shall be in classroom setting at the project site for appropriate portions of the training. Training may be in non-contiguous days at the request of the Owner. The Owner’s representative shall notify Contractor 1-week in advance of each day of requested training. The Contractor’s designated training personnel shall meet with the A/E, CxA and Owner’s representative for the purpose of discussing and fine-tuning the training agenda prior to the first training session. Training agenda shall be as follows:

1. Basic Operator Workstation Training – 8 hours for all potential users of the OWS in 4-hour non-contiguous segments:
   a. Brief walk-through of building, including identification of all controlled equipment and condensed demonstration of controller portable and built-in operator interface device display capabilities.
   b. Brief overview of the various parts of the BAS O&M manuals, including hardware and software programming and operating publications, catalog data, controls installation drawings, and BAS programming documentation.
   c. Demonstration of workstation login/logout procedures, password setup, and exception reporting.
   d. Demonstration of workstation menu penetration and broad overview of the various workstation features.
   e. Overview of systems installed.
   f. Present all site-specific naming conventions and points lists, open protocol information, configuration databases, back up sequences, upload/download procedures, etc.
   g. Overview of scheduling procedures.
   h. Overview of alarm features, including how to acknowledge, respond to, and archive alarms, and how to access further information from them.
   i. Overview of trend features, including how to set up and view trends.
   j. Overview of workstation reporting features and introductory level report generation and scheduling.

2. BAS Technician Training: Two 24-hour training sessions that can be in 4-hour non-contiguous segments for individuals who will troubleshoot the system hardware, I/O devices, and the systems in general.
   a. General review of sequence of operation and control logic for the project site, including standalone and fail safe modes of operation;
   b. Uploading/downloading and backing up controller configuration and application programs;
c. Review of installed components including all communication devices, controllers, I/O, etc., and how to install/replace, maintain, commission, and diagnose them;
d. Introduction to controller programming and overview of the programming application interface;
e. Defining trends, generating graphs in real time; archiving trends, accessing historical archive and generating reports from them;
f. Introductory network administration;
g. Introduction to creating and editing graphics;
h. Review of setpoint optimization and fine-tuning concepts;
i. OI use and maintenance;
j. Web page creation as applicable.

3. System Administrator Training: One 8-hour session that may be done in two 4-hour segments on non-contiguous days. Target audience is the person who will be maintaining the system from an IT perspective as well as Owners IT personnel. Agenda shall be as follows:
   a. Overview of system architecture including all routers, bridges, repeaters, gateways, communications protocols, servers, controllers, etc.;
   b. Overview of and recommendations for backing up and restoring the system configuration database;
   c. Server maintenance;
   d. Security Management: Assigning passwords and rights for various users on the server, workstations and GUI software.

4. Final Systems Operation Training
   a. The BAS Contractor shall conduct Final Systems Operation Training in accordance with Section 01 91 00.
   b. Final Systems Operation Training provides the Owner and Operators a training session on whole-building operation. It shall focus primarily on BAS control of building systems and operation and its impact on building performance. System interactions shall be presented and discussed (such as a combined air handler, chiller, boiler, and terminal unit system), along with a detailed presentation of the sequences of operation and their relationship to the BAS. This training shall be conducted by the BAC with assistance from the CxA, and shall be attended by the Owner, Operators, Contractor, Design Team, and by any other Cx Team members deemed necessary by the CxA or the Owner.
   c. The Record BAS Shop Drawings shall be provided as a handout for the training.
   d. Scheduling, attendees, and training methods shall be as specified in Section 01 91 00.

D. Advanced Off-Site BAS Training: Advanced BAS training shall be provided for one individual and be provided at an offsite training facility containing installations of the proposed system. BAS Contractor shall pay registration and materials fee and the Owner shall pay all other expenses. Training shall include:
   1. Standard offering of advanced training on all control programming applications.
   2. Standard offering of Advanced Installation, Configuration, Maintenance, and Network Administration.

END OF SECTION 230800
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the following:

1. Hot-water heating piping.
2. Chilled-water piping.
3. Condensate-drain piping.

B. Related Sections include the following:

1. Division 23 Section "Hydronic Pumps" for pumps, motors, and accessories for hydronic piping.
2. Division 25 Section "Building Automation System" for control valves also used for system balancing.

1.3 PERFORMANCE REQUIREMENTS

A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature:

1. Hot-Water Heating Piping: at 200 deg F.
2. Chilled-Water Piping: at 200 deg F.
3. Condensate-Drain Piping: 150 deg F.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of the following:

1. Air control devices.
2. Hydronic specialties.

B. LEED Submittals:

1. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.

C. Shop Drawings: Detail, at 1/4 scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of
the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Field quality-control test reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air control devices, hydronic specialties, and specialty-duty valves to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installers of Pressure-Sealed Joints: Installers shall be certified by the pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.

B. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

D. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

A. Drawn-Temper Copper Tubing: ASTM B 88, Type L.

B. DWV Copper Tubing: ASTM B 306, Type DWV.

C. Wrought-Copper Fittings: ASME B16.22.

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. **Grooved-End Copper Fittings:** ASTM B 75, copper tube or ASTM B 584, bronze casting.

3. **Grooved-End-Tube Couplings:** Rigid pattern, unless otherwise indicated; gasketed fitting. Ductile-iron housing with keys matching pipe and fitting grooves, EPDM gasket rated for minimum 250 deg F for use with housing, and steel bolts and nuts.

D. **Copper Pressure-Seal Fittings:**

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   
   a. Stadler-Viega.

2. **Housing:** Copper.

3. **O-Rings and Pipe Stops:** EPDM.

4. **Tools:** Manufacturer's special tools.

5. **Minimum 200-psig working-pressure rating at 250 deg F.**

E. **Wrought-Copper Unions:** ASME B16.22.

2.2 **STEEL PIPE AND FITTINGS**

A. **Steel Pipe:** ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as indicated in Part 3 "Piping Applications" Article.

B. **Cast-Iron Threaded Fittings:** ASME B16.4; Classes 125 and 250 as indicated in Part 3 "Piping Applications" Article.

C. **Cast-Iron Pipe Flanges and Flanged Fittings:** ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in Part 3 "Piping Applications" Article.

D. **Wrought-Steel Fittings:** ASTM A 234/A 234M, wall thickness to match adjoining pipe.

E. **Wrought Cast- and Forged-Steel Flanges and Flanged Fittings:** ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:

   1. **Material Group:** 1.1.
   2. **End Connections:** Butt welding.
   3. **Facings:** Raised face.

F. **Grooved Mechanical-Joint Fittings and Couplings:**

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Anvil International, Inc.
   b. National Fittings, Inc.
   c. S. P. Fittings; a division of Star Pipe Products.
   d. Victaulic Company.
2. Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47/A 47M, Grade 32510 malleable iron; ASTM A 53/A 53M, Type F, E, or S, Grade B fabricated steel; or ASTM A 106, Grade B steel fittings with grooves or shoulders constructed to accept grooved-end couplings; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.

3. Couplings: Ductile- or malleable-iron housing and synthetic rubber gasket of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.

G. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

2.3 JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

   a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

2.4 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper-alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Flanges:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   b. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

D. Dielectric-Flange Kits:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Advance Products & Systems, Inc.
   b. Calpico, Inc.
   c. Pipeline Seal and Insulator, Inc.

2. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

3. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

E. Dielectric Couplings:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Calpico, Inc.
   b. Lochinvar Corporation.
   c. Galvanized-steel coupling with Inert and noncorrosive thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

2.5 VALVES

A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section "General-Duty Valves for HVAC Piping."

B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Division 25 Section "Building Automation System."

2.6 AIR CONTROL DEVICES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   1. Amtrol, Inc.
   2. Armstrong Pumps, Inc.
   3. Bell & Gossett Domestic Pump; a division of ITT Industries.
   4. Taco.

B. Manual Air Vents:

   1. Body: Bronze.
   2. Internal Parts: Nonferrous.
   3. Operator: Screwdriver or thumbscrew.
   4. Inlet Connection: NPS 1/2.
   7. Maximum Operating Temperature: 225 deg F.

C. Automatic Air Vents:
1. Body: Bronze or cast iron.
2. Internal Parts: Nonferrous.
4. Inlet Connection: NPS 1/2.

D. CWP Rating: 150 psig. Expansion Tanks:
1. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature. Factory test with taps fabricated and supports installed and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Bladder: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.

E. Tangential-Type Air Separators:
1. Tank: Welded steel; ASME constructed and labeled for 125-psig minimum working pressure and 375 deg F maximum operating temperature.
2. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
3. Tangential Inlet and Outlet Connections: Threaded for NPS 2 and smaller; flanged connections for NPS 2-1/2 and larger.
5. Size: Match system flow capacity.

2.7 HYDRONIC PIPING SPECIALTIES

A. Y-Pattern Strainers:
1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.

B. Basket Strainers:
1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.

C. Spherical, Rubber, Flexible Connectors:
2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
4. CWP Rating: 150 psig.
5. Maximum Operating Temperature: 250 deg F.
D. Diaphragm-Operated Safety Valves:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Amtrol, Inc.
   b. Armstrong Pumps, Inc.
   c. Bell & Gossett Domestic Pump; a division of ITT Industries.
   d. Conbraco Industries, Inc.
   e. Spence Engineering Company, Inc.
   f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2. Body: Bronze or brass.
3. Disc: Glass and carbon-filled PTFE.
5. Stem Seals: EPDM O-rings.
6. Diaphragm: EPT.
8. Inlet Strainer: stainless steel, removable without system shutdown.
10. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

E. Automatic Flow-Control Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Flow Design Inc.
   b. Griswold Controls.
   c. Hays Fluid Controls

2. Body: Brass or ferrous metal.
3. Piston and Spring (Cartridge) Assembly: Stainless steel, tamper proof, self cleaning, and removable.
4. Combination Assemblies: Include bronze or brass-alloy ball valve.
5. Identification Tag: Marked with zone identification, valve number, and flow rate.
6. Size: Same as pipe in which installed.
7. Performance: Maintain constant flow, plus or minus 5 percent over system pressure fluctuations.
9. Maximum Operating Temperature: 200 deg F.

F. Expansion fittings are specified in Division 23 Section "Expansion Fittings and Loops for HVAC Piping."

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Hot-water heating piping, aboveground, NPS 2 and smaller, shall be any of the following:
1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or pressure-seal joints.
2. Schedule 40 steel pipe; Class 125, cast-iron fittings; cast-iron flanges and flange fittings; and threaded joints.

B. Hot-water heating piping, aboveground, NPS 2-1/2 and larger, shall be any of the following:
   1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints or pressure seal.
   2. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
   3. Schedule 40 steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.

C. Hot-water heating piping installed belowground and within slabs shall be the following:
   1. Type K, annealed-temper copper tubing, wrought-copper fittings, and soldered joints. Use the fewest possible joints.

D. Chilled-water piping, aboveground, NPS 2 and smaller, shall be any of the following:
   1. Condensate-Drain Piping: Type DWV, drawn-temper copper tubing, wrought-copper fittings, and soldered or pressure seal joints.
   2. Schedule 40 steel pipe; Class 125, cast-iron fittings; cast-iron flanges and flange fittings; and threaded joints.

E. Chilled-water piping, aboveground, NPS 2-1/2 and larger, shall be any of the following:
   1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or pressure seal joints.
   2. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
   3. Schedule 40 steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.

F. Makeup-water piping installed aboveground shall be the following:
   1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered or pressure seal joints.

G. Makeup-Water Piping Installed Belowground and within Slabs: Type K, annealed-temper copper tubing, wrought-copper fittings, and soldered joints. Use the fewest possible joints.

H. Condensate-Drain Piping: Type M or DWV, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

I. Air-Vent Piping:
   1. Inlet: Same as service where installed.
   2. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.

J. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.
3.2 VALVE APPLICATIONS

A. Install shutoff-duty valves at each branch connection to supply mains, and at supply connection to each piece of equipment.

B. Install throttling-duty valves at each branch connection to return main.

C. Install check valves at each pump discharge and elsewhere as required to control flow direction.

D. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; and pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

E. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.3 PIPING INSTALLATIONS

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at indicated slopes.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.

J. Install piping on warm side of building insulation. Do not install piping where subject to freezing.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

M. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

N. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
O. Reduce pipe sizes using eccentric reducer fitting installed with level side up.

P. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."

Q. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

R. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.

S. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 nipple and ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.

T. Identify piping as specified in Division 23 Section "Identification for HVAC Piping and Equipment."

U. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."

V. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."

W. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23 Section "Escutcheons for HVAC Piping."

3.4 HANGERS AND SUPPORTS

A. Hanger, support, and anchor devices are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment." Comply with the following requirements for maximum spacing of supports.

B. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
4. Spring hangers to support vertical runs.
5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.

C. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:

1. NPS 2: Maximum span, 10 feet; minimum rod size, 3/8 inch.
2. NPS 2-1/2: Maximum span, 11 feet; minimum rod size, 3/8 inch.
3. NPS 3: Maximum span, 12 feet; minimum rod size, 3/8 inch.
4. NPS 4: Maximum span, 14 feet; minimum rod size, 1/2 inch.
5. NPS 6: Maximum span, 17 feet; minimum rod size, 1/2 inch.
6. NPS 8: Maximum span, 19 feet; minimum rod size, 5/8 inch.
D. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes:

1. NPS 3/4: Maximum span, 5 feet; minimum rod size, 1/4 inch.
2. NPS 1: Maximum span, 6 feet; minimum rod size, 1/4 inch.
3. NPS 1-1/2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
4. NPS 2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
5. NPS 2-1/2: Maximum span, 9 feet; minimum rod size, 3/8 inch.
6. NPS 3: Maximum span, 10 feet; minimum rod size, 3/8 inch.

E. Support vertical runs at roof, at each floor, and at 10-foot intervals between floors.

3.5 PIPE JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

E. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

H. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts. Cut or roll grooves in ends of pipe based on pipe and coupling manufacturer's written instructions for pipe wall thickness. Use grooved-end fittings and rigid, grooved-end-pipe couplings.

3.6 HYDRONIC SPECIALTIES INSTALLATION

A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.

B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Manual vents at heat-transfer coils and elsewhere as required for air venting.
C. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.

D. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.

E. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure tank is properly charged with air to suit system Project requirements.

3.7 TERMINAL EQUIPMENT CONNECTIONS

A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.

B. Install control valves in accessible locations close to connected equipment.

C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.

D. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Division 23 Section "Meters and Gages for HVAC Piping."

3.8 FIELD QUALITY CONTROL

A. Prepare hydronic piping according to ASME B31.9 and as follows:

1. Leave joints, including welds, uninsulated and exposed for examination during test.
2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:

1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
3. Isolate expansion tanks and determine that hydronic system is full of water.
4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.

6. Prepare written report of testing.

C. Perform the following before operating the system:

1. Open manual valves fully.
2. Inspect pumps for proper rotation.
3. Set makeup pressure-reducing valves for required system pressure.
4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
5. Set temperature controls so all coils are calling for full flow.
6. Inspect and set operating temperatures of hydronic equipment, such as heat exchangers.
7. Verify lubrication of motors and bearings.

END OF SECTION 23 21 13
1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary
   Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Separately-coupled, end-suction centrifugal pumps.

1.3 DEFINITIONS

A. Buna-N: Nitrile rubber.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of pump. Include certified performance curves and rated
   capacities, operating characteristics, furnished specialties, final impeller dimensions, and
   accessories for each type of product indicated. Indicate pump's operating point on curves.

B. Shop Drawings: For each pump.
   1. Show pump layout and connections.
   2. Include setting drawings with templates for installing foundation and anchor bolts and
      other anchorages.
   3. Include diagrams for power, signal, and control wiring.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pumps to include in emergency, operation, and
   maintenance manuals.

PART 2 - PRODUCTS

2.1 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering
   products that may be incorporated into the Work include, but are not limited to, the following:
   1. Armstrong Pumps Inc.
   2. Aurora Pump; Division of Pentair Pump Group.
   3. ITT Corporation; Bell & Gossett.
B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, end-suction pump as defined in HI 1.1-1.2 and HI 1.3; designed for base mounting, with pump and motor shafts horizontal.

C. Pump Construction:
   1. Casing: Radially split, cast iron, with replaceable bronze wear rings, threaded gage tappings at inlet and outlet, drain plug at bottom and air vent at top of volute, and flanged connections. Provide integral mount on volute to support the casing, and provide attached piping to allow removal and replacement of impeller without disconnecting piping or requiring the realignment of pump and motor shaft.
   2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For pumps not frequency-drive controlled, trim impeller to match specified performance.
   3. Pump Shaft: Steel, with copper-alloy shaft sleeve.
   4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless-steel spring, and Buna-N bellows and gasket.
   5. Pump Bearings: Grease-lubricated ball bearings in cast-iron housing with grease fittings.

D. Shaft Coupling: Molded-rubber insert and interlocking spider capable of absorbing vibration. Couplings shall be drop-out type to allow disassembly and removal without removing pump shaft or motor.

E. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.

F. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor.

G. Motor:
   1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
   3. Comply with requirements of Division 23 Section "Variable-Frequency Motor Controllers"
   4. Provide grounding device for motor shaft of all motors used with variable frequency controllers.

2.2 PUMP SPECIALTY FITTINGS

A. Suction Diffuser:
   1. Angle pattern.
   2. 175-psig pressure rating, cast-iron body and end cap, pump-inlet fitting.
   3. Bronze startup and bronze or stainless-steel permanent strainers.
   4. Bronze or stainless-steel straightening vanes.
   5. Drain plug.
   6. Factory-fabricated support.

B. Triple-Duty Valve:
1. Brass gage ports with integral check valve and orifice for flow measurement.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.

C. Examine foundations for suitable conditions where pumps are to be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PUMP INSTALLATION

A. Comply with HI 1.4.

B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.

C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.

D. Equipment Mounting: Install base-mounted pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases specified in Division 03 Section “Cast-in-Place Concrete.”
   1. Coordinate sizes and locations of concrete bases with actual equipment provided.
   2. Construct concrete bases 4 inches high and extend base not less than 6 inches in all directions beyond the maximum dimensions of base-mounted pumps unless otherwise indicated or unless required for seismic-anchor support.
   3. Minimum Compressive Strength: 3000 psi at 28 days.

3.3 ALIGNMENT

A. Perform alignment service.

B. Comply with requirements in Hydronics Institute standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.

C. Comply with pump and coupling manufacturers' written instructions.

D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.
3.4 CONNECTIONS

A. Comply with requirements for piping specified in Division 23 Section "Steam and Condensate Heating Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to pump, allow space for service and maintenance.

C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.

D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.

E. Install triple-duty valve on discharge side of pumps.

F. Install suction diffuser and shutoff valve on suction side of pumps.

G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.

H. Install pressure gages on pump suction and discharge or at integral pressure-gage tapping, or install single gage with multiple-input selector valve.

I. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

J. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Check piping connections for tightness.
3. Clean strainers on suction piping.
4. Perform the following startup checks for each pump before starting:
   a. Verify bearing lubrication.
   b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
   c. Verify that pump is rotating in the correct direction.
5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
7. Open discharge valve slowly.

3.6 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain hydronic pumps.

END OF SECTION 23 21 23
SECTION 23 22 13 - STEAM AND CONDENSATE HEATING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. This Section includes the following for LP steam and condensate piping:
      1. Pipe and fittings.
      2. Strainers.
      4. Steam traps.
      5. Thermostatic air vents and vacuum breakers.

1.3 DEFINITIONS
   A. LP Systems: Low-pressure piping operating at 15 psig or less as required by ASME B31.9.

1.4 PERFORMANCE REQUIREMENTS
   A. Components and installation shall be capable of withstanding the following minimum working pressures and temperatures:
      1. LP Steam Piping: 100 psig
      2. Condensate Piping: 100 psig at 250 deg F.
      3. Air-Vent and Vacuum-Breaker Piping: Equal to pressure of the piping system to which it is attached.
      4. Safety-Valve-Inlet and -Outlet Piping: Equal to pressure of the piping system to which it is attached.

1.5 ACTION SUBMITTALS
   A. Product Data: For each type of the following:
      1. Steam trap.
      2. Air vent and vacuum breaker.

1.6 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For valves, safety valves, steam traps, air vents, and vacuum breakers to include in emergency, operation, and maintenance manuals.
1.7 QUALITY ASSURANCE

A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code - Steel."

B. Pipe Welding: Qualify processes and operators according to the following:
   1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. ASME Compliance: Comply with ASME B31.9, "Building Services Piping" for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp flash tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 - PRODUCTS

2.1 STEEL PIPE AND FITTINGS

A. Steel Pipe: ASTM A 53/A 53M, black steel, plain ends, Type, Grade, and Schedule as indicated in Part 3 piping applications articles.

B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125, 150, and 300 as indicated in Part 3 piping applications articles.

C. Malleable-Iron Threaded Fittings: ASME B16.3; Classes 150 and 300 as indicated in Part 3 piping applications articles.

D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in Part 3 piping applications articles.

E. Cast-Iron Threaded Flanges and Flanged Fittings: ASME B16.1, Classes 125 and 250 as indicated in Part 3 piping applications articles; raised ground face, and bolt holes spot faced.

F. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.

G. Wrought-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
   2. End Connections: Butt welding.
   3. Facings: Raised face.

H. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, black steel of same Type, Grade, and Schedule as pipe in which installed.

I. Stainless-Steel Bellows, Flexible Connectors:
   2. End Connections: Threaded or flanged to match equipment connected.
2.2 JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
      a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

D. Welding Materials: Comply with Section II, Part C, of ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

2.3 VALVES

A. Gate, Globe, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section "General-Duty Valves for HVAC Piping."

2.4 STRAINERS

A. Y-Pattern Strainers:
   1. Body: ASTM A 126, Class B cast iron, with bolted cover and bottom drain connection.
   2. End Connections: Threaded ends for strainers NPS 2 and smaller; flanged ends for strainers NPS 2-1/2 and larger.
   4. Tapped blowoff plug.
   5. CWP Rating: 250-psig working steam pressure.

2.5 SAFETY VALVES

A. Cast-Iron Safety Valves:
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Spirax Sarco, Inc.
      c. Watts Water Technologies, Inc.
2. Disc Material: Forged copper alloy with bronze nozzle.
3. End Connections: Raised-face flanged inlet and threaded or flanged outlet connections.
4. Spring: Fully enclosed cadmium-plated steel spring with adjustable pressure range and positive shutoff, factory set and sealed.
5. Pressure Class: 250.
6. Drip-Pan Elbow: Cast iron and having threaded inlet, outlet, and drain, with threads complying with ASME B1.20.1.
7. Exhaust Head: Cast iron and having threaded inlet and drain, with threads complying with ASME B1.20.1.

2.6 STEAM TRAPS

A. Float and Thermostatic Traps:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Hoffman Specialty; Division of ITT Industries.
   c. Spirax Sarco, Inc.
2. Body and Bolted Cap: ASTM A 126, cast iron.
6. Trap Type: Balanced pressure.
7. Thermostatic Bellows: Stainless steel or monel.
8. Thermostatic air vent capable of withstanding 45 deg F of superheat and resisting water hammer without sustaining damage.

2.7 THERMOSTATIC AIR VENTS AND VACUUM BREAKERS

A. Thermostatic Air Vents:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Hoffman Specialty; Division of ITT Industries.
   c. Spirax Sarco, Inc.
2. Body: Cast iron, bronze or stainless steel.
5. Thermostatic Element: Phosphor bronze bellows in a stainless-steel cage.
7. Maximum Temperature Rating: 350 deg F.

B. Vacuum Breakers:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Hoffman Specialty; Division of ITT Industries.
   c. Spirax Sarco, Inc.

2. Body: Cast iron, bronze, or stainless steel.
5. O-ring Seal: EPR.
7. Maximum Temperature Rating: 350 deg F.

2.8 MOISTURE SEPARATORS

A. Moisture Separators:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   b. Hoffman Specialty; Division of ITT Industries.
   c. Spirax Sarco, Inc.

2. Body: ASTM A 126, cast iron.
3. End Connections: Flanged or NPT.
4. Internal Baffles: cast with body.
5. Bushings: Malleable iron.
6. Plug: Malleable iron.
7. Plug gasket: Reinforced exfoliated graphite.
8. Maximum Operating Pressure: 188 psig at 428°F

PART 3 - EXECUTION

3.1 LP STEAM PIPING APPLICATIONS

A. LP Steam Piping, NPS 2 and Smaller: Schedule 80, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.

B. LP Steam Piping, NPS 2-1/2 through NPS 12: Schedule 40, Type E, Grade B, steel pipe; Class 150 wrought-steel fittings, flanges, and flange fittings; and welded and flanged joints.

C. Condensate piping above grade, NPS 2 and smaller, shall be the following:
1. Schedule 80, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.

D. Condensate piping below grade, NPS 2 and smaller, shall be the following:

1. Schedule 80, Type S, Grade B, steel pipe; Class 125 cast-iron fittings; and threaded joints.

3.2 VALVE APPLICATIONS

A. Install shutoff duty valves at branch connections to steam supply mains, at steam supply connections to equipment, and at the outlet of steam traps.

B. Install safety valves on pressure-reducing stations and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install safety-valve discharge piping, without valves, to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

3.3 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Use indicated piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping to permit valve servicing.

E. Install piping free of sags and bends.

F. Install fittings for changes in direction and branch connections.

G. Install piping to allow application of insulation.

H. Select system components with pressure rating equal to or greater than system operating pressure.

I. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

J. Install drains, consisting of a tee fitting, NPS 3/4 full port-ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

K. Install steam supply piping at a minimum uniform grade of 0.2 percent downward in direction of steam flow.
L. Install condensate return piping at a minimum uniform grade of 0.4 percent downward in direction of condensate flow.

M. Reduce pipe sizes using eccentric reducer fitting installed with level side down.

N. Install branch connections to mains using tee fittings in main pipe, with the branch connected to top of main pipe.

O. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."

P. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

Q. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.

R. Install strainers on supply side of control valves, pressure-reducing valves, traps, and elsewhere as indicated. Install NPS 3/4 nipple and full port ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.

S. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in Division 23 Section "Expansion Fittings and Loops for HVAC Piping."

T. Identify piping as specified in Division 23 Section "Identification for HVAC Piping and Equipment."

U. Install drip legs at low points and natural drainage points such as ends of mains, bottoms of risers, and ahead of pressure regulators, and control valves.

1. On straight runs with no natural drainage points, install drip legs at intervals not exceeding 300 feet.
2. Size drip legs same size as main. In steam mains NPS 6 and larger, drip leg size can be reduced, but to no less than NPS 4.

V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."

W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."

3.4 STEAM-TRAP INSTALLATION

A. Install steam traps in accessible locations as close as possible to connected equipment.

B. Install full-port ball valve, strainer, and union upstream from trap; install union, and full-port ball valve downstream from trap unless otherwise indicated.

3.5 MOISTURE SEPARATOR INSTALLATION

A. Install moisture separators in accessible locations as close as possible to connected equipment.

B. Install moisture separators upstream of heat exchanger control valves.
3.6 SAFETY VALVE INSTALLATION

A. Install safety valves according to ASME B31.9, "Building Services Piping."

B. Pipe safety-valve discharge without valves to atmosphere outside the building.

C. Install drip-pan elbow fitting adjacent to safety valve and pipe drain connection to nearest floor drain.

D. Install exhaust head with drain to waste, on vents equal to or larger than NPS 2-1/2.

3.7 HANGERS AND SUPPORTS

A. Install hangers and supports according to Division 23 Section "Hangers and Supports for HVAC Piping and Equipment." Comply with requirements below for maximum spacing.

B. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
4. Spring hangers to support vertical runs.

C. Install hangers with the following maximum spacing and minimum rod sizes:

1. NPS 2: Maximum span, 13 feet; minimum rod size, 3/8 inch.
2. NPS 4: Maximum span, 17 feet; minimum rod size, 1/2 inch.
3. NPS 6: Maximum span, 21 feet; minimum rod size, 1/2 inch.

3.8 PIPE JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

E. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
F. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.9 TERMINAL EQUIPMENT CONNECTIONS

A. Size for supply and return piping connections shall be the same as or larger than equipment connections.

B. Install traps and control valves in accessible locations close to connected equipment.

C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.

D. Install vacuum breakers downstream from control valve, close to coil inlet connection.

E. Install a drip leg at coil outlet.

3.10 FIELD QUALITY CONTROL

A. Prepare steam and condensate piping according to ASME B31.9, "Building Services Piping," and as follows:

1. Leave joints, including welds, uninsulated and exposed for examination during test.
2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
3. Flush system with clean water. Clean strainers.
4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.

B. Perform the following tests on steam and condensate piping:

1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
2. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength.
3. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.

C. Prepare written report of testing.

END OF SECTION 23 22 13
SECTION 23 22 23 - STEAM CONDENSATE PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes steam condensate pumps.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include certified performance curves and rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated. Indicate pump's operating point on curves. Include receiver capacity and material.

B. Shop Drawings: For each pump.
   1. Show pump layout and connections.
   2. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 PRESSURE-POWERED PUMPS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   1. Armstrong Fluid Handling; Div. of Armstrong International, Inc.
   2. ITT Corporation; Domestic Pump Division.
   3. Spirax-Sarco Inc.
   4. Sterling.

B. Description: Factory-fabricated, pressure-powered pumps with mechanical controls, valves, piping connections, and accessories suitable for pumping steam condensate using compressed air.
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2. ASME Compliance: Fabricate and label steam condensate receivers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. Configuration: Duplex pump with float-operated valve control. Receiver:

1. Pump Body: Cast iron, ASME rated to 125 psig.
2. Piping Connections: Threaded; for steam condensate, operating medium, vent, and indicated accessories.
3. Level Gage: Glass site gage with shutoff cocks.
4. Valves: Manufacturer's standard check valves on inlet and outlet.
5. Internal Parts: Stainless-steel float, springs, and actuating mechanism.

D. Receiver:

1. Factory mounted on steel supports.
2. Cast iron.
3. Threaded piping connections.
4. Water-level gage and dial thermometer.
5. Pressure gage at pump discharge.
6. Bronze fitting isolation valve between pump and receiver.
7. Lifting eyebolts.
8. Inlet vent and an overflow.

E. Pipe: ASTM A 53/A 53M, Type S, Grade B or ASTM A 106/A 106M; Schedule 80; seamless steel.

F. Fittings: ASME B16.1, Class 125 cast iron, threaded.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install pumps to provide access for periodic maintenance including removing impellers, couplings, and accessories.

B. Support pumps and piping separately so piping is not supported by pumps.
C. Install thermometers and pressure gages.

D. Equipment Mounting: Install pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases specified in Division 03 Section "Cast-in-Place Concrete."

1. Coordinate sizes and locations of concrete bases with actual equipment provided.
2. Construct bases to withstand, without damage to equipment, seismic force required by code.
3. Construct concrete bases 4 inches high and extend base not less than 6 inches in all directions beyond the maximum dimensions of pumps unless otherwise indicated or unless required for seismic-anchor support.
4. Minimum Compressive Strength: 3000 psi at 28 days.

3.3 CONNECTIONS

A. Comply with requirements for piping specified in Division 23 Section "Steam and Condensate Heating Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to machine, allow space for service and maintenance.

C. Install a globe and check valve and pressure gage before inlet of each pump and a gate and check valve at pump outlet.

D. Pipe drain to nearest floor drain for overflow and drain piping connections.

E. Install full-size vent piping to outdoors, terminating in 180-degree elbow at point above highest steam system connection or as indicated.

3.4 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Clean strainers.
3. Set steam condensate pump controls.
4. Set pump controls for automatic start, stop, and alarm operation.
5. Perform the following preventive maintenance operations and checks before starting:
   a. Set float switches to operate at proper levels.
   b. Set throttling valves on pump discharge for specified flow.
   c. Test pump controls and demonstrate compliance with requirements.
   d. Replace damaged or malfunctioning pump controls and equipment.
   e. Verify that pump controls are correct for required application.
6. Start steam condensate pumps according to manufacturer's written startup instructions.

END OF SECTION 23 22 23
SECTION 23 25 00 - HVAC WATER TREATMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following HVAC water-treatment systems:

1. Bypass chemical-feed equipment and controls.
2. Chemical treatment test equipment.
3. HVAC water-treatment chemicals.

1.3 DEFINITIONS

A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

B. RO: Reverse osmosis.

C. TDS: Total dissolved solids.

1.4 PERFORMANCE REQUIREMENTS

A. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or the environment.

B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.

C. Closed hydronic systems, including hot-water heating, shall have the following water qualities:

1. pH: Maintain a value within 9.0 to 10.5.
2. "P" Alkalinity: Maintain a value within 100 to 500 ppm.
3. Boron: Maintain a value within 100 to 200 ppm.
4. Chemical Oxygen Demand: Maintain a maximum value of 100 ppm.
5. Soluble Copper: Maintain a maximum value of 0.20 ppm.
6. TDS: Maintain a maximum value of 10 ppm.
9. Microbiological Limits:

   a. Total Aerobic Plate Count: Maintain a maximum value of 1000 organisms/ml.
b. Total Anaerobic Plate Count: Maintain a maximum value of 100 organisms/ml.
c. Nitrate Reducers: Maintain a maximum value of 100 organisms/ml.
d. Sulfate Reducers: Maintain a maximum value of 0 organisms/ml.
e. Iron Bacteria: Maintain a maximum value of 0 organisms/ml.

1.5 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following products:
   1. Bypass feeders.
   2. Chemical test equipment.
   3. Chemical material safety data sheets.

B. Shop Drawings: Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems. Include plans, elevations, sections, details, and attachments to other work.

1.6 INFORMATIONAL SUBMITTALS

A. Field quality-control test reports.

B. Other Informational Submittals:

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sensors, injection pumps, water softeners, and controllers to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE

A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   1. GE Betz.

2.2 MANUAL CHEMICAL-FEED EQUIPMENT
A. **Bypass Feeders:** Steel, 10-gauge minimum, with corrosion-resistant exterior coating, minimum 4-inch fill opening in the top, and NPS 3/4 bottom inlet and top side outlet. Quarter turn or threaded fill cast iron cap with Buna N seat ring.

1. Capacity: 5 gal.

### 2.3 CHEMICAL TREATMENT TEST EQUIPMENT

A. **Corrosion Test-Coupon Assembly:** Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.

1. Two-station rack for closed-loop systems.

### 2.4 CHEMICALS

A. Chemicals shall be an alkaline, buffered, nitrite-based corrosion inhibitor, maintained at proper levels to prevent corrosion to the system, compatible with piping system components and connected equipment, and that can attain water quality specified in Part 1 “Performance Requirements” Article.

### PART 3 - EXECUTION

#### 3.1 WATER ANALYSIS

A. Perform an analysis of supply water to determine quality of water available at Project site.

#### 3.2 INSTALLATION

A. Install water testing equipment on wall near water chemical application equipment.

B. **Bypass Feeders:** Install in closed hydronic systems, including hot-water heating, and equipped with the following:

1. Install bypass feeder in a bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
2. Install test-coupon assembly in bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
3. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
4. Install a swing check on inlet after the isolation valve.

#### 3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.
C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Division 23 Section "Hydronic Piping."

D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Division 23 Section "General-Duty Valves for HVAC Piping."

E. Refer to Division 22 Section "Domestic Water Piping Specialties" for backflow preventers required in makeup water connections to potable-water systems.

3.4 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

B. Tests and Inspections:

1. Inspect field-assembled components and equipment installation, including piping.
2. Pre-operational Cleaner: All systems shall be flushed with water prior to chemical cleaning. Use water meter to fill, record, and tag (permanent tag) the system with the actual system volume. Chemical cleaner shall be added to remove grease, mill oil, organic soil, flux, iron oxide etc. All terminal control valves and valves at end of runs ("dead legs") shall be opened so that cleaner is circulated through the whole system. After cleaning, all strainers shall be flushed, and strainer screens cleaned or replaced. Once closed loop is chemically cleaned, system shall be dumped and flushed with water so that all cleaning chemical is removed from the system.
3. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
4. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
5. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
6. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
7. Repair leaks and defects with new materials and retest piping until no leaks exist.

C. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 23 25 00
SECTION 23 31 13 - METAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Single-wall round ducts and fittings.
4. Sealants and gaskets.
5. Hangers and supports.

B. Related Sections:

1. Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
2. Division 23 Section "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.3 PERFORMANCE REQUIREMENTS

A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.

B. Structural Performance: Duct hangers and supports shall withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"

C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

1.4 ACTION SUBMITTALS

A. LEED Submittals:

1. Product Data for Prerequisite IEQ 1: Documentation indicating that duct systems comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
2. Product Data for Prerequisite EA 2: Documentation indicating that duct systems comply with ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
3. Product Data for Credit IEQ 4.1: For adhesives and sealants, documentation including printed statement of VOC content.

B. Shop Drawings:
   1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
   2. Factory- and shop-fabricated ducts and fittings.
   3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
   4. Elevation of top of ducts.
   5. Dimensions of main duct runs from building grid lines.
   6. Fittings.
   7. Reinforcement and spacing.
   8. Seam and joint construction.
   9. Penetrations through fire-rated and other partitions.
  10. Equipment installation based on equipment being used on Project.
  11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
  12. Hangers and supports, including methods for duct and building attachment and vibration isolation.

1.5 INFORMATIONAL SUBMITTALS
   A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
      1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
      2. Suspended ceiling components.
      3. Structural members to which duct will be attached.
      4. Size and location of initial access modules for acoustical tile.
      5. Penetrations of smoke barriers and fire-rated construction.
      6. Items penetrating finished ceiling including the following:
         a. Lighting fixtures.
         b. Air outlets and inlets.
         c. Speakers.
         d. Sprinklers.
         e. Access panels.
         f. Perimeter moldings.
         g. Projection Screens
   B. Field quality-control reports.

1.6 QUALITY ASSURANCE
   A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-up."
   B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
PART 2 - PRODUCTS

2.1 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 SHEET METAL MATERIALS

A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G60.
2. Finishes for Surfaces Exposed to View: Mill phosphatized.

C. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

D. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.3 SEALANT AND GASKETS

A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
B. Two-Part Tape Sealing System:
   1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone
      activator to react exothermically with tape to form hard, durable, airtight seal.
   2. Sealant: Modified styrene acrylic.
   3. Water resistant.
   4. Mold and mildew resistant.
   5. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
   7. Service Temperature: Minus 40 to plus 200 deg F.
   8. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless
      steel, or aluminum.
   9. For indoor applications, sealant shall have a VOC content of 250 g/L or less when
      calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Water-Based Joint and Seam Sealant:
   1. Application Method: Brush on.
   2. Solids Content: Minimum 65 percent.
   5. Mold and mildew resistant.
   6. VOC: Maximum 75 g/L (less water).
   7. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
   8. Service: Indoor or outdoor.
   9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless
      steel, or aluminum sheets.

D. Flanged Joint Sealant: Comply with ASTM C 920.
   2. Type: S.
   3. Grade: NS.
   5. Use: O.
   6. For indoor applications, sealant shall have a VOC content of 250 g/L or less when
      calculated according to 40 CFR 59, Subpart D (EPA Method 24).

E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

F. Round Duct Joint O-Ring Seals:
   1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and shall be
      rated for 10-inch wg static-pressure class, positive or negative.
   2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
   3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings
      and fitting spigots.

2.4 HANGERS AND SUPPORTS

A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
B. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."

C. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.

D. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

E. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

F. Trapeze and Riser Supports:

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.

B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.

C. Install ducts with fewest possible joints.

D. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.

E. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.

F. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

G. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.

H. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.

I. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.

J. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Division 23 Section "Air Duct Accessories" for fire and smoke dampers.

3.2 INSTALLATION OF EXPOSED DUCTWORK

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.3 DUCT SEALING

A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

3.4 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

B. Building Attachments: Concrete inserts or structural-steel fasteners appropriate for construction materials to which hangers are being attached.

   1. Where practical, install concrete inserts before placing concrete.
   2. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.

C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.

D. Hangers Exposed to View: Threaded rod and angle or channel supports.

E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.
F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.5 CONNECTIONS

A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.6 PAINTING

A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Division 09 painting Sections.

3.7 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Duct system will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.8 START UP

A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

3.9 DUCT SCHEDULE

A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:

END OF SECTION 23 31 13
1. RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   2. Fire dampers.
   3. Smoke dampers.
   4. Combination fire and smoke dampers.
   5. Turning vanes.
   6. Remote damper operators.
   7. Duct-mounted access doors.
   8. Flexible connectors.
   10. Duct accessory hardware.

B. Related Requirements:
   1. Division 28 Section "Digital, Addressable Fire-Alarm System" for duct-mounted fire and smoke detectors.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
   1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."
   2. Product Data for Prerequisite EA 2: Documentation indicating that duct insulation R-values comply with tables in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air Conditioning."

C. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.

   1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:

      a. Special fittings.
      c. Control-damper installations.
d. Fire-damper, smoke-damper, combination fire- and smoke-damper installations, including sleeves; and duct-mounted access doors and remote damper operators.

e. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.

B. Source quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 MATERIALS

A. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

   1. Galvanized Coating Designation: G60.

   2. Exposed-Surface Finish: Mill phosphatized.

B. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

C. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.3 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:

   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. Air Balance Inc.; a division of Mestek, Inc.
b. American Warming and Ventilating; a division of Mestek, Inc.
c. McGill AirFlow LLC.
d. Nailor Industries Inc.
e. Pottorff.
f. Ruskin Company.
g. Trox USA Inc.

2. Standard leakage rating, with linkage outside airstream.
3. Suitable for horizontal or vertical applications.
4. Frames:
   a. Frame: Hat-shaped, 0.094-inch-thick, galvanized sheet steel.
   b. Mitered and welded corners.
   c. Flanges for attaching to walls and flangeless frames for installing in ducts.

5. Blades:
   a. Multiple or single blade.
   b. Parallel- or opposed-blade design.
   c. Stiffen damper blades for stability.
   d. Galvanized-steel, 0.064 inch thick.

7. Bearings:
   a. Oil-impregnated bronze or molded synthetic.
   b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

8. Tie Bars and Brackets: Galvanized steel.

B. Jackshaft:
   1. Size: 0.5-inch minimum diameter.
   2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
   3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.

C. Damper Hardware:
   2. Include center hole to suit damper operating-rod size.
   3. Include elevated platform for insulated duct mounting.

2.4 FIRE DAMPERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   1. Air Balance Inc.; a division of Mestek, Inc.
   2. Cesco Products; a division of Mestek, Inc.
4. Nailor Industries Inc.
5. Pottorff.
6. Ruskin Company.

B. Type: Static; rated and labeled according to UL 555 by an NRTL.

C. Fire Rating: 1-1/2 hours.

D. Frame: Curtain type with blades outside airstream except when located behind grille where blades may be inside airstream; fabricated with roll-formed, 0.034-inch-thick galvanized steel; with mitered and interlocking corners.

E. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.
   1. Minimum Thickness: 0.05 thick, as indicated, and of length to suit application.
   2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

F. Mounting Orientation: Vertical or horizontal as indicated.

G. Blades: Roll-formed, interlocking, 0.034-inch-thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch-thick, galvanized-steel blade connectors.

H. Horizontal Dampers: Include blade lock and stainless-steel closure spring.

2.5 SMOKE DAMPERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Air Balance Inc.; a division of Mestek, Inc.
   2. Cesco Products; a division of Mestek, Inc.
   4. Nailor Industries Inc.
   5. Pottorff.
   6. Ruskin Company.

B. General Requirements: Label according to UL 555S by an NRTL.

C. Smoke Detector: Provided by Fire Alarm Contractor and installed by Mechanical Contractor. Integral, factory wired for single-point connection.

D. Frame: Hat-shaped, 0.094-inch-thick, galvanized sheet steel, with welded interlocking, gusseted or mechanically attached corners and mounting flange.

E. Blades: Roll-formed, horizontal, interlocking or overlapping, 0.034-inch minimum thick, galvanized sheet steel.

F. Leakage: Class I.
G. Rated pressure and velocity to exceed design airflow conditions.

H. Mounting Sleeve: Factory-installed, 0.039-inch minimum thick, galvanized sheet steel; length to suit wall or floor application.

I. Damper Motors: Two-position action.

J. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.
5. Electrical Connection: 24 V or 115 V, single phase, 60 Hz, coordinate with Electrical Contractor.

2.6 COMBINATION FIRE AND SMOKE DAMPERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Cesco Products; a division of Mestek, Inc.
4. Nailor Industries Inc.
5. Pottorff.
6. Ruskin Company.

B. Type: Dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.

C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000-fpm velocity.

D. Fire Rating: 1-1/2 hours.

E. Frame: Hat-shaped, 0.094-inch-thick, galvanized sheet steel, with welded interlocking, gusseted or mechanically attached corners and mounting flange.

G. Smoke Detector: Provided by Fire Alarm Contractor and installed by Mechanical Contractor

H. Blades: Roll-formed, horizontal, interlocking or overlapping, 0.034-inch minimum thick, galvanized sheet steel.

I. Leakage: Class I.
J. Rated pressure and velocity to exceed design airflow conditions.

K. Mounting Sleeve: Factory-installed, 0.039-inch minimum thick, galvanized sheet steel; length to suit wall or floor application.

L. Damper Motors: Two-position action.

M. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."

   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
   3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
   4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.
   5. Electrical Connection: 24 V or 115 V, single phase, 60 Hz, coordinate with Electrical Contractor.

2.7 TURNING VANES

   A. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 4-3, "Vanes and Vane Runners," and 4-4, "Vane Support in Elbows."

2.8 REMOTE DAMPER OPERATORS

   A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

      1. Pottorff.
      2. Ventfabrics, Inc.
      3. Young Regulator Company.

   B. Description: Cable system designed for remote manual damper adjustment.

   C. Wall-Box Mounting: Recessed.

   D. Wall-Box Cover-Plate Material: Stainless steel.

2.9 DUCT-MOUNTED ACCESS DOORS

   A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

      1. American Warming and Ventilating; a division of Mestek, Inc.
      2. Cesco Products; a division of Mestek, Inc.
      3. Ductmate Industries, Inc.

1. Door:
   a. Double wall, rectangular.
   b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
   c. Vision panel.
   d. Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.
   e. Fabricate doors airtight and suitable for duct pressure class.

2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.

3. Number of Hinges and Locks:
   a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
   b. Access Doors up to 18 Inches Square: Continuous and two sash locks.
   c. Access Doors up to 24 by 48 Inches: Continuous and two compression latches.
   d. Access Doors Larger Than 24 by 48 Inches: Continuous and two compression latches with outside and inside handles.

C. Pressure Relief Access Door:

1. Door and Frame Material: Galvanized sheet steel.
2. Door: Double wall with insulation fill with metal thickness applicable for duct pressure class.
3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
5. Doors close when pressures are within set-point range.
6. Hinge: Continuous piano.
7. Latches: Cam.
8. Seal: Neoprene or foam rubber.

2.10 FLEXIBLE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Ductmate Industries, Inc.
2. Duro Dyne Inc.
3. Elgen Manufacturing.
4. Ventfabrics, Inc.
B. Materials: Flame-retardant or noncombustible fabrics.

C. Coatings and Adhesives: Comply with UL 181, Class 1.

   1. Minimum Weight: 26 oz./sq. yd.
   2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
   3. Service Temperature: Minus 40 to plus 200 deg F.

E. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
   1. Minimum Weight: 24 oz./sq. yd.
   2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
   3. Service Temperature: Minus 50 to plus 250 deg F.

2.11 FLEXIBLE DUCTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Flexmaster U.S.A., Inc.
   2. McGill AirFlow LLC.

B. Insulated, Flexible Duct: UL 181, Class 1, 2-ply vinyl film supported by helically wound, spring-steel wire; fibrous-glass insulation; polyethylene or aluminized vapor-barrier film.
   1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
   3. Temperature Range: Minus 10 to plus 160 deg F.
   4. Insulation R-value: Comply with ASHRAE/IESNA 90.1.

C. Flexible Duct Connectors:
   1. Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action in sizes 3 through 18 inches, to suit duct size.

2.12 DUCT ACCESSORY HARDWARE

A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.

B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 INSTALLATION
A. Install duct accessories according to applicable details in SMACNA’s "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts.

B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

C. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.

D. Set dampers to fully open position before testing, adjusting, and balancing.

E. Install test holes at fan inlets and outlets and elsewhere as indicated.

F. Install fire, smoke, and combination fire and smoke dampers according to UL listing.

G. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
   1. On both sides of duct coils.
   2. Upstream from duct filters.
   3. At outdoor-air intakes and mixed-air plenums.
   4. At drain pans and seals.
   5. Downstream from manual volume dampers, control dampers, and equipment.
   6. Adjacent to and close enough to fire or smoke dampers, to reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
   7. At each change in direction, except turns of less than 90-degrees, and at maximum 50-foot spacing.
   8. Upstream and downstream from turning vanes.
   9. Control devices requiring inspection.
   10. Elsewhere as indicated.

H. Install access doors with swing against duct static pressure.

I. Access Door Sizes:
   1. One-Hand or Inspection Access: 8 by 5 inches .
   2. Two-Hand Access: 12 by 6 inches .

J. Label access doors according to Division 23 Section "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.

K. Install flexible connectors to connect ducts to equipment.

L. Connect terminal units to supply ducts directly or with maximum 12-inch lengths of flexible duct. Do not use flexible ducts to change directions.
M. Connect diffusers or light troffer boots to ducts directly or with maximum 60-inch lengths of flexible duct clamped or strapped in place.

N. Connect flexible ducts to metal ducts with draw bands.

O. Install duct test holes where required for testing and balancing purposes.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 23 33 00
SECTION 23 34 23 - HVAC POWER VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Ceiling-mounted ventilators.
   2. In-line centrifugal fans.
   3. Residential grade kitchen exhaust fan.

1.3 PERFORMANCE REQUIREMENTS

A. Project Altitude: Base fan-performance ratings on sea level.
B. Operating Limits: Classify according to AMCA 99.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Also include the following:
   1. Certified fan performance curves with system operating conditions indicated.
   2. Certified fan sound-power ratings.
   3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
   4. Material thickness and finishes, including color charts.
   5. Fan speed controllers.
B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. AMCA Compliance: Fans shall have AMCA-Certified performance ratings and shall bear the AMCA-Certified Ratings Seal.

C. UL Standards: Power ventilators shall comply with UL 705. Power ventilators for use for restaurant kitchen exhaust shall also comply with UL 762.

1.8 COORDINATION

A. Coordinate size and location of structural-steel support members.

PART 2 - PRODUCTS

2.1 CEILING-MOUNTED VENTILATORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Loren Cook Company.
3. PennBarry.

B. Housing: Steel, lined with acoustical insulation.

C. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel shall be removable for service.

D. Grille: Metal, louvered grille with flange on intake and thumbscrew attachment to fan housing.

E. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.

2.2 IN-LINE CENTRIFUGAL FANS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Loren Cook Company.
3. PennBarry.

B. Housing: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.
C. Direct-Drive Units: Motor mounted in airstream, factory wired to disconnect switch located on outside of fan housing.

D. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.

E. Fan Wheels: Aluminum, airfoil blades welded to aluminum hub.

F. Accessories:
   1. Companion Flanges: For inlet and outlet duct connections.
   2. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

2.3 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
   3. Comply with requirements of Division 23 Section "Variable-Frequency Motor Controllers."
   4. Provide grounding device for motor shaft of all motors used with variable frequency controllers.

2.4 SOURCE QUALITY CONTROL

A. Certify sound-power level ratings according to AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

B. Certify fan performance ratings, including flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating." Label fans with the AMCA-Certified Ratings Seal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install power ventilators level and plumb.

B. Support units using elastomeric mounts having a static deflection of 1 inch. Vibration- and seismic-control devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

C. Ceiling Units: Suspend units from structure; use steel wire or metal straps.
D. Support suspended units from structure using threaded steel rods and elastomeric hangers having a static deflection of 1 inch. Vibration-control devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

E. Install units with clearances for service and maintenance.

F. Label units according to requirements specified in Division 23 Section "Identification for HVAC Piping and Equipment."

3.2 CONNECTIONS

A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Division 23 Section "Air Duct Accessories."

B. Install ducts adjacent to power ventilators to allow service and maintenance.

C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Verify that cleaning and adjusting are complete.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
5. Adjust belt tension.
6. Verify lubrication for bearings and other moving parts.
7. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
8. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
9. Shut unit down and reconnect automatic temperature-control operators.
10. Remove and replace malfunctioning units and retest as specified above.

C. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Prepare test and inspection reports.
3.4 ADJUSTING

A. Adjust belt tension.

B. Comply with requirements in Division 23 Section "Testing, Adjusting, andBalancing for HVAC" for testing, adjusting, and balancing procedures.

C. Replace fan and motor pulleys as required to achieve design airflow.

D. Lubricate bearings.

END OF SECTION 23 34 23
1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Shutoff, single-duct air terminal units.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.
   1. Air terminal units.
   2. Liners and adhesives.
   3. Sealants and gaskets.
B. LEED Submittals:
   1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - “Systems and Equipment.”
C. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.
   3. Hangers and supports, including methods for duct and building attachment and vibration isolation.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
   1. Ceiling suspension assembly members.
   2. Size and location of initial access modules for acoustic tile.
   3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
B. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Instructions for resetting minimum and maximum air volumes.
2. Instructions for adjusting software set points.

1.6 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

PART 2 - PRODUCTS

2.1 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Environmental Technologies, Inc.
2. METALAIRE, Inc.
3. Nailor Industries Inc.
5. Titus.
7. Tuttle & Bailey.

B. Casing: 0.034-inch steel, single wall.

1. Casing Lining: Non-fibrous "IAQ" type internal insulation.
2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
3. Air Outlet: S-slip and drive connections.
4. Access: Low leakage, gasketed, factory installed access door between damper and heating coil for access to parts requiring service, adjustment, or maintenance.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.

1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
D. **Hydronic Coils:** Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.

E. **Controls:** The controller/actuator and temperature sensors shall be provided to the factory by the BAS vendor for installation by the air terminal unit provider.

F. Include precision airflow sensor to accurately and reliably control full range of airflow in a stable, non-hunting manner from absolute minimum required for minimum zone ventilation to maximum design airflow. Sensor shall be factory calibrated from 0 to 3000 fpm to NIST-traceable volumetric standards to provide accurate, repeatable airflow measurement from zero flow. Accuracy shall be within +/- 2% of airflow reading. Repeatability shall be within 0.25% of reading. Sensor assembly shall be UL listed and include a calibrated probe, integral enclosure and mounting brackets for simple installation. A DIP-switch user interface shall allow for field selection of airflow or equivalent velocity pressure output, four full-scale measurement range options and analog outputs for interface with BAS.

1. Specifying the precision airflow sensor allows for more accurate demand controlled ventilation compliance with ASHRAE 62.1 and may qualify for acquisition of LEED Energy and Atmosphere and Indoor Environmental Quality credits.

2. **Acceptable Manufacturer:** Ebtron ELF or sensor of equal performance.

### 2.2 HANGERS AND SUPPORTS

A. **Hanger Rods for Noncorrosive Environments:** Cadmium-plated steel rods and nuts.

B. **Steel Cables:** Galvanized steel complying with ASTM A 603.

C. **Steel Cable End Connections:** Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

D. **Air Terminal Unit Attachments:** Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

E. **Trapeze and Riser Supports:** Steel shapes and plates for units with steel casings; aluminum for units with aluminum casings.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.

#### 3.2 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
B. Building Attachments: Concrete inserts, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.

1. Where practical, install concrete inserts before placing concrete.
2. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.

C. Hangers Exposed to View: Threaded rod and angle or channel supports.

D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.3 CONNECTIONS

A. Install piping adjacent to air terminal unit to allow service and maintenance.

B. Hot-Water Piping: In addition to requirements in Division 23 Section "Hydronic Piping," connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.

C. Connect ducts to air terminal units according to Division 23 Section "Metal Ducts."

D. Make connections to air terminal units with flexible connectors complying with requirements in Division 23 Section "Air Duct Accessories."

3.4 IDENTIFICATION

A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.5 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safety controls. Replace damaged and malfunctioning controls and equipment.

C. Air terminal unit will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION 23 36 00
SECTION 23 37 13 - DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Rectangular and square ceiling diffusers.
2. Louver face diffusers.
3. Linear bar diffusers.
4. Linear slot diffusers.
5. Modular core supply grilles.
6. Adjustable bar registers and grilles.
7. Fixed face registers and grilles.
8. Linear bar grilles.

B. Related Sections:

1. Division 08 Section "Louvers and Vents" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
2. Division 23 Section "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated, include the following:

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
3. The air terminal submittal shall include a complete tabulation of all devices identified by room number and listing the model, velocity, cfm, throw, pressure drop, sound level and flow factor and/or core area in square feet.
4. The submittal shall also include the manufacturer's recommendations for air balancing procedures for the devices submitted.

PART 2 - PRODUCTS – SEE SCHEDULE ON DRAWINGS

2.1 MANUFACTURERS:
A. Available Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Hart & Cooley Inc.
   b. METALAIRE, Inc.
   c. Nailor Industries Inc.
   d. Price Industries.
   e. Titus.
   f. Tuttle & Bailey.

2.2 SOURCE QUALITY CONTROL

A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install diffusers, registers, and grilles level and plumb.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.3 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13
SECTION 23 57 00 - HEAT EXCHANGERS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes plate heat exchangers.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product.
   1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
B. Shop Drawings: Signed and sealed by a qualified professional engineer. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.

1.4 INFORMATIONAL SUBMITTALS
A. Source quality-control reports.
B. Field quality-control reports.
C. Sample Warranty: For manufacturer's warranty.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For heat exchangers to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 GASKETED-PLATE HEAT EXCHANGERS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Alfa Laval Inc.
2. ITT Corporation; Bell & Gossett.

B. Configuration: Freestanding assembly consisting of frame support, top and bottom carrying and guide bars, fixed and movable end plates, tie rods, individually removable plates, and one-piece gaskets.

C. Frame:
   1. Capacity to accommodate 20 Insert number percent additional plates.
   2. Painted carbon steel with provisions for anchoring to support.

D. Top and Bottom Carrying and Guide Bars: Painted carbon steel, aluminum, or stainless steel.

E. End-Plate Material: Painted carbon steel.

F. Tie Rods and Nuts: Steel or stainless steel.

G. Plate Material: 0.024 inch minimum thick before stamping; Type 316 stainless steel.

H. Gasket Materials: Glue free.

I. Piping Connections: Factory fabricated of materials compatible with heat-exchanger shell. Attach tappings to shell before testing and labeling.
   1. NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
   2. NPS 2-1/2 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

2.2 ACCESSORIES

A. Miscellaneous Components for Steam Unit: Strainers, steam-control valve, steam trap, valves, pressure gage, thermometer, and piping.

B. Pressure Relief Valves: Cast iron, ASME rated and stamped.

2.3 SOURCE QUALITY CONTROL

B. Hydrostatically test heat exchangers to minimum of one and one-half times pressure rating before shipment.

C. Heat exchangers will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine areas for compliance with requirements for installation tolerances and for structural
rigidity, strength, anchors, and other conditions affecting performance of heat exchangers.

B. Examine roughing-in for heat-exchanger piping to verify actual locations of piping connections
before equipment installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 GASKETED-PLATE HEAT-EXCHANGER INSTALLATION

A. Install gasketed-plate heat exchanger on custom-designed wall supports anchored to structure
as indicated on Drawings.

B. Install metal shroud over installed gasketed-plate heat exchanger according to manufacturer's
written instructions.

3.3 CONNECTIONS

A. Comply with requirements for piping specified in other Division 23 Sections. Drawings indicate
general arrangement of piping, fittings, and specialties.

B. Comply with requirements for steam and condensate piping specified in Division 23 Section
"Steam and Condensate Heating Piping."

C. Maintain manufacturer's recommended clearances for tube removal, service, and maintenance.

D. Install piping adjacent to heat exchangers to allow space for service and maintenance of heat

E. Install shutoff valves at heat-exchanger inlet and outlet connections.

F. Install relief valves on heat-exchanger heated-fluid connection and install pipe relief valves, full
size of valve connection, to floor drain.

G. Install vacuum breaker at heat-exchanger steam inlet connection.

H. Install pressure gages on heat-exchanger and heating-fluid piping. Comply with requirements
for pressure gages specified in Division 23 Section "Meters and Gages for HVAC Piping."

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service
representative:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest
until no leaks exist.

2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls
and equipment.

B. Heat exchanger will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.
3.5 CLEANING

A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

END OF SECTION 23 57 00
SECTION 23 73 13 - MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Variable-air-volume, single-zone air-handling units.

1.3 ACTION SUBMITTALS

A. Product Data: For each air-handling unit indicated.
   1. Unit dimensions and weight.
   2. Cabinet material, metal thickness, finishes, insulation, and accessories.
   3. Fans:
      a. Certified fan-performance curves with system operating conditions indicated.
      b. Certified fan-sound power ratings.
      c. Fan construction and accessories.
      d. Motor ratings, electrical characteristics, and motor accessories.
   4. Certified coil-performance ratings with system operating conditions indicated.
   5. Filters with performance characteristics.

B. LEED Submittals:
   1. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - “Systems and Equipment.”

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Mechanical-room layout and relationships between components and adjacent structural and mechanical elements.
   2. Support location, type, and weight.
   3. Field measurements.

B. Source quality-control reports.

C. Field quality-control reports.
1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For air-handling units to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
F. Comply with NFPA 70.

1.7 COORDINATION
A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Carrier Corporation; a member of the United Technologies Corporation Family.
   2. Engineered Air.
   3. Trane; American Standard Inc.
   4. YORK International Corporation.

2.2 UNIT CASINGS
A. General Fabrication Requirements for Casings:
   1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
   2. Casing Joints: Sheet metal screws or pop rivets.
   3. Sealing: Seal all joints with water-resistant sealant.
   5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
B. Casing:
1. Outside Casing: Galvanized steel, minimum 0.052 inch thick.
2. Inside Casing: Galvanized steel, perforated at fan sections, minimum 0.052 inch thick.
3. Floor Plate: Galvanized steel, minimum 0.052 inch thick.
4. Insulation Thickness: 2 inches.
5. Static-Pressure Classifications for Unit Sections before Fans: 4-inch wg.
6. Static-Pressure Classifications for Unit Sections after Fans: 6-inch wg.

C. Access Doors:
1. Access Door Fabrication: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing.
2. Access Doors:
   a. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside. Arrange doors to be opened against air-pressure differential.
   b. Gasket: Neoprene, applied around entire peripheries of panel frames.
   c. Size: Full height of unit casing up to a maximum height of 60 inches.
3. Service Light: Fixture complete with energy efficient, long-life fluorescent lamp and switched junction box located adjacent to door. UL listed for wet locations.
   a. Locations: Each section accessed with door.

D. Condensate Drain Pans:
1. Fabricated with at least one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and to direct water toward drain connection.
   a. Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
   b. Depth: A minimum of 2 inches deep.
2. Double-wall, galvanized-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
3. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
5. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

2.3 FAN, DRIVE, AND MOTOR SECTION

A. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.
2. Shafts: Solid, designed for continuous operation at maximum-rated fan speed and motor horsepower, and with field-adjustable alignment.
   a. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
   b. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutooff and spun-metal inlet bell.
1. Bracing: Steel angle or channel supports for mounting and supporting fan scroll, wheel, motor, and accessories.
2. Horizontal-Flanged, Split Housing: Bolted construction.
3. Housing for Supply Fan: Attach housing to fan-section casing with metal-edged flexible duct connector.

4. Flexible Connector: Factory fabricated with a fabric strip [3-1/2 inches] [5-3/4 inches] wide attached to 2 strips of 2-3/4-inch- wide, 0.028-inch- thick, galvanized-steel sheet or 0.032-inch- thick aluminum sheets; select metal compatible with casing.
      1) Fabric Minimum Weight: 26 oz./sq. yd..
      2) Fabric Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
      3) Fabric Service Temperature: Minus 40 to plus 200 deg F.

C. Plenum Fan Housings: Steel frame and panel; fabricated without fan scroll and volute housing.

D. Fan Shaft Bearings:
   1. Grease-Lubricated, Tapered-Roller Bearings: Self-aligning, pillow-block type with double-locking collars and 2-piece, cast-iron housing with an L10 rated life of 200,000 hours. Extended grease lines to a safe and readily accessible location outside the unit with 1/8" steel tubing and flush plugs with relief set at 5 psig.

E. Internal Vibration Isolation: Fans shall be factory mounted with manufacturer's standard vibration isolation mounting devices having a minimum static deflection of 1 inch.

F. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
   1. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
   2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   3. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
   4. Provide grounding device for motor shaft of all motors used with variable frequency controllers.

G. Variable Frequency Controllers:
   1. Comply with requirements in Division 23 Section Variable-Frequency Motor Controllers for HVAC Equipment.

2.4 COIL SECTION

A. General Requirements for Coil Section:
   1. Comply with ARI 410.
   2. Fabricate coil section to allow removal and replacement of coil for maintenance and to allow in-place access for service and maintenance of coil(s).
   3. Coils shall not act as structural component of unit.

B. Water Coils:
   1. Coil Type: Self-draining.
   2. Piping Connections: Same end of coil.
   3. Tube Material: Copper.
   4. Fin Type: Plate.
   5. Fin Material: Aluminum.
   6. Fin and Tube Joint: Mechanical bond.
2.5 **AIR FILTRATION SECTION**

A. General Requirements for Air Filtration Section:
   1. Comply with NFPA 90A.
   2. Provide minimum arestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
   3. Filters shall have separate holding frame with side access and slide out frames properly sized in accordance with filter manufacturers' guidelines. Frames shall be located to permit removal of entire frame for filter replacement.

2.6 **DAMPERS**

A. Damper and Damper Operators: Coordinate with provider and with requirements in Division 23 Section "Instrumentation and Control for HVAC."

B. Combination Filter and Mixing Section:
   1. Cabinet support members shall hold 2-inch-thick, pleated, flat, permanent or throwaway filters.
   2. Multiple-blade, air-mixer assembly shall mix air to prevent stratification, located immediately downstream of mixing box.

2.7 **CAPACITIES AND CHARACTERISTICS - SEE EQUIPMENT SCHEDULE ON DRAWINGS**

2.8 **SOURCE QUALITY CONTROL**

A. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.

B. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."

C. Water Coils: Factory tested to 300 psig according to ARI 410 and ASHRAE 33.

**PART 3 - EXECUTION**

3.1 **EXAMINATION**

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine casing insulation materials and filter media before air-handling unit installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.
3.2 INSTALLATION

A. Equipment Mounting: Install air-handling units on concrete bases without vibration isolation devices. Secure units to anchor bolts installed in concrete bases. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-Place Concrete." Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.

2. Install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

4. Install anchor bolts to elevations required for proper attachment to supported equipment.

B. Arrange installation of units to provide access space around air-handling units for service and maintenance.

C. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

D. Install filter-gage, static-pressure taps upstream and downstream of filters. Mount filter gages on filter banks, installed with separate static-pressure taps upstream and downstream of filters.

3.3 CONNECTIONS

A. Comply with requirements for piping specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to air-handling unit to allow service and maintenance.

C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.

D. Connect condensate drain pans using NPS 1-1/4, ASTM B 88, Type M copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Division 23 Section "Hydronic Piping." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.

F. Connect duct to air-handling units with flexible connections. Comply with requirements in Division 23 Section "Air Duct Accessories."

3.4 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:
1. **Leak Test:** After installation, fill water coils with water, and test coils and connections for leaks.

2. **Fan Operational Test:** After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.

D. Prepare test and inspection reports.

### 3.5 **STARTUP SERVICE**

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that shipping, blocking, and bracing are removed.
3. Verify that unit is secure on mountings and supporting devices and that connection to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
6. Verify that zone dampers fully open and close for each zone.
7. Verify that face-and-bypass dampers provide full face flow.
8. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
10. Verify that proper thermal-overload protection is installed for electric coils.
11. Install new, clean filters.
12. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

B. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm.
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

### 3.6 **ADJUSTING**

A. Adjust damper linkages for proper damper operation.

B. Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

### 3.7 **CLEANING**

A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units internally.
to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, coils, and filter housings, and install new, clean filters.

3.8 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

PART 4 - BAS FIGURES

BAS FIGURES: Figure 1 and Figure 2 follow this page.
Figure 1: Building Automation System with Automated Logic Corporation product:
Figure 2: Building Automation System with Johnson Controls Inc. NAE product:

Johnson Controls System Architecture

END OF SECTION 23 73 13
SECTION 23 81 26 - SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary
   Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes split-system air-conditioning and heat-pump units consisting of separate
   evaporator-fan and compressor-condenser components.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated. Include rated capacities, operating
   characteristics, and furnished specialties and accessories. Include performance data in terms
   of capacities, outlet velocities, static pressures, sound power characteristics, motor
   requirements, and electrical characteristics.
B. LEED Submittals:
   1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants
      comply.
C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required
      clearances, method of field assembly, components, and location and size of each field
      connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS
A. Field quality-control reports.
B. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For split-system air-conditioning units to include in
   emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance:
   1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."

C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.

1. Warranty Period:
   a. For Compressor: Five year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Mitsubishi Electric & Electronics USA, Inc.; HVAC Advanced Products Division.
3. Trane; a business of American Standard companies.
4. YORK; a Johnson Controls company.

2.2 INDOOR UNITS 5 TONS OR LESS

A. Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect.
   a. Insulation: Faced, glass-fiber duct liner.
   b. Drain Pans: Galvanized steel, with connection for drain; insulated.

2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 210/240.

3. Fan: Direct drive, centrifugal.

4. Fan Motors:
   a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
   b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
5. Air Filtration Section:
   a. General Requirements for Air Filtration Section:
      1) Comply with NFPA 90A.
      2) Minimum Arrestance: According to ASHRAE 52.1 and MERV according to ASHRAE 52.2.
      3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
   b. Disposable Panel Filters:
      1) Factory-fabricated, viscous-coated, flat-panel type.
      2) Thickness: 1 inch.
      3) Arrestance according to ASHRAE 52.1: 80.
      4) Merv according to ASHRAE 52.2: 5.
      5) Media: Interlaced glass fibers sprayed with nonflammable adhesive.
      6) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

2.3 INDOOR UNITS (6 TONS OR MORE)
A. Evaporator-Fan Components:
   1. Cabinet: Enamed steel with removable panels on front and ends in color selected by Architect.
      a. Insulation: Faced, glass-fiber duct liner.
   2. Condensate Drain Pans:
      a. Fabricated with minimum one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
         1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
         2) Depth: A minimum of 2 inches deep.
      c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple.
      d. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.
   5. Fan Motors:
      a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
      b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

6. Air Filtration Section:
   a. General Requirements for Air Filtration Section:
      1) Comply with NFPA 90A.
      2) Minimum Arrestance: According to ASHRAE 52.1 and a MERV according to ASHRAE 52.2.
      3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.

b. Disposable Panel Filters:
   1) Factory-fabricated, viscous-coated, flat-panel type.
   2) Thickness: 1 inch.
   3) Arrestance according to ASHRAE 52.1: 80.
   4) Merv according to ASHRAE 52.2: 5.
   5) Media: Interlaced glass fibers sprayed with nonflammable adhesive.
   6) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

2.4 OUTDOOR UNITS (5 TONS OR LESS)
   A. Air-Cooled, Compressor-Condenser Components:
      1. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
      2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
         a. Compressor Type: Scroll.
         b. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 210/240.
      3. Fan: Aluminum-propeller type, directly connected to motor.
      5. Low Ambient Kit: Permits operation down to 10 deg F.

2.5 OUTDOOR UNITS (6 TONS OR MORE)
   A. Air-Cooled, Compressor-Condenser Components:
      1. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.

   a. Compressor Type: Scroll.
   b. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 210/240.

3. Fan: Aluminum-propeller type, directly connected to motor.
5. Low Ambient Kit: Permits operation down to 10 deg F.

2.6 ACCESSORIES

   A. Control equipment and sequence of operation are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls."

   B. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.

PART 3 - EXECUTION

3.1 INSTALLATION

   A. Install units level and plumb.

   B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

   C. Install ground-mounted, compressor-condenser components on 4-inch-thick, reinforced concrete base that is 4 inches larger, on each side, than unit. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete." Coordinate anchor installation with concrete base.

   D. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.2 CONNECTIONS

   A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

   B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

3.3 FIELD QUALITY CONTROL

   A. Perform tests and inspections.

   B. Tests and Inspections:
1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

END OF SECTION 23 81 26
SECTION 23 82 19 - FAN COIL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary
   Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes fan-coil units and accessories.

1.3 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and
   accessories.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads,
   required clearances, method of field assembly, components, and location and size of each field
   connection.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fan-coil units to include in emergency, operation, and
   maintenance manuals. In addition to items specified in Division 01 Section "Operation and
   Maintenance Data," include the following:

1. Maintenance schedules and repair part lists for motors, coils, integral controls, and filters.

1.6 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70,
   Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for
   intended use.

B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6
   - "Heating, Ventilating, and Air-Conditioning."

1.7 COORDINATION

Henderson - Biobehavioral Health Building
DGS 800-290/PSU 06-42744/BCJ 08001  12 November 2010
A. Coordinate layout and installation of fan-coil units and suspension system components with other construction that penetrates or is supported by ceilings, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In the Fan-Coil-Unit Schedule where titles below are column or row headings that introduce lists, the following requirements apply to product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

2.2 FAN-COIL UNITS

A. Available Manufacturers:

1. Carrier Corporation.
2. Engineered Air Ltd.
3. Trane.
4. YORK International Corporation.

B. Description: Factory-packaged and -tested units rated according to ARI 440, ASHRAE 33, and UL 1995.

C. Coil Section Insulation: 1/2-inch thick minimum, closed-cell foam complying with ASTM C 1071 and attached with adhesive complying with ASTM C 916.

1. Fire-Hazard Classification: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.

D. Main and Auxiliary Drain Pans: Plastic. Fabricate pans and drain connections to comply with ASHRAE 62.1. Drain pans shall be removable.

E. Chassis: Galvanized steel where exposed to moisture. Floor-mounting units shall have leveling screws.

F. Cabinet: Steel with baked-enamel finish in manufacturer's standard paint color as selected by Architect.

1. Horizontal Unit Bottom Panels: Fastened to unit with cam fasteners and hinge and attached with safety chain; with integral stamped discharge grilles.
2. Steel recessing flanges for recessing fan-coil units into ceiling or wall.

G. Filters: Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

1. Pleated Cotton-Polyester Media: 90 percent arrestance and 7 MERV.
H. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.

I. Fan and Motor Board: Removable.
   1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
   2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
   3. Wiring Termination: Connect motor to chassis wiring with plug connection.

J. Control devices and operational sequences are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls" and

K. Electrical Connection: Factory wire motors and controls for a single electrical connection.

PART 3 - EXECUTION

3.1 EXAMINATION
   A. Examine areas to receive fan-coil units for compliance with requirements for installation tolerances and other conditions affecting performance.
   B. Examine roughing-in for piping and electrical connections to verify actual locations before fan-coil-unit installation.
   C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION
   A. Install fan-coil units level and plumb.
   B. Install fan-coil units to comply with NFPA 90A.
   C. Suspend fan-coil units from structure with elastomeric hangers. Vibration isolators are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
   D. Verify locations of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation.
   E. Install new filters in each fan-coil unit within two weeks after Substantial Completion.

3.3 CONNECTIONS
   A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:
1. Install piping adjacent to machine to allow service and maintenance.
2. Connect piping to fan-coil-unit factory hydronic piping package. Install piping package if shipped loose.

B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 23 82 19
SECTION 23 82 33 - CONVECTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following:
   2. Flat-pipe steel radiators.

1.3 ACTION SUBMITTALS
A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Plans, elevations, sections, and details.
   2. Details of custom-fabricated enclosures indicating dimensions.
   3. Location and size of each field connection.
   4. Location and arrangement of piping valves and specialties.
   5. Enclosure joints, corner pieces, access doors, and other accessories.

1.4 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   1. Structural members, including wall construction, to which convection units will be attached.
   2. Method of attaching convection units to building structure.
   3. Penetrations of fire-rated wall and floor assemblies.
B. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For convection heating units to include in emergency, operation, and maintenance manuals.
1.6 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 - PRODUCTS

2.1 HOT-WATER OR STEAM FINNED-TUBE RADIATORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Embassy Industries, Inc.
2. Engineered Air.
3. Rittling, a div. of Hydro-Air Components.
4. Rosemex.
5. Slant/Fin.
6. Trane.

B. Performance Ratings: Rate finned-tube radiators according to Hydronics Institute's "I=B=R Testing and Rating Standard for Finned-Tube (Commercial) Radiation."

C. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on element supports. One tube end shall be belled.

D. Element Supports: Ball-bearing cradle type to permit longitudinal movement.

E. Support Brackets: Locate at maximum 36-inch spacing to support element.

2.2 FLAT-PIPE STEEL RADIATORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Runtal North America, Inc.

B. Heating Elements: Steel, welded and formed into flat, square, steel header with minimum thickness of 0.109 inches. Include threaded piping and air vent connections.

1. Working Pressure 56 psig : 0.048 inch .

C. Mounting: Wall brackets or floor pedestals as indicated on plans on maximum spacing of 36 inches .

D. Finish: Baked-enamel finish in manufacturer's standard color as selected by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine areas to receive convection heating units for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in for hydronic-piping connections to verify actual locations before convection heating unit installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FINNED-TUBE RADIATOR INSTALLATION

A. Install units level and plumb.

B. Install finned-tube radiators according to Guide 2000 - Residential Hydronic Heating.

C. Install valves in accessible location above ceiling.

3.3 FLAT-PIPE STEEL RADIATOR INSTALLATION

A. Install units level and plumb.

3.4 CONNECTIONS

A. Piping installation requirements are specified in Division 23 Section "Hydronic Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect hot-water units and components to piping according to Division 23 Section "Hydronic Piping."

   1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.

C. Install control valves as required by Division 23 Section "Instrumentation and Control for HVAC."

D. Install piping adjacent to convection heating units to allow service and maintenance.

3.5 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace convection heating units that do not pass tests and inspections and retest as specified above.

END OF SECTION 23 82 33
SECTION 23 82 39 - UNIT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Cabinet unit heaters with centrifugal fans and hot-water coils.
   2. Propeller unit heaters with hot-water coils.

1.3 ACTION SUBMITTALS
A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.
B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Plans, elevations, sections, and details.
   2. Location and size of each field connection.
   3. Details of anchorages and attachments to structure and to supported equipment.
   4. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.
   5. Location and arrangement of piping valves and specialties.

1.4 INFORMATIONAL SUBMITTALS
A. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

PART 2 - PRODUCTS

2.1 CABINET UNIT HEATERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Berko Electric Heating; a division of Marley Engineered Products.
2. Carrier Corporation.
3. Engineered Air Ltd.
4. Indeeco.
5. Markel Products; a division of TPI Corporation.
7. McQuay International.
8. QMark Electric Heating; a division of Marley Engineered Products.
9. Trane.
10. USA Coil & Air.

B. Description: A factory-assembled and tested unit complying with ARI 440.

C. Cabinet: Steel with baked-enamel finish with manufacturer's standard paint, in color selected by Architect.

1. Vertical Unit, Exposed Front Panels: Minimum 0.0528-inch thick, galvanized, sheet steel, removable panels with channel-formed edges secured with tamperproof cam fasteners.
2. Recessing Flanges: Steel, finished to match cabinet.
3. Control Access Door: Key operated.
4. Base: Minimum 0.0528-inch thick steel, finished to match cabinet, 4 inches min high with leveling bolts.

D. Filters: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

1. Pleated: 90 percent arrestance and 7 MERV.

E. Hot-Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain.

F. Fan and Motor Board: Removable.

1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

G. Control devices and operational sequences are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls."
H. Electrical Connection: Factory wire motors and controls for a single field connection.

2.2 PROPELLER UNIT HEATERS
A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Engineered Air Ltd.
   3. Trane.
B. Description: An assembly including casing, coil, fan, and motor in horizontal discharge configuration with adjustable discharge louvers.
C. Cabinet: Removable panels for maintenance access to controls.
D. Cabinet Finish: Manufacturer's standard baked enamel applied to factory-assembled and -tested propeller unit heater before shipping.
E. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.
F. General Coil Requirements: Test and rate hot-water propeller unit heater coils according to ASHRAE 33.
G. Hot-Water Coil: Copper tube, minimum 0.025-inch wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 325 deg F, with manual air vent. Test for leaks to 350 psig underwater.
H. Fan: Propeller type with aluminum wheel directly mounted on motor shaft in the fan venturi.
I. Fan Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
   1. Motor Type: Permanently lubricated.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.
B. Examine roughing-in for piping and electrical connections to verify actual locations before unit heater installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install cabinet unit heaters to comply with NFPA 90A.

B. Install propeller unit heaters level and plumb.

C. Suspend cabinet unit heaters from structure with elastomeric hangers. Vibration isolators are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

D. Suspend propeller unit heaters from structure with all-thread hanger rods and. Hanger rods and attachments to structure are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance.

C. Connect piping to cabinet unit heater's factory, hot-water piping package. Install the piping package if shipped loose.

D. Comply with safety requirements in UL 1995.

E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of unit heater. Hydronic specialties are specified in Division 23 Section "Hydronic Piping."

F. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

G. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
B. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 23 82 39
PART 1  GENERAL

1.1  RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Conditions of the Contract, General Conduct of the Work and Special Requirements, and Division 1 Specification Sections, apply to this Section.

1.2  OVERVIEW

A. This document contains the specification and input/output summaries for the Building Automation System (BAS) for the Henderson Bridge Replacement Building, PSU #06-42744 / BCJ 08001 at University Park campus. The system architecture shall utilize intelligent distributed control modules, located at each site, which communicate over a local controller network. The BAS shall provide Direct Digital Control (DDC), monitored and adjusted by the University’s Automated Logic WebCTRL or JCI Metasys System Extended Architecture software at University Park, both via Microsoft Internet-Explorer, the thin-client user interface. This BAS for the air conditioning, heating and ventilating systems shall interface with other microprocessor based building subsystems as shown on the drawings and as specified.

B. Contractor Alert: Many aspects of the installation and implementation of this project require approval by the University’s Physical Plant BAS Group before the BAS installation shall proceed.

1.3  RELATED SECTIONS

A. Specifications where Equipment is purchased by Others, that will have BAS controllers provided by CSC to be installed at the factory (factory-installed Controls, i.e. VAV boxes, etc.)

1. Section 23 36 00 - Air Terminal Units

B. 3rd-Party Interfacing is required on this project according to the following Specification sections for sub-systems. Figure 1 (ALC) or Figure 2 (JCI), depending on which is the selected BAS, shall be provided to the Vendor that provides the following Equipment on this Project, so Vendor understands how the communications-networking needs to function:

1. Section 23 0514 – Variable Frequency Motor Controllers for HVAC Equipment

2. Section 26 0943 – Network Lighting controls

1.4  REFERENCES

1.5  DEFINITIONS

A. BAS refers to the Building Automation System. (In the past, this may have been referred to as CCS, Central Control System, EMS, Energy Management System, or ATC, Automatic Temperature Control.)

B. Critical Space refers to a space that is being backed-up by redundant utilities and/or redundant HVAC system(s) (i.e. Animal Rooms, Temperature-critical research, etc.).

C. CSC refers to the Control System Contractor. The CSC is the Contractor responsible for the implementation of this Section of the Specifications.

D. Enhanced Zone Sensor refers to a Room Sensor with Set-point Adjustment and Occupancy Override.

E. Gateway refers to the interface (hardware and/or software) to provide seamless integration
by non-BAS equipment manufacturers. Refer to paragraph 2A.2 “BAS Interfacing with 3rd-Party Sub-systems”.

F. I/O refers to Input/Output. Thus, "I/O device" means "Input/Output device".

G. IP refers to the Internet Protocol.

H. Night Lighting refers to non-emergency exterior lights mounted to the building.

I. OEM stands for Original Equipment Manufacturer, and refers to the manufacturer of the equipment being provided that includes a microprocessor based building sub-system [VFD(s), Lighting Controls, and/or Electrical Monitoring] for this Project.

J. Object Table(s) refer(s) to the detailed listing(s) of BACnet objects and the functional requirements using the various operator interfaces for the system. In the past, this/these may have been referred to as "Points List(s)" and "I/O Summary".

K. On-line refers to accessibility via the thin-client user interface.

L. Primary Equipment refers to Heating, Cooling and/or Air Moving SOURCE equipment. This includes HW System (pumps, HX, valves, sensors, etc.), CHW System (pumps, valves, sensors, etc.), ACFs, etc. This does NOT include Terminal Equipment (see separate definition).

M. Terminal Equipment refers to Heating, Cooling and/or Air Moving equipment connected to Primary Equipment and directly serving a Conditioned Zone in the Building. This includes FCUs, CUHs, VAVs, FTR, etc. This definition is separate from Primary Equipment (see separate definition).

N. Thin-client User Interface refers to the software program Microsoft Internet Explorer.

O. TNS refers to Penn State’s Telecommunications and Networking Services at The Pennsylvania State University.

P. OWS refers to an Operator Work Station, also seen as Operator Workstation.

Q. “University’s Physical Plant BAS Group” refers to University employees designated by the Office of Physical Plant (OPP) Energy & Engineering Division.

1.6 MANUFACTURER

A. Automated Logic Corporation (ALC), as installed by ALC Pittsburgh branch office.

B. Johnson Controls Inc. (JCI) (Metasys System Extended Architecture), as installed by Harrisburg branch office.

C. No other Manufacturers are allowed.

1.7 SCOPE OF WORK

A. This specification is using the JUL2010 version of the PSU BAS Guide Specification. Some of the revisions since the JAN2008 version will affect the Scope of Work. The CSC must carefully review this entire Specification Section 25 55 00 as the Design Professional may also have new and added requirements.

B. Control System Contractor’s (CSC) Responsibilities:

1. The CSC shall furnish and install all necessary hardware, wiring, computing equipment and software required to provide a complete and functional system necessary to perform the design intent given in the sequences of operation, and as defined in this specification.

2. The CSC is fully responsible for coordinating the work required of the OEM when there is a 3rd-party sub-system provided in the project.

3. All costs associated with the work of this Section shall be included in the CSC’s contract.

4. The CSC shall coordinate the CSC’s work with other trades.

C. System Requirements
1. All material and equipment used shall be standard components, regularly manufactured and available, and not custom designed especially for this project. All systems and components, except site specific software, shall have previously been thoroughly tested and proven in actual use prior to installation on this project.

2. The system architecture shall be fully modular permitting expansion of application software, system peripherals, and field hardware.

3. The system, upon completion of the installation and prior to acceptance of the project, shall perform all operating functions as detailed in this specification.

D. Equipment

1. System Hardware
   a. The CSC shall provide the following:
      (1) Operator workstation(s) and control modules.
      (2) All relays, switches, sensing devices, indicating devices, and transducers required to perform the functions listed in Object Table(s).
      (3) All monitoring and control wiring.
      (4) For this project, the CSC shall connect to (physical wiring and/or via programming) the integration gateway modules and software to interface with the following third party equipment:
         (a) Variable Frequency Motor Controllers for HVAC Equipment
         (b) Modular Indoor Central-Station Air-Handling Units
         (c) Network Lighting controls

2. System Software
   a. The CSC shall provide all software identified in this specification. The database required for implementation of these specifications shall be provided by the CSC, including point descriptor, alarm limits, calibration variables, on-line graphics, reports and point summaries. The CSC shall provide and create the system using the latest software release, at the time of Shop Drawing approval.
   b. Site-license: For this project, at least one (1) additional software license for the existing campus Automated Logic WebCTRL or JCI Metasys System Extended Architecture software shall be provided.

E. Object Table(s)

1. The system as specified shall monitor, control, and calculate all of the points/objects and perform all the functions as listed in sequences of operation and as shown in control diagrams in this specification and in the contract drawings.

2. All objects, including Application Controller level objects, shall be exposed as BACnet Objects.

F. Codes and Regulations

1. All electrical equipment and material and its installation (including programming) shall conform to the current requirements of the following authorities:
   a. Occupational Safety and Health Act (OSHA)
   b. National Electric Code (NEC), 2005
   c. International Fire Code, 2006
d. International Mechanical Code, 2006

g. International Building Code, 2006

h. International Existing Building Code, 2006

i. International Plumbing Code, 2006

2. All distributed, application controllers supplied shall be in compliance with the following listings and standards:
   a. UL916 for Open Energy Management
   b. CE Electro Magnetic Compatibility

3. The control system manufacturer shall have quality control procedures for design and manufacture of environmental control systems for precise control and comfort, indoor air quality, HVAC plant operation, energy savings and preventative maintenance.

4. Where two or more codes conflict, the most restrictive shall apply. Nothing in this specification or related documentation shall be construed to permit work not conforming to applicable codes.

G. Building Ethernet Connection Cabling: The building Ethernet shall be provided by the University (cooperation between Physical Plant and TNS), at the Building Telecommunications closet(s), and a Network Switch is provided and installed by Physical Plant personnel at this location. The CSC shall provide CAT-5e or CAT-6 cabling between Global Building Controller(s)/Router(s) and the Building Telecommunications Closet(s). The CSC shall provide repeaters between Global Building Controllers /Routers and the Building Ethernet Connection as required. Final Building Ethernet Connection terminations shall be by the CSC and shall be coordinated with the University's Physical Plant BAS Group.

H. Major Systems Cabling: The CSC shall provide CAT-5e or CAT-6 cabling between the Global Building Controller location and each location of an Air Handler, Heating System, and/or Chilled Water System Panel. All terminations shall be completed by the CSC.

I. The CSC shall provide all object mapping and programming and shall coordinate object naming conventions and network map requirements with the University's Physical Plant BAS Group. The naming convention shall be submitted with the BAS Shop Drawings for review and approval by the University's Physical Plant BAS Group.

J. The CSC shall provide a circuit from an existing Normal/Emergency power panel and an UPS for the Global Building Controller/Routers and, if necessary, for repeaters and Application Controllers serving emergency and/or critical equipment.

K. The CSC shall provide router and software to route BACnet messages over the existing Campus Ethernet infrastructure using BACnet standard Annex J routing (BACnet over IP). Existing Campus Ethernet infrastructure has multiple subnets and is capable of routing IP messages.

L. Refer to Figure 1 and Figure 2 at the end of this Section for a graphical indication of the Scope of Work, as it relates to the campus infrastructure and OEM equipment.

1.8 SUBMITTALS

A. Submit under provisions of Division 1.

B. BAS Intent Meetings:
   1. Purpose of BAS Intent Meetings: The GOAL of these Meetings is to be proactive about having the Controls Design, including the Programming Logic, to be consistent with the INTENT of the Systems (a "system" involves Equipment and
Sequence of Operation). The Design Intent is best understood by the Design Engineer, and the PSU Engineering Services Engineer responsible for Reviewing and guiding the Project. Text language can often be interpreted in different ways. By having face-to-face discussions, miss-interpretations should be able to be avoided early in the Construction-process.

2. Form of Meetings:
   a. There shall be at least two (2) Meetings, but not less than the number of Meetings that are required to adequately cover the BAS Intent. This will depend on the size of this Project.
   b. Meeting Details:
      (1) The first BAS Intent Meeting shall be conducted by the Owner, and shall be held prior to the CSC starting the BAS Shop Drawings Submittal. Contact the PSU Project Manager with at least 10-days advance notice for scheduling this Meeting.
      (2) The second (and additional) BAS Intent Meeting(s) shall be conducted by the CSC, when the BAS Shop Drawings Submittal is approximately 50% completed, to verify that everything is “on-track” according to the BAS Intent (defined by Designer & Owner).

3. Meeting Attendance:
   a. Required:
      (1) The Project’s Mechanical Design Engineer (the person responsible for, and knowledgeable-about, the Sequences of Operation)
      (2) PSU Engineering Services Engineer (at least Mechanical, and possibly also Electrical)
      (3) PSU BAS Group representative
      (4) Applications Engineer for the CSC (Control System Contractor)
      (5) Project Manager for the CSC
   b. Possible:
      (1) the Project’s CM (Construction Manager) representative
      (2) Programmer /Logic-developer for the CSC
      (3) the Project’s Cx-provider
      (4) PSU Cx Services representative
      (5) PSU Project Management representative

4. BAS Shop Drawings Submittal, presented at the 50% completed stage, shall include at a minimum:
   a. Cover Sheet /Title Sheet, Index, Legend and Letter of Factory Training Credits.
   b. Communications Riser (complete for the entire Project), and Device Addressing Scheme
   c. System Schematic, 1 for each System
   d. Sequence of Operation, 1 for each System
   e. Valve and Damper Schedules
   f. Product Data Sheets: This shall include at least a LIST of the Controllers and Devices to be used. The “list” could be a “combined BOM”, and then submit Product Data Sheets for just the new or not-common Devices.
BAS Shop Drawings Submittal (for Approval) will still include Product Data Sheets for ALL the Materials on the Project, as these are important for future reference.

C. As soon as Submittals are prepared, an electronic version shall be provided simultaneously with the mailing of the paper copies to the Project Contractor-chain. The electronic version shall be transmitted via e-mail, to expedite the approval process. Provide Submittal in electronic format to: Bob Mulhollem, Manager of Environmental Systems, REM26@psu.edu, 863-7220.

D. Air Flow Monitoring Station (AFMS) Product Data Sheets
   1. Submit product data sheets and technical Installation, Operation and Maintenance Manual for thermal dispersion airflow measuring devices indicating minimum placement requirements, sensor density, sensor distribution, and installed accuracy to the host control system.

E. BAS Shop Drawings: The Building Number and PSU Project Reference Number shall be part of each piece of the Shop Drawings Submittal. All controls drawings shall be B-size (11” x 17” sheet), C-size (24” x 18” sheet ) or D-size (36” x 24” sheet), and shall be completed and provided using Visio, or AutoCAD. A minimum of four (4) copies of shop drawings shall be submitted and shall consist of the following:
   1. Shop Drawings shall include:
      a. Cover Sheet /Title Sheet: Attached to the Front of all Submittal Sheets, this shall include a minimum of: Project Name; Project Location; Project Number, Building Number; CSC Contractor Name, Address, Phone Number(s); Project Engineer Name; Mechanical Contractor Name; Submission Date; Date and Name of the Project Construction Documents used to create the Submittal. When resubmitted for Record Documentation, the Date of As-Builts shall be added.
      b. Index: The first sheet of the Shop Drawings shall be an Index of all sheets in the set.
      c. Legend: A description of symbols and acronyms used shall be provided at the beginning of the set of Shop Drawings.
      d. Letter of Factory Training Credits, per requirements in Part 3 – Training.
      e. Communications Riser: A single-page diagram depicting the system architecture complete with a communications riser. Riser shall include room locations and addressing for each controller. Include a Bill of Material for all equipment in this diagram but not included with the unique controlled systems. Renovations and/or expansions to an existing BAS shall be developed using the existing communications riser diagram available from the University’s Physical Plant BAS Group.
      f. Device Addressing Scheme: Install controllers implementing an addressing scheme consistent with the Reference-document "Device Instance at Penn State". The document "Device Instance at Penn State.doc" is available on the PSU Design Standards website. The addressing scheme shall be submitted, reviewed and approved by the University’s Physical Plant BAS Group prior to implementation.
      g. Equipment Numbering: Acronyms used for equipment installed for this project shall follow the "Equipment Identifier Prefix Acronym" listing prepared by the University’s Office of Physical Plant and available on the PSU Design Standards website. The numbering assigned to equipment installed for this project shall sequentially follow the numbering of existing equipment of the same type in the same building. The equipment numbering scheme shall be submitted, reviewed and approved by the University’s Physical Plant BAS Group prior to implementation.
h. Systems Summary: Drawings shall include a table listing each piece of equipment and the area(s) served by each piece of equipment.

i. Valve Schedule: The Valve Schedule(s) shall be submitted using the Template provided by PSU, and shall be reviewed and approved by the Professional prior to installation of any Valve. The document "Valve Schedule_Template.xls" is available on the PSU Design Standards website.

j. Damper Schedule: The Damper Schedule(s) shall be reviewed and approved by the Professional prior to installation of any Damper.

k. Object Table: Object Table shall include all I/O points, all Alarm points and all Trend points. Information on each point shall include the following:
   (1) Point type
   (2) Point description
   (3) Point name
   (4) Alarm limits, if applicable
   (5) Whether or not a Trend is Enabled on point
   (6) What Trend is triggered on, if applicable
   (7) Whether or not Trend historian (archive) is enabled on point
   (8) Event Category and Event Template assigned to point

l. Floor Plans: Drawings shall include the proposed location of all field devices and the routing of the communications cabling.

m. System Schematic: Drawings shall include a single-line representation of the equipment being controlled, including all field devices required for properly controlling equipment and implementing the sequences of operation for this project.

n. Sequence of Operation: Drawings shall include Sequences of Operation for each piece of equipment with a unique configuration. The sequences shall be written in English text in such a way as to clearly convey how the design sequence of operation has been implemented by the controls design included in this Submittal. The design sequence of operation is that which is provided in the specification and in the contract drawings for this project as provided by the Professional. A simple duplication of the design sequence of operation provided in the specification for this project and in the contract drawings is not acceptable. The Sequences of Operation shall follow the outline below for a pattern of form and content. Each device that is referred to shall have the Device Tag identified in parentheses.

   (1) TITLE
   (2) GENERAL (include Set Points, Schedule, etc.)
   (3) MODES OF OPERATION
      (a) Unoccupied
         (1) Heating
         (2) Cooling
      (b) Occupied
         (1) Heating
         (2) Cooling
   (3) INTERLOCKS (i.e. Fume Hoods, Exhaust Fans, etc.)
(4) SAFETIES (i.e. Freeze Protection, Smoke Detector, etc.)

o. Point-to-point Wiring Details: Drawings shall include point-to-point wiring
details and must show all field devices, start-stop arrangement for each
piece of equipment, equipment interlocks, controllers, panel devices, wiring
terminal numbers and any special information (i.e. shielding requirements)
for properly controlling equipment and implementing the required sequences
of operation.

p. Bill of Material: Drawings shall include a bill of the material necessary and
used for properly controlling equipment and implementing the required
sequences of operation. As-built documents shall include the Valves and
Dampers installed.

q. Configuration Details: Drawings shall include programming and parameter
setup information necessary for each controller used to properly control
equipment and implement the required sequence of operation.

r. On-line Graphics: Submit a sample of a typical graphical representation of
the equipment, logic and communication riser. The sample can be from a
previous project that had the same equipment.

s. Each unique controlled system or piece of equipment shall include the
following items (described above):

(1) System Schematic
(2) Sequence of Operation
(3) Point-to-point Wiring Details
(4) Bill of Material
(5) Configuration Details
(6) On-line Graphic (sample)

t. Controller Table: A complete table for each and every controller installed per
this project, shall be included in the BAS Shop Drawings Submittal, and a
separate electronic copy of the table in “Microsoft Excel” format, shall be
provided (via email, to Bob Mulhollem). Contact the University’s Physical
Plant BAS Group for an example or template. This table shall include the
following:

(1) The University Campus location where the equipment and controller will
be installed
(2) The official University building inventory number where the equipment
and controller will be installed
(3) The building name where the equipment and controller will be installed
(4) The BACnet device instance of the controller.
(5) The BACnet network instance that the controller shall reside on.
(6) The UDP port that is being utilized by any device on the BACnet/IP
network
(7) The manufacturer’s name of the controller
(8) The manufacturer’s model number of the controller
(9) The network media type that the controller resides on

2. BAS shop drawings shall be submitted to and approved by the University’s Physical
Plant BAS Group before any aspect of the BAS installation shall proceed.
Therefore, shop drawings must be submitted in time for the Professional and the
University’s Physical Plant BAS Group review so that all installations can be
completed per the project’s completion schedule. Ten working days shall be
allowed for the Professional and the University’s Physical Plant BAS Group to
review submittals.
3. As-Built Drawings shall be created after the final system checkout, by modifying and adding to the Shop Drawings. As-Built Drawings shall show exact installation. As-Built Drawings will be acknowledged in writing by the Professional and the University’s Physical Plant BAS Group after the final checkout of the system. The system will not be considered complete until the As-Built Drawings have received their final approval. The CSC shall deliver four sets of As-Built Drawings to the University’s Physical Plant BAS Group, with copy of the transmittal to the University’s Project Management. Equipment Panel As-Built Drawings shall be provided prior to acceptance of the completed BAS installation.

4. In addition to the Controller Table listed above, and before final configuration, the CSC shall provide Object Table(s) form(s) to the Professional and the University’s Physical Plant BAS Group that include:
   a. Description of all points/objects.
   b. Listing of binary and analog hardware required to interface to the equipment for each function.
   c. Listing of all application programs associated with each piece of equipment.
   d. BACnet device and object instances.
   e. Event Parameters.
   f. Failure modes for control functions to be performed in case of failure.

F. Construction Schedule of CSC’s milestones:

1. The CSC shall submit to the University’s Project Management a detailed schedule, identifying all activities from the contract award to system warranty expiration. The schedule shall be coordinated with all other Contractors and shall be submitted within 90 days after the notice to proceed. The schedule shall include, but shall not be limited to, the following milestones:
   a. notice to proceed;
   b. submittal of this detailed-schedule
   c. date for the first BAS Intent Meeting, to be scheduled (by PSU, the Owner) prior to the CSC starting the BAS Shop Drawings Submittal (if the date for this Meeting occurs before the detailed-schedule is submitted, then date of notification to the PSU Project Manager should also be included);
   d. distribute the 50% completed BAS Shop Drawings Submittal for review and comment by the Design Engineer and the University’s Engineering Services Engineer;
   e. the second BAS Intent Meeting, conducted by the CSC when the BAS Shop Drawings Submittal is approximately 50% completed (additional Meetings, as necessary, can be included but are not required to be included);
   f. submit BAS Shop Drawings Submittal, and associated hardware and software documentation, for review and approval by the University’s Physical Plant BAS Group;
   g. receive work approval; Notice: No portion of the field installation may begin without the Physical Plant BAS Group’s approval of working drawings, and hardware, firmware and software documentation, unless specific written instructions to the contrary are provided by the University’s Physical Plant BAS Group.
   h. begin field installation;
   i. complete installation of all thermowells;
   j. complete installation of wiring runs;
k. complete installation of remote field devices;
l. deliver major BAS components and operator interface / telecommunications equipment;
m. complete installation of panels, communication equipment, processors, etc.;
n. complete installation of operator interface and telecommunications equipment;
o. complete identification of all BAS equipment;
p. complete initial applications engineering and provide the University’s Physical Plant BAS Group with programming and database for review;
q. revise programming input variables, as required;
r. submit copy of construction mark-up set for review and use in commissioning;
s. commission system, using the initial set of online graphics (systems and dynamic thermo-graphic floorplans);
t. notify the University’s Project Management and Physical Plant BAS Group, in writing, of system completion and preparations for acceptance testing;
u. schedule acceptance testing to permit a member of the University’s Physical Plant BAS Group to be present;
v. provide assistance to Cx-provider, as-necessary per Project Scope;
w. complete punch list items;
x. complete training, using construction mark-up set of BAS Shop Drawings;
y. submit approved as-built drawings, and complete revisions to the initial set of online graphics;
z. initiate warranty period;
aa. terminate warranty period.

2. The CSC shall submit similarly detailed schedule information, revised if necessary, for any additional work which will extend the effectiveness of the BAS and is contracted either concurrent to or immediately following the term of the present installation. It shall be the responsibility of the CSC to alert the University’s Project Management of any scheduling conflicts, and to defer to the judgment of the University in the resolution of those conflicts.

3. The CSC shall provide additional workers and/or overtime hours as deemed necessary by the University to meet scheduled completion dates.

4. Should the CSC fail to maintain any part of the installation schedule, the University reserves the right to require written weekly progress reports. If the University so elects, the CSC shall provide a then-current schedule and shall provide written updates to that schedule to both the University and the Professional on a weekly basis. If this option is exercised by the University, the schedule shall be delivered to the University and the Professional no later than the Thursday immediately preceding the week during which the schedule will become effective. Bidders will note that it remains the intent of the University to execute all available remedies under this contract to ensure the CSC’s best efforts to satisfy the initial milestone scheduling. All programming tools shall be provided as part of the system. CSC shall provide any system upgrades released during the warranty period free of charge to the University.

G. Operating and Maintenance Manuals
1. Operating and Maintenance (O&M) manuals for the system shall include the following categories: Workstation User's Manual and Project Engineering Handbook, and Software Documentation. Project specific manuals shall include detailed information describing the specific installation.
   a. Workstation User's Manual shall contain as a minimum:
      (1) System overview.
      (2) Networking architecture.
      (3) The object tables.
      (4) The sequences of operation.
      (5) The graphical programming.
      (6) Established setpoints and schedules.
      (7) Summary of trend objects.
      (8) User manuals for the ‘third party’ software
   b. Project Engineering Manual shall contain as a minimum:
      (1) System architecture overview
      (2) Hardware cut-sheets and product descriptions
      (3) Wiring diagrams for all controllers and field hardware
      (4) Installation, mounting and connection details for all field hardware and accessories
      (5) Commissioning and setup parameters for all field hardware
      (6) Maintenance procedures, including final tuning and calibration parameters.
      (7) Spare parts list.
      (8) Record Software Documentation shall contain as a minimum:
         (a) Graphical programming must be represented using either Visio or AutoCAD.
         (b) Graphical representation of all control logic for every piece of mechanical equipment controlled on the project, together with a glossary or icon symbol library detailing the function of each graphical icon. ‘Line by line’ computer program documentation is unacceptable.
         (c) Detailed description of control sequences used to achieve the specified sequences.

H. PICS: Provide a BACnet Protocol Implementation Conformance Statement (PICS) for each system element proposed (Operator workstation, LAN Gateway/Controller, Logic Controller, Routers, Repeaters, Converters, Application Controllers). This PICS shall contain all of the information described in Section 22.1.1.1, and shall be in the format found in Annex A, of ASHRAE Standard 135.

I. Provide complete description and documentation of any proprietary services and/or objects.

1.9 COORDINATION WITH OTHER CONTRACTORS

A. When the Project involves removal and/or demolition of existing BAS Panel(s) and/or BAS cables (wire or fiber):

   1. Contact the Project Manager and BAS Group to coordinate the disconnection of the equipment from the active CCS network, and
2. All wiring and tubing abandoned by the work of the CSC, during the course of completing this Project, shall be removed in total. Abandoned Controllers, Panels and Devices shall be retained by, and as determined by, PSU Physical Plant Area Services.

3. Contact the Project Manager and the Area Services Supervisor to coordinate the placement of removed equipment into an inventory of Spare Parts for the Building being renovated or demolished.

B. Review the installation of all controlled systems such as air handling equipment, duct work, piping, pumps, fans, and similar equipment for the purpose of providing the appropriate installing contractor correct information for wells, relays, panels, access panels, and similar appurtenances required for the control system. Such information shall include physical size, proper location and orientation, and accessibility requirements.

C. The CSC shall coordinate the installation of all control devices, and shall ensure that supporting work by others such as installation of thermometer wells, pressure taps, orifice plates and flanges, access panels, electronic transducers, and other items required are included. The CSC shall schedule and coordinate the work to ensure that the items are installed in the proper manner at the appropriate time.

D. Coordinate the Pressure and Temperature test plugs (P/T ports) that are required adjacent to all electronic pressure and temperature BAS sensors in hydronic systems (for testing/calibration purposes). Installed per Section 23 05 19.

1.10 CONTRACTOR (CSC) EXPERIENCE AND PERFORMANCE

A. The University requires a BAS that is installed, programmed, commissioned, and serviced by an experienced CSC. To insure the University of proper BAS service and support, the CSC shall be the authorized distributor of the BAS manufacturer for the local area and if requested by the University shall supply proof thereof. In view of this, the CSC shall have installed a minimum of five BASs of the same type and size as the BAS herein specified and shall provide job names, a brief description of the scope of each BAS job, and a point of contact for each job. The actual, local CSC or BAS branch office, rather than the BAS manufacturer, will provide this information.

B. The CSC shall have a local office or representative within the state of Pennsylvania, staffed with factory trained engineers, fully capable of providing instruction, routine maintenance, and emergency maintenance service on all system components. The CSC shall be responsible for replacement of: the controllers with current job software, printer, PC(s), sensors, and devices at all times for a period of not less than 1 year following project completion, and shall guarantee replacement and software reprogramming of a system in need of repair, within a 24 hour period after notification from the University. In the case of an after-hours emergency, the CSC shall provide after-hours emergency services which will, upon notification of an emergency situation, result in CSC personnel being on-site within four hours if necessary.

C. The CSC must have an acceptable performance record with the University. The performance record of the CSC will be subject to an annual review by the University’s Physical Plant BAS Group.

1.11 WARRANTY & SERVICE

A. Provide warranty under provisions of Division 1.

B. Provide all services, materials and equipment necessary for the successful operation of this system for a period of one year. Provide all recommended preventive maintenance which is indicated in the O&M Manuals during this period. In addition, provide two (2) semi-annual visits for testing and evaluating the performance of the networked equipment installed per this specification. One visit shall be during the cooling season and one visit shall be during the heating season. Provide a written report after each visit is complete. Coordinate service visits through the University’s Physical Plant BAS Group. This service visit shall
include, but not be limited to, the following:

1. Check calibration and re-calibrate if needed instrumentation sensors for air flow, liquid flow, pressure, humidity, temperature, and transducers. Written records shall be kept indicating the performance of such calibrations along with pertinent data.

2. Check the operation of dampers and damper actuators to assure no lock up has occurred and stroke is proper. Written records shall be kept indicating the performance of such calibrations along with pertinent data.

3. Check the overall system field operations by performing an all-points review (by hard copy or by documenting all-point inquiries). Verify that all monitoring and command points are valid and active.

4. Written records shall be kept indicating the performance of such exercises.

C. If a problem develops at any time during the warranty/service period, the CSC shall monitor and log the affected BAS point/object for the remainder of the warranty/service period. "A problem" in the above statement will refer to an incident in which any of the following occur:

1. An alarm occurs due to defective control system components or improper installation or programming.

2. Overall performance of the system is compromised due to defective control components or improper installation or programming.

3. Major recalibration (by greater than 5 times the catalogued accuracy) is required for a sensor during one of the service visits.

D. The CSC shall provide any system software upgrades released during the warranty period, free of charge to the University.

---- End of PART 1 --------------------------
PART 2A PRODUCTS, HARDWARE

2A.1 NETWORKING/COMMUNICATIONS

A. The design of the hardware and software shall network existing operator workstations at the PSU Campus with new Global Building Controllers /Routers provided under this Section. The network shall be implemented via the Campus shared Ethernet system. The campus shared Ethernet backbone uses IP communication protocol.

1. Ethernet Switch: For this project, the CSC shall provide an Ethernet switch in the same panel with the Global Building Controller /Router, to connect the Global Building Controller to the campus shared Ethernet backbone. This hardware shall be a 5-port 10/100 Mbps Ethernet-switch with DIN-rail mount; Contemporary Controls Model EISK5-100T or Equivalent.

B. All network parameters must be assigned and approved by the University’s Physical Plant BAS Group prior to implementation.

C. The system must be fully BACnet™ compliant at the time of installation. This means that the system must use BACnet™ as the native communication protocol between workstations or servers on the network.

D. The BACnet communication protocol is the required protocol for all tiers of the network.

2A.2 BAS INTERFACING WITH 3RD-PARTY SUB-SYSTEMS

A. General: The CSC shall be responsible for connecting all sub-systems to the BAS via native BACnet, or if not native BACnet, a sub-system shall be integrated via a gateway that converts the proprietary protocol to the BACnet protocol. Sub-systems include RTU(s), VFD(s), Chiller(s), Lighting Controls and/or Electrical Monitoring provided as part of this project (refer to Figure 1 and Figure 2 at the end of this specification section and related specification sections). These sub-systems shall be controlled, monitored and graphically programmed through the Graphical User Interface (GUI) software of the BAS.

B. Gateway: The gateway(s), required for the sub-system(s), shall be provided by the OEM. The gateway(s) is(are) further specified below:

1. The gateway Submittal shall be provided by the OEM to be included with the BAS Shop Drawings Submittal, for review and approval by the University’s Physical Plant BAS Group.

2. All system information specified in the sequence of operation and related documents shall be available to the BAS. Read and write capability, as indicated by an object table provided by the OEM, shall be provided to the mechanical and electrical equipment indicated and be available to the BAS system. The OEM shall provide to the CSC, a table of gateway objects and their functionality, including normal operating limits (i.e. High and Low Oil Temperature Limits from a Chiller control panel).

3. Define how the gateway interaction with equipment will comply with this section. OEMs shall bid a fully BACnet compliant device to facilitate interoperability between OEM electrical/mechanical sub-systems and the BACnet BAS or provide the necessary gateway to integrate into the web-based BACnet BAS (WebCTRL, or JCI Metasys System Extended Architecture) using the BACnet protocol.

   a. The OEM shall provide any software or hardware required to access or modify any electrical/mechanical subsystems (i.e. RTUs, VFD, Chillers, Lighting Controls and/or Electrical Monitoring).
b. Typical gateway requirements for projects include: A BACnet interface to the lighting controls manufacturer’s product(s), a BACnet interface to the VFD manufacturer’s product(s), a BACnet interface to the electrical monitoring manufacturer’s product(s) (Square D or Cutler-Hammer). A Modbus interface may be used only when a BACnet interface is not available.

4. If the equipment manufacturer does not have this capability, they shall contact the authorized representative of the CSC for assistance and shall include in their equipment price any necessary hardware and/or software obtained from the CSC to comply with this section.

C. OEM Configuration Tools and Licenses: Configuration Tools, and all software licenses, required to configure all OEM controllers installed on this project shall be provided.

2A.3 GLOBAL BUILDING CONTROLLER /ROUTER

A. Acceptable Products:
   1. ALC: LGR Ethernet Router
   2. JCI: NAE (Network Automation Engine)

B. GENERAL - Global Building Controller /Router
   1. The Global Building Controller /Router shall be a microprocessor based communications device. One of the functions of the Global Building Controller /Router is to provide a communications gateway between a controller network and an IP Ethernet network. The Global Building Controller /Router shall communicate via IP and be connected to the PSU campus Ethernet infrastructure. A sufficient number of controllers shall be supplied to fully meet the requirements of this specification. Controller networks shall use the BACnet protocol.
   2. The Global Building Controller /Router shall support a network of at least 50 controllers.
   3. The Global Building Controller /Router shall provide a port which can be connected to Operator Workstations, portable computers, or modems.
   4. Global Building Controller /Router shall provide full arbitration between multiple users, whether they are communicating through the same or different Global Building Controller /Routers.
   5. The Global Building Controller /Router shall be responsible for routing global information from the various controller networks which may be installed throughout a building.

C. Memory: Each Global Building Controller /Router shall have sufficient memory to support its own operating system and databases including:
   1. Control processes
   2. Energy Management Applications
   3. Alarm Management
   4. Historical/Trend Data for 100% of all physical I/O for all programs in the Global Building Controller, at a minimum of 500 samples per Trend.
   5. Maintenance Support Applications
   6. Custom Processes
   7. Operator I/O

D. Expandability: The system shall be modular in nature, and shall permit easy expansion
through the addition of software applications, workstation hardware, application controllers, sensors, and actuators.

E. Integrated On-Line Diagnostics: Each Global Building Controller /Router shall continuously perform self-diagnostics, communication diagnosis and diagnosis of all subsidiary equipment. The Global Building Controller /Router shall provide both local and remote annunciation of any detected component failures, or repeated failure to establish communication. Indication of the diagnostic results shall be provided at each Global Building Controller /Router, and shall not require the connection of an operator I/O device.

F. Surge and Transient Protection: Isolation shall be provided at all network terminations, as well as all field point terminations to suppress induced voltage. Isolation levels shall be sufficiently high as to allow all signal wiring to be run in the same conduit as high voltage wiring where acceptable by electrical code.

G. Powerfail Restart: In the event of the loss of normal power, there shall be an orderly shutdown of all Global Building Controllers /Routers to prevent the loss of database or operating system software. Non-Volatile memory shall be incorporated for all critical Global Building Controller /Router configuration data, and battery back-up shall be provided to support the real-time clock and all volatile memory for a minimum of 72 hours.

1. Upon restoration of normal power, the Global Building Controller /Router shall automatically resume full operation without manual intervention.

2. Should Global Building Controller /Router memory be lost for any reason, the user shall have the capability of reloading the Global Building Controller /Router via the Local Area Network (LAN).

H. Communications:

1. The controller network shall use BACnet™ as its native communication protocol. The communication between controllers shall be ARCNET or MS/TP at least 38.4 Kbps.

2. The Global Building Controller /Router shall utilize FLASH memory, battery backed RAM or firmware which shall allow for operating system updates to be performed remotely via TCP/IP or UDP/IP.

I. UPS: Uninterruptible Power Supply(s) is(are) required for the Global Building Controller(s), repeater(s) and/or Application Controllers that serve or monitor emergency and/or critical equipment.

2A.4 APPLICATION CONTROLLERS

A. Acceptable Products:

2. JCI: NCE, FEC-line of Controllers (BACnet), VMA Series 1600 (BACnet).

B. GENERAL - Application Controllers

1. Definition: An Application Controller, for this specification, could be an AAC (Advanced Application Controller) or an ASC (Application Specific Controller). These would be used on Primary Equipment and Terminal Equipment, respectively.

2. Application controllers must use BACnet™ as the native communication protocol between controllers.

3. Each Application Controller must be capable of standalone direct digital operation utilizing its own processor, non-volatile flash memory, input/output, minimum 8 bit A to D conversion, and include voltage transient and lightning protection devices. Firmware revisions to the module must be able to be made from the local workstation, portable operator terminals or from remote locations over modems or LANs.
4. The Application Controllers for Primary Equipment shall be expandable to the specified I/O point requirements. Each controller shall accommodate multiple I/O Expander Modules via a designated expansion I/O bus port. The controller, in conjunction with the expansion modules, shall act as one application controller.

5. All point data, algorithms and application software within the controllers shall be custom programmable from the Operator Workstation.

6. Each Application Controller shall execute application programs, calculations, and commands via a microcomputer resident in the controller. All operating parameters for application programs residing in each controller shall be stored in read/write-able nonvolatile flash memory within the controller and will be able to upload/download to/from the Operator Workstation.

7. Each Application Controller shall be configured on the workstation/server software as a BACnet™ device. All of the points shall be configured as BACnet objects. Each controller shall include self-test diagnostics which allow the controller to automatically relay to the Global Building Controller /Router any malfunctions or alarm conditions that exceed desired parameters as determined by programming input.

8. Each Application Controller should be capable of performing event notification (alarming).

9. Each Application Controller should be capable of scheduling using an on-board real-time clock.

10. Each Application Controller shall contain both software and firmware to perform full DDC PID control loops.

11. Each Application Controller shall contain a port for the interface of maintenance personnel's portable computer. All network interrogation shall be possible through this port.

12. If being installed outdoors, the Application Controllers shall be capable of being mounted directly in or on the equipment located outdoors. The Application Controllers shall be capable of proper operation in an ambient temperature environment of -20 degrees F to + 150 degrees F.

13. Input-Output Processing:
   a. Digital outputs shall be relays or triacs, 24VAC or VDC minimum. Each output shall be configurable as normally open or normally closed.
   b. Universal inputs shall be capable of 0-20mA, dry contact, and 0-5VDC or 0-10VDC.
   c. Analog output shall be electronic, voltage mode 0-10VDC or current mode 4-20mA.
   d. Enhanced Zone Sensor Input shall provide one thermistor input, one local setpoint adjustment, one timed local override switch, and an occupancy indicator.
   e. All programming sequences shall be stored in non-volatile memory. All programming tools shall be provided as part of the system. Provide documentation of all programming including configuration files.

14. Each Application Controller shall execute application programs, calculations, and commands via a microcomputer resident in the Application Controller. All operating parameters for application programs residing in each Application Controller shall be stored in read/write-able nonvolatile flash memory within the controller. Firmware revisions, application programs and program modifications to the controller shall be capable of being performed over the Wide Area Network (WAN).

15. Application Controller output circuits shall be optically isolated.
16. Each Application Controller shall be able to support various types of zone temperature sensors, such as temperature sensor only, temperature sensor with built-in local override switch, with setpoint adjustment switch.

17. Each Application Controller for VAV application shall have a built-in air flow transducer for accurate air flow measurement in order to provide the Pressure Independent VAV operation.

18. Each Application Controller for VAV applications shall have an integral direct coupled electronic actuator. The actuator shall provide on-off/floating point control with a minimum of 35 in-lb of torque. The assembly shall mount directly to the damper operating shaft with a universal V-Bolt clamp assembly. The actuator shall not require any limit switches, and shall be electronically protected against overload. When reaching the damper or actuator end position, the actuator shall automatically stop. The gears shall be manually disengaged with a button on the assembly cover. The position of the actuator shall be indicated by a visual pointer. The assembly shall have an anti-rotational strap.

19. Each Application Controller shall have LED indication for visual status of communication and power.

20. Astronomical Time: Astronomic capability shall allow the system to calculate sunrise and sunset times based on geographical location, and incorporate Daylight Savings Time, for dusk-to-dawn control or dusk-to-time control. This is required in any Application Controller with I/O for the Exterior lighting circuit(s).

21. In the event of a loss of communication, the Application Controller shall control from a standalone algorithm which maintains the assigned space temperature until communication is restored.

22. UPS: Uninterruptible Power Supply(s) is(are) required for any Application Controller that monitors or serves emergency and/or critical equipment.

23. All Application Controller level objects shall be exposed as BACnet Objects.

24. Primary Equipment shall be controlled using the same Application Controller, when possible.

25. Each Application Controller for Primary Equipment shall contain the following as Spare I/O:
   a. Minimum of: (3) Spare Universal Inputs (or 2-DIs and 1-AI), (1) Spare AO, and (2) Spare DOs.
   b. In addition to the Minimum, the Application Controller shall have 10% Spare I/O, of each type; UI (or DI and AI), AO and DO.

2A.5 LAPTOP COMPUTER(S)
   A. For this project, the CSC shall provide one Laptop Computer(s) to the University’s Physical Plant BAS Group prior to the start of the Acceptance Testing (reference subsection 3.11 - ACCEPTANCE OF COMPLETED BAS INSTALLATION).
   B. Provide a new laptop computer with the control system software and database as part of the project. Computer, in original packaging, is to be delivered to the University’s Physical Plant BAS Group via the Project Contractor-chain and the University’s Project Management.
   C. Provide an Allowance of $2000 per Laptop, at time of Bidding.
   D. At time of Purchase, contact PSU Physical Plant ITS group (865-7509 or mlf6@psu.edu) for the minimum specifications of the Laptop to be provided. Cost overruns or underruns shall be handled via Change-Order via the Project Contractor-chain and the University’s Project Management.

2A.6 FIELD HARDWARE/INSTRUMENTATION
A. Input Devices - General Requirements

1. Temperature sensors shall be of the type and have accuracy ratings as indicated and/or required for the application and shall permit accuracy rating of within 1% of the temperature range of their intended use.

2. Sensors used for mixed air application shall be the averaging type and have an accuracy of ± 1 degrees F.

3. Outside air temperature sensors shall have a minimum range of -52 degrees F to 152 degrees F and an accuracy of within ± 1 degrees F in this temperature range.

4. Room temperature sensors shall have an accuracy, of ± 1.0 degrees F in the range of 32 degrees F to 96 degrees F.

5. Chilled water sensors shall have an accuracy of ± 0.25 degrees F in their range of application.

6. Hot water temperature sensors shall have an accuracy of ± 0.75 degrees F over the range of their application.

7. Temperature-differential measurement shall use a matched set of sensors.

2A.7 SENSORS

A. AIR FLOW MEASUREMENT STATIONS (AFMS-x): See separate paragraph. These are considered more than just a "sensor".

B. Electronic Sensors: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.

1. Thermistor temperature sensors as follows:
   a. Accuracy: Plus or minus 0.5 deg F (0.3 deg C) at calibration point.
   b. Wire: Twisted, shielded-pair cable.
   c. Insertion Elements in Ducts: Single point, 18 inches (20 cm) long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft. (1 sq. m).
   d. Averaging Elements in Ducts: 72 inches long, flexible; use where prone to temperature stratification or where ducts are larger than 9 sq. ft. (1 sq. m); length as required.
   e. Insertion Elements for Liquids: Brass socket with minimum insertion length of 2-1/2 inches (64 mm).
   f. Room Sensors: With Set-point Adjustment and Occupancy Override (Enhanced Zone Sensor), except when placed in Public Spaces. Sensors that must be installed on exterior walls shall include insulating bases. Refer to Part 3 for Execution requirements.
   g. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.
   h. Room Temperature Security Sensors: Stainless-steel cover plate with insulated back and security screws.

   a. Accuracy: Plus or minus 0.2 percent at calibration point.
   b. Wire: Twisted, shielded-pair cable.
   c. Insertion Elements in Ducts: Single point, 18 inches (20 cm) long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft. (1 sq. m).
d. Averaging Elements in Ducts: Minimum 72 inches long, flexible; use where prone to temperature stratification or where ducts are larger than 9 sq. ft. (1 sq. m); length as required. Total length: 5 ft (1.5m) per 10 ft² (1 m²) of duct cross-section.

e. Mixed Air Temperature (MAT) shall be an averaging-type sensor, minimum 20ft length. For a Coil more than 20 ft², provide 1 ft (3 m) of sensing element for each 1 ft² (1 m²) of downstream face area of the mixing plenum.

f. Insertion Elements for Liquids: Brass socket with minimum insertion length of 2-1/2 inches (64 mm).

g. Room Sensors: With Set-point Adjustment and Occupancy Override, except when placed in Public Spaces. Sensors that must be installed on exterior walls shall include insulating bases.

h. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.

i. Room Temperature Security Sensors: Stainless-steel cover plate with insulated back and security screws.

a. Accuracy: 5 percent full range with linear output.

b. Another standard span for room sensors below is 20 to 90 percent relative humidity with 2 percent accuracy.

c. Room Sensors: With cover matching room thermostats, span of 25 to 90 percent relative humidity.

d. Duct and Outside-Air Sensors: With element guard and mounting plate, range of 0 to 100 percent relative humidity.

4. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.

a. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.

b. Output: 4 to 20 mA.

c. Building Static-Pressure Range: 0 to 0.25 inch wg (0 to 62 Pa).

d. Duct Static-Pressure Range: 0 to 5 inches wg (0 to 1243 Pa).

5. Pressure Transmitters: Direct acting for gas, liquid, or steam service; range suitable for system; proportional output 4 to 20 mA.

C. Equipment operation sensors as follows:

1. Status Inputs for Fans: Differential-pressure switch with adjustable range of 0 to 5 inches wg (0 to 1243 Pa).

2. Status Inputs for Pumps: Differential-pressure switch piped across pump with adjustable pressure-differential range of 8 to 60 psig (55 to 414 kPa).

D. Water-Flow Switches: Pressure-flow switches of bellows-actuated mercury or snap-acting type, with appropriate scale range and differential adjustment, with stainless-steel or bronze paddle. For chilled-water applications, provide vaporproof type.

E. Carbon-Dioxide Sensor and Transmitter: Single detectors, using solid-state infrared sensors, suitable over a temperature range of 23 to 130 deg F (minus 5 to plus 55 deg C), calibrated for 0 to 2 percent, with continuous or averaged reading, 4 to 20 mA output, and wall or duct mounted.
F. Ceiling-mounted Room Sensor: When application requires this, these sensors shall be 10k Type2 Thermistor with 0-5vdc signal, by Veris Industries, http://www.veris.com/docs/datasheets/tc_ts_d.pdf

G. Occupancy Sensor: These sensors shall have passive dual technology (PDT) and internal relay option. Provide Sensorswitch Model WV-PDT-16-R sensors with WV-BR ceiling mounting brackets. The power source is 24 VAC/VDC, and shall be provided by the BAS controller. This is a stocked-item at OPP Stores, and can be furnished by Laface & McGovern, Altoona Office; contact Dan Cowen, 814-944-6373.

2A.8 THERMOSTATS

A. Combination Thermostat and Fan Switches: Line-voltage thermostat with two-, three-, or four-position, push-button or lever-operated fan switch.

1. Label switches "FAN ON-OFF," "FAN HIGH-LOW-OFF," "FAN HIGH-MED-LOW-OFF." Provide unit for mounting on two-gang switch box.

B. Line-Voltage, On-Off Thermostats: Bimetal-actuated, open contact or bellows-actuated, enclosed, snap-switch type, or equivalent solid-state type, with heat anticipator, integral manual on-off/auto selector switch.

1. Equip thermostats, which control electric heating loads directly, with off position on dial wired to break ungrounded conductors.

2. Dead Band: Maximum 2 deg F (1 deg C).

C. Remote-Bulb Thermostats: On-off or modulating type, liquid filled to compensate for changes in ambient temperature, with copper capillary and bulb, unless otherwise indicated.

1. Bulbs in water lines with separate wells of same material as bulb.

2. Bulbs in air ducts with flanges and shields.

3. Averaging Elements: Copper tubing with either single- or multiple-unit elements, extended to cover full width of duct or unit, adequately supported.

4. Scale settings and differential settings are clearly visible and adjustable from front of instrument.

5. On-Off Thermostat: With precision snap switches, with electrical ratings required by application.

6. Modulating Thermostats: Construct so complete potentiometer coil and wiper assembly is removable for inspection or replacement without disturbing calibration of instrument.

D. Room thermostat located on exterior walls: Shall include insulating base.

E. Electric Low-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual- or automatic-reset switch that trips if temperature sensed across any 12 inches (300 mm) of bulb length is equal to or below set point.

1. Bulb Length: Minimum 20 feet (6 m). For a Coil more than 20 ft², provide 1 ft (3 m) of sensing element for each 1 ft² (1 m²) of coil area.

2A.9 VALVE AND DAMPER ACTUATORS

A. Electronic direct-coupled actuation shall be provided.

B. The actuator shall be direct-coupled over the shaft, enabling it to be mounted directly to the damper shaft without the need for connecting linkage. The fastening clamp assembly shall be of a "V" bolt design with associated "V" shaped toothed cradle attaching to the shaft for maximum strength and eliminating slippage. Spring return actuators shall have a "V" clamp assembly of sufficient size to be directly mounted to an integral jackshaft of up to 1.05 inches when the damper is constructed in this manner. Single bolt or screw type fasteners are not acceptable.
C. The actuator shall have electronic overload or digital rotation sensing circuitry to prevent damage to the actuator throughout the entire rotation of the actuator. Mechanical end switches or magnetic clutch to deactivate the actuator at the end of rotation are not acceptable.

D. For power failure/safety applications, an internal mechanical spring return mechanism shall be built into the actuator housing. Non-mechanical forms of fail-safe operation are acceptable for valves larger than 4”.

E. All spring return actuators shall be capable of both clockwise and counterclockwise spring return operation.

F. Proportional actuators shall accept a 0 to 10VDC or 0 to 20mA analog control input and provide a 2 to 10VDC or 4 to 20mA operating range. An actuator capable of accepting a pulse width modulating control signal is not acceptable. An actuator capable of accepting a three-point floating control signal is not acceptable.

G. All 24VAC/DC actuators shall operate on Class 2 wiring and shall not require more than 10VA for AC or more than 8 watts for DC applications. Actuators operating on 120VAC power shall not require more than 10VA. Actuators operating on 230VAC shall not require more than 11VA.

H. All non-spring return actuators shall have an external manual gear release to allow manual positioning of the damper when the actuator is not powered. Spring return actuators with more than 60 in-lb torque shall have a manual crank for this purpose.

I. All modulating actuators shall have an external, built-in switch to allow reversing direction of rotation.

J. Actuators shall be provided with a conduit fitting.

K. Actuators shall be Underwriters Laboratories Standard 873 listed and Canadian Standards Association Class 4813 02 certified as meeting correct safety requirements and recognized industry standards.

L. Actuators shall be designed for a minimum of 60,000 full stroke cycles at the actuator's rated torque and shall have a 2-year manufacturer's warranty, starting from the date of start-up, per Start-up Report or Cx documentation. Manufacturer shall be ISO9001 certified.

2A.10 CONTROL VALVES

A. Control Valves: Factory fabricated, of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.

B. Globe Valves NPS 2 (DN 50) and Smaller: Bronze body, bronze trim, rising stem, renewable composition disc, and screwed ends with backseating capacity repackable under pressure.

C. Globe Valves NPS 2-1/2 (DN 65) and Larger: Iron body, bronze trim, rising stem, plug-type disc, flanged ends, and renewable seat and disc.

D. Hydronic system globe valves shall have the following characteristics:
   1. Rating: Class 125 for service at 125 psig (862 kPa) and 250 deg F (121 deg C) operating conditions.
   2. Internal Construction: Replaceable plugs and seats of stainless steel or brass.
      a. Single-Seated Valves: Cage trim provides seating and guiding surfaces for plug on top and bottom of guided plugs.
      b. Double-Seated Valves: Balanced plug; cage trim provides seating and guiding surfaces for plugs on top and bottom of guided plugs.
   3. Sizing: 3-psig (21-kPa) maximum pressure drop at design flow rate.
4. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics. Operators shall close valves against pump shutoff head.

E. Butterfly Valves: 200-psig (1380-kPa), 150-psig (1035-kPa) maximum pressure differential, ASTM A 126 cast-iron or ASTM A 536 ductile-iron body and bonnet, extended neck, stainless-steel stem, field-replaceable EPDM or Buna N sleeve and stem seals.

2. Disc Type: Elastomer-coated ductile iron.
3. Sizing: 1-psig (7-kPa) maximum pressure drop at design flow rate.

F. Pressure Independent Control Valves

1. Manufacturers:
   a. BELIMO AIRCONTROLS (USA), INC.
   b. GRISWOLD

2. The modulating control valves shall be pressure independent.
3. The control valves shall accurately control the flow from 0 to 100% full rated flow with an equal percentage flow characteristic. The flow shall not vary more than +/- 5% due to system pressure fluctuations across the valve with a minimum of 5 PSID across the valve.
4. Forged brass body rated at no less than 400 PSI, chrome plated brass ball and stem, female NPT union ends, dual EPDM lubricated O-rings and TEFZEL characterizing disc.
5. Combination of actuator and valve shall provide a minimum close-off pressure rating of 200 PSID.
6. The control valve shall require no maintenance and shall not include replaceable cartridges.
7. All actuators shall be electronically programmed by use of a handheld programming device or external computer software. Programming using actuator mounted switches or multi-turn actuators are NOT acceptable. Actuators for two-position ½"-1" pressure independent control valves shall fail in place and have a mechanical device inserted between the valve and the actuator for the adjustment of flow. Actuators shall be provided with an auxiliary switch to prove valve position.
8. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory via a single screw on a four-way DIN mounting-base.
9. The control valve shall require no maintenance and shall not include replaceable cartridges.
10. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
11. The use of pressure independent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permit sequencing is NOT acceptable.

G. Terminal Unit Control Valves: Characterized Ball, Forged brass body, Stainless Steel trim, two- or three-port as indicated, replaceable plugs and seats, union and threaded ends.

1. Rating: Class 125 for service at 125 psig (862 kPa) and 250 deg F (121 deg C) operating conditions.
2. Sizing: 3-psig (21-kPa) maximum pressure drop at design flow rate, to close against pump shutoff head. Select control valves for a minimum Cv of 1.0 to reduce the risk of system dirt accumulating in very small orifices in characterizing-discs.
3. Flow Characteristics: Two-way valves shall have equal percentage characteristics; three-way valves shall have linear characteristics.

2A.11 CONTROL PANEL 120-Volt ENCLOSED POWER SUPPLY
A. Each BAS Control Panel (including the Building Controller) shall have a “packaged” Power Supply in a separate enclosure, such that the BAS Control Panel door can be opened without exposure to the hazards of 120-Volt wiring connections (Arc-Flash hazard).

B. The CSC shall use the PSH Series by Functional Devices, Inc. The specific Model will vary with specific power requirements at that Control Panel. An Approved Equal is acceptable.

C. The Enclosed Power Supply shall be installed, according to the Manufacturer's instructions, in the upper-left corner inside the BAS Control Panel.

2A.12 COMBINATION AIR FLOW / TEMPERATURE MEASUREMENT STATION (AFMS):

A. Manufacturers:
   EBTRON, Inc. Gold Series (basis of design)

B. General: Provide thermal dispersion type, combination airflow and air temperature measurement devices where indicated on the drawings and/or control sequences. Each measuring device shall consist of multi-point sensor nodes in one or more probe assemblies with a maximum of sixteen sensor nodes per location, and a single remotely mounted 32-bit microprocessor-based transmitter for each measurement location. Airflow/Temperature measuring devices shall be UL Listed as an entire assembly. Devices in UL-labeled enclosures are not equivalent and are not acceptable without a UL Listing for Standard 873.

1. Design and installation shall use duct or plenum mounted devices to fullest extent possible.

2. Fan inlet sensors shall not be substituted for duct or plenum sensor probes.
   a. Exception: where conditions otherwise make duct/plenum installation impractical and justifications of exceptions are reviewed with University and manufacturer’s authorized representative.
   b. Where fan inlet mounting is otherwise unavoidable, mounting styles shall be indicated on the plans as either “face mounting” or “throat mounting.” Face mounting shall provide no mechanical fastening in the throat or on the surface of the inlet cone and shall be used on all performance-sensitive plenum-type or plug fans.

3. The manufacturer’s authorized representative shall review and approve placement and operating airflow rates for each measurement location indicated on the plans. A written report shall be submitted to the consulting mechanical engineer prior to installation if any measurement locations do not meet the manufacturer’s placement requirements.

4. Field Installation: Install in accordance with manufacturer’s placement instructions for optimum performance at the locations indicated on the plans. A written report shall be submitted to the consulting mechanical engineer if any discrepancies are found.

5. Adjustment: Duct and plenum devices shall not be adjusted without approval from the consulting mechanical engineer. Fan inlet mounted devices may be adjusted during start up and commissioning only after having been checked against known volumetric values (or against another like device measuring the same air volume) at two or more points of operation.
C. Sensor Assembly: Each sensing point shall independently determine the airflow rate and temperature at each node, which shall then be equally weighted in calculations by the transmitter prior to output as the cross-sectional average. No electronic components other than the sensor elements shall be located at the sensing node. Each ducted sensor probe shall have an integral, U.L. Listed, plenum rated cable. Cable jackets and conductor insulation shall be FEP, Teflon-FEP or Neoflon-FEP. Conductor insulation for internal probe wiring shall be Kynar. Devices which average multiple non-linear variables are not acceptable. Pitot arrays are not acceptable. Devices using chip-in-glass, epoxy-coated or diode-case chip thermistors are not acceptable. Vortex-shedding devices are not acceptable.

1. Each independent airflow sensor shall have a sensor accuracy of +/-2% of Reading over the entire calibrated airflow range of 0 to 5,000 fpm (25.4 m/s for ducted or plenum mounted probes, or not less than 0 to 10,000 fpm (50.8 m/s) for fan inlet mounted sensors. All sensor nodes shall be wind tunnel calibrated to at least 16 air velocities against standards that are traceable to NIST.

2. Each independent temperature sensor shall have a calibrated accuracy of +/-0.14° F (0.08° C) over the entire operating temperature range of -20° F to 160° F (-28.9° C to 71° C) and be calibrated at 3 temperatures against standards that are traceable to NIST.

3. Devices whose accuracy is the combined and independent accuracy of the transmitter and sensor probes must demonstrate that the total accuracy meets the performance requirements of this specification throughout the calibrated range.

D. Transmitter: Each transmitter shall have a display capable of simultaneously displaying both airflow and temperature. Airflow rate shall be field configurable to be displayed as velocity or volumetric rates, selectable as IP or SI units. Each transmitter shall operate on 24 VAC and be fused and protected from over voltage, over current and power surges. All integrated circuitry shall be temperature rated as 'industrial-grade'.

1. Each transmitter shall be capable of transmitting individual velocity and temperature measurements for every sensing point in an array for a single location. The traverse data from each independent sensor shall be available as part of the network data packet transmitted via the BACnet protocol.

2. Each transmitter shall be capable of communicating with other devices using at a minimum the following interface option:

   a. Combined linear airflow and temperature analog output signals and one RS-485 network interface. This shall include: Two field selectable 0-5VDC / 0-10VDC / 4-20mA (4-wire) outputs, fuse protected and electrically isolated from all other circuitry; plus one field selectable network protocol: BACnet-MS/TP or BACnet-ARCNET. BACnet devices shall provide analog variables for airflow and temperature containing individual sensor airflow rate and temperature data.

3. Transmitter shall include the following features: Enhanced Output Integration, Low Airflow Alarm functions for compliance with LEED Outdoor Air Delivery Monitoring credit and ASHRAE Standard 189.1 and a Field Calibration Wizard to simplify field setup for adjustments when desired.

2A.13 Bi-directional bleed airflow sensors (Thermal Dispersion Type):

A. General: Provide EBTRON, Inc. Silver Series Model STN104-B series Transmitter (basis of design) thermal dispersion type air airflow/pressure “bleed” sensors where indicated to measure and control to very low velocity/pressure differentials. The transmitter output shall be RS-485, BACnet-MS/TP to be capable of communicating with the BAS. Provide a manufacturer’s parts warranty for 36 months from the date of unit shipment. The manufacturer’s authorized representative shall review and approve placement and setup parameters for each measurement location indicated on the plans. A written report shall be submitted to the consulting mechanical engineer if any measurement locations do not meet the
manufacturer’s placement requirements.

B. Each measuring device shall consist of a factory calibrated sensor assembly of three hermetically sealed bead-in-glass thermistors in a glass filled polypropylene housing, with a “plug and play” cable, and a single, remotely mounted, microprocessor-based transmitter capable of field configuration and diagnostics, with a switching power supply, fused and protected from transients and power surges and circuitry to assure automatic reset after power disruption, transients and brown-outs. The operating airflow range shall be ±3,000 fpm and pressure range of –0.5 to +0.5 in w.c. Each measuring device shall have an accuracy of ±2% of reading over the entire operating airflow range, factory calibrated at a minimum of 10 airflow rates to standards that are traceable to the National Institute of Standards and Technology (NIST).

C. Provide duct/plenum mounting kits as applicable. Hardware shall include stainless steel face plates with connecting pipe and fittings. Provide correction coefficients to compensate for entry and friction loss of the entire assembly to convert the airflow rate to the equivalent pressure between adjacent zones. Provide a rain/snow shield for installations on exterior wall surfaces.

2A.14 UNINTERRUPTIBLE POWER SUPPLY (UPS)

A. An UPS is required to be installed to provide Power to every level of Controller serving emergency and/or critical equipment.

B. The UPS shall include dry-contacts for monitoring the UPS status.
PART 2B PRODUCTS, SOFTWARE

2B.1 SYSTEM SOFTWARE OVERVIEW

A. Acceptable Products:
   1. ALC: Eikon and WebCTRL are acceptable ALC System Software products.
   2. JCI: NAE, ADS, SCT, GX Tool and HVAC-PRO are acceptable JCI System Software products.

B. The CSC shall provide all software required for operation of the BAS system specified herein. All functionality described herein shall be regarded as a minimum. The CSC shall provide the following as a minimum:
   2. Configuration of all controller and operator workstation application programs to provide the sequence of operation indicated.
   3. An electronic copy of each and every controller program installed in all Primary Equipment, Terminal Equipment, or other programmable controllers for the Project. File-names shall include Equipment Tag and Date in MMDDYYYY format.
   4. All Configuration Tools, and all software licenses, required to configure all controllers installed on this project.

2B.2 SYSTEM CONFIGURATION

A. Database Creation and Modification. All changes shall be done utilizing standard procedures. The system shall allow changes to be made either at the local site through a portable computer or central workstation.

B. The system shall permit the operator to perform, as a minimum, the following:
   1. Add and delete points/objects
   2. Modify point parameters
   3. Create and modify control sequences and programs
   4. Reconfigure application programs

C. All data points/objects within the database shall be completely accessible as independent or dependent variables for custom programming, calculation, interlocking, or manipulation.

D. The University shall be provided with a software account that has unlimited privileges for the entire site installation.

2B.3 APPLICATION PROGRAMMING

A. The system software shall include Graphic Programming or Line Programming for all DDC control algorithms resident in individual control modules. This programming shall be used to create the sequences of operation necessary to complete a control sequence. Graphical-blocks or Line-programming shall represent common logical control devices used in conventional control systems, such as relays, switches, high signal selectors, etc., in addition to the more complex DDC and energy management strategies such as PID loops and optimum start. Each graphical-block or line-programming routine shall be interactive and contain the programming necessary to execute the function of the device it represents.

B. Programming shall be performed while on screen and using a mouse; each graphical-block or line-programming routine shall be selected from a library and assembled with other blocks or routines necessary to complete the specified sequence. Blocks or routines are then interconnected by forming logical connections. Once assembled, each logical grouping of blocks or routines and their interconnections then forms a program which may be used to control any piece of equipment with a similar point configuration and sequence of operation.
C. The clarity of the programming sequence must be such that the user has the ability to verify that system programming meets the specifications. The programming must be documented to provide the user with an understandable and exact representation of each sequence of operation.

D. Provide the tools to create, modify, and debug custom application programming. The operator shall be able to create, edit, and download custom programs. The programming language shall have the following features:

1. The language shall be Graphical or English language oriented, and allow for free-form programming (i.e., not column-oriented or "fill in the blanks").

2. A full-screen character editor/programming environment shall be provided. The editor shall be cursor/mouse-driven and allow the user to insert, add, modify, and delete custom programming code. It also shall incorporate features such as cut/paste and find.

3. The programming language shall allow independently executing program modules to be developed.

4. The editor/programming environment shall have a debugging capability that shall provide error messages for syntax and execution errors.

5. The programming language shall support conditional statements (IF/THEN/ELSE/ELSE-IF) using compound Boolean (AND, OR, and NOT) and/or relations (EQUAL, LESS THAN, GREATER THAN, NOT EQUAL) comparisons.

6. The programming language shall support floating-point arithmetic using the following operators: +, -, /, x, square root, and x-to-the-y-power. The following mathematical functions also shall be provided: natural log, log, trigonometric functions (sine, cosine, etc.), absolute value, and minimum/maximum value from a list of values.

7. The programming language shall have predefined variables that represent time of day, day of the week, month of the year, and the date. Other predefined variables shall provide elapsed time in seconds, minutes, hours, and days. These elapsed time variables shall be able to be reset by the language so that interval-timing functions can be stopped and started within a program. Values from all of the above variables shall be readable by the language so that they can be used in a program for such purposes as IF/THEN comparisons, calculations, etc.

8. The language shall be able to read the values of the variables and use them in programming statement logic, comparisons, and calculations.

2B.4 DIRECT DIGITAL CONTROL SOFTWARE

A. The system shall continuously perform DDC functions at the local control module in a stand alone mode. The operator shall be able to design and modify the control loops to meet the requirements of the system being operated. The operators shall use system provided output for tuning of PID loops.

B. Each local control module should perform the following functions:

1. Identify and report alarm condition

2. Execute all application programs indicated on the Object Table(s)

3. Execute DDC algorithms

4. Trend and store data

C. In the event of a control module power failure, all points/objects under it's control shall be commanded to the failure mode as indicated on the Object Table(s). All DDC software shall reside in the respective control module.

1. Power failures shall cause the control module to go into an orderly shutdown with no loss of program memory.
2. Power failure at any control module shall be reported at the Operator Workstation.

3. The restart program shall automatically restart affected field equipment. The operator shall be able to define an automatic power up time delay for each piece of equipment under control.

2B.5 SOFTWARE USER INTERFACE

A. The on-line graphics, scheduling, and events shall be created using the Automated Logic WebCTRL or JCI Metasys System Extended Architecture software.

B. For this project, at least one (1) additional simultaneous-user license for the existing campus Automated Logic WebCTRL or JCI Metasys System Extended Architecture software shall be provided. (This is the same requirement, just a repeat wording location, as in “Scope of Work, System Software, Site-license”.)

C. All of the system objects, schedules, and events shall be represented as BACnet objects by the CSC.

D. Events (Alarms):
   1. The CSC shall provide all alarm event notification and alarm events messages for objects on the object table provided to and approved by the University’s Physical Plant BAS Group.
   2. Alarm event notification, alarm event messages, and event routing shall be in accordance with the existing PSU standards.
   3. CSC implemented events objects:
      a. All Input/Output objects listed on the object tables for each piece of equipment shall have an event defined for the off-normal condition.
      b. Analog objects shall list the high and low alarm limits.
      c. Every device connected to the system shall also be alarmed for an off-line condition. The CSC shall provide a BACnet BV for the offline status.
         (1) Three notification classes shall be defined to route alarms.
            a. Critical alarms shall be printed, logged, and pop-up windows shall occur via an email notification.
            b. Maintenance level alarms shall be printed and logged.
            c. Commissioning alarms shall be printed and logged.
      d. The event objects and routing shall be reviewed by the University’s Physical Plant BAS Group to identify the class, routing, limits, and message content for each object prior to CSC implementation.
      e. An event shall be generated for a device communications failure or a device program changing to a halt or failure state. All devices shall have this feature implemented.

E. On-line Graphics:
   1. The on-line graphics shall be provided by either an approved Automated Logic Corporation (ALC) dealer or an approved JCI dealer. The on-line graphics submittal shall be submitted to the CSC to be included with the Shop Drawing Submittal, for review and approval by the University’s Physical Plant BAS Group.
   2. On-line Graphics Submittal by the CSC shall include a list of the color graphic screens to be provided and sample graphics for each unique mechanical system and a dynamic thermo-graphic Floor Plan.
   3. All mechanical equipment (Primary, Terminal, etc.) shall have a representative graphic.
4. System Summary Graphics:
Each integrated building-wide system or combination of systems, and each central plant system, shall have a separate graphic that accurately represents the relative order/arrangement of equipment and components as installed, and shows the inter-relationships and inter-dependence between key components of each system and combination of systems.

   a. Example-1: when multiple pieces of mechanical equipment within a “system” are intended to operate in series or parallel, with a duty/standby or lead/lag sequence of operation.
   b. Example-2: when primary equipment supply units and zone/terminal distribution units have associated exhaust fans that are linked for overall pressure control, or airflow control.
   c. Example-3: chiller “plants” shall schematically show key components of the main system, including multiple chillers, cooling towers, pumps, isolation and temperature/flow control valves and interconnected piping. Include summary of connected load equipment cooling requests.
   d. Example-4: heating “plants” shall schematically show key components of the main system, including multiple boilers, combustion air dampers, fuel gas valves, pumps, isolation and temperature/flow control valves and interconnected piping. Include summary of connected load equipment heating requests.

5. All mechanical equipment shall also have a graphic representing the logic programming: An on-line graphical representation of the programming logic with real-time values, accessible via the standard thin-client user interface program Microsoft Internet Explorer preferred; OR vendor-supplied toolset will be acceptable.

6. There shall also be a graphics screen for each communication trunk showing the communication status for each device connected to the system.

   a. The graphic shall use layout and/or text to represent where each control device is located and the actual physical riser connections of the control modules and network accessories (i.e. repeaters, network protection devices, etc.).
   b. If a device is in communications failure, the controller color shall be magenta. If the device communications status is normal, the controller color shall be green.
   c. The program run state of each device shall also be displayed on the communication trunk graphic. If the program is in the normal running state
the color should be green. If it is in the halted or failure state, the color should be magenta.

7. AreaServed/Equipment graphic
   a. The CSC shall provide a Floor Plan graphic representing the spaces served by each piece of Primary Equipment (Air systems, and Heating-only systems). The Floor Plan graphic will include the Room Numbers of the Spaces being served, and the Spaces shall be color-shaded to indicate they are served by the noted Primary Equipment.
   b. Floor Plans shall dynamically update to visually depict the Zone alarm (event) status of the Spaces being served, just as with the Floor Plan dynamic thermo-graphics.
   c. If the Primary Equipment serves Spaces on several Floors, the AreaServed/Equipment graphic will be comprised of portions of several Floor Plans.
   d. This AreaServed/Equipment graphic will be available from the Equipment graphic and from the Floor Plan dynamic thermo-graphic (as described below) that represents the difference between Zone Temperature and Zone Set-Point.

8. Floor Plan dynamic thermo-graphics.
   a. All floors in the building shall have a graphic screen.
   b. Equipment locations and space temperatures shall be displayed on the floor plan graphic.
   c. Hypertext links to the room controller parameters shall be defined by clicking on the room location the controller serves.
   d. Hypertext links to equipment parameters shall be defined by clicking on the equipment location on the floor plan.
   e. Dynamic thermo-graphics shall be defined for each Zone controller to visually depict the Zone alarm (event) status of the room(s). The color-coding is defined below.

9. If the actual space temperature is in the dead band between the heating setpoint and the cooling setpoint, the color displayed shall be green for the occupied mode, representing ideal comfort conditions. If in the unoccupied mode, the color displayed shall be gray representing 'after-hours' conditions.

10. If the space temperature rises above the cooling setpoint, the color shall change to yellow. Upon further rise beyond the cooling setpoint plus an offset, the color shall change to orange. Upon further rise beyond the cooling setpoint plus the yellow band offset, plus the orange band offset, the color shall change to red indicating unacceptable high temperature conditions. At this point an alarm shall be generated to notify the operator.

11. When space temperature falls below the heating setpoint, the color shall change to light blue. Upon further temperature decrease below the heating setpoint minus an offset, the color shall change to dark blue. Upon further space temperature decrease below the heating setpoint minus the light blue band offset minus the dark blue band offset the color shall change to red indicating unacceptable low temperature conditions. At this point an alarm shall be generated to notify the operator.

12. Two submissions of online Graphics are required. Refer to the Schedule of CSC’s milestones:
   a. Initial set of online graphics (systems and dynamic thermo-graphic floorplans), shall be ready for use by the Cx-provider before verification of Inputs and Outputs.
   b. Complete revisions to the initial set of online graphics, at the same time as submitting as-builts BAS Shop Drawings.
13. All graphics screens shall be reviewed, coordinated and approved by the University’s Physical Plant BAS Group prior to implementation.

F. Equipment Occupancy Scheduling:
1. All equipment occupied/unoccupied scheduling shall be accomplished via a BACnet BV that is controlled by a BACnet schedule.
2. The CSC shall provide a BACnet BV for all VAVs, FCUs, Air Handlers, Exhaust equipment to be implemented in schedules.
3. Equipment schedules shall be coordinated between the University Project Management and the University customer.
4. The system shall allow the operator to designate any combination of equipment to form a group that can be scheduled with a single operator command through the mouse interface at the workstation.
   a. Any designated group shall have the capability to be a member of another group.
   b. The operator shall be able to make all schedule additions, modifications and deletions using the mouse and appropriate dialog boxes. In addition, the operator shall have the capability to edit all schedules and then download any or all schedule changes to the control modules with a single operator command through the mouse interface.
   c. The operator shall be able to view a color-coded forecast of schedules for instant overview of facilities schedules. Schedule graphic forecast shall include colored coded indication of all types of schedules, i.e. normal, holiday and override.

G. The following applications software, per “programs” in System Points/Objects List(s), shall be provided for the purposes of 1) emergency utility demand limiting and 2) optimizing energy consumption while maintaining occupant comfort:
1. Emergency Utility Demand Limiting Strategies
   Install controllers implementing a demand-limiting strategy consistent with the Sequences of Operation Guideline available at Enterprise Utility Management System (EUMS) Equipment Control Strategies on the PSU Design Standards website. The demand-limiting strategies shall be submitted, reviewed and approved by the University’s Physical Plant BAS Group prior to implementation.

2. Time Scheduling
   The system shall be capable of scheduling by individually controlled equipment and groups of individually controlled equipment. Each schedule shall provide beginning and ending dates and times (hours:minutes). The CSC shall provide a BACnet BV for scheduling by the CSC.

3. Demand Limiting (DL) - Temperature Compensated
   a. The DL application shall be programmable for a minimum of six separate time of day kW demand billing rate periods. The system shall be capable of measuring electrical usage from multiple meters serving one building and each piece of equipment being controlled on the LAN shall be programmable to respond to the peak demand information from its respective meter.
   b. The demand control function shall utilize a sliding window method with the operator being able to establish the kilowatt threshold for a minimum of three adjustable demand levels. Sliding window interval shall be operator selectable in increments of one minute, up to 60 minutes. Systems that incorporate rotating shed tables will not be acceptable.
c. The operator shall have the capability to set the individual equipment temperature setpoints for each operator defined demand level. Equipment shall not be shed if these reset setpoints are not satisfied, rather the setpoint shall be revised for the different established demand levels. The system shall have failed meter protection, such that when a kW pulse is not received from the utility within an operator adjustable time period, an alarm will be generated. The system software will automatically default to a predetermined fail safe shed level.

d. The system shall have the ability to archive demand and usage information for use at a later time. System shall permit the operator access to this information on a current day, month to date and a year to date basis.

4. Reset (Source Temperature Optimization (STO))

a. The system shall automatically perform source optimization for all air handling units, chilled water and heating water systems in response to the needs of other downstream pieces of equipment, by increasing or decreasing supply temperature setpoints, i.e. chilled water, discharge air, etc. using University defined parameters. In addition to optimization, the STO capability shall also provide for starting and stopping primary mechanical equipment based on zone occupancy and/or zone load conditions.

b. The STO program will allow setpoints for various equipment in the heating/cooling chain to be reset between an University defined maximum and a minimum setpoint based on the actual requirements of the building zones. The actual setpoint shall be calculated based on the number of heating or cooling requests which are currently being received from the equipment or zones served. Once every update period, the STO program surveys the network to see if any piece of equipment requires any additional heating or cooling from its source.

c. As an example, a VAV air handler is the source of cold air for a number of VAV boxes. Assume that the STO program for the air handler has the following parameters established for it by the University’s Physical Plant BAS Group:

1. Optimized setpoint description: Initial setpoint 60.00, Max. setpoint 65.00, Min. setpoint 55.00. Every 2.0 minutes, trim by 0.25 and respond by -0.50 but no more than 2.0. Every two minutes, the STO program will total up all of the requests and calculate a new setpoint: New setpoint = prev setpoint + 'trim by' + ('respond by' x no. of req.). Assuming four requests were received and the previous setpoint was 57.00 degrees, the new setpoint would be: New setpoint = 57.00 + 0.25 + (-0.50 x 4) = 55.25 Deg F

2. If the number of requests received multiplied times the 'respond by' value is greater than the 'but no more than' value, the 'but no more than' value is used inside the parenthesis in the above calculation.

5. Set Back/Set Up (Day/Night Setback (DNS))

a. The system shall allow the space temperature to drift down or up within a preset (adjustable) unoccupied temperature range. The heating or cooling shall be activated upon reaching either end of the DNS range and shall remain activated until the space temperature returns to the DNS range.

b. The system shall be capable of closing all outside air and exhaust air dampers during the unoccupied period, except for 100% outside air units.

c. Unoccupied space temperature shall be monitored by the DDC temperature sensors located in the individual zones being controlled or within a representative room in the building if full DDC control is not being effected.
User shall be able to define, modify or delete the following parameters:

1. DNS setpoint temperature(s)
2. Temperature band for night heating operation
3. Period when the DNS is to be activated

6. Timed Local Override (TLO)
   - The system shall have TLO input points/objects which permit the occupants to request an override of equipment which has been scheduled OFF. The system shall turn the equipment ON upon receiving a request from the local input device. Local input devices shall be push button (momentary contact), wind-up timer, or ON/OFF switches as detailed in the Object Table(s).
   - If a push button is used the system operator shall be able to define the duration of equipment ON time per input pulse and the total maximum ON time permitted. Override time already entered shall be canceled by the occupant at the input point. If a wind-up timer is used the equipment will stay in override mode until the timer expires. Year to date, month-to-date and current day override history shall be maintained for each TLO input point. History data shall be accessible by the operator at any time and shall be capable of being automatically stored on hard disk and/or printed on a daily basis.

7. Space Temperature Control (STC)
   - There shall be two independently-adjustable space temperature setpoints, one for cooling and one for heating, separated by a dead band. Only one of the two setpoints shall be operative at any time. The cooling setpoint is operative if the actual space temperature has more recently been equal to or greater than the cooling setpoint. The heating setpoint is operative if the actual space temperature has more recently been equal to or less than the heating setpoint. There are two modes of operation for the setpoints, one for the occupied mode (example: heating = 72 degrees F, cooling = 76 degrees F) and one for the unoccupied mode (example: heating = 55 degrees, cooling = 90 degrees F). NOTE: it will no longer be acceptable to accomplish having a Heating Setpoint and a Cooling Setpoint by having a single mid-range setpoint with offsets.
   - The occupied/unoccupied modes may be scheduled by time, date, or day of week via a BACnet BV.
   - All setpoints and offsets shall be operator definable. When in the occupied mode, start-up mode, or when heating or cooling during the night setback unoccupied mode, a request shall be sent over the network to other equipment in the HVAC chain, such as to an AHU fan that serves the space, to run for ventilation. The operator shall be able to disable this request function if desired.
   - The cooling and heating setpoints may be increased (decreased) under demand control conditions to reduce the cooling (heating) load on the building during the demand control period. Up to three levels of demand control strategy shall be provided. The operator may predefine the amount of setpoint increase or decrease for each of the three levels. Each space temperature sensor in the building may be programmed independently.
   - An optimum start-up program transitions from the unoccupied setpoints to the occupied setpoints. The optimum start-up algorithm considers the rate of space temperature rise for heating and the rate of space temperature fall for cooling under nominal outside temperature conditions; it also considers the outside temperature; and the heat loss and gain coefficients of the space envelope (AI: Space Temperature).
f. A PID control loop, comparing the actual space temperature to its setpoint, shall modulate the dampers and heating coil valve or heating stages in sequence to achieve the setpoint target.

8. Historical Data and Trend Analysis: A variety of Historical data collection utilities shall be provided to automatically sample, store, and display system data in all of the following ways.
   a. Continuous Point Histories: Global Building Controllers /Routers shall store Point History Files for all analog and binary inputs and outputs. The Point History routine shall continuously and automatically sample the value of all analog inputs at half hour intervals. Samples for all physical hardware input and output points shall be collected during the warranty period, to allow the user to immediately analyze equipment performance and all problem-related events. Point History Files for binary input or output points and analog output points shall be archived on the server workstation hard drive.
   b. Control Loop Performance Trends: Global Building Controllers /Routers shall also provide high resolution sampling capability with an operator-adjustable resolution of 10-300 seconds in one-second increments for verification of control loop performance.
   c. Extended Sample Period Trends: Measured and calculated analog and binary data shall also be assignable to user-definable trends for the purpose of collecting operator-specified performance data over extended periods of time. Sample intervals of 1 minute to 2 hours, in one-minute intervals, shall be provided. Each standalone Global Building Controller /Router shall have a dedicated buffer for trend data, and shall be capable of storing a minimum of 5000 data samples.
   d. Data Storage and Archiving: Trend data shall be stored at the Global Building Controllers /Routers, and uploaded to hard disk storage when archival is desired. Uploads shall occur based upon either user-defined interval, manual command, or when the trend buffers become full. All trend data shall be available in disk file form for use in 3rd Party personal computer applications.

9. Runtime Totalization: Global Building Controllers /Routers shall automatically accumulate and store runtime hours for binary input and output points as specified.
   a. The Totalization routine shall have a sampling resolution of one minute or less.
   b. The user shall have the ability to define a warning limit for Runtime Totalization. Unique, user-specified messages shall be generated when the limit is reached.

10. Analog/Pulse Totalization: Global Building Controllers /Routers shall automatically sample, calculate and store consumption totals on a daily, weekly, or monthly basis for user-selected analog and binary pulse input-type points.
    a. Totalization shall provide calculation and storage of accumulations of up to 99,999.9 units (e.g., KWH, gallons, KBTU, tons, etc.).
    b. The Totalization routine shall have a sampling resolution of one minute or less.
    c. The user shall have the ability to define a warning limit. Unique, user-specified messages shall be generated when the limit is reached.

11. Event Totalization: Global Building Controllers /Routers shall have the ability to count events such as the number of times a pump or fan system is cycled on and off. Event Totalization shall be performed on a daily, weekly, or monthly basis.
a. The Event Totalization feature shall be able to store the records associated with a minimum of 9,999,999 events before reset.

b. The user shall have the ability to define a warning limit. Unique, user-specified messages shall be generated when the limit is reached.

--- End of PART 2 --------------------------
PART 3 EXECUTION

3.1 EXAMINATION
A. Verify that systems are complete and ensure that the systems are capable of being started and operated in a safe and normal condition before attempting to operate the BAS systems.
B. Beginning of work means acceptance of existing conditions.

3.2 GENERAL INSTALLATION
A. Install equipment level and plumb.
B. Install software in control units and, as applicable, in laptop computer(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.
C. Connect and configure equipment and software to achieve sequence of operation specified.

3.3 WIRING DEMOLITION
A. All wiring and tubing abandoned by the work of the CSC, during the course of completing this Project, shall be removed in total.
B. Controllers, Panels and Devices abandoned by the Scope of this Project, shall be retained by PSU Physical Plant Area Services. Area Services Technicians shall be given 10 days notice for them to remove these items.

3.4 WIRING INSTALLATION
A. Install systems and materials in accordance with manufacturer's instructions, rough-in drawings and equipment details. Install electrical components and use electrical products complying with requirements of applicable Division 26 sections of these specifications.
B. Provide all interlock and control wiring. All wiring shall be installed neatly and professionally, in accordance with requirements of applicable Specification Division 26 sections and all national, state, and local electrical codes. All the wiring shall be installed in accordance with the current National Electrical Code (NEC).
C. Provide wiring as required by functions as specified and as recommended by equipment manufacturer's to serve specified control functions.
D. Control wiring shall not be installed in power circuit raceways. Magnetic starters and disconnect switches shall not be used as junction boxes. Provide auxiliary junction boxes as required. Coordinate location and arrangement of all control equipment with the University's Physical Plant BAS Group's representative prior to rough-in.
E. The term "control wiring" is defined to include the providing of wire, conduit, and miscellaneous materials as required for mounting and connecting electric or electronic control devices in pilot circuits of contactors, starters, relays, etc., and wiring for valve and damper operators.
F. Install signal, communication, and fiber-optic cables according to Division 26 Section "Control/Signal Transmission Media", and as follows:
   1. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
   2. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.
G. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.
H. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.
I. Provide auxiliary pilot duty relays on motor starters as required for control function.

J. All exposed control wiring and control wiring in the mechanical, electrical, telephone, and similar rooms shall be installed in raceways. All other wiring shall be installed neatly and inconspicuously above ceilings.

K. Install exposed control wiring system in conduit for electric/electronic control systems. Conceal wiring, except in mechanical rooms and areas where other conduit and piping are exposed. UL plenum-rated cable shall be provided when located in ceiling spaces. All control wiring shall be installed in a neat and workmanlike manner parallel to building lines with adequate support. Both conduit and plenum wiring shall be supported from or anchored to structural members. Conduit or plenum wiring supported from or anchored to piping, duct supports, the ceiling suspension system, is not acceptable. Wiring buried in slab-on-grade concrete or explosion-proof areas shall be in rigid metal conduit. Provide adequate strain relief for all field terminations.

L. Number-code or color-code conductors, excluding those used for individual zone controls, appropriately for future identification and servicing of control system.

3.5 CONTROL DEVICE INSTALLATION

A. All room sensors and thermostats shall be mounted so as to be accessible in accordance with ADA Guidelines, unless otherwise noted on the drawings. It is the CSC’s responsibility for final coordination of the sensor/thermostat locations with the Professional and the University’s Physical Plant BAS Group.

B. Enhanced Zone Sensors shall be installed only in private or semi-private Offices, and Conference Rooms. These shall not be installed in Public Spaces.

C. Provide averaging-type sensors in mixing plenums, and at hot and cold decks. Install averaging-type sensors in a serpentine manner vertically across the duct cross-section. Support each bend with a capillary clip.

D. Install low-limit duct thermostats (freezestats) in a serpentine manner horizontally across the face of coil. Provide 1 ft (3 m) of sensing element for each 1 ft² (1 m²) of coil area.

E. Remote control devices not in local panels shall be accessible for adjustment and service below 7' above finished floor whenever possible.

F. Locate all temperature control devices wired under Division 26.

G. Install guards on thermostats in the following locations:
   1. Entrances.
   2. Public areas.
   3. Where indicated.

H. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.

I. Local controllers shall be mounted at eye level for accessibility and service, and located within 50’ of the system served, unless otherwise shown on the plans.

J. Freestanding enclosures and panels shall be supported on steel unistrut frames, or approved equal, and be securely anchored to the floor and be well braced.

K. Enclosures and panels mounted directly to the wall shall be provided with a minimum airspace of 1” between the enclosure and the wall.

L. A minimum of 3’ working clearance shall be provided in front of all enclosures and panels; clearance shall be ensured to permit the enclosure door to open at least 90° from its closed position.

M. Mounting height shall be a maximum 6’-6” to the top of the enclosure.
N. Shall be suitable for use in environments having an ambient temperature range of 31°F to 104°F and a relative humidity of up to 95% noncondensing.

O. There shall be no pneumatic equipment or device installed in a Global Building Controller/Router enclosure. There shall be no equipment or device installed in a Global Building Controller/Router that is not a functional component of the campus system interface or building BAS system.

P. A padlocking hasp and staple or keyed cylinder shall be provided for each door.

Q. A field-installed, 14-gage galvanized steel drip shield shall be provided where enclosures and panels may be subjected to dripping water.

3.6 INSTALLATION OF AIRFLOW MEASUREMENT DEVICES

A. Installation

1. Install in accordance with manufacturer’s placement instructions for optimum performance at the locations indicated on the plans. A written report shall be submitted to the consulting mechanical engineer if any discrepancies are found.

B. Adjusting

1. Duct and plenum devices shall not be adjusted without approval from the consulting mechanical engineer.

2. Fan inlet mounted devices may be adjusted during start up and commissioning only after having been checked against known volumetric values (or against another like device measuring the same air volume) at two or more points of operations.

3.7 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Ground equipment: Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.8 CONTROL POWER

A. Power supply for Global Building Controllers/Routers and associated BAS components shall be connected via a dedicated circuit to the building normal-emergency panel. A grounding conductor shall be run from building service entrance panel ground bus. Conductor shall be insulated and isolated from other grounded conductors and building conduit system.

B. Power supply for Application Controllers used to monitor emergency equipment and/or equipment serving critical spaces (i.e. Animal Rooms, Computer Server Rooms, etc.) shall be connected via a dedicated circuit to the building normal/emergency panel.

C. UPS: Uninterruptible Power Supply(s) shall supply power for the Global Building Controller(s), repeater(s) and/or Application Controllers that monitor or serve emergency and/or critical equipment. The dry-contacts for monitoring the UPS status shall be monitored by the BAS.

D. Provide power for Application Controllers and all associated control components from nearest electrical control panel or as indicated on the electrical drawings—coordinate with Electrical Contractor.

E. Power for each control panel shall be provided through a switch (standard light switch) located inside the panel. A standard duplex receptacle shall also be provided inside the control panel. The receptacle shall be unswitched. Control transformer(s) shall be located outside the control panel, and attached to the side of the panel.

3.9 IDENTIFICATION
A. The CSC shall label each system device with a point address or other clearly identifiable notation inside the device cover. Labels shall be permanent, and method of labeling shall be approved by the University’s Physical Plant BAS Group.

B. All control equipment shall be clearly identified by control shop drawing designation as follows:
   1. Control valves and damper actuators: brass tags or engraved phenolic (Bakelite) tags.
   2. Other Remote Control Devices: Metal tags or laser printed, adhesive backed, metalized polyester film labels.
   3. Control Enclosures and Panels: Engraved nameplate with panel number and system served.

C. Duct static-pressure sensors and piping differential-pressure sensors locations shall be:
   1. indicated on the Installation Mark-up Drawings (kept on-site) for transfer of this information onto the As-Builts; and
   2. identified on the BAS Floor Plan online graphic; and
   3. identified in the building using a sticker/label on the nearest ceiling grid, or access-panel where concealed.

3.10 TRENDS

A. All input and output control and status points will have trends set-up and enabled. Each trend will store a minimum of 500 samples in the associated controller utilizing a first-in/first-out algorithm so that the oldest data is over-written as new data is stored. The controller will also be programmed for the capability of enabling historical trending on each trended point individually so that historical trending can be enabled on any point without enabling it on any other trended point.

B. All trends shall be programmed to be triggered according to the type of point, as follows:
   1. All equipment start/stop control point trends will be triggered on the control point’s change of state.
   2. All equipment status point trends will be triggered on the status point’s change of state.
   3. All space-temperature and outside-air trends will be triggered on any change of value of 2 degrees Fahrenheit.
   4. All space-humidity and outside-air-humidity trends will be triggered on any change of value of 5%.
   5. All fan air temperature trends will be triggered on any change of value of 5 degrees Fahrenheit.
   6. All water temperature trends will be triggered on any change of value of 3 degrees Fahrenheit.
   7. All damper motor control point trends will be triggered on any change of value of 10% of it’s control range.
   8. All valve control point trends will be triggered on any change of value of 10% of it’s control range.
   9. All VFD motor control point trends will be triggered on any change of value of 5% of it’s control range.
  10. All fan air static pressure trends will be triggered on any change of value of .05 inches water column.
  11. All water pressure trends will be triggered on any change of value of 3 psi.
12. All steam pressure trends will be triggered on any change of value of 2% of the steam pressure input range.

3.11 ALARMS
A. All Input/Output objects listed on the object tables, for each piece of equipment, shall have an event (alarm) defined for the off-normal condition.
B. Analog objects shall list the high and low alarm limits.
C. Every device connected to the system shall also be alarmed for an off-line condition. The CSC shall provide a BACnet BV for the offline status.
   1. Two notification classes shall be defined to route alarms.
      a. Critical alarms shall be printed, logged, and pop-up windows shall occur via an email notification.
      b. Maintenance level alarms shall be printed and logged.
D. The event objects and routing shall be reviewed by the University’s Physical Plant BAS Group to identify the class, routing, limits, and message content for each object prior to implementation.
E. An event shall be generated for a device communications failure or a device program changing to a halt or failure state. All devices shall have this feature implemented.

3.12 SCHEDULES
A. A list of schedules to be implemented shall be reviewed and approved by the Professional. The list shall also include the schedule times (Occupied and Unoccupied) to be implemented.

3.13 BASIC SYSTEM REPORTS AND CUSTOM TRENDS
A. Basic System Reports shall be set-up, a minimum of one per System, that provide a Summary of values of the key Points in that System, at the same point-in-time ("snapshot"). Some Reports might require multiple “pages” for viewing. Contact the BAS Group for examples.
B. Reports shall be created using Microsoft Excel spreadsheets.
C. Basic System Reports for HVAC Systems Functional Performance & Diagnostics
   1. General Intent: To assess ongoing functional performance through continued monitoring and useful reporting through the BAS of the actual operating conditions of the controls and interactions of the HVAC systems. Coordinate and integrate building reporting requirements with campus EUMS to avoid duplication or omission of reporting requirements.
   2. Reports shall be initially set up by BAS vendor to be able to be manually or automatically run at user’s option, and sent out periodically via email to user defined list to achieve the following goals:
      a. Verifying design intent and functional performance
      b. Diagnosing comfort and other space condition problems
      c. Alert users to inefficient or improper operation of equipment
      d. Maintaining persistence of energy savings
      e. Demonstrating effects of poor maintenance or identifying when maintenance procedures are not followed
f. To provide data that can be further used in spreadsheets to assist in studying alternative strategies

3. Reports shall be organized according to the project specific applications. They shall include summaries of key setpoints, control status (optimized reset, auto vs. overridden) and actual controlled conditions.

   a. For example, reports shall provide, at a glance, a summary of the % cooling demand at all zone terminals, and corresponding cooling requests at zone level causing reset of Supply air temperature at AHU and unmet SAT setpoint at AHU level, causing DP reset at chilled water pump and/or chilled water supply temperature reset at chiller level.

   b. Example reports in Excel spreadsheet format. Request e-file “BAS Performance Reports.xlsx” from the BAS Group. Contact: Bob Mulhollem, Manager of Environmental Systems, The CSC shall provide a minimum of 10 Custom Trends, to be set-up by the CSC after the Cx-provider has begun Functional Performance Testing. These Custom Trends are in addition to the Trends for all input and output control and status points noted above, and will mostly involve display of multiple trends in the same view (i.e. Trend Graph or Trend Study). The Cx-provider will provide 15-calendar-days advance notification of when the Custom Trends need to be completed.

4. In general, include reports at each of the following levels and for each of the systems within those levels and key indicators that show interactions between systems:

   a. **Zone Level Systems**
      1. Thermal Comfort/Environmental Conditions
      2. Terminal Heating and Cooling Equipment
      3. Smoke & other distribution control dampers (position status)
      4. Other (as required)

   b. **Primary Equipment and Central Plant Level Systems**
      1. Air Handling Units
         a. Coil/Energy Transfer
         b. Ventilation and Pressurization: Supply, Return, Outside Air quantities
         c. Fan
      2. Auxiliary
         a. Pumps (chilled, condenser and hot water)
         b. Exhaust fans
            1. General
            2. Purpose
            1. Cooling Plant Equipment
               a. Campus Chilled Water
b. Chillers
c. Cooling Towers
d. Heat exchangers

2. Heating Plant Equipment
   a. Boilers
   b. Heat Exchangers
c. Decentralized Level Systems
   1. Packaged Unitary DX Equipment
   2. Heat Pumps
   3. Other (as required)

D. Custom Trends:
The CSC shall provide a minimum of 10 Custom Trends, to be set-up by the CSC after the Cx-provider has begun Functional Performance Testing. These Custom Trends are in addition to the Trends for all input and output control and status points noted above, and will mostly involve display of multiple trends in the same view (i.e. Trend Graph or Trend Study). The Cx-provider will provide 15-calendar-days advance notification of when the Custom Trends need to be completed.

3.14 ACCEPTANCE OF COMPLETED BAS INSTALLATION

A. Acceptance of the completed BAS installation includes verification of the proper equipment communication setup. This shall be accomplished by submitting a BACnet network analysis capture for a period of 5-minutes. The capture file (in .TXT format) shall be submitted to the University’s Physical Plant BAS group for Review and Approval. The Physical Plant BAS group Approval shall be received, and any identified problems shall be resolved before Acceptance Testing shall begin. Corporate assistance shall be requested and used as necessary to resolve any network-issues in a timely fashion.

B. Upon completion of the installation, the CSC shall start up the system and perform all necessary calibration, testing, and debugging operations. An acceptance test shall be performed by the CSC in the presence of the University’s Physical Plant BAS Group representative. Acceptance test shall be scheduled with at least 10 working days advance notice. The acceptance test shall be observed by at least one member from the University’s Physical Plant BAS group.

C. Manufacturer’s Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.
   1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove malfunctioning units, replace with new units, and retest.
   2. Test and adjust controls and safeties.

D. Replace damaged or malfunctioning controls and equipment.
   1. Start, test, and adjust control systems.
   2. Demonstrate compliance with requirements, including calibration and testing, and control sequences.
3. Adjust, calibrate, and fine tune circuits and equipment to achieve sequence of operation specified.

E. The acceptance test shall include, but not be limited to:

1. The CSC shall submit a checklist of the objects for the test. The checklist shall be submitted to the University’s Physical Plant BAS Group, and reviewed and approved by the University’s Physical Plant BAS Group, prior to the test. The checklist shall include all objects that have event (alarm) routing defined.

2. The CSC and OEM manufacturer shall verify the proper operation of all input/outputs.

3. The CSC shall verify the proper event (alarm) routing to Physical Plant BAS operations center for all points on the main equipment and perform a spot check of the operations of ten percent of terminal units equipment.

4. The CSC shall verify that the software programs meet the design intent of the control sequences in the Construction Documents.

5. The CSC shall verify the proper operation of the system software on the operator workstation.

6. The CSC and the OEM manufacturer shall verify all inputs meet or exceed manufacturer’s stated tolerances for accuracy.

7. The CSC shall verify that all on-line graphical displays of equipment accurately represent the real time state of the field equipment.

8. The CSC shall verify that all on-line graphical displays of programming logic accurately represent the real time state of the field equipment.

9. The CSC shall verify the reliability of all communications of all field devices to the appropriate operator workstation located in the Physical Plant Building.

10. The test shall include all workstation/server level integration included in the scope of this project with the CSC and OEM manufacturers.

11. The test shall include functional verification of all interfaces and system integration required to meet the scope of this project.

12. Final acceptance shall include acceptance by the University’s Physical Plant BAS Group.

13. The Acceptance Test shall be conducted with the CSC, OEM manufacturer, the Prime Contractor representative and a member of the University’s Physical Plant BAS Group present.

F. Turnover of ALARMS to PSU BAS Operators: Alarms being turned-over to PSU BAS Operators shall have been activated, tested for proper routing and determined to not be producing frequent and nuisance alarms. It is expected that Alarms will not be turned-over to PSU BAS Operators until there is final acceptance of the completed BAS installation.

G. Acceptance: When the field test procedures have been successfully demonstrated to the University’s Physical Plant BAS Group and the system performance is deemed satisfactory, the system parts will be accepted for beneficial use and placed under warranty. At this time, a "notice of completion" shall be issued by the University’s project representative and the warranty period shall start.

H. All of the points which are alarmed shall be trended and archived from the time of installation through the end of the warranty period. All archived files will be readily accessible to the University’s Physical Plant BAS Group.

I. Start-up and commission systems: Allow sufficient time for start-up and commissioning prior to placing control systems in permanent operation.
J. Provide any recommendation for system modification in writing to the University’s Physical Plant BAS Group. Do not make any system modification, including operating parameters and control settings, without prior approval of the University’s Physical Plant BAS Group.

K. Provide certificate stating that control system has been tested and adjusted for proper operation.

L. Project Record Documentation: After a successful acceptance testing, submit project record drawings of the completed project for final approval. After receiving final approval, supply four (or as specified in Division 1) complete project record sets (maximum ANSI “D” size), together with an electronic version on CD to the University’s Project Management. The electronic version shall simultaneously be provided at the BAS Group’s FTP site, and the University’s Physical Plant BAS Group shall be notified. Notify Bob Mulhollem, Manager of Environmental Systems, REM26@psu.edu, 863-7220.

M. Equipment Panel As-Built Drawings: After the above final approval, one set for the entire project shall be provided in the Building Controller Panel, and a paper-copy set of just the Drawings for that System shall be provided in each System Panel, and the University’s Physical Plant BAS Group shall be notified. Notify Bob Mulhollem, Manager of Environmental Systems, REM26@psu.edu, 863-7220.

3.15 TRAINING

A. The CSC shall provide factory-trained instructor to give full instructions to designated personnel in the operation, maintenance, and programming of the system. Instructors shall be thoroughly familiar with all aspects of the subject matter they are to teach. The training shall be specifically oriented to the system and interfacing equipment installed.

B. Instructions shall include 2 parts, the “New BAS Equipment Classroom-Orientation” and the “BAS Product Training” as outlined below:

1. New BAS Equipment “walk-through” sessions will be conducted by the PSU Technician that has been assisting with New Building (or Major Renovation) Commissioning.

2. New BAS Equipment Classroom-Orientation: Two (2) 3-hour Classroom-sessions for the University’s Technical Service employees. This shall be an overhead/onscreen presentation of the online BAS interface and include showing how to access, and use, information about any portion of the new project’s BAS.
   a. Handouts (20 copies) will include the construction mark-ups of the BAS Shop Drawing submittal, and shall be clearly noted on the Cover-page with “FOR TRAINING ONLY. (Date) DO NOT COPY”, and shall be turned-over to the Training Coordinator at the end of the Classroom sessions. Alternate: A minimum of 5 Printed Handouts, and presentation using 2 projectors and 2 screens, including 1 projector and screen dedicated to displaying the BAS Shop Drawing Page being discussed.
   b. General - One session will be more general in nature for the Area Services and Weekend personnel who will be initial responders, dealing mostly with “Too Hot” or “Too Cold” calls.
   c. Technical – One session will be more technical, being oriented for the Central Services personnel that will need to troubleshoot more complex problems.
   d. Schedule Classroom-sessions with the University giving at least ten days advance notice. Provide an Agenda, to be approved by the University’s Physical Plant BAS Group prior to scheduling Training. To schedule sessions, contact the Physical Plant Training Coordinator at 814/ 863-2340.

3. Project Specific BAS Product Training: This contract shall provide “Factory Training Credits” with a value equal to 1% (0.01 times) of the scheduled BAS work for this
Project. This training shall be provided during the period of installation, OR at the University’s option, banked for use following the installation period of this contract.

a. Submit a “Letter of Factory Training Credits” as part of the BAS Shop Drawings Submittal (see Part 1). Include Project Name, CSC Project Manager, Total Value of BAS Contract and Date.

b. "Factory Training Credits” shall be used to engage a factory-authorized service representative to train University's maintenance personnel on-site to adjust, operate, and maintain control systems and components.

c. Train University's maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, Operation of portable operator's terminal and maintaining equipment and schedules.

d. Provide operator training on modification of data display, alarm and status descriptors, requesting data, executing command, calibrating and adjusting devices, resetting default values, and requesting logs.

e. Provide a student binder with training modules.

f. Schedule BAS Product Training sessions with the University with at least twenty (20) days advance notice. Provide an Agenda, to be approved by the University’s Physical Plant BAS Group, prior to scheduling Training. To schedule, contact the Physical Plant Training Coordinator at 814/ 863-2340.

3.16 ADJUSTING AND CLEANING

A. Start-up: Start-up, test, and adjust electric control systems in presence of manufacturer's authorized representative. Demonstrate compliance with requirements. Replace damaged or malfunctioning controls and equipment.

B. Cleaning: Clean factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer’s touch-up paint.

C. Final Adjustment: After completion of installation, adjust sensors, thermostats, control valves, motors, and similar equipment provided as work of this section. Final adjustment shall be performed by specially trained personnel in direct employ of manufacturer of primary temperature control system.

--- End of PART 3 --------------------------
PART 4 SEQUENCES OF OPERATION

A. HVAC EQUIPMENT – Refer to HVAC drawings, H6.XX series.

1. Note that in addition to the sequences provided in the H6.XX series drawings the contractor shall also provide monitoring of other systems and points including chilled water flow (see detail 2/H9.10), steam flow (see detail 10/H8.10) and condensate flow metering (see detail 11/H8.10) for use by OPP.

2. IN ADDITION TO CONTROLS OF HVAC EQUIPMENT THE CONTRACTOR SHALL ALSO CONTROL AND/OR MONITOR OTHER BUILDING SYSTEMS AS DESCRIBED BELOW:

B. PLUMBING EQUIPMENT

1. Domestic Hot Water Heater: Controller supervised by BAS. Refer to Plumbing equipment schedules for sequence by local controller.

2. Domestic Hot Water Recirculation Pump: Pump shall operate when any HVAC zone is in occupied mode and the measured return temperature in the loop drops below 100˚ F. Monitor status through the BAS.

3. Provide metering information for the domestic water usage through the BAS back to OPP for use by OPP.

C. DEFINITIONS

1. Night Lighting refers to non-emergency exterior lights mounted to the building. These “night” lights are usually controlled by the campus master photocell. “Night” Lighting does not include exterior lighting for the site (walkway, roadway, or parking) or egress lighting to the Public Way.

D. INTERIOR PUBLIC SPACE LIGHTING

1) Interior Lighting Control - BAS shall schedule when to enable or disable local control of interior corridor and public space lighting via CAT-6 Cable to the EC provided lighting control panel (typically a motorized breaker panel).
   • Unoccupied Hours - After 6:00 PM the lighting controller will turn lighting zone off. Provide a local override switch within each zone to allow occupants to give local control back to the occupancy sensors for a period of 2 hours (adjustable).
   • Note: Programming of the building lighting control panel by EC shall be such that it’s sequence of operation can be modified to force on lighting during the occupied hours (with no control via local occupancy sensors) and then allow local occupancy sensor control during unoccupied hours.

2) Building Mounted Lighting Control – Control of building mounted lighting shall match that of Site/Night Lighting Control.

3) Status: Status shall be determined via data interface of building lighting panel to BAS by BAS contractor.
   [Note difference between Interior and Exterior Lighting Status:
   • Status for interior lighting zones is via data transfer between lighting controller interface and BAS.
   • Status for exterior and building mounted lighting zones is via current sensor input to the BAS.

4) Alarm: An alarm shall indicate when a lighting zone has been turned on, but the status remains off.
5) Hours-of-Use: An accumulated-time indicating the total on hours until reset.

E. SITE (WALKWAY, ROADWAY AND PARKING) & NIGHT LIGHTING

Each circuit shall have I/O for control and status. When any Site and/or Night Light type of exterior lighting circuit is included in a Project, the following shall be provided:

1) Site/Night Lighting Control: BAS shall signal the EC provided lighting control panel to energize or de-energize the Night and/or Street Lighting circuit(s) via CAT-6 cable. Each exterior lighting circuit shall be controlled by each of the following means:
   - automatically via astronomic capability in the Application Controller(s) with I/O for the Exterior lighting circuit(s)
   - via BAS network communications, using the Lighting Master Point at Physical Plant
   - a software toggle, manual On/Off control from a BAS graphic
   - a hardware Hand-Off-Auto(BAS control) for each group of circuits (i.e. one each for night, walkway, roadway, and parking – as required)
   - Exterior Emergency Lighting: Utilize a non-latching relay to control an electrically held, normally closed lighting contactor. BAS shall open the contactor (hold lights off) during daytime hour (dawn to dusk). Any failure within the system shall put the lights in the “on” position.

2) Status: Status shall be determined via a current sensor (typically split-core, 0-30 A input: 4-20 mA output), set-up in software to indicate On status with a current in excess of 35% (adj.) of total circuit current. Where there are multiple phases, each phase shall be monitored. Contractor shall utilize a true rms meter to measure total circuit current (per phase) with all lamps confirmed operable.

3) “Maintenance” Alarm: A “Maintenance” Alarm shall indicate when a lighting circuit has been commanded On, but the current sensor has a reading of less than 75% (adj.), but greater than 35% (adj.) of total circuit current.
   [The INTENT is to know when the lights are On and all but 1 or 2 of the lamps are functioning. When more than 35% of the lamps are burned out, The Status will indicate On, but initiate a Maintenance Alarm.]

4) “Off Normal” Alarm: An “Off Normal” Alarm shall indicate when a lighting circuit has been commanded On, but the Status remains Off. This condition shall occur when the current sensor has a reading between 0% and 35% (adj.) of total circuit current.

5) “On Hand” Alarm: An “On Hand” Alarm shall indicate when a lighting circuit has been commanded Off, but the Status remains On. This condition shall occur when the current sensor has a reading greater than 5% (adj.) of total circuit current.

6) “Over-current” Alarm: A “Over-current” Alarm shall indicate when a lighting circuit has been commanded On and the current sensor has a reading of greater than 110% (adj.) of total circuit current value measured during the initial setup (refer to paragraph 2).

7) Hours-of-Use: An accumulated-time, indicating the total On hours until Reset.

F. ELECTRICAL SERVICE ENTRANCE EQUIPMENT

1) Arc Flash Reduction Mode: BAS shall monitor the Arc Flash Reduction Mode ARMS in the electrical service entrance equipment (usually the main Switchgear).
   - Initiate a four (4) hour countdown timer until Alarm.
   - Note: Electrician should call into CCS to notify that they are putting the building into arc flash reduction mode. If the electrician hasn’t put the building back to normal mode prior to leaving that site, an Alarm shall notify the CCS operator to contact that
electrician as to whether the work is complete. If the electrician has left for the day and the electrical gear is not back in normal mode, the CCS operator should notify the electrical integrity crew supervisor of this issue so that the building can be put back into normal mode.

G. EMERGENCY SYSTEMS

1) Automatic Transfer Switch (ATS) [NOTE: Automatic Transfer Switches exist in many different applications, including where there is an Emergency Generator, a Fire Pump, or Emergency Standby HVAC equipment. EACH Automatic Transfer Switch needs to include indication of normal and emergency source voltage availability, status, and alarm, per the following.]

   a) Normal Source (Preferred) Voltage Availability: The CSC shall use the contacts provided by the ATS Manufacturer/ Electrical Contractor. These contacts shall indicate an acceptable source voltage based on ATS settings.

   b) Emergency Source (Non-Preferred) Voltage Availability: The CSC shall use the contacts provided by the ATS Manufacturer/ Electrical Contractor. These Contacts shall indicate an acceptable source voltage based on ATS settings. Loss of acceptable source voltage shall be Alarmed in the BAS.

   c) Status: The CSC shall use the NC contact of the Manufacturer-installed SPDT auxiliary contacts in the Emergency Transfer Switch to provide an input indicating the Status of the ATS.

   d) Alarms:

       1) The Status of the ATS shall be Alarmed in the BAS, to indicate any time the ATS has switched to the Emergency source.

       2) ATS Normal to Emergency Switch Failure – Once the normal source voltage available alarms, program a 90 second timer to monitor contact showing ATS in emergency position. If contact does not change state in that time, initiate alarm.

       3) ATS Emergency to Normal Switch Failure (situation starting with no normal source available) - Once the normal source voltage becomes available, program a 35 minute timer to monitor the ATS normal position contact. If contact does not change state in that time, initiate alarm.

SECTION 260000 - ELECTRICAL SYSTEMS GENERAL PROVISIONS

PART 1 - GENERAL

1.1 SCOPE

A. Furnish all labor, materials and equipment as required for new electrical work and as shown on Drawings and described below:

B. Provide and install all electrical systems, including but not limited to, lighting, power, fire alarm and low voltage systems as shown or implied in the contract documents for a complete and functional installation in accordance with OSHA and NEC requirements.

C. Electrical Contractor shall provide and install all lighting and power wiring and connect each motor and its control and shall provide roughing and receptacles or boxes for all equipment requiring the same.

D. Before ordering any material or doing any work, the Electrical Contractor shall check and verify all measurements, including lines, grades, pipe and duct elevations at the building and shall be responsible for the correctness of same.

E. Electrical Contractor shall provide temporary power as necessary for the construction phase and comply with state, local and regulating authorities. Contractor will coordinate and verify in the field with the General Contractor for the necessary equipment, panels, etc, including locations required to serve and accommodate the temporary power requirements.

1.2 TERMINOLOGY

A. “Provide” shall mean furnish and install, make all final connections and leave in an approved operating condition.

B. “Electrical work” or “work” shall mean all labor, transportation, material, equipment, scaffolding, rigging, tools, installation, supervision, services, and any other incidental items or services necessary for a complete and operable installation.

C. “Wiring” shall include the conductor, raceways, and connections to the equipment, apparatus, outlets and other specialties.

D. “Conductor”, “wire”, and “cable” shall mean insulated conductor.

1.3 DRAWINGS

A. The drawings accompanying this specification form a part of the Specification upon which the work shall be based. Drawings are not to be scaled.

B. Drawings are diagrammatic, small scale and indicate only the general arrangement of systems and work included.
C. Consult the architectural and mechanical drawings for exact location of fixtures and equipment. Where same are not definitively located, obtain this information from the Architect.

1.4 INTENT

A. It is the intention of the drawings and specifications to call for clean finished work, tested, and ready for operation.

B. Any incidental accessories necessary to make the work complete and perfect in all respects and ready for operation, even if not particularly specified or shown, shall be provided without additional expense. Minor details not usually shown or specified, but manifestly necessary for the proper installation and operation the various systems, shall be included in the work, the same as if specified or shown on the drawings.

C. The Electrical Contractor shall be responsible for assuring that his proposed systems can be installed as required from the drawings and specifications. If any departures from the drawing and specification are deemed necessary by the Contractor, details or such departures and the reasons therefore shall be submitted to the Architect for approval. No such departures shall be made without the prior written approval of the Architect.

1.5 ALTERATIONS TO EXISTING ELECTRICAL WORK

A. Should removal, relocation, rerouting of another Division's work be required to accommodate Division 26 work, the Electrical Contractor shall be responsible for that work and shall pay all required costs. Work shall be performed by mechanics skilled in particular trade involved; that is, plumbing work by plumbers, electrical work by electricians, mechanical work by steamfitters and sheet metal mechanics.

B. Existing wiring, which is to remain in service under the new arrangement, shall be modified, extended, rerouted and connected to existing available circuit or to new circuit. If existing wiring is found not to be in satisfactory condition, provide written notification to replace with new wiring of type required for new arrangement for owner's review and approval.

C. Existing electrical work that has become exposed due to new arrangement, and is to remain in service, shall be relocated, modified, extended as required to suit the new arrangement.

D. Existing equipment, building areas, or surfaces damaged, during alterations, shall be restored to their original condition or replaced.

E. Electrical Contractor shall provide temporary electrical service for any existing equipment, or systems required to be maintained in operation during the construction. Final connections to this equipment shall be provided when the required permanent electrical services are installed completely.

1.6 CONTINUITY OF SYSTEMS

A. Electrical work shall be done at such time, and in such manner, as will least interfere with the maintenance and operation of any existing facilities included in the work. Provisions shall be made to permit use of all existing electrical systems at all times. Provide temporary facilities to secure these conditions and remove such temporary facilities when no longer required.
B. Shutdown for disconnecting existing electrical facilities and connecting new electrical work shall be made at such time and in such manner as directed by the University.

C. Where shutdown periods cannot be of duration to accommodate the new work, the Subcontractor shall perform the work in a series of preplanned stages of minimal allowable shutdown periods. Provide temporary facilities to allow re-energizing of service between working stages.

1.7 STRUCTURAL CONDITIONS AND COORDINATION OF WORK

A. Electrical Contractor shall carefully examine all architectural and structural drawings for the buildings and all drawings for other trades, and shall be responsible for the proper fitting of his material into the buildings as planned, without interference with other work.

B. Electrical Contractor shall carefully investigate the structural and finish conditions affecting all his work and arrange his work accordingly; furnishing such fittings, bends, etc., as may be required to meet such conditions.

C. All electrical fixtures, equipment, ducts, wiring, etc., shall be installed so as not to interfere with other pipelines, plumbing or electrical fixtures, electrical raceways, etc. All work shall be installed so as to preserve proper access. Pipe hanger, conduit, ductwork, etc., in the immediate vicinity of any piece of equipment shall be located as to leave all parts of the equipment accessible for maintenance and conforms to the minimum Working Space Conditions of the National Electrical Code.

D. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual, and with those required by codes and standards. Use consistent designations throughout Project.

E. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

F. Coordinate installation of identifying devices with location of access panels and doors.

G. Install identifying devices before installing acoustical ceilings and similar concealment. Coordinate chases, slots, inserts, sleeves, and openings with general construction work and arrange in building structure during progress of construction to facilitate the electrical installations that follow.

H. Set inserts and sleeves in poured-in-place concrete, masonry work, and other structural components as they are constructed.

I. Sequence, coordinate, and integrate installing electrical materials and equipment for efficient flow of the Work. Coordinate installing large equipment requiring positioning before closing in the building.

J. Where electrical identification devices are applied to field-finished surfaces, coordinate installation of identification devices with completion of finished surface.

1.8 SCAFFOLDING, RIGGING, HOISTING

A. Provide scaffolding, ladders, rigging, hoisting and all other equipment required for the installation of electrical work.
1.9 PAINTING

A. All electrical equipment such as circuit breaker enclosures, switchboards, panelboards, disconnect switches, enclosed motor starters, lighting fixtures, etc., shall be furnished with factory applied finish, including prime, under and finished coats of paint.

B. If factory finish surfaces become damaged or deteriorated, restore the surface to the original condition, to the satisfaction of the Architect.

1.10 PASSAGE OF EQUIPMENT

A. Establish passage clearances required to deliver, install, and erect electrical equipment

B. Where there is not sufficient clearance for passage of electrical equipment into the building, deliver, set and protect such equipment before confining walls, floors, slabs, steel work are erected. Install the equipment before restraining enclosures are erected.

C. If structure, equipment and systems must be altered to provide passage of equipment, the Electrical Contractor shall restore structures, equipment and systems to their original condition, at no additional cost.

1.11 INSPECTION, ADJUSTING AND CLEANING

A. At the completion of the project, the Electrical Contractor shall make thorough inspection of all the electrical work. At the final inspection, all systems must be 100 percent complete, and tests shall be performed in strict compliance with this specification.

B. Where the work of the Electrical Contractor will be installed in close proximity to work of other trades, or where there is evidence that the work of the Contractor will interfere with the work of Other Trades, he shall assist in working out space to make a satisfactory adjustment.

C. If the Electrical Contractor installs work before coordinating with Other Trades, or so as to cause interference with work of Other Trades, the Electrical Contractor shall make necessary changes in his work to correct the condition without extra charge.

D. The Electrical Contractor shall locate all equipment, which must be serviced, operated or maintained in fully accessible positions. Equipment shall include, but not be limited to panels, motors, and controllers, pull boxes, etc. If required for better accessibility, Contractor shall furnish approved access doors for this purpose. Minor deviations from drawings may be made to allow for better accessibility, but changes of magnitude or which involve extra cost shall not be made without approval of the Architect.

E. Where conduit runs in close proximity to heating piping or domestic hot water piping, the minimum space between pipes and conduits shall be six inches (6").

F. The Electrical Contractor shall maintain maximum headroom and space conditions at all points. Where headroom or space conditions appear inadequate, the Architect shall be notified before proceeding with installation.

G. Architect shall be informed of any change in major overall dimensions as shown on the Electrical Drawings effecting the physical size, shape or location of any part of the layout, whether due to field conditions or changes due to the use of equipment of manufacturer other than those listed. The Architect must approve any changes.
1.12 CLOSE OUT

A. Provide electronic copy of “as-built” drawings in DWG and PDF formats.

1.13 TESTING

A. ELECTRICAL ACCEPTANCE TESTING

1. Testing shall be performed on electrical equipment and systems to assure that equipment and systems are operational and within applicable standards and manufacturer’s tolerances. Testing should verify that equipment and systems are installed in accordance with design specifications. All testing shall occur at the building site.

2. Testing shall be performed by an independent organization that is professionally independent of the manufacturers, suppliers, and installers of the equipment or systems being evaluated. The name of the proposed testing organization shall be submitted to Engineering Services for approval.

3. Qualified technicians who are trained and regularly employed for testing services shall do all testing. Submit technician qualifications.

4. The testing organization shall conform to the general guidelines of section 5 of the latest NETA Acceptance Testing Specifications, in their entirety. This includes the following:
   a. Safety and Precautions
   b. Suitability of Test Equipment
   c. Test Instrument Calibration
   d. Test Report

5. Provide report in the Megger “Power DB” program. Furnish one (1) original, editable electronic (.mdb format), one (1) electronic PDF copy, and Four (4) paper copies of the completed report to Engineering Services. Have the testing firm contact Engineering Services to procure PSU standard Power DB testing forms.

6. Notify Engineering Services at least seven (7) days in advance of any testing. A representative of Engineering Services shall witness testing. All testing shall be video taped.

7. Inspection and testing of all applicable electrical equipment listed below shall be done in accordance with the latest version of NETA ATS. This will include all tests marked optional unless waived in writing by Engineering Services.
   a. Switchgear and Switchboard Assemblies
   b. Transformers: Air Cooled and Liquid Filled
   c. Cables: Low and Medium Voltage
   d. Air Switches:
1) Medium Voltage, Metal Enclosed

e. Vacuum Switches: Medium Voltage

f. Low Voltage Circuit Breakers:
   1) Insulated Case/Molded Case (100 amp frame and larger)
   2) Power

g. Medium Voltage Circuit Breakers:
   1) Air
   2) Oil
   3) Vacuum
   4) SF6

h. Circuit Switchers

i. Network Protectors

j. Protective Relays

k. Instrument Transformers

l. Metering

m. Grounding Systems

n. Ground Fault Protection Systems

o. Motors: AC and DC

p. Motor Starters: Low and Medium Voltage

q. Adjustable Speed Drive Systems

r. Direct Current Systems:
   1) Batteries
   2) Battery Chargers

s. Surge Arresters
   1) Low Voltage Surge Protection Devices
   2) Medium Voltage Surge Protection Devices

t. Emergency Systems:
   1) Uninterruptible Power Systems
   2) Automatic Transfer Switches
B. System Function Tests
   1. Perform system function tests upon completion of equipment tests as defined in 260000.1.12.4. It is the purpose of the system function tests to prove the correct interaction of all sensing, process, and action devices.
   2. Verify the correct operation of all safety devices for fail-safe functions in addition to design function.
   3. Verify the correct operation of all sensing devices, alarms, and indicating devices.

C. Thermographic Survey
   1. Perform a thermographic survey on all current carrying devices. Perform the survey during periods of maximum possible loading and prior to expiration of warranty or bond period.
   2. Imaging equipment shall be capable of detecting a minimum of 1-degree Celsius at 30 degrees Celsius.
   3. Level 2 certified thermographer shall perform the survey.
   4. A report shall be submitted to Engineering Services which includes the following:
      a. Description of equipment tested
      b. Discrepancies
      c. Temperature difference between area of concern and reference area
      d. Areas inspected
      e. Load conditions at time of inspection
      f. Provide photographs and/or thermograms of deficient areas
      g. Summary which includes recommendations for corrective actions.

D. Electromagnetic Field Testing
   1. Determine the vector-valued quantity of magnetic flux density for power frequency magnetic fields over a predetermined space or area, as designated by Engineering Services.
   2. Testing shall be done in accordance with the latest version of NETA ATS.

E. Voltage Drop Testing
   1. A voltage test shall be made at the last receptacle of each branch circuit of each Panelboard. Total voltage drop shall not exceed 3% of the initial voltage measured at the end of that branch circuit. The test shall be made using a 12A load attached to the furthest receptacle. Contractor is responsible to correct any installation with a voltage
drop of greater than 3%. If a branch circuit fails the test, all other branch circuits on that panel shall be tested. Submit all test results to Engineering Services.

2. Documentation of the results shall be provided to Engineering Services.

3. Any non-conforming branch circuits shall be corrected.

F. Fire Alarm Testing

1. All connected fire alarm devices are to be tested for operation, proper programming, and verified to meet proper sequence of operation. Printout of full system test showing test of all devices and interconnected systems shall be provided. Test is to include all sprinkler flow sprinkler tamper devices, all duct detectors and associated fan shutdown, any smoke evacuation sequence, elevator recall, magnetic door hold or door closer devices, any fire alarm sub-system interconnection, etc. Final fire alarm testing is to be completed in the presence of a representative from the Office of Physical Plant – Engineering Services with sufficient prior notification.

2. System shall be tested for code compliant alarm audibility upon completion of construction.

3. Completed and accurate As-Built floor plans shall be used for final testing and copies of these drawings shall be turned over to the PSU representative immediately after testing. These plans shall include full floor plans showing all fire alarm devices with address and/or loop ID information. Also, a copy of the MXL program shall be turned over to PSU at that time.

END OF SECTION 260000
SECTION 26 05 19 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following:
   1. Building wires and cables rated 600 V and less.
   2. Connectors, splices, and terminations rated 600 V and less.
B. Related Sections include the following:
   1. Division 27 Section "Communications Horizontal Cabling" for cabling used for voice and data circuits.

1.3 DEFINITIONS
A. EPDM: Ethylene-propylene-diene terpolymer rubber.
B. NBR: Acrylonitrile-butadiene rubber.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.5 INFORMATIONAL SUBMITTALS
A. Qualification Data: For testing agency.
B. Field quality-control test reports.

1.6 QUALITY ASSURANCE
A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
   1. Testing Agency’s Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 CONDUCTORS AND CABLES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alcan Products Corporation; Alcan Cable Division.
3. General Cable Corporation.
4. Senator Wire & Cable Company.
5. Southwire Company.

B. Copper Conductors: Comply with NEMA WC 70.

C. Conductor Insulation: Comply with NEMA WC 70 for Types THHN-THWN.

2.2 CONNECTORS AND SPLICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems, Inc.
3. O-Z/Gedney; EGS Electrical Group LLC.
4. 3M; Electrical Products Division.
5. Tyco Electronics Corp.

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

C. Minimum conductor size shall be No. 12 AWG.
3.2 CONDUCTOR INSULATION AND WIRING METHODS

A. Service Entrance: Type THHN-THWN, single conductors in raceway.

B. Exposed Feeders: Type THHN-THWN, single conductors in raceway.

C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: Type THHN-THWN, single conductors in raceway.

D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.

E. Exposed Branch Circuits, Including in Crawlspace: Type THHN-THWN, single conductors in raceway.

F. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway.

G. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.

H. MC cable shall be allowed for wiring whips up to 72" long.

I. Class 1 Control Circuits: Type THHN-THWN, in raceway.

J. Class 2 Control Circuits: Type THHN-THWN, in raceway.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.

B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.

E. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."

F. Identify and color-code conductors and cables according to Division 26 Section "Identification for Electrical Systems."

G. Provide separate neutral conductor for every interior branch circuit.

3.4 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
   1. Use oxide inhibitor in each splice and tap conductor for aluminum conductors.
C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS
A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Division 26 Section "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.6 FIRESTOPPING
A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Division 07 Section "Penetration Firestopping."

3.7 FIELD QUALITY CONTROL
A. Refer to Division 26 Section "Electrical Systems General Provisions" for testing requirements.

END OF SECTION 26 05 19
SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes: Grounding systems and equipment.
B. Section includes grounding systems and equipment, plus the following special applications:
   1. Underground distribution grounding.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of product indicated.

1.4 INFORMATIONAL SUBMITTALS
A. Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in "Field Quality Control" Article, including the following:
   1. Ground rods.
   2. Grounding for sensitive electronic equipment.
B. Qualification Data: For qualified testing agency and testing agency's field supervisor.
C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Instructions for periodic testing and inspection of grounding features at test wells grounding connections for separately derived systems based on NETA MTS.
      a. Tests shall determine if ground-resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if values do not.
      b. Include recommended testing intervals.
1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.
   1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.1 CONDUCTORS

A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

B. Bare Copper Conductors:
   4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch in diameter.
   5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
   6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
   7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

C. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 2 inches in cross section, with 9/32-inch holes spaced 1-1/8 inches apart. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V. Lexan or PVC, impulse tested at 5000 V.

2.2 CONNECTORS

A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, pressure type with at least two bolts.
   1. Pipe Connectors: Clamp type, sized for pipe.

C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

D. Bus-bar Connectors: Mechanical type, cast silicon bronze, solderless compression-type wire terminals, and long-barrel, two-bolt connection to ground bus bar unless otherwise noted.
2.3 GROUNDING ELECTRODES

A. Ground Rods: Copper-clad steel; 3/4 inch by 10 feet in diameter.

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.

B. Underground Grounding Conductors: Install bare copper conductor, No. 2/0 AWG minimum.
   1. Bury at least 24 inches below grade.
   2. Duct-Bank Grounding Conductor: Bury 12 inches above duct bank when indicated as part of duct-bank installation.

C. Grounding Bus: Install in electrical and telecommunications equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
   1. Install bus on insulated spacers 2 inches minimum from wall, 6 inches above finished floor unless otherwise indicated.
   2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down to specified height above floor; connect to horizontal bus.

D. Conductor Terminations and Connections:
   1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
   2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
   3. Connections to Ground Rods at Test Wells: Bolted connectors.

3.2 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, nonshrink grout.

C. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches from the foundation.
### 3.3 EQUIPMENT GROUNDING

**A.** Install insulated equipment grounding conductors with all feeders and branch circuits.

**B.** Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.
5. Three-phase motor and appliance branch circuits.
6. Flexible raceway runs.

**C.** Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

**D.** Signal and Communication Equipment: In addition to grounding and bonding required by NFPA 70, provide a separate grounding system complying with requirements in TIA/ATIS J-STD-607-A.

1. For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.
2. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-4-by-12-inch grounding bus.
3. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

**E.** Metal Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.

### 3.4 INSTALLATION

**A.** Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

**B.** Ground Rods: Drive rods until tops are 2 inches below finished floor or final grade unless otherwise indicated.

1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
2. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.
C. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Division 26 Section "Raceways and Boxes for Electrical Systems," and shall be at least 12 inches deep, with cover.

1. Test Wells: Install at least one test well for each service unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.

D. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.

1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

E. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.

F. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install bonding jumper to bond across flexible duct connections to achieve continuity.

G. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet apart.

3.5 LABELING

A. Comply with requirements in Division 26 Section "Identification for Electrical Systems" Article for instruction signs. The label or its text shall be green.

B. Install labels at the telecommunications bonding conductor and grounding equalizer and at the grounding electrode conductor where exposed.

1. Label Text: "If this connector or cable is loose or if it must be removed for any reason, notify the facility manager."

3.6 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. Grounding system will be considered defective if it does not pass tests and inspections.
C. Report measured ground resistances that exceed the following values:
   1. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: 5 ohms.
   2. Power Distribution Units or Panelboards Serving Electronic Equipment: 3 ohm(s).
   5. Point to point grounding resistance between main grounding bus and all major electrical
      equipment frames: .5 ohms.

D. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify
   Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION 26 05 26
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following:
   1. Hangers and supports for electrical equipment and systems.
   2. Construction requirements for concrete bases.

1.3 DEFINITIONS
A. EMT: Electrical metallic tubing.
B. IMC: Intermediate metal conduit.
C. RMC: Rigid metal conduit.

1.4 PERFORMANCE REQUIREMENTS
A. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
B. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
C. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.5 ACTION SUBMITTALS
A. Product Data: For the following:
   1. Steel slotted support systems.

1.6 INFORMATIONAL SUBMITTALS
A. Welding certificates.
1.7 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
B. Comply with NFPA 70.

1.8 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Allied Tube & Conduit.
      b. Cooper B-Line, Inc.; a division of Cooper Industries.
      c. ERICO International Corporation.
      d. GS Metals Corp.
      e. Thomas & Betts Corporation.
      f. Unistrut; Tyco International, Ltd.
      g. Wesanco, Inc.
   2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
   3. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
   4. Channel Dimensions: Selected for applicable load criteria.

B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.

C. Conduit and Cable Support Devices: Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.

E. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

F. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. **Powder-Actuated Fasteners:** Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
   a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
      1) Hilti Inc.
      2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      3) MKT Fastening, LLC.
      4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.

2. **Mechanical-Expansion Anchors:** Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
   a. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
      1) Cooper B-Line, Inc.; a division of Cooper Industries.
      2) Empire Tool and Manufacturing Co., Inc.
      3) Hilti Inc.
      4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      5) MKT Fastening, LLC.

3. **Concrete Inserts:** Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.

4. **Clamps for Attachment to Steel Structural Elements:** MSS SP-58, type suitable for attached structural element.

5. **Through Bolts:** Structural type, hex head, and high strength. Comply with ASTM A 325.

6. **Toggle Bolts:** All-steel springhead type.

7. **Hanger Rods:** Threaded steel.

### 2.2 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

**A. Description:** Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

**B. Materials:** Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

### PART 3 - EXECUTION

**3.1 APPLICATION**

**A.** Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

**B.** Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.

**C.** Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
1. Secure raceways and cables to these supports with two-bolt conduit clamps.

D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

### 3.2 SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT and RMC may be supported by openings through structure members, as permitted in NFPA 70.

C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

   1. To Wood: Fasten with lag screws or through bolts.
   2. To New Concrete: Bolt to concrete inserts.
   3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
   4. To Existing Concrete: Expansion anchor fasteners.
   5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
   6. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts.
   7. To Light Steel: Sheet metal screws.
   8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

### 3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.
3.4 CONCRETE BASES

A. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.

B. Use 3000-psi Insert value, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 Section "Cast-in-Place Concrete."

C. Anchor equipment to concrete base.
   1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor bolts to elevations required for proper attachment to supported equipment.
   3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.5 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
   1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Touchup: Comply with requirements in Division 09 painting Sections for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION 26 05 29
SECTION 26 05 33 - RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Metal conduits, tubing, and fittings.
   2. Nonmetal conduits, tubing, and fittings.
   3. Metal wireways and auxiliary gutters.
   4. Nonmetal wireways and auxiliary gutters.
   5. Surface raceways.
   7. Handholes and boxes for exterior underground cabling.

B. Related Requirements:
   1. Division 27 Section "Pathways for Communications Systems" for conduits, wireways, surface pathways, innerduct, boxes, faceplate adapters, enclosures, cabinets, and handholes serving communications systems.

1.3 DEFINITIONS

A. ARC: Aluminum rigid conduit.

B. GRC: Galvanized rigid steel conduit.

C. IMC: Intermediate metal conduit.

1.4 ACTION SUBMITTALS

A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

B. LEED Submittals:

   1. Product Data for Credit IEQ 4.1: For solvent cements and adhesive primers, documentation including printed statement of VOC content.
   2. Laboratory Test Reports for Credit IEQ 4: For solvent cements and adhesive primers, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of
Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers.

C. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

PART 2 - PRODUCTS

2.1 METAL CONDUITS, TUBING, AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. AFC Cable Systems, Inc.
5. Thomas & Betts Corporation.

B. Listing and Labeling: Metal conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit.

1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch, minimum.

D. EMT: Comply with ANSI C80.3 and UL 797.

E. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.

F. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
2. Fittings for EMT:
   a. Material: Steel.
   b. Type: compression.

3. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.
4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch, with overlapping sleeves protecting threaded joints.

G. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
2.3 SURFACE RACEWAYS

A. Listing and Labeling: Surface raceways and tele-power poles shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Wiremold / Legrand.

2.4 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Cooper Technologies Company; Cooper Crouse-Hinds.
   2. EGS/Appleton Electric.
   4. FSR Inc.
   5. Hoffman; a Pentair company.
   6. Hubbell Incorporated; Killark Division.
   7. Mono-Systems, Inc.
   9. RACO; a Hubbell Company.
   10. Spring City Electrical Manufacturing Company.
   12. Wiremold / Legrand.

B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.

C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
D. Metal Floor Boxes:
   2. Type: Fully adjustable.
   3. Shape: Rectangular.
   4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb. Outlet boxes designed for attachment of luminaires weighing more than 50 lb shall be listed and marked for the maximum allowable weight.

F. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

G. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.

H. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

I. Device Box Dimensions: 4 inches by 2-1/8 inches by 2-1/8 inches deep.

J. Gangable boxes are allowed.

K. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1 with continuous-hinge cover with flush latch unless otherwise indicated.
   1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
   2. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

L. Cabinets:
   1. NEMA 250, Type 1 galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
   2. Hinged door in front cover with flush latch and concealed hinge.
   3. Key latch to match panelboards.
   4. Metal barriers to separate wiring of different systems and voltage.
   5. Accessory feet where required for freestanding equipment.
   6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.5 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. General Requirements for Handholes and Boxes:
   1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
   2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of fiberglass.
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Armorcast Products Company.
   b. Carson Industries LLC.
   d. NewBasis.
   e. Nordic Fiberglass, Inc.
   f. Oldcastle Precast, Inc.; Christy Concrete Products.
   g. Synertech Moulded Products; a division of Oldcastle Precast, Inc.

2. Standard: Comply with SCTE 77.
3. Color of Frame and Cover: Green.
4. Configuration: Designed for flush burial with closed bottom unless otherwise indicated.
5. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
6. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
7. Cover Legend: Molded lettering, "ELECTRIC."
8. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.

2.6 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

   1. Tests of materials shall be performed by an independent testing agency.
   2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
   3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012 and traceable to NIST standards.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below unless otherwise indicated:

   1. Exposed Conduit: GRC.
   2. Concealed Conduit, Aboveground: GRC.
   4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
   5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.

B. Indoors: Apply raceway products as specified below unless otherwise indicated:

   1. Exposed, Not Subject to Physical Damage: EMT or RNC.
   2. Exposed, Not Subject to Severe Physical Damage: EMT.
3. Exposed and Subject to Severe Physical Damage: GRC. Raceway locations include the following:
   a. Mechanical rooms.

4. Concealed in Ceilings and Interior Walls and Partitions: EMT.

5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.

6. Damp or Wet Locations: GRC.

7. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.

C. Minimum Raceway Size: 3/4-inch trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

   1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.

   2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.

   4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.

F. Install surface raceways only where indicated on Drawings.

3.2 INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.

B. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

C. Complete raceway installation before starting conductor installation.

D. Comply with requirements in Division 26 Section "Hangers and Supports for Electrical Systems" for hangers and supports.

E. Arrange stub-ups so curved portions of bends are not visible above finished slab.

F. Install no more than the equivalent of three 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 12 inches of changes in direction.

G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.

H. A. Support conduit within 12 inches of enclosures to which attached.
I. Raceways Embedded in Slabs:

1. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure raceways to reinforcement at maximum 10-foot intervals.
2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
3. Arrange raceways to keep a minimum of 1 inch of concrete cover in all directions.
4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
5. Change from ENT to RNC, Type EPC-40-PVC, before rising above floor.

J. Stub-ups to Above Recessed Ceilings:

1. Use EMT or RMC for raceways.
2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

K. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

L. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly.

M. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.

N. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch trade size and insulated throat metal bushings on 1-1/2-inch trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.

O. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.

P. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.

Q. Cut conduit perpendicular to the length. For conduits 2-inch trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.

R. Install pull wires in empty raceways. Use No. 12 non-ferrous or 200 lb nylon fish line. Leave at least 12 inches of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.

S. Surface Raceways:

1. Install surface raceway with a minimum 2-inch radius control at bend points.
2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.
T. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings according to NFPA 70.

U. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where an underground service raceway enters a building or structure.
3. Where otherwise required by NFPA 70.

V. Comply with manufacturer's written instructions for solvent welding RNC and fittings.

W. Expansion-Joint Fittings:

1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F and that has straight-run length that exceeds 25 feet. Install in each run of aboveground RMC conduit that is located where environmental temperature change may exceed 100 deg F and that has straight-run length that exceeds 100 feet.
2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
   a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
   b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
   c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
   d. Attics: 135 deg F temperature change.
3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

X. Flexible Conduit Connections: Comply with NEMA RV 3. Use a maximum of 72 inches of flexible conduit for recessed and semirecessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.

1. Use LFMC in damp or wet locations subject to severe physical damage.
2. Use LFMC in damp or wet locations not subject to severe physical damage.

Y. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to top of box unless otherwise indicated.

Z. Support outlet and switch boxes from (2) adjacent studs.
AA. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.

BB. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel. Back to back outlets in common walls are not allowed.

CC. Locate boxes so that cover or plate will not span different building finishes.

DD. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.

EE. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

FF. Set metal floor boxes level and flush with finished floor surface.

3.3 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Division 31 Section "Earth Moving" for pipe less than 6 inches in nominal diameter.

2. Install backfill as specified in Division 31 Section "Earth Moving."

3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving."

4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.

5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through floor.

   a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete for a minimum of 12 inches on each side of the coupling.

   b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.

6. Warning Planks: Bury warning planks approximately 12 inches above direct-buried conduits but a minimum of 6 inches below grade. Align planks along centerline of conduit.

7. Underground Warning Tape: Comply with requirements in Division 26 Section "Identification for Electrical Systems."
3.4 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch above finished grade.

D. Install handholes with bottom below frost line, below grade.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables but short enough to preserve adequate working clearances in enclosure.

F. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Division 26 Section "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.6 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."

3.7 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.

2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 05 33
SECTION 26 05 44 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
   2. Sleeve-seal systems.
   5. Silicone sealants.

B. Related Requirements:
   1. Division 07 Section "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
   1. Product Data for Credit EQ 4.1: For sealants, documentation including printed statement of VOC content.
   2. Laboratory Test Reports for Credit EQ 4: For sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

PART 2 - PRODUCTS

2.1 SLEEVES

A. Wall Sleeves:
   2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

C. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.

D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

F. Sleeves for Rectangular Openings:
   2. Minimum Metal Thickness:
      a. For sleeve cross-section rectangle perimeter less than 50 inches and with no side larger than 16 inches, thickness shall be 0.052 inch.
      b. For sleeve cross-section rectangle perimeter 50 inches or more and one or more sides larger than 16 inches, thickness shall be 0.138 inch.

2.2 SLEEVE-SEAL SYSTEMS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Advance Products & Systems, Inc.
      b. CALPICO, Inc.
      c. Metraflex Company (The).
      d. Pipeline Seal and Insulator, Inc.
      e. Proco Products, Inc.

   2. Sealing Elements: EPDM rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   3. Pressure Plates: Carbon steel.
   4. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.

   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Presealed Systems.
2.4 GROUT
A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.
C. Design Mix: 5000-psi, 28-day compressive strength.
D. Packaging: Premixed and factory packaged.

2.5 SILICONE SEALANTS
A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.
   1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.
B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS
A. Comply with NECA 1.
B. Comply with NEMA VE 2 for cable tray and cable penetrations.
C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:
   1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
      a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants."
      b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.
   2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
   3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed.
   4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
   5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches above finished floor level. Install sleeves during erection of floors.
D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:
   1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
   2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

E. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.

B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.

C. Secure nailing flanges to concrete forms.

D. Using grout, seal the space around outside of sleeve-seal fittings.

END OF SECTION 26 05 44
SECTION 26 0553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Identification for raceways.
2. Identification of power and control cables.
3. Identification for conductors.
5. Warning labels and signs.
6. Instruction signs.
7. Equipment identification labels.
8. Miscellaneous identification products.

1.3 ACTION SUBMITTALS

A. Product Data: For each electrical identification product indicated.

B. Samples: For each type of label and sign to illustrate size, colors, lettering style, mounting provisions, and graphic features of identification products.

C. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.

1.4 QUALITY ASSURANCE

A. Comply with ANSI A13.1.

B. Comply with NFPA 70.

D. Comply with ANSI Z535.4 for safety signs and labels.

E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.
1.5  COORDINATION

A. Coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual; and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.

B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

C. Coordinate installation of identifying devices with location of access panels and doors.

D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1  POWER RACEWAY IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway size.

B. Colors for Raceways Carrying Circuits at 600 V or Less:
   1. Black letters on an orange field.
   2. Legend: Indicate voltage and system or service type.

C. Colors for Raceways Carrying Circuits at More Than 600 V:
   1. Black letters on an orange field.
   2. Legend: "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch-high letters on 20-inch centers.

D. Self-Adhesive Vinyl Labels for Raceways Carrying Circuits at 600 V or Less: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

E. Tape and Stencil for Raceways Carrying Circuits More Than 600 V: 4-inch-wide black stripes on 10-inch centers diagonally over orange background that extends full length of raceway or duct and is 12 inches wide. Stop stripes at legends.

F. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking cable tie fastener.

G. Write-On Tags: Polyester tag, 0.015 thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
   1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.
2.2 POWER AND CONTROL CABLE IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

C. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking cable tie fastener.

D. Write-On Tags: Polyester tag, 0.015 inch thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
   1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.3 CONDUCTOR IDENTIFICATION MATERIALS

A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.

B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

C. Write-On Tags: Polyester tag, 0.015 inch thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
   1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2.4 UNDERGROUND-LINE WARNING TAPE

A. Tape:
   1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.
   2. Printing on tape shall be permanent and shall not be damaged by burial operations.
   3. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to acids, alkalis, and other destructive substances commonly found in soils.

B. Color and Printing:
   1. Comply with ANSI Z535.1 through ANSI Z535.5.
   2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE,.
   3. Inscriptions for Orange-Colored Tapes: TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE,.

2.5 WARNING LABELS AND SIGNS

B. Metal-Backed, Butyrate Warning Signs:

1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch galvanized-steel backing; and with colors, legend, and size required for application.
2. 1/4-inch grommets in corners for mounting.
3. Nominal size, 10 by 14 inches.

C. Warning label and sign shall include, but are not limited to, the following legends:

1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES."

2.6 INSTRUCTION SIGNS

A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch thick for signs up to 20 sq. inches and 1/8 inch thick for larger sizes.

1. Engraved legend with black letters on white face.
2. Punched or drilled for mechanical fasteners.
3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.7 EQUIPMENT IDENTIFICATION LABELS

A. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting with rust proof screws. White letters on a black background for normal power and white letters on red background for emergency power. Minimum letter height shall be 3/8 inch.

2.8 CABLE TIES

A. General-Purpose Cable Ties: Fungus inert, self extinguishing, one piece, self locking, Type 6/6 nylon.

2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.

B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self extinguishing, one piece, self locking, Type 6/6 nylon.

2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.

C. Plenum-Rated Cable Ties: Self extinguishing, UV stabilized, one piece, self locking.

2. Tensile Strength at 73 deg F, According to ASTM D 638: 7000 psi.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: Minus 50 to plus 284 deg F.
5. Color: Black.

2.9 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in Division 09 painting Sections for paint materials and application requirements. Select paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

2.10 DEVICE LABELING

A. Inscribe panel and circuit number on back of each device coverplate with indelible marker and provide tag inside device box.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Verify identity of each item before installing identification products.

B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.

C. Apply identification devices to surfaces that require finish after completing finish work.

D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.

E. Attach signs and plastic labels that are not self-adhesive type with rust proof mechanical fasteners appropriate to the location and substrate.

F. System Identification Color-Coding Bands for Raceways and Cables: Each color-coding band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

G. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.

H. Cable Ties: For attaching tags. Use general-purpose type, except as listed below:
   1. Outdoors: UV-stabilized nylon.
   2. In Spaces Handling Environmental Air: Plenum rated.

I. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 6 to 8 inches below finished grade. Use
multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.

J. Painted Identification: Comply with requirements in Division 09 painting Sections for surface preparation and paint application.

3.2 IDENTIFICATION SCHEDULE

A. Concealed Raceways, Duct Banks, More Than 600 V, within Buildings: Tape and stencil 4-inch wide black stripes on 10-inch centers over orange background that extends full length of raceway or duct and is 12 inches wide. Stencil legend "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch high black letters on 20-inch centers. Stop stripes at legends. Apply to the following finished surfaces:

1. Floor surface directly above conduits running beneath and within 12 inches of a floor that is in contact with earth or is framed above unexcavated space.
2. Wall surfaces directly external to raceways concealed within wall.
3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.

B. Accessible Raceways, More Than 600 V: Snap-around labels. Install labels at 10-foot maximum intervals.

C. Accessible Raceways, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30 A, and 120 V to ground: Identify with self-adhesive vinyl tape applied in bands. Install labels at 10-foot maximum intervals.

D. Accessible Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive vinyl labels with the wiring system legend and system voltage. System legends shall be as follows:

2. Power.

E. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use color-coding conductor tape to identify the phase.

1. Color-Coding for Phase Identification, 600 V or Less: Use colors listed below for ungrounded service feeder and branch-circuit conductors.

   a. Color shall be factory applied.
   b. Colors for 208/120-V Circuits:

      1) Phase A: Black.
      2) Phase B: Red.
      3) Phase C: Blue.

   c. Colors for 480/277-V Circuits:

      1) Phase A: Brown.
      2) Phase B: Orange.
      3) Phase C: Yellow.
d. **Field-Applied, Color-Coding Conductor Tape:** Apply in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.

F. **Power-Circuit Conductor Identification, More than 600 V:** For conductors in vaults, pull and junction boxes, manholes, and handholes, use write-on tags.

G. **Install instructional sign including the color-code for grounded and ungrounded conductors using adhesive-film-type labels.**

H. **Conductors to Be Extended in the Future:** Attach write-on tags to conductors and list source.

I. ** Auxiliary Electrical Systems Conductor Identification:** Identify field-installed alarm, control, and signal connections.
   1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
   2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.

J. **Locations of Underground Lines:** Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable.
   1. Limit use of underground-line warning tape to direct-buried cables.
   2. Install underground-line warning tape for both direct-buried cables and cables in raceway.

K. **Workspace Indication:** Install floor marking tape to show working clearances in the direction of access to live parts. Workspace shall be as required by NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

L. **Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting:** Metal-backed, butyrate warning signs.
   2. Identify system voltage with black letters on an orange background.
   3. Apply to exterior of door, cover, or other access.
   4. For equipment with multiple power or control sources, apply to door or cover of equipment including, but not limited to, the following:
      a. Power transfer switches.
      b. Controls with external control power connections.

M. **Operating Instruction Signs:** Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.

N. **Emergency Operating Instruction Signs:** Install instruction signs with white legend on a red background with minimum 3/8-inch- high letters for emergency instructions at equipment used for power transfer.
O. Provide self adhesive wrap around label on conductors landed at each 100A and above frame size circuit breakers with phase information and circuit breaker identification. Labels shall be readily visible once deadfront cover is removed.

P. Nameplates for normal power equipment shall be black with white lettering.

Q. Nameplates for emergency power equipment shall be red with white lettering.

R. Inscribe panel and circuit number with indelible ink on the back of all coverplates and provide durable tag in each outlet box.

S. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and the Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.

1. Labeling Instructions:
   a. Indoor Equipment: Engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2- inch- high label; where two lines of text are required, use labels 2 inches high.
   b. Outdoor Equipment: Engraved, laminated acrylic or melamine label.
   c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.
   d. Unless provided with self-adhesive means of attachment, fasten labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure.

2. Equipment to Be Labeled:
   a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be engraved, laminated acrylic or melamine label.
   b. Enclosures and electrical cabinets.
   c. Access doors and panels for concealed electrical items.
   d. Switchgear.
   e. Switchboards.
   f. Transformers: Label that includes tag designation shown on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.
   g. Emergency system boxes and enclosures.
   h. Enclosed switches.
   i. Enclosed circuit breakers.
   j. Enclosed controllers.
   k. Variable-speed controllers.
   l. Push-button stations.
   m. Power transfer equipment.
   n. Contactors.
   o. Remote-controlled switches, dimmer modules, and control devices.
   p. Monitoring and control equipment.

END OF SECTION 26 05 53
1. RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes computer-based short circuit, protective device evaluation, protective device coordination and arc flash protection studies. Protective devices shall be set based on results of the studies.

1.3 ACTION SUBMITTALS

A. Product Data: For computer software program to be used for studies.

B. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Submittals shall be in digital form.

1. Coordination-study input data, including completed computer program input data sheets.
2. Study and Equipment Evaluation Reports.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399.

1.5 QUALITY ASSURANCE

A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.

B. Studies shall be performed by, stamped and signed by a registered professional engineer in the state of Pennsylvania. Credentials of the individual(s) performing the study and background of the firm shall be submitted to the Engineer for approval prior to work. A minimum of five (5) years experience in power system analysis is required for individual in charge of project.

C. Comply with IEEE 242 for short-circuit currents and coordination time intervals.

D. Comply with IEEE 399 for general study procedures.
1.6 **GENERAL REQUIREMENTS**

A. Short circuit, protective device evaluation, protective device coordination and arc flash protection studies shall be performed by the distribution equipment manufacturer or an independent firm currently involved in high and low voltage power system evaluation.

B. Studies shall be submitted to PSU Engineering Services prior to receiving final approval of distribution equipment show drawings and prior to release of equipment for manufacture. If formal completion of the studies may cause delay in equipment manufacture, approval from PSU Engineering Services may be obtained for a preliminary submittal of sufficient study data to ensure that selection of device ratings and characteristics will be satisfactory.

C. Studies shall include all portions of the electrical distribution system from the normal power incoming primary source, the emergency source, down to and including all panels and distribution equipment in the distribution system, as required to comply with NFPA 70E. Normal systems connections and those which result in maximum fault and/or arc flash conditions, shall be adequately covered in study.

D. The firm performing study shall demonstrate capability and experience to provide assistance during start up, if required.

E. Power system studies are required to confirm the adequacy of the ratings of all electrical system components and proper coordination settings of all circuit breakers. Studies shall not be used as a basis to compromise the electrical system and do not imply that short circuit ratings of distribution equipment and devices may be lower than those indicated on the drawings or specified herein.

F. Power distribution equipment manufacturer shall carry in their bid to the electrical contractor a sufficient allowance to provide modifications to equipment, if necessary, based on the results of the studies identified herein.

**PART 2 - PRODUCTS**

2.1 **COMPUTER SOFTWARE DEVELOPERS**

A. Basis-of-Design Product: Subject to compliance with requirements, provide SKM Systems Analysis, Inc. or a comparable product by one of the following:
   1. EDSA Micro Corporation.
   2. ESA Inc.

2.2 **COMPUTER SOFTWARE PROGRAM REQUIREMENTS**

A. Comply with IEEE 399.

B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device
settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

1. Optional Features:
   a. Arcing faults.
   b. Simultaneous faults.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.

1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.2 POWER SYSTEM DATA

A. Gather and tabulate the following input data to support coordination study:

1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Impedance of utility service entrance.
3. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
   a. Circuit-breaker and fuse-current ratings and types.
   b. Relays and associated power and current transformer ratings and ratios.
   c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
   d. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
   e. Motor horsepower and code letter designation according to NEMA MG 1.

4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:
   a. Special load considerations, including starting inrush currents and frequent starting and stopping.
   b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
d. Generator thermal-damage curve.
e. Ratings, types, and settings of utility company's overcurrent protective devices.
f. Special overcurrent protective device settings or types stipulated by utility company.
g. Time-current-characteristic curves of devices indicated to be coordinated.
h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.3 FAULT-CURRENT STUDY

A. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:

1. Switchgear and switchboard bus.
2. Distribution panelboard.

B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.

C. Calculate momentary and interrupting duties on the basis of maximum available fault current.

D. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 141 and IEEE 242.

1. Transformers:
   a. ANSI C57.12.10.
   b. ANSI C57.12.22.
   c. ANSI C57.12.40.
   d. IEEE C57.12.00.
   e. IEEE C57.96.

4. Low-Voltage Fuses: IEEE C37.46.

E. Study Report:
1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.
2. Show interrupting (5-cycle) and time-delayed currents (6 cycles and above) on medium-voltage breakers as needed to set relays and assess the sensitivity of overcurrent relays.

F. Equipment Evaluation Report:
1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

3.4 COORDINATION STUDY

A. Perform coordination study to support selection of instrument transformer ratios, protective relay characteristics and settings, fuse ratings, low-voltage circuit breaker ratings, characteristics and settings.

B. Study shall demonstrate that the protective devices as selected and set will ensure that the minimum unfaulted load is interrupted when protective devices isolate a fault or overload anywhere in the system while satisfactory protection is provided for equipment against overloads, and short circuits are interrupted as rapidly as possible.

1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.
2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
3. Calculate the maximum and minimum ground-fault currents.

D. Comply with IEEE 141 recommendations for fault currents and time intervals.

E. Transformer Primary Overcurrent Protective Devices:
1. Device shall not operate in response to the following:
   a. Inrush current when first energized.
   b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
   c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.

F. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that
equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

G. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:

1. Tabular Format of Settings Selected for Overcurrent Protective Devices:
   a. Device tag.
   b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
   c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
   d. Fuse-current rating and type.
   e. Ground-fault relay-pickup and time-delay settings.

2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company’s upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
   a. Device tag.
   b. Voltage and current ratio for curves.
   c. Three-phase and single-phase damage points for each transformer.
   d. No damage, melting, and clearing curves for fuses.
   e. Cable damage curves.
   f. Transformer inrush points.
   g. Maximum fault-current cutoff point.

H. Completed data sheets for setting of overcurrent protective devices.

3.5 NFPA 70E (ARC FLASH ANALYSIS) STUDY

A. Calculate Arc-Flash Incident Energy (AFIE) levels and flash protection boundary distances.

B. The Arc-Flash Hazard Analysis (AFHA) shall be performed in conjuncture with a short circuit-analysis and time-current coordination analysis.

C. Results of the analysis shall be submitted in tabular form, and shall include device or bus name, bolted fault and arcing fault current levels, flash protection boundary distances, personal protective equipment classes and AFIE levels.

D. The analysis shall be performed under worst case Arc-Flash conditions, and the final report shall describe, when applicable, how these conditions differ from the worst case bolted fault conditions.

E. The AFHA shall be performed in compliance with IEEE Standard 1584 (latest edition) the IEEE Guide for Performing Arc-Flash Calculations.
F. The proposed vendor shall demonstrate experience with AFHA by submitting names of at least ten (10) actual AFHA it has performed in the past year.

G. The proposed vendor shall demonstrate capabilities in providing equipment, services, and training to reduce Arc-Flash exposure and train workers in accordance with NFPA 70E and other applicable standards.

H. The proposed vendor shall demonstrate experience in providing equipment labels in compliance with NEC-2008 section 110 and ANSI Z535.4 to identify AFIE and appropriate Personal Protective Equipment classes.

I. Provide study on all major electrical distribution equipment and downstream distribution and utilization equipment. This shall include but not be limited to:
   1. Switchgear
   2. Switchboard
   3. Distribution panelboards
   4. Lighting and appliance panelboards
   5. Disconnect switches
   6. Controller equipment such as variable frequency/adjustable drives
   7. Fuses and circuit breakers
   8. Rotating equipment
   9. Automatic and non-automatic transfer switches
   10. Feeders

J. Provide proper labeling per NFPA 70E on all noted equipment, including any hinged doors or rear accessible equipment. Coordinate study and labeling requirements with PSU Engineering Services. Typical minimum label requirements shown below.
K. Labels shall be orange and include date of study. Specify second blue label to note arc-reduction levels. Refer to Division 26 Section “Overcurrent Protective Device Coordination Study”.

L. Manufacturer representative shall provide a letter stating they have visited the site and confirmed that the stickers have been applied in appropriate locations, per the approved Power System Study.
SECTION 26 08 00 - ELECTRICAL SYSTEM COMMISSIONING

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Systems and equipment Start-Up and Functional Performance Testing.

B. Validation of proper and thorough installation of Division 26 systems and equipment.

C. Generic Start-Up Documentation for electrical systems and equipment.

D. Development of final Start-Up Documentation for electrical systems and equipment.

E. System Start-Up and Turn-Over procedures.

F. Coordination and execution of Training Events.

1.2 GENERAL DESCRIPTION

A. Commissioning (Cx) is the process of ensuring that (i) all building systems are installed and perform interactively according to the design intent; (ii) that systems are efficient and cost effective and meet the Owner’s operational needs; (iii) that the installation is accurately documented; and (iv) that the Operators are adequately trained. Commissioning serves as a tool to minimize post-occupancy operational problems, and establishes testing and communication protocols to advance the building systems from installation to optimized, fully-dynamic operation.

B. Commissioning Authority (CxA) shall work with the Contractor and the design engineers to direct and oversee the Cx process and perform Functional Performance Testing.

C. The Commissioning Plan outlines the Cx process beyond the Construction Contract, including design phase activities and design team/owner responsibilities. The specification Sections dictate all requirements of the commissioning process relative to the construction contract. The Cx Plan is not part of the construction contract, although it is available for reference at the request of the Contractor.

D. This Section outlines the Cx procedures specific to the Division 26 Contractors. Requirements common to all Sections are specified in Sections 01 91 00 and 01 91 10 This Section and other sections of the specification details the Contractor’s responsibilities relative to the Cx process.

1.3 SCOPE

A. The following systems and equipment are included in the Scope of Commissioning for this project:

B. Electrical Systems: All Division 26 equipment and systems are subject to commissioning, including but not limited to the systems listed below. All components and devices that make up these systems are included.

1. Grounding Equipment and Building Grounding System
2. Switchgear/Switchboards
3. Disconnect Switches
4. Circuit Breakers
5. Motor Controllers
6. Distribution Dry-Type Transformers
7. Distribution and Branch Circuit Panelboards
8. Automatic Transfer Switches
9. Feeders and Large Branch Circuits
10. Lighting and Lighting Controls
11. Motors

1.4 RELATED WORK AND DOCUMENTS

A. The Cx process references many related Sections, particularly Section 01 91 00 - General Commissioning. It is important for all Contractors subject to the Cx process to be familiar with Section 01 91 00.

B. Refer to Section 01 91 00 for a complete list of Sections on Related Work.

1.5 DEFINITIONS AND ABBREVIATIONS

A. Refer to Section 01 91 00 for a complete list of Definitions and Abbreviations.

1.6 REFERENCE STANDARDS

A. National Electric Code (NEC)
B. American Society for Testing and Materials (ASTM)
C. Electronics Industry Association/Telecommunications Industry Association (EIA/TIA)
D. Illuminating Engineering Society (IES)
E. Institute of Electrical and Electronics Engineers (IEEE)
F. International Electrical Testing Association (NETA)
G. National Electrical Manufacturers Associates (NEMA)
H. National Fire Protection Association (NFPA)
I. Underwriters Laboratory, Inc. (UL)
J. Refer to Section 01 91 00 for additional Reference Standards.

1.7 DOCUMENTATION

A. Documentation shall be as required in Section 01 91 00. In addition, Contractor shall also provide to the CxA the following per the procedures specified herein, in the Cx Plan, and in other Sections of the specification:
1. Short Circuit and Coordination Study: CxA shall review and recommend approval.
2. Field Testing Agency Reports: Provide all documentation of work of independent testing agencies required by the specification. These shall be provided prior to Acceptance Phase. Field Testing Agency Reports should be provided in PDF electronic format. These may include but are not limited to:
   a. Electrical Testing Agency Reports
b. Thermographic Survey Report

1.8 SEQUENCING AND SCHEDULING

A. Refer to Section 01 91 00.

1.9 COORDINATION MANAGEMENT PROTOCOLS

A. Coordination responsibilities and management protocols relative to Cx are initially defined in Section 01 91 00 and the Cx Plan, but shall be refined and documented in the Construction Phase Cx Kick-Off Meeting. Contractor shall have input into the protocols to be used and all Parties will commit to scheduling obligations. The CxA will record and distribute.

1.10 CONTRACTOR RESPONSIBILITIES

A. Refer to Section 01 91 00: Detailed Contractor responsibilities common to all Divisions are specified in Section 01 91 00. The following are additional responsibilities or notable responsibilities specific to Division 26.

B. Construction Phase
   1. Provide skilled technicians qualified to perform the work required.
   2. Provide factory-trained and authorized technicians where required by the Contract Documents.
   3. Prepare and submit required draft Start-Up Documentation and submit along with the manufacturer’s application, installation and start-up information.
   4. Provide assistance to the CxA in preparation of the specific Functional Performance Test (FPT) procedures. Contractors, subcontractors and vendors shall review FPT procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits to be used during the tests. Damage caused to equipment performed in accordance with the approved procedures will be the responsibility of the Contractor.
   5. Thoroughly complete and inspect installation of systems and equipment as detailed throughout Contract Documents, as required by reference or industry standards, and as specifically indicated elsewhere this Section.
   6. Start-Up, Adjust, Test, and Turn-Over systems and equipment prior to functional performance testing by the CxA. Approved Start-Up Documentation shall be in accordance with Contract Documents, reference or industry standards, and specifically elsewhere in Part I of this Section.
   7. Record Start-Up on approved Start-Up Documentation forms and certify that the systems and equipment have been started and or tested in accordance with the requirements specified above and in Section 01 09 00. Each task or item shall be indicated with the Party actually performing the task or procedure.
   8. Coordinate the work of the Electrical Testing Agency and the Cx requirements.

C. Acceptance Phase
   1. Assist CxA in Functional Performance Testing. Assistance will typically include the following:
      a. Manipulate systems and equipment to facilitate Functional Performance Testing (as specified in Section 01 91 00, Section 01 91 10, and the Cx Plan; in some cases this will entail only an initial sample);
      b. Provide any specialized instrumentation necessary for Functional Performance Testing;
1.11 EQUIPMENT SUPPLIER RESPONSIBILITIES
   A. Refer to Section 01 91 00.

1.12 CONTRACTOR NOTIFICATION AND SCHEDULING
   A. Refer to Section 01 91 00.

1.13 START-UP DOCUMENTATION
   A. Refer to Section 01 91 00.

1.14 EQUIPMENT NAMEPLATE DATA
   A. Refer to Section 01 91 00.

1.15 INDEPENDENT ELECTRICAL TESTING AGENCY
   A. An Independent Electrical Testing Agency shall be provided under the construction specifications and therefore included with the bid. Many of the aspects of the Start-Up and Functional Performance Testing indicated herein will be accomplished under the respective section and witnessed by the CxA at the indicated sample rate. CxA will include applicable test results in the functional performance testing record.

1.16 FUNCTIONAL PERFORMANCE TESTING
   A. For applicable systems and equipment, Contractor shall participate in the initial samples of Functional Performance Testing as stipulated in Section 01 91 00 and Section 01 91 10.

1.17 FPT ACCEPTANCE CRITERIA
   A. Acceptance criteria for tests are indicated in Section 01 91 10 and in the specification Sections applicable to the systems being tested. Unless indicated otherwise, the criteria for acceptance will be that specified with the individual system, equipment, component, or device, which shall typically conform to NFPA 70B and International Electrical Testing Association (NETA) testing specifications NETA ATS-1991.

1.18 TRAINING
   A. Contractors, subcontractor, vendors, and other applicable Parties shall prepare and conduct training sessions on the installed systems and equipment they are responsible for per the requirements of Section 01 91 00 and the individual Specifications.

1.19 SYSTEMS MANUAL AND O&M DOCUMENTATION CONTENT - PREPARATION AND LOGISTICS
   A. Refer to Section 01 91 00 the individual Specifications.
PART 2 - PRODUCTS

2.1 INSTRUMENTATION

A. General: All testing equipment used by any Party shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. Unless otherwise noted, all equipment shall be calibrated according to the manufacturer’s recommended intervals. Calibration tags shall be affixed or certificates readily available.

B. Testing Instrumentation: Contractor shall provide all instrumentation necessary for tests for which they are responsible. CxA will provide standard instrumentation for measuring medium and low voltage electrical voltage, current, power factor, power, and total harmonic distortion (THD). CxA will provide receptacle testers for normal and GFI receptacle tests. Contractor shall provide all other instrumentation required to accomplish the specified testing.

2.2 INFRARED THERMOGRAPHIC SCANNER

A. Contractor shall provide infrared scanning equipment. Infrared scanning equipment shall be an AGA (or approved equal) thermovision set capable of viewing an entire bus or equipment assembly at one time and have a sensitivity of 0.2°C with a liquid nitrogen reference.

2.3 WEB-BASED COMMISSIONING PORTAL

A. All general and major subcontractors participating in the Cx process shall use the web-based Cx Portal (‘Portal’) to document the Cx procedures. The Portal is a Web-based Internet hub used to electronically collaborate and coordinate activities and deliverables throughout the Cx process. The Portal is hosted by the CxA and shall be accessible to all Parties participating in the Cx program. The Portal provides a common location to store Start-Up Documentation, Functional Performance Tests and results, project documents and deliverables. It also serves as a collaborative email hub to facilitate, automate, and track communications between Parties relating to the Cx process.

B. Refer to Section 01 91 00 the individual Specifications for additional information and requirements for using the Portal.

PART 3 - EXECUTION

3.1 GENERIC START-UP DOCUMENTATION - GENERAL

A. Part III of this Section outlines ‘generic’ or minimally acceptable Start-Up Documentation (which are defined to include both ‘Start-Up Checks’ and ‘Start-Up Tests’) and individual systems training requirements for systems and equipment. These procedures are the direct responsibility of the Contractor as a basic element of validating that the installation is correct per normal quality control practices. These items shall provide a minimally acceptable guideline for required Contractor development of Start-Up Documentation. Contractor shall synthesize these minimum requirements along with their own internal quality control practices, those of the manufacturer, and any applicable codes and standards to develop specific and itemized final Start-Up Documentation specific to the equipment and systems installed on this project.

B. Section 01 91 00 defines the systems and equipment Start-Up process in detail and provides definitions for Start-Up Documentation, including the generic Start-Up Documentation provided below.
C. Refer to the technical sections of Division 26 for additional Electrical Testing requirements.

3.2 TESTING PROCEDURES

A. Thermographic Scanning
   1. The infrared scan shall be made when the equipment is energized and is operating at its normal capacity, unless otherwise noted. It is intended that the scan be made after the equipment has been in full operation; however, the exact time of conducting the scan will be determined by the CxA near the completion of the project.
   2. Test equipment, miscellaneous tools, and materials shall be transported properly, moved, and set up by trained personnel. Equipment used in testing shall be capable to perform all recommended procedures required by the apparatus and related equipment. All test equipment shall have certification of calibration and be in working order.
   3. All hot spots shall be marked, identified and an infrared thermographic scanning report prepared and furnished to the Owner.
   4. The report shall contain infrared photos of trouble spots with temperature readings.
   5. All sources indicating heat problems shall be promptly reported to the Owner for corrective action by the Division 26 contractor.

B. Grounding Systems
   1. Perform three-point fall-of-potential test per IEEE Standard 81 on the main grounding electrode or system. Resistance shall be no greater than 5 ohms.
   2. Perform the two-point method test per IEEE Standard 81 to determine the ground resistance between the main ground system and all major electrical equipment frames, system neutral, and/or derived neutral points. Resistance shall be no greater than 5 ohms.

3.3 START-UP CHECKS COMMON TO ALL SYSTEMS

A. The following Start-Up verifications and procedures shall be considered common to all systems:
   1. Checkout shall proceed from lower level devices to larger components to the entire system operation.
   2. Verify labeling is affixed per specification and visible.
   3. Verify prerequisite procedures are done.
   4. Inspect for damage and ensure none is present.
   5. Verify system is installed per the manufacturer’s recommendations.
   6. Verify system has undergone Start-Up per the manufacturer’s recommendations.
   7. Verify that access is provided for inspection, operation and repair.
   8. Verify that access is provided for eventual replacement of the equipment.
   9. Verify that record drawings, submittal data and O&M documentation accurately reflect the installed systems.
  10. Verify all gauges and test ports are provided as required by contract documents and manufacturer’s recommendations.
  11. Verify all recorded nameplate data is accurate.
  12. Verify that the installation ensures safe operation and maintenance.
  13. Verify specified replacement material/attic stock has been provided as required by the Contract Documents.
  14. Verify all rotating and moving parts are properly lubricated.
  15. Verify all monitoring and ensure all alarms are active and set per Owner’s requirements.
  16. Complete all nameplate data and confirm that ratings conform to the design documents.
3.4 GROUNDING/BUILDING GROUNDING SYSTEM

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
   1. Conduct fall of potential ground resistance tests per IEEE Standard 81 at each test well and at service equipment.
   2. Perform point-to-point tests to determine the resistance between the main grounding system and all major electrical equipment frames, system neutral, and/or derived neutral points.

3.5 SWITCHGEAR/SWITCHBOARDS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Provide the services of a Factory-Trained Manufacturer’s Representative to assist the Contractor in the installation and start-up service of the equipment for a period of 3 working days in 3 visits and train Owner’s maintenance personnel as specified below. Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
   1. Visual and Mechanical Inspections listed in NETA 7.1.1.
   2. Check calibration/setting of trip devices using system coordination study.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
   1. Visually and mechanically inspect to include the following: anchoring; grounding; torque of feeder and incoming bus duct connections; feeder cable and integral main bus connections; switchgear section alignments; electrical clearances; mechanical operation of breaker/fuse drawout elements and operating mechanisms, manual trip function; main bus safety shutters; and installation verification using manufacturer's checklist.
   2. Electrical tests listed in NETA 7.1.2. Optional tests are not required.
   3. Test each breaker in accordance with the Circuit Breaker tests listed in this Section.
   4. Conduct operational/functional tests of protective relaying. Time-current tests shall be conducted and trip points shall be set per the Short Circuit and Coordination Study.

E. Training: Train Owner’s maintenance personnel on procedures and schedules related to troubleshooting, servicing, and preventative maintenance.

3.6 DISCONNECT SWITCHES

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.
B. General: Refer to the quality control requirements listed in applicable Sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
   1. Visual and Mechanical Inspections listed in NETA 7.5.1.1.1.
   2. Check installation of warning nameplates and equipment nametags.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
   1. Electrical tests listed in NETA 7.5.1.1.2.

E. Training: Train Owner's maintenance personnel on procedures and schedules related to troubleshooting, servicing, and preventative maintenance.

3.7 CIRCUIT BREAKERS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Provide the services of a manufacturer-certified specialist to supervise the installation, make adjustments, and perform tests on the insulated case breakers, power breakers and medium-voltage breakers and train Owner's maintenance personnel. Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
   1. Visual and Mechanical Inspections listed in NETA 7.6.1.1.1 insulated case and molded case breakers, NETA 7.6.1.2.1 for low-voltage power breakers, and NETA 7.6.1.3.1 for medium-voltage air breakers.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
   1. Electrical tests listed in NETA 7.6.1.1.2 insulated case and molded case breakers, NETA 7.6.1.2.2 for low-voltage power breakers, and NETA 7.6.1.3.2 for medium-voltage air breakers. Optional tests are not required.

E. Training: Train Owner's maintenance personnel on procedures and schedules related to troubleshooting, servicing, and preventative maintenance.

3.8 MOTOR CONTROLLERS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
1. Visual and Mechanical Inspections listed in NETA 7.16.1.1.1, including optional items.
2. Check installation of warning nameplates and equipment nametags.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
1. Visually and mechanically inspect to include the following: anchoring, grounding, torque of feeder and incoming connections, electrical clearances, starter and feeder unit drawout mechanisms, and check installation using manufacturer’s checklist.
2. Electrical tests listed in NETA 7.16.1.1.2. Optional tests are not required.

E. Training: Train Owner’s maintenance personnel on procedures and schedules related to troubleshooting, servicing, and preventative maintenance.

3.9 DISTRIBUTION DRY-TYPE TRANSFORMERS

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
   1. Inspect wiring connections.
   2. Insure taps are adjusted.
   3. Inspect grounding.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
   1. Visually and mechanically inspect to include the following: mounting, grounding, electrical clearances, and K-factor and/or isolating transformers are installed where required.
   2. Perform insulation resistance, turns ratios, and polarity tests on each type/size of transformer.

E. Training: Train Owner’s maintenance personnel on procedures and schedules related to troubleshooting, servicing, and preventative maintenance.

3.10 DISTRIBUTION AND BRANCH CIRCUIT PANELBOARDS

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
   1. Visually and mechanically inspect to include the following: mounting, separate ground and neutral connections per circuit, completed circuit directories, electrical clearances, KAIC ratings of panelboard and breakers.
   2. Inspect wiring connections.
D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
   1. Correct surge suppression devices installed.
   2. Conduct insulation resistance tests.
   3. Correct identification and phasing arrangements.
   4. Verify that branch circuit labeling on a minimum of 10% of the panelboard branch circuits matches the printed panelboard directory. If 25% or more of the tested branch circuits do not match the printed directory, verify another 10% of the panelboard branch circuits. If 25%, or more, of these branch circuits do not match the printed directory, verify 100% of the panelboard branch circuits.

3.11 AUTOMATIC TRANSFER SWITCHES (ATS)

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Provide the services of a manufacturer-certified specialist to supervise the installation, make adjustments, perform tests on the automatic transfer switches, and train Owner's maintenance personnel. Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
   1. Visually inspect the systems.
   2. Ensure the terminations are tight and all ancillary equipment completely installed.
   3. Ensure all overloads are in place.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer's instructions.
   1. Electrical tests listed in NETA 7.22.3.2.

E. Training: Train Owner's maintenance personnel on procedures and schedules related to start-up and shutdown, troubleshooting, servicing, and preventative maintenance.

3.12 FEEDERS AND LARGE BRANCH CIRCUITS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: This paragraph and subparagraphs apply to all feeders serving panelboards, and motor control centers, all conductors connected to switchgear and switchboards, and all circuits that are rated for 100 amps, or larger. Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
   1. Inspect cable support and terminations.
   2. Verify equipment edges are not in contact with cables or that protective padding is provided.
   3. Visually and mechanically inspect to include the following: large junction and pull boxes, supports of raceways and cable bus, and compression type terminations.
4. Torque test terminations and verify they are in accordance with manufacturers recommendations.
5. Correct identification and phasing arrangements.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
2. Torque test terminations and verify they are in accordance with manufacturers recommendations.
3. Correct identification and phasing arrangements.
4. Conduct continuity test of each feeder.
5. Conduct insulation resistance test on each cable with respect to ground and adjacent cables.

3.13 LIGHTING CONTROLS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.

B. General: Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer’s instructions.
1. Ensure all labeling for all relays/contactors is affixed and accurate.
2. Ensure all terminations are tight.
3. Check sensor placement is adequate for required duty.
4. Ensure adequate access is provided to all relays/contactors, timeclocks, etc.
5. Ensure all circuits for the loads are energized and ready for testing.
6. Obtain all time schedules and individual device time-delay settings for all spaces from the Owner.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer’s instructions.
1. Test, calibrate, and set all sensing (photocells, motion sensors, etc.) devices.
2. Verify the correct operation of all control devices (contactors, relays, timeclocks, BAS interface relays, etc.).
3. Check full load current on all breakers serving controlled lighting to ensure that the breaker is properly sized.
4. Check full load current on all control device contacts serving controlled lighting to ensure that the contact rating is properly sized.
5. Enter all time schedules per Owner’s direction. Individual device time-delay settings are handled as part of the Room/Zone Checkout described in this Section.
6. Validate all interfaces with other systems on a point-by-point basis.

E. Training: Train Owner’s maintenance personnel on the operation, programming and maintenance of the lighting controls.

3.14 INTEGRATED LIGHTING CONTROL SYSTEMS

A. Include all applicable ‘Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.
B. General: Provide the services of a factory-trained manufacturer's representative to assist the Contractor in the installation and start-up service of the lighting control system and train Owner's maintenance personnel as specified below. Representative will confirm the proper installation and operation of all system components. Refer to the quality control requirements listed in applicable sections of Division 26 for additional checks and tests. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks: During start-up, perform the following checks and any additional checks specified in manufacturer's instructions.
1. Ensure all labeling is affixed and accurate.
2. Ensure all terminations are tight.
3. Check sensor placement is adequate for required duty.
4. Ensure adequate access is provided to all panels and that documentation of that panel is provided in it.
5. Ensure all circuits for the loads are energized and ready for testing.
6. Obtain all time schedules, individual device time-delay settings for all spaces, and on/off fade-rate settings from the Owner.

D. Start-Up Tests: During start-up, perform the following tests, measurements, or procedures and any additional tests, measurements, or procedures specified in manufacturer's instructions.
1. Test, calibrate, and set all digital and analog sensing, and actuating devices. Calibrate each instrumentation device by making a comparison between the graphic display and the reading at the device, using an instrument traceable to the National Bureau of Standards, which shall be at least twice as accurate as the device to be calibrated (e.g., if field device is +/-0.5% accurate, test equipment shall be +/-0.25% accurate over same range). Record the measured value and displayed value for each device in the Start-Up Report.
2. Check each digital control point by making a comparison between the control command at the control panel and the status of the controlled device. Check each digital input point by making a comparison of the state of the sensing device and the OI display. Record the results for each device in the BAS Start-Up Report.
3. Check full load current on all breakers serving controlled lighting to ensure that the breaker is properly sized.
4. Check full load current on all control device contacts serving controlled lighting to ensure that the contact rating is properly sized.
5. Enter all time schedules, override time-delays and on/off fade rates per Owner's direction.
6. For Operator Interfaces:
   a. Verify all elements on the graphics are functional and properly bound to physical devices and/or virtual points and that hot links or page jumps are functional and logical.
   b. Output all specified reports for review and approval.
   c. Verify the alarm printing and logging is functional and per requirements.
7. Validate all interfaces with other systems on a point-by-point basis.

E. Training: Train Owner's maintenance personnel on the operation and programming of the lighting control system. Two days of training will be provided for up to 50 users.

3.15 MOTORS

A. Include all applicable “Start-Up Checks Common to All Systems”. Additional Start-Up Checks and Tests are as follows.
B. General: Electrical contractor shall be responsible for ensuring adequate electrical connections for each motor that is directly connected under this project. Where equipment manufacturers provide onsite startup of equipment and perform some, or all, of the required Cx activities for the motors, the Electrical Contractor shall monitor the results of their effort, verify successful completion of the Cx activities and obtain copies of the startup field reports. Refer to the quality control requirements listed in applicable sections of Divisions 22, 23 and 26 for additional checks and tests related to the connection of motors. These shall be included in the Start-Up Checks and Tests used for this project.

C. Start-Up Checks and Tests: Follow the manufacturer's written procedures and the following as a minimum:
1. Inspect terminations and grounding.
2. Ensure proper access to all electrical equipment.
3. Ensure proper labeling of all electrical equipment.
4. Compare wiring of poles to manufacturer's instructions.
5. Check voltage-to-disconnects with disconnect open and compare to rating data.
6. In collaboration with the Contractor who supplied the motor, bump it and ensure proper rotation.
7. Test each motor furnished under Division 26 with megger and record readings. Division 22 and 23 motors will be meggered by the contractors responsible for those divisions. Results of those tests shall be monitored by the Division 26 contractor and verified correct. Ensure that megger test results are documented and a copy is submitted to the commissioning team. Megger test shall be performed at the final disconnect switch/breaker for the motor.
8. For all motors furnished under Division 26, check the overloads in comparison to FLA noted on the motor nameplate and ensure adequacy of protection and reliability. Division 22 and 23 motor overloads will be verified by the contractors responsible for those divisions. Division 26 contractor is responsible for ensuring this has been completed prior to energizing any motors.
9. Observe several starts to ensure the start is reliable.

END OF SECTION 260800
SECTION 26 09 23 - LIGHTING CONTROL DEVICES [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Time switches.
      2. Indoor occupancy sensors.
      3. Lighting contactors.
      4. Emergency shunt relays.
   B. Related Requirements:
      1. Division 26 Section "Wiring Devices" for wall-box dimmers, wall-switch occupancy sensors, and manual light switches.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product.
   B. Shop Drawings: Show installation details for occupancy and light-level sensors.
      1. Interconnection diagrams showing field-installed wiring.
      2. Include diagrams for power, signal, and control wiring.
      3. Vendor approved layout of occupancy sensors throughout building.

1.4 INFORMATIONAL SUBMITTALS
   A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For each type of lighting control device to include in emergency, operation, and maintenance manuals.
PART 2 - PRODUCTS

2.1 TIME SWITCHES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Cooper Industries, Inc.
2. Intermatic, Inc.
3. Invensys Controls.
5. NSi Industries LLC; TORK Products.
6. Tyco Electronics; ALR Brand.

B. Electronic Time Switches: Solid state, programmable, with alphanumeric display; complying with UL 917.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Contact Configuration: SPST.
4. Battery Backup: Not less than seven days reserve, to maintain schedules and time clock.

2.2 INDOOR OCCUPANCY SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hubbell Building Automation, Inc.
2. Sensor Switch, Inc.
3. Watt Stopper.

B. General Requirements for Sensors: Wall- or ceiling-mounted, solid-state indoor occupancy sensors with a separate power pack.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
3. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor is powered from the power pack.
4. Power Pack: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
5. Mounting:
   a. Sensor: Suitable for mounting in any position on a standard outlet box.
   b. Relay: Externally mounted through a 1/2-inch knockout in a standard electrical enclosure.
   c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
6. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
7. Bypass Switch: Override the "on" function in case of sensor failure.
8. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc; turn lights off when selected lighting level is present.

C. Dual-Technology Type: Ceiling mounted; detect occupants in coverage area using PIR and ultrasonic detection methods. The particular technology or combination of technologies that control on-off functions is selectable in the field by operating controls on unit.

1. Sensitivity Adjustment: Separate for each sensing technology.
2. Detector Sensitivity: Detect occurrences of 6-inch- minimum movement of any portion of a human body that presents a target of not less than 36 sq. in., and detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. when mounted on a 96-inch- high ceiling.

2.3 EMERGENCY SHUNT RELAY

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Lighting Control and Design; Acuity Lighting Group, Inc.
2. Watt Stopper.
3. Bodine, a Division of Phillips.

B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contacts; complying with UL 924.

1. Coil Rating: 277 V.

2.4 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 24 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
PART 3 - EXECUTION

3.1 SENSOR INSTALLATION

A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies. Provide vendor approved layout drawing of sensor locations as part of shop drawing package. Vendor may have to modify the layout from the contract documents to meet vendor specific requirements or limitations.

B. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.2 CONTACTOR INSTALLATION

A. Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.3 WIRING INSTALLATION

A. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size is 1/2 inch.

B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.

C. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.

D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.4 IDENTIFICATION

A. Identify components and power and control wiring according to Division 26 Section "Identification for Electrical Systems."

1. Identify controlled circuits in lighting contactors.
2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.

B. Label time switches and contactors with a unique designation.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate lighting control devices and perform tests and inspections.
B. Notify PSU Engineering Services at least 7 days in advance of any testing. A representative of PSU Engineering Services shall witness testing.

C. Perform the following tests and inspections:

1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
2. Test and adjust controls and safety. Replace damaged and malfunctioning controls and equipment.

D. Lighting control devices will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 ADJUSTING

A. Occupancy Adjustments: Provide on-site assistance in adjusting sensors to suit actual occupied conditions after one month and again after 11 months of occupancy.

1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner’s operations.

3.7 DEMONSTRATION

A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control systems specified in Division 26 Section "Network Lighting Controls."

B. Train Owner’s maintenance personnel to adjust, operate, and maintain lighting control devices.

END OF SECTION 26 09 23
SECTION 26 09 43 - NETWORK LIGHTING CONTROLS [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes automatically controlled, microprocessor-based, digital lighting controls with integral electrically operated circuit breakers and control module.

B. Related Sections:
   1. Division 26 Section "Lighting Control Devices" for time clocks, photoelectric sensors, occupancy sensors, and multipole contactors.

1.3 DEFINITIONS

A. BACnet: A networking communication protocol that complies with ASHRAE 135.

B. BAS: Building automation system.

C. DALI: Digital addressable lighting interface.

D. LonWorks: A control network technology platform for designing and implementing interoperable control devices and networks.

E. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling and power-limited circuits.

F. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

G. PC: Personal computer; sometimes plural as "PCs."

H. Power Line Carrier: Use of radio-frequency energy to transmit information over transmission lines whose primary purpose is the transmission of power.

I. RS-485: A serial network protocol, similar to RS-232, complying with TIA-485-A.

J. UTP: Unshielded twisted pair.

1.4 ACTION SUBMITTALS

A. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Outline Drawings: Indicate dimensions, weights, arrangement of components, and clearance and access requirements.
3. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

4. Wiring Diagrams: For power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in other Sections.
   1. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
   2. For networked controls, list network protocols and provide statements from manufacturers that input and output devices meet interoperability requirements of the network protocol.

B. Field quality-control reports.

C. Software licenses and upgrades required by and installed for operation and programming of digital and analog devices.

D. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For lighting controls to include in emergency, operation, and maintenance manuals.

B. Software and Firmware Operational Documentation:
   1. Software operating and upgrade manuals.
   2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
   3. Device address list.
   4. Printout of software application and graphic screens.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Electrically Operated, Molded-Case Circuit Breakers: Equal to 5 percent of amount installed for each size indicated, but no fewer than 5 circuit breakers.

1.8 QUALITY ASSURANCE

A. Source Limitations: Obtain lighting control module and power distribution components through one source from a single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with 47 CFR, Subparts A and B, for Class A digital devices.

D. Comply with NFPA 70.
1.9 COORDINATION

A. Coordinate lighting control components to form an integrated interconnection of compatible components.
   1. Match components and interconnections for optimum performance of lighting control functions.
   2. Coordinate lighting controls with BAS. Design display graphics showing building areas controlled; include the status of lighting controls in each area.
   3. Coordinate lighting controls with that in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

B. Coordinate lighting control components specified in this Section with components specified in Division 26 Section "Panelboards."

1.10 WARRANTY

A. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of lighting controls that fail in materials or workmanship or from transient voltage surges within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Failure of software input/output to execute switching or dimming commands.
      b. Failure of modular relays to operate under manual or software commands.
      c. Damage of electronic components due to transient voltage surges.
   2. Warranty Period: Two years from date of Substantial Completion.
   3. Extended Warranty Period Failure Due to Transient Voltage Surges: Eight years.

1.11 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning with Substantial Completion, provide software support for two years.

B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of the software.
   1. Provide 30 days’ notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Square D Powerlink 3000C, with Clipsal components and interface.
   2. Watt Stopper DLM
   3. Sensor Switch nLight

2.2 SYSTEM REQUIREMENTS

A. Expandability: System shall be capable of increasing the number of control functions in the future by 25 percent of current capacity; to include equipment ratings, housing capacities, spare relays, terminals, number of conductors in control cables, and control software.
B. Performance Requirements: Manual switches, an internal timing and control unit, and external sensors or other control signal sources send a signal to a PC-based network-system control module that processes the signal according to its programming and routes an open or close command to one or more electrically operated circuit breakers in the power-supply circuits, or routes variable commands to one or more dimmers, for groups of lighting fixtures or other loads.

C. Provide web based interface for remote control and monitoring.

2.3 CONTROL MODULE

A. Control Module Description: Panelboard mounted; comply with UL 916 (CSA C22.2, No. 205); microprocessor based, solid-state, 365-day timing and control unit. Control units shall be networked and capable of receiving inputs from sensors and other sources. Panelboard shall use low-voltage-controlled, electrically operated, molded-case branch circuit breakers as prime power-circuit switching devices. Circuit breakers and a limited number of digital or analog, low-voltage control-circuit outputs shall be individually controlled by control module. Line-voltage components and wiring shall be separated from low-voltage components and wiring by barriers. Control module shall be locally programmable. Panelboard shall also comply with Division 26 Section "Panelboards."

1. Display: Single graphic display for programming lighting control panelboards.
2. Interoperability: Control module shall be configured to connect with other control systems using RS-485 network to enable remote workstations to use control module functions.
3. System Memory: Nonvolatile. System shall reboot program and reset time automatically without errors after power outages up to 90 days' duration.
4. Automatic Time Adjustment: System shall automatically adjust for leap year and daylight saving time and shall provide weekly routine and annual holiday scheduling.
5. Astronomic Control: Automatic adjustment of dawn and dusk switching.
6. Demand Control: Demand shall be monitored through pulses from a remote meter and shall be controlled by programmed switching of loads. System capability shall include sliding window averaging and programming of load priorities and characteristics. Minimum of two different time-of-day demand schedules shall execute load-management control actions by switching output circuits or by transmitting other types of load-control signals.
7. Local Override Capability: Manual, low-voltage control devices shall override programmed shutdown of lighting and shall override other programmed control for intervals that may be duration programmed.
8. Automatic battery backup shall provide power to maintain program and system clock operation for 90 days' minimum duration when power is off.
9. Programmed time signals shall change preset scenes and dimmer settings.
10. Energy Conservation: Bilevel control of special ballasts or dimming circuits to comply with local energy codes.
11. Flick Warning: Programmable momentary turnoff of lights shall warn that programmed shutoff will occur after a preset interval. Warning shall be repeated after a second preset interval before end of programmed override period.
12. Diagnostics: When system operates improperly, software shall initiate factory-programmed diagnosis of failure and display messages identifying problem and possible causes.

2.4 POWER DISTRIBUTION COMPONENTS

A. Electrically Operated, Molded-Case Circuit-Breaker Panelboard: Comply with NEMA PB 1 and UL 50 (CAN/CSA C22.2, No. 94), UL 67 (CSA C22.2, No. 29), UL 489 (CAN/CSA C22.2, No. 65), and UL 916 (CSA C22.2, No. 205).
1. Cabinets: In addition to requirements specified below, comply with Division 26 Section “Panelboards.”
2. Electrically Operated, Molded-Case Circuit Breakers: Bolt-on type.
   a. Switching Endurance Ratings: Certified by manufacturer or by a nationally recognized testing laboratory (NRTL) for at least 20,000 open and close operations under rated load at 0.8 power factor.
   b. Minimum 30,000 open and close operations with load equal to circuit-breaker trip rating and consisting of 100 percent tungsten filament load.
   c. Minimum 30,000 open and close operations with load equal to circuit-breaker trip rating and consisting of 100 percent fluorescent ballasts rated for 10 percent total harmonic distortion.
   d. Listed and labeled as complying with UL SWD, HCAR, and HID ratings by an NRTL acceptable to authorities having jurisdiction.

B. Line-Voltage Surge Suppression: Factory installed as an integral part of 120- and 277-V ac, solid-state control panels.

2.5 MANUAL ANALOG SWITCHES AND PLATES
   A. Push-Button Switches: Modular, momentary-contact, low-voltage type.
      1. Match color specified in Division 26 Section "Wiring Devices."
      2. Integral green LED pilot light to indicate when circuit is on.
      3. Internal white LED locator light to illuminate when circuit is off.

   B. Manual, Maintained Contact, Full- or Low-Voltage Switch: Comply with Division 26 Section "Wiring Devices."

   C. Wall-Box Dimmers: Comply with Division 26 Section "Wiring Devices."

   D. Wall Plates: Single and multigang plates as specified in Division 26 Section "Wiring Devices."

   E. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.6 FIELD-MOUNTED DIGITAL CONTROLS AND PLATES
   A. Connection Type: RS-485 protocol, category 5 UTP cable, using RJ45 connectors. Power shall be from the control unit.

   B. Pushbutton Switches: Modular, solid-state, programmable, digital, momentary contact, designed to connect to a microprocessor based control unit as a manual control source.
      1. Mounting: Standard single-gang recessed switchbox, using device plates specified in Division 26 Section "Wiring Devices."
      2. Multi-Gang Mounting: One to six pushbuttons per gang.

2.7 CONDUCTORS AND CABLES
   A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

   B. Classes 2 and 3 Control Cables: Stranded copper, complying with UL 83, multiconductor cable with copper conductors not smaller than No. 18 AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
C. Class 1 Control Cables: Stranded copper, complying with UL 83, multiconductor cable with copper conductors not smaller than No. 14 AWG, complying with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

D. Structured Network Digital and Multiplexed Signal Cables: UTP cable with copper conductors, complying with TIA/EIA-568-B.2, Category 6 for horizontal copper cable and with Division 27 Section "Communications Horizontal Cabling."

E. RS-485 Cables:
1. Standard Cable: NFPA 70, Type CM.
   a. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
   b. PVC insulation.
   c. Unshielded.
   d. PVC jacket.
   e. Flame Resistance: Comply with UL 1581.

2. Plenum-Rated Cable: NFPA 70, Type CMP.
   a. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
   b. Fluorinated ethylene propylene insulation.
   c. Unshielded.
   d. Fluorinated ethylene propylene jacket.
   e. Flame Resistance: NFPA 262, Flame Test.

F. RS-485 Cables:
1. Standard Cable: NFPA 70, Type CM.
   a. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
   b. PVC insulation.
   c. Unshielded.
   d. PVC jacket.
   e. Flame Resistance: Comply with UL 1581.

2. Plenum-Rated Cable: NFPA 70, Type CMP.
   a. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
   b. Fluorinated ethylene propylene insulation.
   c. Unshielded.
   d. Fluorinated ethylene propylene jacket.
   e. Flame Resistance: NFPA 262, Flame Test.

2.8 SYSTEM COMPUTER

A. Provide (1) laptop computer workstation to interface with lighting control system.

B. Workstation shall be pre-configured with all software and actual job configuration files. Workstation shall be ready to connect and operate when turned on to PSU Engineering Services.

C. System Requirements:
1. Tablet type, Dell Latitude XT2 or similar with 4GB DDR3 SDRAM, 160GB hard drive, DVDRW/DVD, 6-cell battery, separate 9-cell "battery slice", (2) AC adaptors, wireless a/g/n LAN card, Energy Star 5.0, docking station, cordless optical mouse, Windows 7 OS (with XP mode), MS Office 2010 software and backpack case.

2. Provide software and other options as suggested or required to interface with Lighting Control System.

3. Load complete PDF set of all trades as-built drawings and electrical shop drawings onto hard drive and provide BlueBeam PDF reader software.
PART 3 - EXECUTION

3.1 WIRING INSTALLATION

A. Comply with NECA 1.

B. Wiring Method: Install wiring in raceways. Minimum conduit size shall be 1/2 inch.
1. For power wiring comply with Division 26 Section “Low-Voltage Electrical Power Conductors and Cables”
2. For digital data transmission and low-voltage (operating at less than 50 V) remote control and signaling cables, comply with Division 26 Section "Control-Voltage Electrical Power Cables"

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Separate power-limited and non-power-limited conductors according to conductor manufacturer's written instructions.

D. Install field-mounting transient voltage suppressors for lighting control devices in Category A locations that do not have integral line-voltage surge protection.

E. Size conductors according to lighting control device manufacturer's written instructions unless otherwise indicated.

F. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in terminal cabinets, equipment enclosures, and in junction, pull, and outlet boxes.

G. Identify components and power and control wiring according to Division 26 Section "Identification for Electrical Systems."

3.2 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. In addition to Refer to Division 26 Section “Electrical Systems General Provisions”, Provide the following tests and Inspections:
1. Test for circuit continuity.
2. Verify that the control module features are operational.
3. Check operation of local override controls.
4. Test system diagnostics by simulating improper operation of several components selected by Architect.
5. Provide (3) days of onsite manufacturer programming assistance.

C. Lighting controls will be considered defective if they do not pass tests and inspections.

3.3 SOFTWARE INSTALLATION

A. Install and program software with initial settings of adjustable values. Make backup copies of software and user-supplied values. Provide current licenses for software.
3.4 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain lighting controls and software training for PC-based control systems. See Division 01 Section “Demonstration and Training.”

END OF SECTION 26 09 43
SECTION 26 12 00 - MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following types of transformers with medium-voltage primaries:
   1. Dry-type distribution and power transformers.

1.3 DEFINITIONS

1.4 ACTION SUBMITTALS
A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, location of each field connection, and performance for each type and size of transformer indicated.

1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For transformer and accessories to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

   1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with IEEE C2.

E. Comply with NFPA 70.

1.7 DELIVERY, STORAGE, AND HANDLING
A. Store transformers protected from weather and so condensation will not form on or in units. Provide temporary heating according to manufacturer’s written instructions.

1.8 COORDINATION
A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of louvers, doors, spill retention areas, and sumps. Coordinate installation so no piping or conduits are installed in space allocated for medium-voltage transformers except those directly associated with transformers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acme Electric Corporation; Power Distribution Products Division.
2. Cooper Industries; Cooper Power Systems Division.
5. Square D; Schneider Electric.
6. Virginia Transformer Corp.

2.2 DRY-TYPE DISTRIBUTION AND POWER TRANSFORMERS
A. Description: NEMA ST 20, IEEE C57.12.01, ANSI C57.12.50, UL 1562 listed and labeled, dry-type, 2-winding transformers.

1. Indoor, ventilated, cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of 40 deg C.

B. Primary Connection: Transition terminal compartment with connection pattern to match switchgear.

C. Secondary Connection: Transition terminal compartment with connection pattern to match switchgear.

D. Insulation Materials: IEEE C57.12.01, rated at 220 deg C.

E. Insulation Temperature Rise: 150 deg C, maximum rise above 40 deg C.

F. Basic Impulse Level: 60 kV.
G. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps, 2 above and 2 below rated primary voltage.

H. Sound level may not exceed sound levels listed in NEMA TR 1, without fans operating.

I. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

2.3 IDENTIFICATION DEVICES

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

2.4 SOURCE QUALITY CONTROL

A. Factory Tests: Perform design and routine tests according to standards specified for components. Conduct transformer tests according to ANSI C57.12.50.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions for compliance with requirements for medium-voltage transformers.

B. Examine roughing-in of conduits and grounding systems to verify the following:
   1. Wiring entries comply with layout requirements.
   2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and that requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install transformers on concrete bases.
   1. Anchor transformers to concrete bases according to manufacturer's written instructions and requirements in Division 26 Section "Hangers and Supports for Electrical Systems."
   2. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit and 4 inches high.
3. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete."
4. Install dowel rods to connect concrete bases to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
5. Install epoxy-coated anchor bolts, for supported equipment, that extend through concrete base and anchor into structural concrete floor.
6. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
7. Tack-weld or bolt transformers to channel-iron sills embedded in concrete bases. Install sills level and grout flush with floor or base.

B. Provide a minimum of 2/0 AWG bare copper ground ring with at least (2) 96” ground rods around transformer foundation/pad. Exothermically weld rods and ring. Ring shall be a minimum of 24” from the edge of the foundation/pad, buried 18” and 24” deep. Rods shall be installed at opposite corners or at a distance no more than a rod length apart. Extend cabling a minimum of 48” above grade for connection to transformer. Do not connect this ground ring to building service.

C. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.

3.3 IDENTIFICATION
A. Identify field-installed wiring and components and provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

3.4 CONNECTIONS
A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL
A. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:

B. Notify PSU Engineering Services at least 7 days in advance of any testing. A representative of PSU Engineering Services shall witness testing.

C. Perform the following field tests and inspections and prepare test reports:
   1. After installing transformers but before primary is energized, verify that grounding system at substation is tested at specified value or less.
   2. After installing transformers and after electrical circuitry has been energized, test for compliance with requirements.
   3. Perform visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Remove and replace malfunctioning units and retest as specified above.

E. Test Reports: Prepare written reports to record the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Test results that do not comply with requirements and corrective actions taken to achieve compliance with requirements.

3.6 FOLLOW-UP SERVICE

A. Voltage Monitoring and Adjusting: If requested by Owner, perform the following voltage monitoring after Substantial Completion but not more than six months after Final Acceptance:

1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at secondary terminals of each transformer. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with a chart speed of not less than 1 inch per hour. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.

2. Corrective Actions: If test results are unacceptable, perform the following corrective actions, as appropriate:
   a. Adjust transformer taps.
   b. Prepare written request for voltage adjustment by electric utility.

3. Retests: After corrective actions have been performed, repeat monitoring until satisfactory results are obtained.

B. Infrared Scanning: Perform as specified in Division 26 Section "Medium-Voltage Switchgear."

END OF SECTION 26 12 00
SECTION 26 13 00 - MEDIUM-VOLTAGE SWITCHGEAR

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes metal-enclosed interrupter switchgear with the following optional components, features, and accessories:

1. Copper, tin-plated main bus.
2. Surge arresters.

1.3 DEFINITIONS

1.4 SUBMITTALS

A. Product Data: For each type of switchgear and related equipment, include the following:

1. Rated capacities, operating characteristics, furnished specialties, and accessories for individual interrupter switches.
2. Time-current characteristic curves for overcurrent protective devices, including fusible devices.

B. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around switchgear where piping and ducts are prohibited. Show switchgear layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Identify field measurements.

C. Qualification Data: For testing agency.

D. Source quality-control test reports.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For switchgear and switchgear components to include in operation and maintenance manuals. In addition to items specified in Division 01 Section “Operation and Maintenance Data,” include the following:

1. Time-current curves for each type of overcurrent protective device.
1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

B. Source Limitations: Obtain each type of switchgear and associated components through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of switchgear and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Comply with IEEE C2.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver in sections of lengths that can be moved past obstructions in delivery path as indicated.

B. Store switchgear indoors in clean dry space with uniform temperature to prevent condensation. Protect switchgear from exposure to dirt, fumes, water, corrosive substances, and physical damage.

C. If stored in areas subjected to weather, cover switchgear to provide protection from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside switchgear; install electric heating (250 W per section) to prevent condensation.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation at indicated ampere ratings for the following conditions:

1. Ambient temperature not exceeding 122 deg F.

B. Installation Pathway: Remove and replace building components and structures to provide pathway for moving switchgear into place.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchgear, including clearances between switchgear and adjacent surfaces and other items. Comply with indicated maximum dimensions.
1.8 COORDINATION

A. Coordinate layout and installation of switchgear and components with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.

B. Coordinate size and location of concrete bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.9 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Three power fuses, stored within the switchgear.
2. Touchup Paint: Three containers of paint matching enclosure finish, each 0.5 pint.

B. Maintenance Tools: Furnish tools and miscellaneous items required for interrupter switchgear test, inspection, maintenance, and operation. Include the following:

1. Fuse-handling tool.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

A. Description: Factory assembled and tested, and complying with IEEE C37.20.1.

B. Ratings: Suitable for application in 3-phase, 60-Hz, solidly grounded-neutral system.

C. System Voltage: 4.16 kV nominal; 4.76 kV maximum.

2.2 METAL-ENCLOSED INTERRUPTER SWITCHGEAR

A. Basis-of-Design Product: Subject to compliance with requirements, provide Square D MiniBreak Load Interrupter Switch or comparable product by one of the following:

1. Eaton Corporation; Cutler-Hammer Products.

B. Comply with IEEE C37.20.3.

C. Comply with IEEE C37.20.7. Provide arc-resistant switchgear, Type 1.

E. Interrupter Switches: Stationary, gang operated, and suitable for application at maximum short-circuit rating of integrated switchgear assembly.

1. Rating: 200-A continuous duty and load break.
2. Duty-Cycle, Fault Closing: 20,000 asymmetrical A.
3. **Switch Action:** No external arc and no significant quantities of ionized gas released into the enclosure.

4. **Switch Construction:** Supported entirely by interior framework of structure, with copper switchblades and stored-energy operating mechanism.

5. **Phase Barriers:** Full length of switchblades and fuses for each pole; designed for easy removal; allow visual inspection of switch components if barrier is in place.

6. **Protective Shields:** Cover live components and terminals.

7. **Fuses:** De-energized if switch is open.

F. **Mechanical Interlock:** Prevent opening switch compartment door unless switchblades are open, and prevent closing switch if door is open.

G. **Window:** Permit viewing switchblade positions if door is closed.

H. **Power Fuses:** Comply with the following and with applicable requirements in NEMA SG 2:
   1. **Indicator:** Integral with each fuse to indicate when it has blown.
   2. **Mounting:** Positively held in position with provision for easy removal and replacement from front without special tools.
   3. **Current-Limiting Fuses:** Full-range, fast-replaceable, current-limiting type that will operate without explosive noise or expulsion of gas, vapor, or foreign matter from tube.

### 2.3 FABRICATION

A. **Indoor Enclosure:** Steel.

B. **Finish:** Manufacturer's standard gray finish over rust-inhibiting primer on phosphatizing-treated metal surfaces.

C. **Incoming-Line Unit:** Arranged to suit incoming line.

D. **Outgoing Feeder Units:** Arranged to suit distribution feeders.

### 2.4 COMPONENTS

A. **Main Bus:** Copper, tin plated.

B. **Ground Bus:** Copper, silver plated or copper, tin plated; minimum size 1/4 by 2 inches; full length of switchgear.

C. **Bus Insulation:** Covered with flame-retardant insulation.

D. **Surge Arresters:** Distribution class, metal-oxide-varistor type. Comply with NEMA LA 1.
   1. Install in cable termination compartments in each phase of circuit.
   2. Coordinate rating with circuit voltage.

### 2.5 IDENTIFICATION

A. **Materials:** Refer to Division 26 Section "Identification for Electrical Systems." Identify units, devices, controls, and wiring.
2.6 SOURCE QUALITY CONTROL

A. Before shipment of equipment, perform the following tests and prepare test reports:
   1. Production tests on circuit breakers according to ANSI C37.09.
   2. Production tests on completed switchgear assembly according to IEEE C37.20.2.

B. Prepare equipment for shipment.
   1. Provide suitable crating, blocking, and supports so equipment will withstand expected domestic shipping and handling shocks and vibration.
   2. Weatherproof equipment for shipment. Close connection openings to prevent entrance of foreign material during shipment and storage.

2.7 FACTORY FINISHES

A. Finish: Manufacturer's standard color finish applied to equipment before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elements and surfaces to receive switchgear for compliance with requirements for installation tolerances, required clearances, and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Anchor switchgear assembly to 4-inch, channel-iron sill embedded in concrete base and attach by bolting.
   1. Sills: Select to suit switchgear; level and grout flush into concrete base.
   2. Concrete Bases: 4 inches high, reinforced, with chamfered edges. Extend base no less than 3 inches in all directions beyond the maximum dimensions of switchgear, unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."

B. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchgear units and components.

3.3 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

B. Diagram and Instructions:
   1. Frame under clear acrylic plastic on front of switchgear.
a. Operating Instructions: Printed basic instructions for switchgear.
b. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads.

2. Storage for Maintenance: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

3.4 CONNECTIONS

A. Cable terminations at switchgear are specified in Division 26 Section "Medium-Voltage Cables."
B. Tighten bus joints, electrical connectors, and terminals according to manufacturer's published torque-tightening values.
C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
D. Connect wiring according to Division 26 Sections "Low-Voltage Electrical Power Conductors and Cables" and "Medium-Voltage Cables."

3.5 FIELD QUALITY CONTROL

A. Prepare for acceptance tests as follows:
   1. Test insulation resistance for each switchgear bus, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.
B. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
C. Notify PSU Engineering Services at least 7 days in advance of any testing. A representative of PSU Engineering Services shall witness testing.
D. Perform the following field tests and inspections and prepare test reports:
   1. Perform each electrical test and visual and mechanical inspection stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for each of the following NETA categories:
      a. Load Interrupter Switchgear.
      b. Surge arresters.
E. Remove and replace malfunctioning units and retest as specified above.
F. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of each switchgear. Remove front and rear panels so joints and connections are accessible to portable scanner.
   1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
   2. Instrument: Use an infrared-scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies switchgear checked and that describes infrared-scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 CLEANING

A. On completion of installation, inspect interior and exterior of switchgear. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair damaged finishes.

3.7 PROTECTION

A. Temporary Heating: Apply temporary heat to switchgear, according to manufacturer's written instructions, throughout periods when switchgear environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain switchgear. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 13 00
SECTION 26 22 00 - LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:

1. Distribution transformers.

1.3 ACTION SUBMITTALS

A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Source quality-control test reports.

C. Field quality-control test reports.

D. Efficiency and harmonic testing reports per PSU Engineering Services requirements consisting of the following:

1. No load and full load losses per NEMA ST20.
2. Linear load efficiency data at 1/6 load.
3. Linear Load efficiency data at ¼, ½, ¾, and full load.
4. Linear load efficiency at 35% loading tested per NEMA TP-2.
5. Efficiency under K7 load profile at 15%, 25%, 50% 75%, and 100% of nameplate rating.
1.5 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE
A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7.
B. Source Limitations: Obtain each transformer type through one source from a single manufacturer.
C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
D. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

1.7 DELIVERY, STORAGE, AND HANDLING
A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

1.8 COORDINATION
A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
B. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. Base Bid:
   1. Base bid is for CSL3 efficiency.
   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Powersmith "E-Saver-C3"
      b. Eaton Electrical Inc.; Cutler-Hammer Products “HMT"
      c. Mirus International Inc “Ultra"
B. Alternate Bid:
   1. Alternate bid is for TP-1 efficiency.
   2. Manufacturers: Provide transformer by same manufacturer as switchgear.

C. Manufacturers wishing to have products evaluated for acceptability and conformance with the performance requirements of this specification shall provide detailed compliance and/or exception statements, along with documentation identified in Part 1 and test documentation, signed by an engineer, that confirms that the transformer(s) meet the no load losses and efficiency levels identified in Part 2. Failure to provide the required documentation no less that 14 days prior to bid date with disqualify products from consideration for this project.

2.2 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.

B. Cores: Grain-oriented, non-aging silicon steel.

C. Coils: Continuous windings without splices except for taps.
   1. Internal Coil Connections: Brazed or pressure type.
   2. Coil Material: Copper.

2.3 DISTRIBUTION TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Cores: One leg per phase.

C. Enclosure: Ventilated, NEMA 250, Type 2.
   1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

D. Transformer Enclosure Finish: Comply with NEMA 250.
   1. Finish Color: Gray.

E. Taps for Transformers Smaller Than 3 kVA: One 5 percent tap above normal full capacity.

F. Taps for Transformers 7.5 to 24 kVA: One 5 percent tap above and one 5 percent tap below normal full capacity.

G. Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.

H. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of 150 deg C rise above 40 deg C ambient temperature.

I. Energy Efficiency for Transformers Rated 15 kVA and Larger:
   1. Complying with CSL3, Class 1 efficiency levels for Base Bid.
   2. Complying with NEMA TP 1, Class 1 efficiency levels for Alternate Bid.
   3. Tested according to NEMA TP 2.
J. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.

1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.
2. Indicate value of K-factor on transformer nameplate.

K. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.

1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
2. Include special terminal for grounding the shield.
3. Shield Effectiveness:
   a. Capacitance between Primary and Secondary Windings: Not to exceed 33 picofarads over a frequency range of 20 Hz to 1 MHz.
   b. Common-Mode Noise Attenuation: Minimum of minus 120 dBA at 0.5 to 1.5 kHz; minimum of minus 65 dBA at 1.5 to 100 kHz.
   c. Normal-Mode Noise Attenuation: Minimum of minus 52 dBA at 1.5 to 10 kHz.

L. Wall Brackets: Manufacturer's standard brackets.

M. Fungus Proofing: Permanent fungicidal treatment for coil and core.

N. Low-Sound-Level Requirements: Minimum of 3 dBA less than NEMA ST 20 standard sound levels when factory tested according to IEEE C57.12.91.

O. Base bid shall be high efficiency copper wound transformers meeting US Department of Energy proposed Candidate Standard Level (CSL) 3 efficiency with extreme no load losses.

1. Maximum no load losses shall not exceed:
   a. 15KVA: 60W.
   b. 30KVA: 99W.
   c. 45KVA: 130W.
   d. 75KVA: 180W.
   e. 112.5KVA: 260W.
   f. 150KVA: 330W.
   g. 225KVA: 450W.
   h. 300KVA: 560W.
   i. 500KVA: 850W.
   j. 750KVA: 1200W.

2. Efficiency at 1/6 load shall meet or exceed:
   a. 15KVA: 96.6%.
   b. 30KVA: 97.4%.
   c. 45KVA: 97.7%.
   d. 75KVA: 98.2%.
   e. 112.5KVA: 98.4.
   f. 150KVA: 98.5%.
   g. 225KVA: 98.5%.
   h. 300KVA: 98.6%.
i. 500KVA: 98.7%

j. 750KVA: 98.7%

P. Deduct alternate bid shall be for copper wound, 115 deg C rise, K-4 rated standard TP-1 transformers.

2.4 IDENTIFICATION DEVICES

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each distribution transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

2.5 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to IEEE C57.12.91.

B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer.

B. Construct concrete bases and anchor floor-mounting transformers according to manufacturer's written instructions and requirements in Division 26 Section "Hangers and Supports for Electrical Systems."
3.3 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. Provide on-site revenue class efficiency and harmonic measurements of transformers once installed and operating. Data shall be collected from the primary and secondary sides of the transformer simultaneously on a synchronized cycle by cycle basis. The use of two discrete meters is not acceptable. Primary and secondary readings shall be synchronized to ensure accuracy. A performance report shall be issued by a licensed engineer.

3.5 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.6 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 26 22 00
SECTION 26 2300 - LOW-VOLTAGE SWITCHGEAR [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes metal-enclosed, low-voltage power circuit-breaker switchgear rated 1000 V and less for use in ac systems.
B. Related Sections include the following:
   1. Division 26 Section "Electrical Power Monitoring and Control" for interfacing communication and metering requirements.
C. Switchgear shall include Arc Flash Reduction system.

1.3 DEFINITIONS
B. GFCI: Ground-fault circuit interrupter.

1.4 ACTION SUBMITTALS
A. Shop Drawings: For each type of switchgear and related equipment.
   1. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Include the following:
      a. Tabulation of installed devices with features and ratings.
      b. Enclosure types and details.
      c. Outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.
      d. Bus configuration with size and number of conductors in each bus run, including phase, neutral, and ground conductors of main and branch buses.
      e. Current rating of buses.
      f. Short-time and short-circuit current rating of switchgear assembly.
      g. Nameplate legends.
      h. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
   2. Wiring Diagrams: Power, signal, and control wiring.
B. Manufacturer’s engineering power studies shall be submitted to PSU Engineering Services prior to receiving final approval of shop drawings and prior to release of equipment. Refer to Division 26 Section “Overcurrent Protective Device Coordination Study.”

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around switchgear where pipe and ducts are prohibited. Show switchgear layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Six of each type and rating used. Include spares for potential transformer fuses, control power fuses, and fuses and fusible devices for fused circuit breakers.
2. Indicating Lights: Six of each type installed.
3. Touchup Paint: 3 containers of paint matching enclosure finish, each 0.5 pint.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency’s Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

B. Source Limitations: Obtain switchgear through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of switchgear and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Comply with NFPA 70.

F. Switchgear shall comply with ANSI C37/UL1558.

G. Circuit breakers shall comply with UL1066.
1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver switchgear in sections of lengths that can be moved past obstructions in delivery path.

B. Store switchgear indoors in clean dry space with uniform temperature to prevent condensation. Protect switchgear from exposure to dirt, fumes, water, corrosive substances, and physical damage.

C. If stored in areas subjected to weather, cover switchgear to provide protection from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside switchgear; install electric heating (250 W per section) to prevent condensation.

1.9 PROJECT CONDITIONS

A. Installation Pathway: Remove and replace building components and structures to provide pathway for moving switchgear into place.

B. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:

1. Ambient Temperature: Not exceeding 40 deg C.
2. Altitude: Not exceeding 6600 feet.

1.10 COORDINATION

A. Coordinate layout and installation of switchgear and components with other construction that penetrates ceilings or is supported by them, including conduit, piping, equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels.

B. Coordinate size and location of concrete bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

2. General Electric Company.
4. Square D; Schneider Electric.

2.2 RATINGS

A. Nominal System Voltage: 480/277 V, 4 wire, 60 Hz.

B. Main-Bus Continuous Ampacity: as indicated on drawings.
C. Short-Time and Short-Circuit Current: Match rating of highest-rated circuit breaker in switchgear assembly.

D. Power distribution equipment manufacturer shall carry in their bid to the electrical contractor a sufficient allowance to provide modifications to equipment, if necessary, based on the results of the engineering power studies. Refer to Section 260573 “Electrical Protective Device Coordination Study.

2.3 FABRICATION

A. Factory assembled and tested and complying with IEEE C37.20.1. Provide the following features:
   1. Vertical barrier between adjacent upright sections.
   2. Safety shutters.

B. Indoor Enclosure Material: Steel.

C. Finish: IEEE C37.20.1, manufacturer’s standard gray finish over a rust-inhibiting primer on phosphatizing-treated metal surfaces.

D. Circuit-breaker compartments shall be equipped to house drawout-type circuit breakers and shall be fitted with hinged outer doors.

E. Fabricate enclosure with removable, hinged, front and rear doors. Rear doors shall have hasp for padlock. Label rear doors to match front.

F. Auxiliary Compartments: Match and align with basic switchgear assembly. Include the following:
   1. Bus transition sections.
   2. Incoming-line pull sections.
   3. Hinged front panels for access to metering, accessory, and blank compartments.
   4. Pull box on top of switchgear for extra room for pulling cable, with removable top, front, and side covers and ventilation provisions adequate to maintain air temperature in pull box within same limits as switchgear.
      a. Set pull box back from front to clear circuit-breaker lifting mechanism.
      b. Bottom: Insulating, fire-resistant material with separate holes for cable drops into switchgear.
      c. Cable Supports: Arranged to ease cabling and adequate to support cables indicated, including those for future installation.

G. Bus bars connect between vertical sections and between compartments. Cable connections are not permitted.
   1. Main Phase Bus: Uniform capacity the entire length of assembly.
   3. Vertical Section Bus Size: Comply with IEEE C37.20.1, including allowance for spare circuit breakers and spaces for future circuit breakers.
   5. Use copper for connecting circuit-breaker line to copper bus.
6. **Ground Bus:** Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size 1/4 by 2 inches.

7. **Supports and Bracing for Buses:** Adequate strength for indicated short-circuit currents.

8. **Neutral bus equipped with pressure-connector terminations for outgoing circuit neutral conductors.** Neutral-bus extensions for busway feeders are braced.

9. **Neutral Disconnect Link:** Bolted, uninsulated, 1/4-by-2-inch copper bus, arranged to connect neutral bus to ground bus.

10. **Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.**

### 2.4 COMPONENTS

**A. Multifunction Digital-Metering Monitor (DMM) will be provided by PSU Utility Services.** Coordinate all requirements between PSU and manufacturer for complete installation of DMM. Provide provisions for the DMM within an isolated compartment. Compartment shall include CTs on a shorting block and voltage connection brought to a fuse block with disconnect (mount CTs and voltage connection ahead of main). Compartment shall accept a Square D monitor style meter.

**B. Transient Voltage Surge Suppressor:** integral to switchgear, mounted in a separate, barriered compartment, connected to bus with a circuit breaker, sized per manufacturer recommendations. Refer to Division 26 section for TVSS requirements.

**C. Provision for Future Devices:** Equip compartments with rails, mounting brackets, supports, necessary appurtenances, and bus connections.

**D. Control Power Supply:** Control power transformer supplying 120-V control circuits through secondary disconnect devices. Include the following features:

1. **Dry-type transformers, in separate compartments for units larger than 3 kVA, including primary and secondary fuses.**
2. **Control Power Fuses:** Primary and secondary fuses with current-limiting and overload protection.
3. **Fuses are specified in Division 26 Section "Fuses."**

**E. Control Wiring:** Factory installed, complete with bundling, lacing, and protection; and complying with the following:

1. Flexible conductors for No. 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
2. Conductors sized according to NFPA 70 for duty required.

### 2.5 CIRCUIT BREAKERS

**A. Description:** Low voltage power circuit breakers, comply with IEEE C37.13.

**B. Ratings:** As indicated for continuous, interrupting, and short-time current ratings for each circuit breaker; voltage and frequency ratings same as switchgear.

**C. Operating Mechanism:** Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:
1. Normal Closing Speed: Independent of both control and operator.
2. Slow Closing Speed: Optional with operator for inspection and adjustment.
4. Operation counter.

D. Trip Devices: Solid-state, overcurrent trip-device system consisting of one or two current transformers or sensors per phase, a release mechanism, and the following features:

1. Functions: Long-time-delay, short-time-delay, and instantaneous-trip functions, independent of each other in both action and adjustment.
2. Temperature Compensation: Ensures accuracy and calibration stability from minus 5 to plus 40 deg C.
3. Field-adjustable, time-current characteristics.
4. Current Adjustability: Dial settings and rating plugs on trip units or sensors on circuit breakers, or a combination of these methods.
5. Three bands, minimum, for long-time- and short-time-delay functions; marked "minimum," "intermediate," and "maximum."
7. Pickup Points: Five minimum, for instantaneous-trip functions.
8. Ground-fault protection with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup. Arrange to provide protection for the following:
   a. Three-wire circuit or system.
   b. Four-wire circuit or system.
9. Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.
10. Arc Flash Reduction: Provide arc flash reduction system that shall adjust the trip curve of the breaker relay. Systems utilizing “zone-interlock” exclusively are not acceptable. Arc flash light/current sensing equipment similar to ABB REA Arc Protection System shall be acceptable as approved by Engineer and PSU Engineering Services.
   a. The Arc Flash Reduction Maintenance Switch shall reduce the trip system instantaneous pickup value when enabled. The device must not compromise phase protection or defeat its functionality, even when enabled. Once disabled, the recalibration of phase protection must not be required.
   b. Activation and deactivation of reduced maintenance trip setting shall be accomplished without opening the circuit breaker door and exposing operator to energized parts.
   c. The Arc Flash reduction system shall include a blue LED indicating light for visual indication that the Arc Flash reduction system is activated. Blue LED shall be mounted on the front of each circuit breaker cubicle. The light control voltage shall be a 120 volt AC source separately derived within the switchgear.
   d. Arc reduction maintenance system shall have remote lockable switch on the front of each breaker cubicle to initiate this maintenance setting. The switch must be rated and tested for milli-volt signals in harsh environments. The switch shall include an extra NO/NC contact for remote indication.
   e. The reduced maintenance trip setting must be adjustable with a minimum of five settings ranging from 2.5X to 10X of sensor tap value.
   f. The Arc Flash Reduction System maximum clearing time must not exceed 0.05 seconds. The System must meet the requirements of ANSI C37.59 and EMI testing.
E. Auxiliary Contacts: For interlocking or remote indication of circuit-breaker position, with spare auxiliary switches and other auxiliary switches required for normal circuit-breaker operation, quantity as indicated. Each consists of two Type "a" and two Type "b" stages (contacts) wired through secondary disconnect devices to a terminal block in stationary housing.

F. Drawout Features: Circuit-breaker mounting assembly equipped with a racking mechanism to position circuit breaker and hold it rigidly in connected, test, and disconnected positions. Include the following features:

1. Interlocks: Prevent movement of circuit breaker to or from connected position when it is closed, and prevent closure of circuit breaker unless it is in connected, test, or disconnected position.
2. Circuit-Breaker Positioning: An open circuit breaker may be racked to or from connected, test, and disconnected positions only with the associated compartment door closed unless live parts are covered by a full dead-front shield. An open circuit breaker may be manually withdrawn to a position for removal from the structure with the door open. Status for connection devices for different positions includes the following:
   a. Test Position: Primary disconnect devices disengaged, and secondary disconnect devices and ground contact engaged.
   b. Disconnected Position: Primary and secondary devices and ground contact disengaged.

G. Arc Chutes: Readily removable from associated circuit breaker when it is in disconnected position, and arranged to permit inspection of contacts without removing circuit breaker from switchgear.

H. Operating Handle: One for each circuit breaker capable of manual operation.

I. Electric Close Button: One for each electrically operated circuit breaker.

J. Padlocking Provisions: For installing at least three padlocks on each circuit breaker to secure its enclosure and prevent movement of drawout mechanism.

K. Mechanical Interlocking of Circuit Breakers: Uses a mechanical tripping lever or equivalent design and electrical interlocks.

L. Undervoltage Trip Devices: Adjustable time-delay and pickup voltage.

M. Shunt-Trip Devices: Where indicated.

N. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices.

2.6 ACCESSORIES

A. Accessory Set: Furnish tools and miscellaneous items required for circuit-breaker and switchgear test, inspection, maintenance, and operation.

1. Racking handle to manually move circuit breaker between connected and disconnected positions.
2. Portable test set for testing all functions of circuit-breaker, solid-state trip devices without removal from switchgear.
B. Circuit-Breaker Removal Apparatus: Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of drawout circuit breaker installed.

C. Storage cabinet, with padlock and hasp, for storing equipment and breakers. Unit shall be 60”H x 24”D x 36”W, capable of 900lb/shelf built by Duram, Lyon, Stronghold or approved equal.

D. Floor mount rolling hydraulic foot pump platform lift, Beech Engineering (Division of Miller Products Inc.) Model # PS-2460, or approved equal by Genie, Vestil or Wesco. 72” overall height, rated load of 1000lbs, minimum lift height of 60”, and platform measuring 20”x20”.

E. Padlocking Provisions: Provide Best #11B772-L with core #1C7F1-626 in the following quantities:
   1. One (1) for each rear hinged section.
   2. One (1) for each draw-out circuit breaker cubicle and cubicle space.
   3. Two (2) spare.

F. Storage for Manual: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

G. Provide set of “as-built” drawings stored in main electrical room. Storage shall be PVC tube mounted on wall with caps on each end. Label tube appropriately.

H. Provide 30”x42” laminated copy of the single line diagram adjacent to the service entrance equipment. Mount in aluminum frame under plexi-glass.

2.7 IDENTIFICATION

A. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads. Include as-built data for low-voltage power switchgear and connections as follows:
   1. Frame size of each circuit breaker.
   2. Trip rating for each circuit breaker.
   3. Conduit and wire size for each feeder.

B. Mimic Bus: Continuous mimic bus, arranged in single-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.
   1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce a concise visual presentation of principal switchgear components and connections.
   3. Color: Contrasting with factory-finish background; Normal power shall be in white, emergency power in red.

C. Provide nameplate on front and rear of each upright section switchgear.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elements and surfaces where switchgear will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance.

   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with applicable portions of NECA 400.

B. Anchor switchgear assembly to 4-inch, channel-iron floor sill embedded in concrete base and attach by bolting.

   1. Sills: Select to suit switchgear; level and grout flush into concrete base.
   2. Concrete Bases: 4 inches high, reinforced, with chamfered edges. Extend base no more than 3 inches in all directions beyond the maximum dimensions of switchgear unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts from switchgear units and components.

3.3 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

B. Diagram and Instructions:

   1. Frame and mount under clear acrylic plastic on the front of switchgear.

      a. Operating Instructions: Printed basic instructions for switchgear, including control and key-interlock sequences and emergency procedures.
      b. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads.

   2. Storage for Maintenance: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.

3.4 CONNECTIONS

A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
3.5 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. In addition to testing specified in Division 26 Section “Electrical Systems General Provisions”, provide the following tests:

1. Test insulation resistance for each switchgear bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

3.6 ADJUSTING

A. Independent testing agency to set field-adjustable, protective-relay trip characteristics according to results in Division 26 Section "Overcurrent Protective Device Coordination Study."

B. Set field-adjustable, protective-relay trip characteristics.

3.7 CLEANING

A. On completion of installation, inspect interior and exterior of switchgear. Remove paint splatters and other spots. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair exposed surfaces to match original finish.

3.8 PROTECTION

A. Temporary Heating: Apply temporary heat to switchgear, according to manufacturer's written instructions, throughout periods when switchgear environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain switchgear. Provide a minimum of eight hours. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 2300
SECTION 26 24 13 - SWITCHBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Service and distribution switchboards rated 600 V and less.
2. Disconnecting and overcurrent protective devices.
3. Accessory components and features.
4. Identification.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of switchboard, overcurrent protective device, transient voltage suppression device, accessory, and component indicated. Include dimensions and manufacturers’ technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

B. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
7. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Include selectable ranges for each type of overcurrent protective device.

C. Manufacturer’s engineering power studies shall be submitted to PSU Engineering Services prior to receiving final approval of shop drawings and prior to release of equipment. Refer to Division 26 Section “Overcurrent Protective Device Coordination Study.”

1.4 INFORMATIONAL SUBMITTALS

A. Field Quality-Control Reports:
1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For switchboards and components to include in operation and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for switchboards and all installed components.
2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
3. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Include selectable ranges for each type of overcurrent protective device.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

B. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

C. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Comply with NEMA PB 2.

G. Comply with NFPA 70.

H. Comply with UL 891.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

B. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating (250 W per section) to prevent condensation.
C. Handle and prepare switchboards for installation according to NECA 400.

1.8 PROJECT CONDITIONS

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Environmental Limitations:

1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
   a. Ambient Temperature: Not exceeding 104 deg F.
   b. Altitude: Not exceeding 6600 feet.

C. Service Conditions: NEMA PB 2, usual service conditions, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet.

1.9 COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

1.11 EXTRA MATERIALS

A. Provide 20% or (2) full sets, whichever is less, spare batteries for electronic trip units.
PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

1. Manufacturers: Same manufacturer as switchgear.

B. Nominal System Voltage: refer to drawings.

C. Main-Bus Continuous Ampacity: refer to drawings.

D. Front-Connected, Front-Accessible Switchboards:
   1. Main Devices: Drawout, individually mounted.
   2. Branch Devices: Fixed, group mounted.
   3. Sections front and rear aligned.

E. Indoor Enclosures: Steel, NEMA 250, Type 1.

F. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.

G. Barriers: Between adjacent switchboard sections.

H. Insulation and isolation for main bus of main section and main and vertical buses of feeder sections.

I. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

J. Removable, Hinged Rear Doors and Compartment Covers: Secured by captive thumb screws, for access to rear interior of switchboard. Provide hasp for padlock.

K. Hinged Front Panels: Allow access to circuit breaker, accessory, and blank compartments.

L. Pull Box on Top of Switchboard:
   1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
   2. Set back from front to clear circuit-breaker removal mechanism.
   3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
   4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
   5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.

M. Buses and Connections: Three phase, four wire unless otherwise indicated.
   2. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with copper mechanical connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
   3. Ground Bus: 1/4-by-2-inch- hard-drawn copper of 98 percent conductivity, equipped with mechanical connectors for feeder and branch-circuit ground conductors. For busway
feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

4. Main Phase Buses and Equipment Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.

5. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.

N. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

2.2 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Main Device: molded-case circuit breaker (MCCB), comply with UL 489, with interrupting capacity to meet available fault currents.

1. Electronic trip circuit breakers with rms sensing, field-replaceable rating plug or field-replaceable electronic trip, integral power supply and the following field-adjustable settings:
   a. Instantaneous trip.
   b. Long- and short-time pickup levels.
   c. Long- and short-time time adjustments.

2. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
   a. Standard frame sizes, trip ratings, and number of poles.
   b. Lugs: Mechanical style, copper, suitable for number, size, trip ratings, and conductor material.

B. Branch Devices: molded-case circuit breakers (MCCB), comply with UL 489, with interrupting capacity to meet available fault currents.

2. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
   a. Standard frame sizes, trip ratings, and number of poles.
   b. Lugs: Mechanical style, copper, suitable for number, size, trip ratings, and conductor material.

C. Adjustable magnetic trip type circuit-breaker shall be utilized for frame sizes 100A up to 400A.

D. Electronic trip type for circuit breaker shall be utilized for frame sizes 400A and over. Electronic trip type circuit breakers shall incorporate cause of trip indicator targets. Trip units shall utilize field replaceable batteries.

E. Interrupting rating: all overcurrent protective devices shall be fully rated, series rating is not acceptable.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Receive, inspect, handle, and store switchboards according to NECA 400.

B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install switchboards and accessories according to NECA 400.

B. Equipment Mounting: Install switchboards on concrete base, 4-inch nominal thickness. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-Place Concrete."

   1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
   2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   4. Install anchor bolts to elevations required for proper attachment to switchboards.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.

D. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.

E. Install filler plates in unused spaces of panel-mounted sections.

F. Comply with NECA 1.

3.3 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.4 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. In addition to testing specified in Division 26 Section “Electrical Systems General Provisions”, provide the following tests:

1. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Switchboard will be considered defective if it does not pass tests and inspections.

3.5 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Overcurrent Protective Device Coordination Study."

3.6 PROTECTION

A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.7 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories, and to use and reprogram microprocessor-based trip, monitoring, and communication units.

END OF SECTION 26 24 13
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 26 24 16 - PANELBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Distribution panelboards.
   2. Lighting and appliance branch-circuit panelboards.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of panelboard, switching and overcurrent protective device, transient voltage suppression device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
B. Shop Drawings: For each panelboard and related equipment.
   1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
   2. Detail enclosure types and details for types other than NEMA 250, Type 1.
   3. Detail bus configuration, current, and voltage ratings.
   4. Short-circuit current rating of panelboards and overcurrent protective devices.
   5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
   6. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Include selectable ranges for each type of overcurrent protective device.
C. Manufacturer's engineering power studies shall be submitted to PSU Engineering Services prior to receiving final approval of shop drawings and prior to release of equipment. Refer to Division 26 Section “Overcurrent Protective Device Coordination Study.”

1.4 INFORMATIONAL SUBMITTALS
A. Qualification Data: For qualified testing agency.
B. Field Quality-Control Reports:
   1. Test procedures used.
   2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

C. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For panelboards and components to include in operation and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Keys: Two spares for each type of panelboard cabinet lock.
2. Circuit Breakers Including GFCI Type: Two spares for each panelboard.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Comply with NEMA PB 1.

F. Comply with NFPA 70.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.
B. Handle and prepare panelboards for installation according to NECA 407.

1.9 PROJECT CONDITIONS

A. Environmental Limitations:
   1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
   2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
      a. Ambient Temperature: Not exceeding 23 deg F to plus 104 deg F.
      b. Altitude: Not exceeding 6600 feet.

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
   1. Ambient temperatures within limits specified.
   2. Altitude not exceeding 6600 feet.

1.10 COORDINATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.11 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PANELBOARDS

A. Enclosures: Surface-mounted cabinets.
   1. Rated for environmental conditions at installed location.
      a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
2. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box.
3. Hinged Front Cover: Entire front trim hinged to box and with standard door in door cover.
4. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
5. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
6. Finishes:
   a. Panels and Trim: Steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
   c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.

B. Incoming Mains Location: Top and bottom.

C. Phase, Neutral, and Ground Buses:
   2. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.

D. Conductor Connectors: Suitable for use with conductor material and sizes.
   2. Main and Neutral Lugs: Mechanical type, copper.
   3. Ground Lugs and Bus-Configured Terminators: Mechanical type.
   4. Feed-Through Lugs: Mechanical type, copper. Locate at opposite end of bus from incoming lugs or main device.
   5. Subfeed (Double) Lugs: Mechanical type, copper. Locate at same end of bus as incoming lugs or main device.
   6. Gutter-Tap Lugs: Mechanical type, copper. Locate at same end of bus as incoming lugs or main device.

E. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.

F. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

2.2 DISTRIBUTION PANELBOARDS

A. Manufacturers: Same manufacturer as switchgear.

B. Panelboards: NEMA PB 1, power and feeder distribution type.

C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
1. For doors more than 36 inches high, provide two latches, keyed alike.

D. Mains: Circuit breaker.

F. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.

G. Transient Voltage Surge Suppressor (TVSS): integral to panel where indicated on single line diagram, mounted in a separate, barred compartment, connected to bus with a circuit breaker, sized per manufacturer recommendations. Refer to Division 26 section for TVSS requirements.

2.3 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Manufacturers: Same manufacturer as switchgear.

B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.

C. Mains: Circuit breaker.

D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

E. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.

F. Group installed panels shall have separate trim.

2.4 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Manufacturers: Same manufacturer as switchgear.

B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip type for circuit-breaker frame sizes 100A up to 400A. Electronic trip type for circuit breaker frame sizes 400A and over.

2. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:

   a. Standard frame sizes, trip ratings, and number of poles.
   b. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor materials.
   c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
   d. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage.
e. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.
f. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.

2.5 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receive, inspect, handle, and store panelboards according to NECA 407.

B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install panelboards and accessories according to NECA 407.

B. Equipment Mounting: Install panelboards on concrete bases, 4-inch nominal thickness. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
2. For panelboards, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to panelboards.
5. Attach panelboard to the vertical finished or structural surface behind the panelboard.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

D. Mount top of trim 90 inches above finished floor unless otherwise indicated.

E. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
F. Install overcurrent protective devices and controllers not already factory installed.
   1. Set field-adjustable, circuit-breaker trip ranges.

G. Install filler plates in unused spaces.

H. Stub four 1-inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch empty conduits into raised floor space or below slab not on grade.

I. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.

J. Comply with NECA 1.

3.3 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Division 26 Section "Identification for Electrical Systems."

B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate Owner's final room designations. Directory shall denote source of power. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.

C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Notify PSU Engineering Services at least 7 days in advance of any testing. A representative of PSU Engineering Services shall witness testing.

C. Acceptance Testing Preparation:
   1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.

D. Tests and Inspections:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
   3. Perform the following infrared scan tests and inspections and prepare reports:
a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.

b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.

c. Instruments and Equipment:
   1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Panelboards will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 ADJUSTING

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Overcurrent Protective Device Coordination Study."

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.

   1. Measure as directed during period of normal system loading.
   2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
   3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
   4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

3.6 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION 26 2416
PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Receptacles, receptacles with integral GFCI, and associated device plates.
      2. Weather-resistant receptacles.
      3. Snap switches and wall-box dimmers.
      4. Communications outlets.
      5. Cord and plug sets.
      6. Floor service outlets, poke-through assemblies, service poles, and multioutlet assemblies.

1.3 DEFINITIONS
   A. EMI: Electromagnetic interference.
   B. GFCI: Ground-fault circuit interrupter.
   C. Pigtail: Short lead used to connect a device to a branch-circuit conductor.
   D. RFI: Radio-frequency interference.
   E. TVSS: Transient voltage surge suppressor.
   F. UTP: Unshielded twisted pair.

1.4 ADMINISTRATIVE REQUIREMENTS
   A. Coordination:
      1. Receptacles for Owner-Furnished Equipment: Match plug configurations.
      2. Cord and Plug Sets: Match equipment requirements.

1.5 ACTION SUBMITTALS
   A. Product Data: For each type of product.
   B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.
C. Samples: One for each type of device and wall plate specified, in each color specified.

1.6 INFORMATIONAL SUBMITTALS
A. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing-
label warnings and instruction manuals that include labeling conditions.

1.8 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials that match products installed and that are packaged with protective
covering for storage and identified with labels describing contents.
   1. Floor Service-Outlet Assemblies: One for every 10, but no fewer than one.
   2. Poke-Through, Fire-Rated Closure Plugs: One for every five floor service outlets
      installed, but no fewer than two.

PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. Manufacturers’ Names: Shortened versions (shown in parentheses) of the following
manufacturers' names are used in other Part 2 articles:
   1. Cooper Wiring Devices; Division of Cooper Industries, Inc. (Cooper).
   2. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
B. Source Limitations: Obtain each type of wiring device and associated wall plate from single
source from single manufacturer.

2.2 GENERAL WIRING-DEVICE REQUIREMENTS
A. Wiring Devices, Components, and Accessories: Listed and labeled as defined in NFPA 70, by a
qualified testing agency, and marked for intended location and application.
B. Comply with NFPA 70.
C. Devices that are manufactured for use with modular plug-in connectors may be substituted
under the following conditions:
   1. Connectors shall comply with UL 2459 and shall be made with stranding building wire.
   2. Devices shall comply with the requirements in this Section.
2.3 STRAIGHT-BLADE RECEPTACLES

A. Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 Configuration 5-20R, UL 498, and FS W-C-596.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Cooper; 5351 (single), CR5362 (duplex).
   b. Hubbell; HBL5351 (single), HBL5352 (duplex).
   c. Leviton; 5891 (single), 5352 (duplex).
   d. Pass & Seymour; 5361 (single), 5362 (duplex).

2. Flat screen TV receptacles shall utilize 2-gang recessed combination receptacle and coax outlet by one of the following:
   a. Arlington Industries; Inbox.
   b. Leviton; Recessed Entertainment Box.

2.4 GFCI RECEPTACLES

A. General Description:
   1. Straight blade, feed-through type.
   2. Comply with NEMA WD 1, NEMA WD 6, UL 498, UL 943 Class A, and FS W-C-596.
   3. Include indicator light that shows when the GFCI has malfunctioned and no longer provides proper GFCI protection.

B. Duplex GFCI Convenience Receptacles, 125 V, 20 A:

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Cooper; VGF20.
   b. Hubbell; GFR5352L.
   c. Pass & Seymour; 2095.
   d. Leviton; 7590.

2.5 CORD AND PLUG SETS

A. Description:
   1. Match voltage and current ratings and number of conductors to requirements of equipment being connected.
   2. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and ampacity of at least 130 percent of the equipment rating.

2.6 TOGGLE SWITCHES

A. Comply with NEMA WD 1, UL 20, and FS W-S-896.

B. Switches, 120/277 V, 20 A:
1. Products: Subject to compliance with requirements, provide one of the following:

   a. Single Pole:

      1) Cooper; AH1221.
      2) Hubbell; HBL1221.
      3) Leviton; 1221-2.
      4) Pass & Seymour; CSB20AC1.

   b. Two Pole:

      1) Cooper; AH1222.
      2) Hubbell; HBL1222.
      3) Leviton; 1222-2.
      4) Pass & Seymour; CSB20AC2.

   c. Three Way:

      1) Cooper; AH1223.
      2) Hubbell; HBL1223.
      3) Leviton; 1223-2.
      4) Pass & Seymour; CSB20AC3.

   d. Four Way:

      1) Cooper; AH1224.
      2) Hubbell; HBL1224.
      3) Leviton; 1224-2.
      4) Pass & Seymour; CSB20AC4.

C. Pilot-Light Switches, 20 A:

   1. Products: Subject to compliance with requirements, provide one of the following:

      a. Cooper; AH1221PL for 120 and 277 V.
      b. Hubbell; HBL1201PL for 120 and 277 V.
      c. Leviton; 1221-LH1.
      d. Pass & Seymour; PS20AC1RPL for 120 V, PS20AC1RPL7 for 277 V.

   2. Description: Single pole, with neon-lighted handle, illuminated when switch is "off."

2.7 WALL PLATES

   A. Single and combination types shall match corresponding wiring devices.

      1. Plate-Securing Screws: Metal with head color to match plate finish.
      4. Material for Damp Locations: Cast aluminum with spring-loaded lift cover, and listed and labeled for use in wet and damp locations.

   B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with Type 3R, weather-resistant, die-cast aluminum with lockable cover.
2.8 FLOOR SERVICE FITTINGS

A. Type: Modular, flush-type, dual-service units suitable for wiring method used.

B. Compartments: Barrier separates power from voice and data communication cabling.

C. Service Plate: Round, solid brass with satin finish.

D. Power Receptacle: NEMA WD 6 Configuration 5-20R, gray finish, unless otherwise indicated.

E. Voice and Data Communication Outlet: Two modular, keyed, color-coded, RJ-45 jacks for UTP cable complying with requirements in Division 27 Section "Communications Horizontal Cabling."

2.9 POKE-THROUGH ASSEMBLIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hubbell Incorporated; Wiring Device-Kellems.
2. Pass & Seymour/Legrand.
3. Square D/Schneider Electric.
4. Thomas & Betts Corporation.
5. Wiremold/Legrand.

B. Description:

1. Factory-fabricated and -wired assembly of below-floor junction box with multichanneled, through-floor raceway/firestop unit and detachable matching floor service-outlet assembly.
2. Comply with UL 514 scrub water exclusion requirements.
3. Service-Outlet Assembly: Flush type with four simplex receptacles and space for four RJ-45 jacks complying with requirements in Division 27 Section "Communications Horizontal Cabling."
4. Size: Selected to fit nominal 4-inch cored holes in floor and matched to floor thickness.
5. Fire Rating: Unit is listed and labeled for fire rating of floor-ceiling assembly.
6. Closure Plug: Arranged to close unused 4-inch cored openings and reestablish fire rating of floor.
7. Wiring Raceways and Compartments: For a minimum of four No. 12 AWG conductors and a minimum of four, four-pair cables that comply with requirements in Division 27 Section "Communications Horizontal Cabling."

2.10 FINISHES

A. Device Color:

1. Wiring Devices Connected to Normal Power System: As selected by Architect unless otherwise indicated or required by NFPA 70 or device listing.

B. Wall Plate Color: For plastic covers, match device color.
PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with NECA 1, including mounting heights listed in that standard, unless otherwise indicated.

B. Coordination with Other Trades:
   1. Protect installed devices and their boxes. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of boxes.
   2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
   3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
   4. Install wiring devices after all wall preparation, including painting, is complete.

C. Conductors:
   1. Do not strip insulation from conductors until right before they are spliced or terminated on devices.
   2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
   3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
   4. Existing Conductors:
      a. Cut back and pigtail, or replace all damaged conductors.
      b. Straighten conductors that remain and remove corrosion and foreign matter.
      c. Pigtailling existing conductors is permitted, provided the outlet box is large enough.

D. Device Installation:
   1. Replace devices that have been in temporary use during construction and that were installed before building finishing operations were complete.
   2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
   3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
   4. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.
   5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, two-thirds to three-fourths of the way around terminal screw.
   6. Use a torque screwdriver when a torque is recommended or required by manufacturer.
   7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
   8. Tighten unused terminal screws on the device.
   9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device-mounting screws in yokes, allowing metal-to-metal contact.

E. Receptacle Orientation:
1. Install ground pin of vertically mounted receptacles up, and on horizontally mounted receptacles to the left.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

H. Adjust locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.

3.2 GFCI RECEPTACLES

A. Install non-feed-through-type GFCI receptacles where protection of downstream receptacles is not required.

3.3 IDENTIFICATION

A. Comply with Division 26 Section "Identification for Electrical Systems."

B. Identify each receptacle with panelboard identification and circuit number. Use hot, stamped, or engraved machine printing with black-filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.

3.4 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. In addition to testing specified in Division 26 Section “Electrical Systems General Provisions”, provide the following tests for convenience receptacles:

1. Line Voltage: Acceptable range is 105 to 132 V.
2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is unacceptable.
3. Ground Impedance: Values of up to 2 ohms are acceptable.
4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
5. Using the test plug, verify that the device and its outlet box are securely mounted.
6. Tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

C. Test straight-blade for the retention force of the grounding blade according to NFPA 99. Retention force shall be not less than 4 oz.

D. Wiring device will be considered defective if it does not pass tests and inspections.

END OF SECTION 26 27 26
SECTION 26 28 13 - FUSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cartridge fuses rated 600-V ac and less for use in control circuits, enclosed switches, and enclosed controllers.
2. Spare-fuse cabinets.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:

1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
   a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
   b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse. Submit on translucent log-log graph paper.
5. Coordination charts and tables and related data.
6. Fuse sizes for elevator feeders and elevator disconnect switches.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Ambient temperature adjustment information.
2. Current-limitation curves for fuses with current-limiting characteristics.
3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse. Submit on translucent log-log graph paper.
4. Coordination charts and tables and related data.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.

1.6 QUALITY ASSURANCE

A. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
C. Comply with NEMA FU 1 for cartridge fuses.
D. Comply with NFPA 70.

1.7 PROJECT CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F or more than 100 deg F, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.8 COORDINATION

A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Cooper Bussmann, Inc.
   2. Edison Fuse, Inc.
   3. Ferraz Shawmut, Inc.
   4. Littelfuse, Inc.
2.2 CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

2.3 SPARE-FUSE CABINET

A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.

1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
2. Finish: Gray, baked enamel.
3. Identification: "SPARE FUSES" in 1-1/2-inch-high letters on exterior of door.
4. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

A. Cartridge Fuses:

1. Service Entrance: Class J, time delay.
2. Feeders: Class J, fast acting.
3. Motor Branch Circuits: Class RK1, time delay.
4. Other Branch Circuits: Class RK1, time delay.
5. Control Circuits: Class CC, fast acting.

3.3 INSTALLATION

A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
B. Install spare-fuse cabinet(s).

3.4 IDENTIFICATION

A. Install labels complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems" and indicating fuse replacement information on inside door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION 26 28 13
SECTION 26 28 16 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Fusible switches.
2. Nonfusible switches.
3. Shunt trip switches.
4. Molded-case circuit breakers (MCCBs).
5. Molded-case switches.

1.3 DEFINITIONS

A. NC: Normally closed.
B. NO: Normally open.
C. SPDT: Single pole, double throw.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

1. Enclosure types and details for types other than NEMA 250, Type 1.
2. Current and voltage ratings.
3. Short-circuit current ratings (interrupting and withstand, as appropriate).
4. Include evidence of NRTL listing for series rating of installed devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.
6. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Submit on translucent log-log graph paper.

B. Shop Drawings: For enclosed switches and circuit breakers. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.
1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Field quality-control reports.
   1. Test procedures used.
   2. Test results that comply with requirements.
   3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

C. Manufacturer's field service report.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
   2. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Submit on translucent log-log graph paper.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
   2. Fuse Pullers: Two for each size and type.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.
   1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NFPA 70.
1.9 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.
2. Altitude: Not exceeding 6600 feet.

1.10 COORDINATION

A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

PART 2 - PRODUCTS

2.1 FUSIBLE SWITCHES

A. Manufacturers: Same manufacturer as switchgear.

B. Type HD, Heavy Duty, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Double Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
4. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
5. Hookstick Handle: Allows use of a hookstick to operate the handle.
6. Lugs: Mechanical type, suitable for number, size, and conductor material.
7. Service-Rated Switches: Labeled for use as service equipment.

2.2 NONFUSIBLE SWITCHES

A. Manufacturers: Same manufacturer as switchgear.

B. Type HD, Heavy Duty, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
C. Accessories:
1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
4. Hookstick Handle: Allows use of a hookstick to operate the handle.
5. Lugs: Mechanical type, suitable for number, size, and conductor material.
6. Accessory Control Power Voltage: Remote mounted and powered; 24-V dc.

2.3 SHUNT TRIP SWITCHES
A. Manufacturers: Same manufacturer as switchgear.
B. General Requirements: Comply with ASME A17.1, UL 50, and UL 98, with 200-kA interrupting and short-circuit current rating when fitted with Class J fuses.
C. Switches: Three-pole, horsepower rated, with integral shunt trip mechanism and Class J fuse block; lockable handle with capability to accept three padlocks; interlocked with cover in closed position.
D. Control Circuit: 120-V ac; obtained from integral control power transformer, with primary and secondary fuses, with a control power transformer of enough capacity to operate shunt trip, connected pilot, and indicating and control devices.
E. Accessories:
1. Oiltight key switch for key-to-test function.
2. Oiltight green ON pilot light.
3. Isolated neutral lug; 100 percent rating.
4. Mechanically interlocked auxiliary contacts that change state when switch is opened and closed.
5. Form C alarm contacts that change state when switch is tripped.
6. Three-pole, double-throw, fire-safety and alarm relay; 24-V dc coil voltage.
7. Three-pole, double-throw, fire-alarm voltage monitoring relay complying with NFPA 72.

2.4 MOLDED-CASE CIRCUIT BREAKERS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. Siemens Energy & Automation, Inc.
3. Square D; a brand of Schneider Electric.
B. General Requirements: Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents.
D. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

E. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:
   1. Instantaneous trip.
   2. Long- and short-time pickup levels.
   3. Long- and short-time time adjustments.
   4. Ground-fault pickup level, time delay, and i^2t response.

F. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.

H. Ground-Fault, Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip).

I. Features and Accessories:
   1. Standard frame sizes, trip ratings, and number of poles.
   2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.
   3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.
   4. Ground-Fault Protection: Comply with UL 1053; integrally mounted, self-powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
   5. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
   6. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
   7. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
   8. Alarm Switch: One NO contact that operates only when circuit breaker has tripped.
   9. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
  10. Zone-Selective Interlocking: Integral with ground-fault trip unit; for interlocking ground-fault protection function.
  11. Electrical Operator: Provide remote control for on, off, and reset operations.

2.5 ENCLOSURES

A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.
   1. Indoor, Dry and Clean Locations: NEMA 250, Type 1.
   2. Outdoor Locations: NEMA 250, Type 3R.
   3. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4.
   4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.
B. Comply with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
D. Install fuses in fusible devices.
E. Comply with NECA 1.

3.3 IDENTIFICATION

A. Comply with requirements in Division 26 Section "Identification for Electrical Systems."
   1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
   2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.4 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.
B. In addition to testing specified in Division 26 Section “Electrical Systems General Provisions”, provide the following tests.
   1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.
C. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

3.5 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
B. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Overcurrent Protective Device Coordination Study".

END OF SECTION 26 28 16
SECTION 26 29 13 - ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes the following enclosed controllers rated 600 V and less:

1. Full-voltage manual.
2. Full-voltage magnetic.
3. Reduced-voltage magnetic.
4. Reduced-voltage solid state.
5. Multispeed.

B. Related Section:

1. Division 26 Section "Variable-Frequency Motor Controllers" for general-purpose, ac, adjustable-frequency, pulse-width-modulated controllers for use on variable torque loads in ranges up to 200 hp.

1.3 DEFINITIONS

A. CPT: Control power transformer.
B. MCCB: Molded-case circuit breaker.
C. MCP: Motor circuit protector.
D. N.C.: Normally closed.
E. N.O.: Normally open.
F. OCPD: Overcurrent protective device.
G. SCR: Silicon-controlled rectifier.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of enclosed controller. Include manufacturer's technical data on features, performance, electrical characteristics, ratings, and enclosure types and finishes.
1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Field quality-control reports.

C. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.

D. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For enclosed controllers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Routine maintenance requirements for enclosed controllers and installed components.
2. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
3. Manufacturer's written instructions for setting field-adjustable overload relays.
4. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage solid-state controllers.

1.7 MATERIALS MAINTENANCE SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
2. Control Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
3. Indicating Lights: Two of each type and color installed.
4. Auxiliary Contacts: Furnish one spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish three spares for each size and type of magnetic contactor installed.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NFPA 70.
1.9 DELIVERY, STORAGE, AND HANDLING

A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

B. If stored in areas subject to weather, cover enclosed controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers.

1.10 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.
2. Altitude: Not exceeding 6600 feet.

1.11 COORDINATION

A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

PART 2 - PRODUCTS

2.1 FULL-VOLTAGE CONTROLLERS

A. General Requirements for Full-Voltage Controllers: Comply with NEMA ICS 2, general purpose, Class A.

B. Motor-Starting Switches: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.

1. Manufacturers: Same manufacturer as switchgear.
2. Configuration: Nonreversing.
3. Flush Surface mounting.

C. Fractional Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.

1. Manufacturers: Same manufacturer as switchgear.
2. Configuration: Nonreversing.
3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button; bimetallic type.
4. Surface mounting.
5. Green pilot light.

D. Integral Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.
1. Manufacturers: Same manufacturer as switchgear.
2. Configuration: Nonreversing.
3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters and sensors in each phase, matched to nameplate full-load current of actual protected motor and having appropriate adjustment for duty cycle; external reset push button; bimetallic type.
4. Surface mounting.
5. Green pilot light.
6. N.O. auxiliary contact.

E. Combination Magnetic Controller: Factory-assembled combination of magnetic controller, OCPD, and disconnecting means.
1. Manufacturers: Same manufacturer as switchgear.
3. MCP Disconnecting Means:
   a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
   b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
   c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
   d. N.O. alarm contact that operates only when MCP has tripped.
   e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

2.2 ENCLOSURES

A. Enclosed Controllers: NEMA ICS 6, to comply with environmental conditions at installed location.
1. Dry and Clean Indoor Locations: Type 1.
2. Outdoor Locations: Type 3R.
3. Other Wet or Damp Indoor Locations: Type 4.
4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.

2.3 ACCESSORIES

A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.
a. Push Buttons: Recessed types; maintained as indicated.
b. Pilot Lights: LED types; colors as indicated; push to test.
c. Selector Switches: Rotary type.

2. Elapsed Time Meters: Heavy duty with digital readout in hours; resettable.
3. Meters: Panel type, 2-1/2-inch minimum size with 90- or 120-degree scale and plus or minus two percent accuracy. Where indicated, provide selector switches with an off position.

B. Reversible N.C./N.O. auxiliary contact(s).

C. Control Relays: Auxiliary and adjustable solid-state time-delay relays.

E. Breather and drain assemblies, to maintain interior pressure and release condensation in Type 4 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

F. Space heaters, with N.C. auxiliary contacts, to mitigate condensation in Type 3R enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

G. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

H. Cover gaskets for Type 1 enclosures.

I. Terminals for connecting power factor correction capacitors to the load side of overload relays.

J. Spare control wiring terminal blocks, quantity as indicated; unwired.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and surfaces to receive enclosed controllers, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine enclosed controllers before installation. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Wall-Mounted Controllers: Install enclosed controllers on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."
B. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

C. Install heaters in thermal overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.

D. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.

E. Install power factor correction capacitors. Connect to the load side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents.

F. Comply with NECA 1.

3.3 IDENTIFICATION

A. Identify enclosed controllers, components, and control wiring. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

   1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
   2. Label each enclosure with engraved nameplate.
   3. Label each enclosure-mounted control and pilot device.

3.4 CONTROL WIRING INSTALLATION

A. Install wiring between enclosed controllers and remote devices and facility's central control system. Comply with requirements in Division 26 Section "Control-Voltage Electrical Power Cables."

B. Bundle, train, and support wiring in enclosures.

C. Connect selector switches and other automatic-control selection devices where applicable.

   1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
   2. Connect selector switches with enclosed-controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.5 FIELD QUALITY CONTROL

A. Refer to Division 26 Section "Electrical Systems General Provisions" for testing requirements.

B. In addition to testing specified in Division 26 Section "Electrical Systems General Provisions", provide the following tests.

   1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.
3. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.

4. Test insulation resistance for each enclosed-controller element, component, connecting motor supply, feeder, and control circuits.

5. Test continuity of each circuit.

6. Verify that voltages at controller locations are within plus or minus 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Construction Manager before starting the motor(s).

7. Test each motor for proper phase rotation.

9. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

10. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

C. Enclosed controllers will be considered defective if they do not pass tests and inspections.

3.6 ADJUSTING

A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.

B. Adjust overload-relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.

C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable instantaneous trip elements. Initially adjust to six times the motor nameplate full-load ampere ratings and attempt to start motors several times, allowing for motor cooldown between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Construction Manager before increasing settings.

D. Set the taps on reduced-voltage autotransformer controllers at 50 percent.

E. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage solid-state controllers.

F. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Overcurrent Protective Device Coordination Study."

3.7 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.

B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.
3.8 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers, and to use and reprogram microprocessor-based, reduced-voltage solid-state controllers.

END OF SECTION 26 29 13
SECTION 26 36 00 - TRANSFER SWITCHES [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes transfer switches rated 600 V and less, including the following:
   1. Automatic transfer switches.
   2. Bypass/isolation switches.
   3. Nonautomatic transfer switches.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Features and operating sequences, both automatic and manual.
   2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing
Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency’s Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Source Limitations: Obtain automatic transfer switches bypass/isolation switches nonautomatic transfer switches and remote annunciator and control panels through one source from a single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Comply with NEMA ICS 1.

F. Comply with NFPA 70.

G. Comply with NFPA 99.

H. Comply with NFPA 110.

I. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.7 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide ASCO 4000 Series or comparable product by one of the following:

1. Contactor Transfer Switches:
   a. GE Zenith Controls.
   b. Eaton.

2.2 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.

C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
2. Switch Action: Double throw; mechanically held in both directions.
3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

G. Neutral Switching. Where four-pole switches are indicated, provide overlapping neutral contacts.

H. Neutral Terminal: Fully rated, unless otherwise indicated.

I. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.

J. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."

1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

K. Enclosures: General-purpose NEMA 250, Type 1, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

1. Normal source acceptable, emergency source acceptable and switch status shall be monitored by the building automation system.
2. Transfer switch shall log data and maintain last 99 events upon loss of power. Data logged shall be as follows:
   a. Total number of transfers.
   b. Number of transfers caused by power failures.
   c. Total number of days controller has been energized.
2.3 AUTOMATIC TRANSFER SWITCHES

A. Comply with Level 1 equipment according to NFPA 110.

B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.

E. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

F. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.

G. Motor Disconnect and Timing Relay: Controls designated starters so they disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters is through wiring external to automatic transfer switch. Time delay for reconnecting individual motor loads is adjustable between 1 and 60 seconds, and settings are as indicated. Relay contacts handling motor-control circuit inrush and seal currents are rated for actual currents to be encountered.

H. Automatic Transfer-Switch Features:
   1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
   2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.
   3. Voltage/Frequency Lockout Relay: Prevent premature transfer to emergency source. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
   4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
   5. Test Switch: Simulate normal-source failure.
   6. Switch-Position Pilot Lights: Indicate source to which load is connected.
      a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
   8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.

2.4 NONAUTOMATIC TRANSFER SWITCHES

A. Operation: Electrically actuated by push buttons designated "Normal Source" and "Alternate Source." In addition, removable manual handle provides quick-make, quick-break manual-switching action. Switch shall be capable of electrically or manually transferring load in either direction with either or both sources energized. Control circuit disconnects from electrical operator during manual operation.

B. Double-Throw Switching Arrangement: Incapable of pauses or intermediate position stops during switching sequence.

C. Nonautomatic Transfer-Switch Accessories:

1. Pilot Lights: Indicate source to which load is connected.
   a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."

3. Unassigned Auxiliary Contacts: One set of normally closed contacts for each switch position, rated 10 A at 240-V ac.

2.5 SOURCE QUALITY CONTROL

A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details.

B. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.

C. Identify components according to Division 26 Section "Identification for Electrical Systems."

D. Set field-adjustable intervals and delays, relays, and engine exerciser clock.
3.2 CONNECTIONS

A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.

B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. In addition to testing specified in Division 26 Section “Electrical Systems General Provisions”, provide the following tests:

1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
   a. Check for electrical continuity of circuits and for short circuits.
   b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
   c. Verify that manual transfer warnings are properly placed.
   d. Perform manual transfer operation.

4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
   a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
   b. Simulate loss of phase-to-ground voltage for each phase of normal source.
   c. Verify time-delay settings.
   d. Verify pickup and dropout voltages by data readout or inspection of control settings.
   e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
   f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.

5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
   a. Verify grounding connections and locations and ratings of sensors.
C. Remove and replace malfunctioning units and retest as specified above.

3.4 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 26 36 00
SECTION 26 43 13 - TRANSIENT-VOLTAGE SUPPRESSION FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes field-mounted TVSS for low-voltage (120 to 600 V) power distribution and control equipment.
B. Related Sections:
   1. Division 26 Section "Switchgear" for factory-installed TVSS.
   2. Division 26 Section "Panelboards" for factory-installed TVSS.
   3. Division 26 Section "Wiring Devices" for devices with integral TVSS.

1.3 DEFINITIONS
B. SVR: Suppressed voltage rating.
C. TVSS:Transient voltage surge suppressor(s), both singular and plural; also, transient voltage surge suppression.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product indicated. Include rated capacities, operating weights, electrical characteristics, furnished specialties, and accessories.

1.5 INFORMATIONAL SUBMITTALS
A. Qualification Data: For qualified testing agency.
B. Product Certificates: For TVSS devices, from manufacturer.
C. Field quality-control reports.
D. Warranties: Sample of special warranties.
1.6 CLOSEOUT SUBMITTALS
   A. Operation and Maintenance Data: For TVSS devices to include in emergency, operation, and maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS
   A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
      1. Replaceable Protection Modules: One of each size and type installed.

1.8 QUALITY ASSURANCE
   A. Testing Agency Qualifications: Member company of NETA or an NRTL.
      1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
   B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.
   C. Comply with IEEE C62.41.2 and test devices according to IEEE C62.45.
   D. Comply with NEMA LS 1.
   E. Comply with UL 1283 and UL 1449.
   F. Comply with NFPA 70.

1.9 PROJECT CONDITIONS
   A. Service Conditions: Rate TVSS devices for continuous operation under the following conditions unless otherwise indicated:
      1. Maximum Continuous Operating Voltage: Not less than 115 percent of nominal system operating voltage.
      2. Operating Temperature: 30 to 120 deg F.
      3. Humidity: 0 to 85 percent, noncondensing.
      4. Altitude: Less than 20,000 feet above sea level.

1.10 COORDINATION
   A. Coordinate location of field-mounted TVSS devices to allow adequate clearances for maintenance.
1.11 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SERVICE ENTRANCE SUPPRESSORS

A. Manufacturers: Same manufacturer as switchgear.

B. Surge Protection Devices:

1. Comply with UL 1449.
2. Modular design (with field-replaceable modules).
3. Fuses, rated at 200-kA interrupting capacity.
4. Fabrication using bolted compression lugs for internal wiring.
5. Integral disconnect switch.
6. Redundant suppression circuits.
7. Redundant replaceable modules.
8. Arrangement with copper bus bars and for bolted connections to phase buses, neutral bus, and ground bus.
9. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
10. LED indicator lights for power and protection status.
11. Audible alarm, with silencing switch, to indicate when protection has failed.
12. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

C. Peak Single-Impulse Surge Current Rating: 120 kA per mode, 240 kA per phase.

D. Minimum single impulse current ratings, using 8-by-20-mic.sec waveform described in IEEE C62.41.2

1. Line to Neutral: 70,000 A.
2. Line to Ground: 70,000 A.
3. Neutral to Ground: 50,000 A.

E. Protection modes and UL 1449 SVR for grounded wye circuits with 480Y/277 V and 208Y/120 V, 3-phase, 4-wire circuits shall be as follows:

1. Line to Neutral: 800 V for 480Y/277 V.
2. Line to Ground: 800 V for 480Y/277 V.

F. Protection modes and UL 1449 SVR for 240/120 V, single-phase, 3-wire circuits shall be as follows:
1. Line to Neutral: 400 V.
2. Line to Ground: 400 V.
3. Neutral to Ground: 400 V.

2.2 PANELBOARD SUPPRESSORS

A. Manufacturers: Same manufacturer as switchgear.

B. Surge Protection Devices:
   1. Comply with UL 1449.
   2. Modular design (with field-replaceable modules).
   3. Short-circuit current rating complying with UL 1449, and matching or exceeding the panelboard short-circuit rating and redundant suppression circuits; with individually fused metal-oxide varistors.
   4. Fuses, rated at 200-kA interrupting capacity.
   5. Fabrication using bolted compression lugs for internal wiring.
   6. Integral disconnect switch.
   7. Redundant suppression circuits.
   8. Redundant replaceable modules.
   9. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
   10. LED indicator lights for power and protection status.
   11. Audible alarm, with silencing switch, to indicate when protection has failed.
   12. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

C. Peak Single-Impulse Surge Current Rating: 80 kA per mode, 160 kA per phase.

D. Minimum single impulse current ratings, using 8-by-20-mic.sec waveform described in IEEE C62.41.2:
   1. Line to Neutral: 70,000 A.
   2. Line to Ground: 70,000 A.
   3. Neutral to Ground: 50,000 A.

E. Protection modes and UL 1449 SVR for grounded wye circuits with 480Y/277 V and 208Y/120 V, 3-phase, 4-wire circuits shall be as follows:
   1. Line to Neutral: 800 V for 480Y/277 V, 400 V for 208Y/120 V.
   2. Line to Ground: 800 V for 480Y/277 V, 400 V for 208Y/120 V.
   3. Neutral to Ground: 800 V for 480Y/277 V, 400 V for 208Y/120 V.

F. Protection modes and UL 1449 SVR for 240/120-V, single-phase, 3-wire circuits shall be as follows:
   1. Line to Neutral: 400 V.
   2. Line to Ground: 400 V.
   3. Neutral to Ground: 400 V.
2.3 ENCLOSURES

A. Indoor Enclosures: NEMA 250 Type 1.

B. Outdoor Enclosures: NEMA 250 Type 3R.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install TVSS devices at service entrance on load side, with ground lead bonded to service entrance ground.

B. Install TVSS devices for panelboards and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.

1. Provide multiple circuit breaker as a dedicated disconnecting means for TVSS sized per manufacturer’s recommendations.

3.2 FIELD QUALITY CONTROL

A. Refer to Division 26 Section “Electrical Systems General Provisions” for testing requirements.

B. In addition to testing specified in Division 26 Section “Electrical Systems General Provisions”, provide the following tests:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS, "Surge Arresters, Low-Voltage Surge Protection Devices" Section. Certify compliance with test parameters.
2. After installing TVSS devices but before electrical circuitry has been energized, test for compliance with requirements.
3. Complete startup checks according to manufacturer's written instructions.

C. TVSS device will be considered defective if it does not pass tests and inspections.

3.3 STARTUP SERVICE

A. Do not energize or connect service entrance equipment and panelboards to their sources until TVSS devices are installed and connected.

B. Do not perform insulation resistance tests of the distribution wiring equipment with the TVSS installed. Disconnect before conducting insulation resistance tests, and reconnect immediately after the testing is over.

3.4 DEMONSTRATION

A. Train Owner's maintenance personnel to maintain TVSS devices.
SECTION 26 51 00 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Interior lighting fixtures, lamps, and ballasts.
   2. Emergency lighting units.
   3. Exit signs.
   4. Lighting fixture supports.
   5. Retrofit kits for fluorescent lighting fixtures.

B. Related Sections:
   1. Division 26 Section "Lighting Control Devices" for automatic control of lighting, including time switches, photoelectric relays, occupancy sensors, and multipole lighting relays and contactors.
   2. Division 26 Section "Network Lighting Controls" for manual or programmable control systems with low-voltage control wiring or data communication circuits.

1.3 DEFINITIONS

A. BF: Ballast factor.
B. CCT: Correlated color temperature.
C. CRI: Color-rendering index.
D. HID: High-intensity discharge.
E. LER: Luminaire efficacy rating.
F. Lumen: Measured output of lamp and luminaire, or both.
G. Luminaire: Complete lighting fixture, including ballast housing if provided.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
   1. Physical description of lighting fixture including dimensions.
   2. Ballast, including BF.
   4. Life, output (lumens, CCT, and CRI), and energy-efficiency data for lamps.
   5. Photometric data and adjustment factors based on laboratory tests, complying with IESNA Lighting Measurements Testing & Calculation Guides, of each lighting fixture type. The adjustment factors shall be for lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.
B. Shop Drawings: For nonstandard or custom lighting fixtures. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.
   1. Provide a list of all lamp types used on Project; use ANSI and manufacturers' codes.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Globes and Guards: One for every 20 of each type and rating installed. Furnish at least three of each type.

1.7 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NFPA 70.

D. FM Global Compliance: Lighting fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FM Global.

1.8 COORDINATION

A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide one of the products indicated on Drawings.

B. In addition to the general requirements relating to substitutions as specified in Division 01 "Substitution Procedures", substitutions of lighting fixtures shall comply with the following:
   1. The Design Team, consisting of the Architect, Engineer and Lighting Consultant, shall evaluate all proposed substitutions. The Architect reserves the right to require the use of all specified products unless specific substitutions have been approved by the Architect in writing.
   2. Proposed substitutions shall be of equivalent performance, efficiency, dimensions and quality of construction as specified fixture. It shall be incumbent upon the Contractor to
demonstrate equivalent performance, efficiency, dimensions and quality of construction. The Owner, in conjunction with the Design Team, shall evaluate the proposed substitution against the basis of design.

3. Proposed substitutions that are judged to not be equivalent to the basis of design shall be considered “value engineering” and shall be submitted complete with the reduction of Contract amount that will occur if the substitution is accepted.

4. The professional time to evaluate any such substitution request by the Design Team shall be compensated by the Contractor. Such payment compensation does not guarantee approval.

5. No compensation will be given or made due to rejection of a substituted product not approved in writing.

6. The Contractor shall be fully responsible for modifying all other systems to accommodate the proposed substitution, including but not limited to the impact on the following: lamps, ballasts, controls, supports, branch wiring, LEED requirements, and coordination with mechanical, structural, and architectural elements.

7. The substituted products shall result in a complete and functioning lighting system which operates as designed.

8. All lighting systems and related equipment, lamps, devices, etc. specified herein shall be ordered in sufficient time to complete the project on the schedule established at the time of notice to proceed, or as may be changed thereafter with the Owner’s consent. Substitution requests caused by the inability to obtain specified products shall be forwarded with proof of timely ordering and written proof from the specified manufacturer that despite timely efforts, the specified products cannot be supplied on time. Inadequately documented requests of this type or other late substitution requests will not be considered.

2.2 GENERAL REQUIREMENTS FOR LIGHTING FIXTURES AND COMPONENTS

A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

B. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.

C. HID Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5B.

D. Metal Parts: Free of burrs and sharp corners and edges.

E. Sheet Metal Components: Steel unless otherwise indicated. Form and support to prevent warping and sagging.

F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.

G. Diffusers and Globes:
   1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic meeting ASTM specifications for methacrylate molding compounds D.788-69A. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
      a. Lens Thickness: At least 0.125 inch minimum unless otherwise indicated.
      b. UV stabilized.
   2. Glass: Annealed crystal glass unless otherwise indicated.
H. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps and ballasts. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
   1. Label shall include the following lamp and ballast characteristics:
      a. "USE ONLY" and include specific lamp type.
      b. Lamp diameter code (T-4, T-5, T-8, T-12, etc.), tube configuration (twin, quad, triple, etc.), base type, and nominal wattage for fluorescent and compact fluorescent luminaires.
      c. Lamp type, wattage, bulb type (ED17, BD56, etc.) and coating (clear or coated) for HID luminaires.
      d. Start type (preheat, rapid start, instant start, etc.) for fluorescent and compact fluorescent luminaires.
      e. ANSI ballast type (M98, M57, etc.) for HID luminaires.
      f. CCT and CRI for all luminaires.

I. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic interference as required by MIL-STD-461E. Fabricate lighting fixtures with one filter on each ballast indicated to require a filter.

J. Provide field applied label on each lighting fixture ballast chamber in 1/8" lettering to read "__V; Instant-Start; _.__ Ballast Factor" or "__V; Program-Start; _.__ Ballast Factor" (insert the voltage and ballast factor in underlined space). For Example, “120V; Program-Start; 0.88 Ballast Factor.”

K. Provide inline disconnect in all lighting fixtures to comply with 2008 NEC 410.13-(G). Provide wire nut connection on load side of disconnect to facilitate ballast replacement.

L. Obtain all similar lamp types through one source from a single manufacturer.

M. Provide 2 year warranty for all lamps.

N. Provide 5 year warranty for all ballasts.

2.3 BALLASTS FOR LINEAR FLUORESCENT LAMPS

A. General Requirements for Electronic Ballasts:
   1. Comply with UL 935 and with ANSI C82.11.
   2. NEMA premium efficiency.
   3. Designed for type and quantity of lamps served.
   4. Ballasts shall be designed for full light output unless another BF, dimmer, or bi-level control is indicated.
   5. Sound Rating: Class A.
   7. Transient Voltage Protection: IEEE C62.41.1 and IEEE C62.41.2, Category A or better.
   8. Operating Frequency: 42 kHz or higher.
   9. Lamp Current Crest Factor: 1.7 or less.
   10. BF: 0.88 or as listed on the Lighting Fixture Schedule.
   11. Power Factor: 0.95 or higher.
   12. Programmed rapid start ballasts (PRS) utilized with occupancy or in frequent switching scenarios shall be by one of the following unless otherwise noted:
      a. Advance: Optima.
      b. GE: UltraStart.
      c. Sylvania: Prostart.
   13. Instant start ballasts (IS) utilized with manual switching or unswitched fixtures shall be by one of the following unless otherwise noted:
a. Advance: Optanium.
b. GE: Ultramax.
c. Sylvania: QHE.
d. Universal: ULTim8.

B. Luminaires controlled by occupancy sensors shall have programmed rapid start ballasts.

C. Electronic Programmed-Start Ballasts for T5HO Lamps: Comply with ANSI C82.11 and the following:
   1. Lamp end-of-life detection and shutdown circuit for T5 diameter lamps.
   2. Automatic lamp starting after lamp replacement.

D. Electromagnetic Ballasts: Comply with ANSI C82.1; energy saving, high-power factor, Class P, and having automatic-reset thermal protection.

E. Single Ballasts for Multiple Lighting Fixtures: Factory wired with ballast arrangements and bundled extension wiring to suit final installation conditions without modification or rewiring in the field.

F. Ballasts for Low-Temperature Environments:
   1. Temperatures 0 Deg F and Higher: Electronic instant start type rated for 0 deg F starting and operating temperature with indicated lamp types.

G. Ballasts for Low Electromagnetic-Interference Environments: Comply with 47 CFR 18, Ch. 1, Subpart C, for limitations on electromagnetic and radio-frequency interference for consumer equipment.

H. Ballasts for Dimmer-Controlled Lighting Fixtures: Electronic type.
   1. Dimming Range: 100 to 5 percent of rated lamp lumens.
   2. Ballast Input Watts: Can be reduced to 20 percent of normal.
   3. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated.
   4. Control: Coordinate wiring from ballast to control device to ensure that the ballast, controller, and connecting wiring are compatible.

I. Ballasts for Tri-Level Controlled Lighting Fixtures: Electronic type.
   1. Operating Modes: Ballast circuit and leads provide for remote control of the light output of the associated lamp between high- and low-level and off.
      a. High-Level Operation: 100 percent of rated lamp lumens.
      b. Low-Level Operation: 30 and 60 percent of rated lamp lumens.
   2. Ballast shall provide equal current to each lamp in each operating mode.
   3. Compatibility: Certified by manufacturer for use with specific tri-level control system and lamp type indicated.

2.4 BALLASTS FOR COMPACT FLUORESCENT LAMPS

A. Description: Electronic-programmed rapid-start type, complying with UL 935 and with ANSI C 82.11, designed for type and quantity of lamps indicated. Ballast shall be designed for full light output unless dimmer or bi-level control is indicated:
   1. Lamp end-of-life detection and shutdown circuit.
   2. Automatic lamp starting after lamp replacement.
   3. Sound Rating: Class A.
   4. Total Harmonic Distortion Rating: Less than 20 percent.
   5. Transient Voltage Protection: IEEE C62.41.1 and IEEE C62.41.2, Category A or better.
6. Operating Frequency: 20 kHz or higher.
7. Lamp Current Crest Factor: 1.7 or less.
8. BF: 0.95 or higher unless otherwise indicated.
9. Power Factor: 0.95 or higher.
10. Interference: Comply with 47 CFR 18, Ch. 1, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.

2.5 EXIT SIGNS

A. General Requirements for Exit Signs: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.

B. Internally Lighted Signs:
   1. Lamps for AC Operation: Red LEDs, 50,000 hours minimum rated lamp life.

2.6 FLUORESCENT LAMPS

A. T8 rapid-start lamps, rated 32 W maximum, nominal length of 48 inches, 3100 initial lumens (minimum), CRI 80-86, color temperature 3500 K, and average rated life 36,000 hours unless otherwise indicated.
   1. Lamps shall be by one of the following:
      a. GE High Lumen: F32T8/XL/SPX35/HL/ECO
      b. Philips Advantage: F32T8/ADV835/ALTO
      c. Sylvania XPS: F032/835/XPS/ECO

B. T5HO rapid-start, high-output lamps, rated 54 W maximum, nominal length of 45.2 inches, 5000 initial lumens (minimum), CRI 85 (minimum), color temperature 4100 K, and average rated life of 20,000 hours unless otherwise indicated.
   1. Lamps shall be by one of the following:
      a. Phillips: 49W T5HO
      b. Sylvania: 50W T5HO

C. Compact Fluorescent Lamps: 4-Pin, CRI 80 (minimum), color temperature 3500 K, average rated life of 16,000 hours at three hours operation per start, and suitable for use with dimming ballasts unless otherwise indicated.
   1. 18 W: T4, double or triple tube, rated 1200 initial lumens (minimum).
   2. 32 W: T4, triple tube, rated 2400 initial lumens (minimum).

2.7 LIGHTING FIXTURE SUPPORT COMPONENTS

A. Comply with Division 26 Section "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.

B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.

C. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.

E. Wires for Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage.

F. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.
PART 3 - EXECUTION

3.1 INSTALLATION

A. Lighting fixtures:
   1. Set level, plumb, and square with ceilings and walls unless otherwise indicated.
   2. Install lamps in each luminaire.

B. Temporary Lighting: If it is necessary, and approved by Architect, to use permanent luminaires for temporary lighting, install and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires, disassemble, clean thoroughly, install new lamps, and reinstall.

C. Remote Mounting of Ballasts: Distance between the ballast and fixture shall not exceed that recommended by ballast manufacturer. Verify, with ballast manufacturers, maximum distance between ballast and luminaire.

D. Lay-in Ceiling Lighting Fixtures Supports: Use grid as a support element.
   1. Install ceiling support system rods or wires, independent of the ceiling suspension devices, for each fixture. Locate not more than 6 inches from lighting fixture corners.
   2. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
   3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch metal channels spanning and secured to ceiling tees.
   4. Install at least two independent support rods or wires from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.

E. Suspended Lighting Fixture Support:
   1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
   3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.
   4. Do not use grid as support for pendant luminaires. Connect support wires or rods to building structure.

F. All fluorescent lamps on dimming ballasts shall be burned in at full brightness for 100 hours continuously prior to dimming. Bypass local control if necessary.

G. All lighting fixtures shall be thoroughly cleaned and clear of dust, paint and construction debris and fingerprints after all other trades are complete, but prior to date of substantial completion.

H. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.2 IDENTIFICATION

A. Install labels with panel and circuit numbers on concealed junction and outlet boxes. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
3.3 STARTUP SERVICE

A. Burn-in all lamps that require specific aging period to operate properly, prior to occupancy by Owner. Burn-in fluorescent and compact fluorescent lamps intended to be dimmed, for at least 100 hours at full voltage.

3.4 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting aimable luminaires to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Some of this work may be required after dark.

1. Adjust aimable luminaires in the presence of Architect.

END OF SECTION 26 51 00
SECTION 26 56 00 - EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Exterior luminaires with lamps and ballasts.
      2. Luminaire-mounted photoelectric relays.
      3. Poles and accessories.
      4. Luminaire lowering devices.
   B. Related Sections:
      1. Division 26 Section “Interior Lighting” for exterior luminaires normally mounted on exterior surfaces of buildings.

1.3 DEFINITIONS
   A. CCT: Correlated color temperature.
   B. CRI: Color-rendering index.
   C. HID: High-intensity discharge.
   D. LER: Luminaire efficacy rating.
   E. Luminaire: Complete lighting fixture, including ballast housing if provided.
   F. Pole: Luminaire support structure, including tower used for large area illumination.
   G. Standard: Same definition as “Pole” above.

1.4 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION
   A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4-M.
   B. Live Load: Single load of 500 lbf, distributed as stated in AASHTO LTS-4-M.
   C. Ice Load: Load of 3 lbf/sq. ft., applied as stated in AASHTO LTS-4-M Ice Load Map.
D. Wind Load: Pressure of wind on pole and luminaire and banners and banner arms, calculated and applied as stated in AASHTO LTS-4-M.

1.5 ACTION SUBMITTALS

A. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Anchor-bolt templates keyed to specific poles and certified by manufacturer.
   3. Design calculations, certified by a qualified professional engineer, indicating strength of screw foundations and soil conditions on which they are based.
   4. Wiring Diagrams: For power, signal, and control wiring.

B. Samples: For products designated for sample submission in the Exterior Lighting Device Schedule. Each Sample shall include lamps and ballasts.

1.6 INFORMATIONAL SUBMITTALS

A. Pole and Support Component Certificates: Signed by manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4-M and that load imposed by luminaire and attachments has been included in design. The certification shall be based on design calculations by a professional engineer.

B. Qualification Data: For qualified agencies providing photometric data for lighting fixtures.

C. Field quality-control reports.

D. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For luminaires and poles to include in emergency, operation, and maintenance manuals.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Lamps: One for every 100 of each type and rating installed. Furnish at least one of each type.
   2. Glass and Plastic Lenses, Covers, and Other Optical Parts: One for every 100 of each type and rating installed. Furnish at least one of each type.
   3. Ballasts: One for every 100 of each type and rating installed. Furnish at least one of each type.
   4. Globes and Guards: One for every 20 of each type and rating installed. Furnish at least one of each type.
1.9 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NFPA 70.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Package aluminum poles for shipping according to ASTM B 660.

B. Store poles on decay-resistant-treated skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.

C. Retain factory-applied pole wrappings on fiberglass and laminated wood poles until right before pole installation. Handle poles with web fabric straps.

D. Retain factory-applied pole wrappings on metal poles until right before pole installation. For poles with nonmetallic finishes, handle with web fabric straps.

1.11 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.

1. Warranty Period for Luminares: Five years from date of Substantial Completion.
2. Warranty Period for Metal Corrosion: Five years from date of Substantial Completion.
3. Warranty Period for Color Retention: Five years from date of Substantial Completion.
4. Warranty Period for Poles: Repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide product indicated on Drawings.
2.2 GENERAL REQUIREMENTS FOR LUMINAIRES

A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.
   1. LER Tests HID Fixtures: Where LER is specified, test according to NEMA LE 5B.

B. Lateral Light Distribution Patterns: Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.

C. Metal Parts: Free of burrs and sharp corners and edges.

D. Sheet Metal Components: Corrosion-resistant aluminum unless otherwise indicated. Form and support to prevent warping and sagging.

E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.

F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens.

G. Exposed Hardware Material: Stainless steel.

H. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

I. Light Shields: Metal baffles, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field.

J. Reflecting surfaces shall have minimum reflectance as follows unless otherwise indicated:
   1. White Surfaces: 85 percent.
   2. Specular Surfaces: 83 percent.
   3. Diffusing Specular Surfaces: 75 percent.

K. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.

L. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.

M. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps and ballasts. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
   1. Label shall include the following lamp and ballast characteristics:
      a. "USES ONLY" and include specific lamp type.
      b. ANSI ballast type (M98, M57, etc.) for HID luminaires.
      c. CCT and CRI for all luminaires.
2.3 BALLASTS FOR HID LAMPS

A. Comply with ANSI C82.4 and UL 1029 and capable of open-circuit operation without reduction of average lamp life. Include the following features unless otherwise indicated:

1. Ballast Circuit: Constant-wattage autotransformer or regulating high-power-factor type.
2. Minimum Starting Temperature: Minus 22 deg F.
3. Normal Ambient Operating Temperature: 104 deg F.
4. Ballast Fuses: One in each ungrounded power supply conductor. Voltage and current ratings as recommended by ballast manufacturer.

2.4 HID LAMPS

A. Metal-Halide Lamps: ANSI C78.43, with minimum CRI 65, and CCT color temperature 4000 K.
B. Pulse-Start, Metal-Halide Lamps: Minimum CRI 65, and CCT color temperature 4000 K.
C. Ceramic, Pulse-Start, Metal-Halide Lamps: Minimum CRI 80, and CCT color temperature 4000 K.

2.5 GENERAL REQUIREMENTS FOR POLES AND SUPPORT COMPONENTS

A. Structural Characteristics: Comply with AASHTO LTS-4-M.

1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in "Structural Analysis Criteria for Pole Selection" Article.
2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.

B. Luminaire Attachment Provisions: Comply with luminaire manufacturers’ mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.

C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.

1. Materials: Shall not cause galvanic action at contact points.
3. Anchor-Bolt Template: Plywood or steel.

D. Handhole: Oval-shaped, with minimum clear opening of 2-1/2 by 5 inches, with cover secured by stainless-steel captive screws. Provide on all, except wood poles.

E. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."

F. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A 36/A 36M and hot-dip galvanized according to ASTM A 123/A 123M; and with top-plate and mounting bolts to match pole base flange and strength required to support pole, luminaire, and accessories.
G. Breakaway Supports: Frangible breakaway supports, tested by an independent testing agency acceptable to authorities having jurisdiction, according to AASHTO LTS-4-M.

2.6 ALUMINUM POLES

A. Poles: Seamless, extruded structural tube complying with ASTM B 429/B 429M, Alloy 6063-T6 with access handhole in pole wall.

B. Poles: ASTM B 209, 5052-H34 marine sheet alloy with access handhole in pole wall.
   1. Shape: Round, tapered.
   2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

C. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.

D. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

E. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast aluminum. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.
   1. Tapered oval cross section, with straight tubular end section to accommodate luminaire.
   2. Finish: Same as pole.

F. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.

G. Aluminum Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
   1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
   2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
   3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
   4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

A. Install lamps in each luminaire.

B. Fasten luminaire to indicated structural supports.
1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.

C. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources, favoring a north orientation.

3.2 POLE INSTALLATION

A. Alignment: Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.

B. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features unless otherwise indicated on Drawings:

1. Fire Hydrants and Storm Drainage Piping: 60 inches.
3. Trees: 15 feet from tree trunk.

C. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 03 Section "Cast-in-Place Concrete."

D. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.

   1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
   2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
   3. Install base covers unless otherwise indicated.
   4. Use a short piece of 1/2-inch- diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

E. Embedded Poles with Tamped Earth Backfill: Set poles to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.

   1. Dig holes large enough to permit use of tampers in the full depth of hole.
   2. Backfill in 6-inch layers and thoroughly tamp each layer so compaction of backfill is equal to or greater than that of undisturbed earth.

F. Embedded Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.

   1. Make holes 6 inches in diameter larger than pole diameter.
   2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of 3000 psi at 28 days, and finish in a dome above finished grade.
   3. Use a short piece of 1/2-inch- diameter pipe to make a drain hole through concrete dome. Arrange to drain condensation from interior of pole.
   4. Cure concrete a minimum of 72 hours before performing work on pole.

G. Poles and Pole Foundations Set in Concrete Paved Areas: Install poles with minimum of 6-inch- wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with pea gravel to a level 1 inch below top of concrete slab.
H. Raise and set poles using web fabric slings (not chain or cable).

3.3 BOLLARD LUMINAIRE INSTALLATION

A. Align units for optimum directional alignment of light distribution.

B. Install on concrete base with top 4 inches above finished grade or surface at bollard location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.4 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LUMINAIRES

A. Install on concrete base with top 4 inches above finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.5 CORROSION PREVENTION

A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.

B. Steel Conduits: Comply with Division 26 Section "Raceway and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch-thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.6 GROUNDING

A. Ground metal poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

   1. Install grounding electrode for each pole unless otherwise indicated.
   2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.

B. Ground nonmetallic poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

   1. Install grounding electrode for each pole.
   2. Install grounding conductor and conductor protector.
   3. Ground metallic components of pole accessories and foundations.

3.7 FIELD QUALITY CONTROL

A. Inspect each installed fixture for damage. Replace damaged fixtures and components.

B. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.

   1. Verify operation of photoelectric controls.
C. Illumination Tests:
   a. Measure light intensities at night. Use photometers with calibration referenced to NIST standards. Comply with the following University standards.

D. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.8 DEMONSTRATION

A. Train Owner’s maintenance personnel to adjust, operate, and maintain luminaire lowering devices.

END OF SECTION 26 56 00
SECTION 27 05 36 - CABLE TRAYS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section Includes:
   1. Wire-basket cable trays.

1.3 ACTION SUBMITTALS
A. Product Data: For each type of cable tray.
   1. Include data indicating dimensions and finishes for each type of cable tray indicated.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design cable tray supports and seismic bracing.
B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes in cable tray installed outdoors.
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 GENERAL REQUIREMENTS FOR CABLE TRAYS
A. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
   1. Source Limitations: Obtain cable trays and components from single manufacturer.
B. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.
C. Structural Performance: See articles for individual cable tray types for specific values for the following parameters:
1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
3. Load and Safety Factors: Applicable to both side rails and rung capacities.

2.3 WIRE-BASKET CABLE TRAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Cablofil/Legrande.
4. Cooper B-Line, Inc.
5. Enduro Systems, Inc.
7. MP Husky.
8. Niedax-Kleinhuis USA, Inc.
10. Wiremaid Products Division; Vutec Corporation.

B. Description:

1. Configuration: Wires are formed into a standard 2-by-4-inch wire mesh pattern with intersecting wires welded together. Mesh sections must have at least one bottom longitudinal wire along entire length of section.
4. Sizes:
   a. Straight sections shall be furnished in standard 118-inch lengths.
   b. Wire-Basket Depth: 6-inch usable loading depth by 6 inches wide.
5. Connector Assemblies: Bolt welded to plate shaped to fit around adjoining tray wires and mating plate. Mechanically joins adjacent tray wires to splice sections together or to create horizontal fittings.
6. Connector Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
7. Hardware and Fasteners: Steel, zinc plated according to ASTM B 633.

2.4 MATERIALS AND FINISHES

A. Steel:

1. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of ASTM A 1011/A 1011M, SS, Grade 33.
2. Steel Tray Splice Plates: ASTM A 1011/A 1011M, HSLAS, Grade 50, Class 1.
3. Fasteners: Steel complies with the minimum mechanical properties of ASTM A 510/A 510M, Grade 1008.

5. Finish: Hot-dip galvanized after fabrication.

a. Powder-Coat Enamel: Cable tray manufacturer's recommended primer and corrosion-inhibiting treatment, with factory-applied powder-coat paint.
b. Epoxy-Resin Prime Coat: Cold-curing epoxy primer, MPI# 101.
c. Epoxy-Resin Topcoat: Epoxy, cold-cured, gloss, MPI# 77.
d. Hardware: Chromium-zinc plated, ASTM F 1136.

7. Finish: Factory-standard primer, ready for field painting, with chromium-zinc-plated hardware according to ASTM F 1136.
8. Finish: Black oxide finish for support accessories and miscellaneous hardware according to ASTM D 769.

2.5 CABLE TRAY ACCESSORIES
A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.
B. Covers: Louvered type made of same materials and with same finishes as cable tray.
C. Barrier Strips: Same materials and finishes as for cable tray.
D. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.6 WARNING SIGNS
A. Comply with requirements for fasteners in Division 26 Section "Identification for Electrical Systems."

2.7 SOURCE QUALITY CONTROL
A. Testing: Test and inspect cable trays according to NEMA FG 1.

PART 3 - EXECUTION

3.1 CABLE TRAY INSTALLATION
A. Install cable trays according to NEMA FG 1.
B. Install cable trays as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.

C. Install cable trays so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.

D. Remove burrs and sharp edges from cable trays.

E. Join aluminum cable tray with splice plates; use four square neck-carriage bolts and locknuts.

F. Fasten cable tray supports to building structure.

G. Design fasteners and supports to carry cable tray, the cables, and a concentrated load of 200 lb. Comply with requirements in Division 26 Section "Hangers and Supports for Electrical Systems."

H. Support bus assembly to prevent twisting from eccentric loading.

I. Support wire-basket cable trays with trapeze hangers.

J. Make connections to equipment with flanged fittings fastened to cable trays and to equipment. Support cable trays independent of fittings. Do not carry weight of cable trays on equipment enclosure.

K. Install expansion connectors where cable trays cross building expansion joints and in cable tray runs that exceed dimensions recommended in NEMA FG 1. Space connectors and set gaps according to applicable standard.

L. Make changes in direction and elevation using manufacturer's recommended fittings.

M. Make cable tray connections using manufacturer's recommended fittings.

N. Seal penetrations through fire and smoke barriers. Comply with requirements in Division 07 Section "Penetration Firestopping."

O. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.

P. Install cable trays with enough workspace to permit access for installing cables.

Q. Install permanent covers, if used, after installing cable. Install cover clamps according to NEMA VE 2.

R. Clamp covers on cable trays installed outdoors with heavy-duty clamps.

S. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.2 CABLE TRAY GROUNDING

A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems."
B. Cable trays with communications cable shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

C. Cable trays with control conductors shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

D. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.

E. Bond cable trays to power source for cables contained within with bonding conductors sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors."

3.3 CABLE INSTALLATION

A. Install cables only when each cable tray run has been completed and inspected.

B. Fasten cables on horizontal runs with cable clamps or cable ties according to NEMA VE 2. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.

C. Fasten cables on vertical runs to cable trays every 18 inches.

D. Fasten and support cables that pass from one cable tray to another or drop from cable trays to equipment enclosures. Fasten cables to the cable tray at the point of exit and support cables independent of the enclosure. The cable length between cable trays or between cable tray and enclosure shall be no more than 72 inches.

3.4 CONNECTIONS

A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.

B. Connect pathways to cable trays according to requirements in NEMA VE 2 and NEMA FG 1.

3.5 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.
2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
4. Verify that there are no intruding items such as pipes, hangers, or other equipment in the cable tray.
5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.

7. Check for improperly sized or installed bonding jumpers.

8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.

9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray system for continuity. Maximum allowable resistance is 1 ohm.

B. Prepare test and inspection reports.

3.6 PROTECTION

A. Protect installed cable trays and cables.

1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and shall remain in place until the risk of damage is over.

2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.

3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

END OF SECTION 27 05 36
SECTION 27 15 00 - COMMUNICATIONS HORIZONTAL CABLING [C]

PART 1 - GENERAL CONDITIONS

1.1 CONCURRENT OPERATIONS

Because other activities of the Owner will be proceeding at the same time of the work covered by the specification, the Contractor shall cooperate with the Owner’s Representative to ensure that all contract work progresses in a manner which does not conflict with other activities.

All contractor employees shall conduct themselves in a professional and courteous manner, and shall abide by all applicable University Policies while on University property.

1.2 WORKMANSHIP

All workmen shall be thoroughly experienced in the particular class of work in which they are employed. All materials shall be securely fastened in place in a neat and workmanlike manner.

1.3 CLEAN-UP

Contractor shall be responsible for maintaining all work areas in a neat and orderly manner. Immediately upon completion, all clean up shall be performed to the satisfaction of the Owner’s Representative.

1.4 SAFETY

The Contractor shall comply with all applicable provisions of the Occupational Safety and Health Act (OSHA) throughout the duration of the specified work. The contractor shall be responsible for guarding against fire, and shall provide suitable fire extinguishers conveniently located at the site.

1.5 INSPECTION OF WORK IN PROGRESS AND UPON COMPLETION

Non-compliance with the terms of this specification and ensuing contract can result in either the cancellation of the contract, or complete replacement of the defective areas at the Contractor’s expense. In the event of cancellation, the Owner will not be obligated to compensate the Contractor for any work undertaken. Furthermore, damages caused by water infiltration resulting from the failure of the Contractor to secure each days work in a weather tight manner, will be corrected at the Contractor’s expense.

1.6 CHANGES IN THE WORK

All proposals for additions, deductions, alterations or changes from the specified work shall be submitted to and approved by the Owner in writing.

1.7 SUBSTITUTION OF MATERIALS
A. Whenever a particular make of material is shown or specified herein, such make of material shall be regarded as a standard. Any other make of material will be accepted which is comparably equal to that and suitable for the purpose intended.

B. A bidder intending to furnish an alternate in place of the item specified will be required to submit to the Owner's Representative the following when requested, generally prior to award of contract:

1. A sample of the material which he intends to furnish under the bid and manufacturers literature, "cut sheets" and any applicable technical data. It shall be the bidders responsibility to demonstrate equivalency to the specified product.

2. In order to substantiate the equality of performance of the alternate material under actual field use, a bidder offering "or equal" materials shall also submit a list of at least three (3) jobs with his bid, where the proposed alternate materials have been used under similar conditions as specified within a radius of fifty (50) miles from this location. These jobs must each be at least three (3) years old and must be available for inspection by all persons designated as "Owner Representatives".
   
   a. The Owner reserves the right to be the final authority on the acceptance or rejection of any proposed alternate materials. If the substituted materials are determined to be not equivalent, the bidder shall provide materials as specified or the bid will be rejected
   
   b. Any bidder intending to use alternate materials will be required to write, “ALTERNATIVE” on the proposal sheet submitted, along with a statement noting what "or equal" material has been substituted in place of what specified material.

1.8 ALL BIDDERS SHALL GUARANTEE TO THE OWNER THAT CONTRACTORS TO BE UTILIZED FOR THIS PROJECT SHALL BE ON THE LATEST PRE-QUALIFIED BIDDERS LIST AS RELEASED BY THE PENNSYLVANIA STATE UNIVERSITY.

PART 2 - SECTION 2 - Installation

2.1 DEFINITIONS:

A. Finished space: Including exterior areas, occupied rooms or space visible to the public. All work shall be concealed in finished space.

B. Unfinished space: Room or space accessible only to building maintenance personnel; or specifically shown as “unfinished spaces”

C. Concealed: Used in connection with installation and painting of conduit and accessories; means hidden from sight as in trenches, chases, furred spaces, pipe shafts, ceiling spaces, and hollow walls; and where not hidden from sight in partially excavated or crawl spaces.

D. Exposed: used in connection with installation of conduit and accessories; means not concealed as defined above.

E. Provide: Furnish and install.
2.2 DRAWS NGES ARE DIAGRAMMATIC TO INDICATE GENERAL CHARACTER AND INTENT OF WORK INCLUDED. RIGHT IS RESERVED TO MAKE REASONABLE CHANGES.

2.3 CUTTING, PATCHING AND PAINTING

A. All cutting, patching and painting required in connection with these specifications shall be carried out by or under the direct supervision of the Telecommunications Contractor using mechanics experienced in their line of work. All patching and painting shall match the adjacent finishes.

B. Cutting shall be accomplished in such a manner as not to cause damage to the building or leave unsightly surfaces which cannot be concealed by plates or other construction. Where such unsightly conditions are caused by the Telecommunications Contractor, he shall be required at his own expense to engage a mechanic experienced in this line of work to repair the damaged areas. All holes or openings to be put in existing concrete shall be bored.

2.4 REFERENCES

A. The latest edition of all referenced standards shall apply, unless otherwise noted.

C. TIA/EIA-568B 2.2 – Transmission Performance Specifications for 4-pair 100 ohm Category 6 cabling.

D. EIA/TIA-569 - Commercial Building Standard for Telecommunication Pathways and Spaces.

E. NFPA 70 - National Electrical Code

F. EIA Standards for Test Procedures Fiber Optic.

G. TIA/EIA-607 - Grounding and Bonding Requirements for Telecommunications.

2.5 QUALITY ASSURANCE

A. Perform work in accordance with EIA/TIA Building Telecommunications Wiring Standards, and provisions of this document.

B. Furnish 15 year application assurance and 15 year extended product warranty in writing.

2.6 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Furnish products and materials listed and classified by Underwriter's Laboratories, Inc. as suitable for purpose specified and indicated.

2.7 INSTALLATION – TELECOMMUNICATIONS EQUIPMENT

A. Install wire and cable as indicated on the drawings and in accordance with manufacturer instructions and EIA/TIA Building Telecommunications Wiring Standards. “The maximum horizontal distance shall be 90 meters (295 ft.) independent of media type. This cable length is from the mechanical termination of the media in the telecommunications room to the telecommunications outlet.”

B. All Horizontal UTP cable will terminate at the wall plate on a Category 6 jack, T568B, gray. Wire will terminate per TIA/EIA 568A. Note section 10.6.3.1 “connector termination practices”.

C. All Horizontal UTP cable in the Telecommunications room will terminate in a patch panel, located in a 19-inch rack equipped with cable management system. Wire will terminate per TIA/EIA 568A, note section 10.6.3.1 “connector termination practice”.

D. Video cable at the wall plate will terminate with a hex crimp 1/2-inch long integral crimp ring “F” connector with specific recommendation by the connector manufacturer that it is compatible with the manufacturer and part number of the coaxial cable. The terminated cable will be attached to an “F” female to female splice (or barrel) in the faceplate. The splice or barrel will be of sufficient length that after installation in the faceplate with nut and washer there is still enough splice exposed to install and “F” connector such that the rotational part of the connector does not bottom out before the ferrule tightens up to the splice.

E. Video cable in the Telecommunications room will terminate with a hex crimp 1/2-inch long integral crimp ring “F” connector with specific recommendation by the connector manufacturer that it is compatible with the part number of the coaxial cable. Each terminated cable will be attached to a splice barrel on a 96-port, bottom hinged, “F” type, female-to-female coax patch panel. A #10 ground wire will be run from each wall mounted patch panel to the TGB in the room. Each cable will be identified with a tag that has the jack number printed on it in a neat and legible manner. i.e. Brady Label-heat shrunk to cable.

F. Horizontal multimode fiber optic cable will terminate on duplex SC connectors at both ends. The closet connector will be placed in a fiber distribution center mounted in a 19-inch rack equipped with a cable management system. At the wallplate the connector will be placed in a multimedia outlet, designed for fiber optic applications.

G. Backbone multimode fiber optic cable will terminate on ST connectors at both ends. The connector will be placed in a fiber distribution center mounted in a 19-inch rack equipped with a cable management system.

H. Singlemode fiber optic cable in the Telecommunications room will terminate on SC/APC connectors. The connector will be placed in a fiber distribution center mounted in a 19-inch rack equipped with a cable management system.

I. Horizontal, Intrabuilding Backbone, and Interbuilding Backbone fiber optic cables shall each be mounted in separate fiber distribution centers by category unless otherwise indicated on drawings.

2.8 IDENTIFICATION – TELECOMMUNICATIONS EQUIPMENT
A. Horizontal cables, entrance cable, house cable and fiber cable shall be labeled at each end by means of a tag affixed to the cable. The numbering system for horizontal cable shall follow the chart located on the drawings. The numbering system for all other cables shall be as shown on the drawings or as directed.

B. Faceplates will be marked with 26 point medium numbers, 3/8 inch tape, black numbers on clear tape. Each jack will be numbered with its corresponding relative position in the patch panel, 110 blocks, or assigned video number. Jack numbers will be recorded on the drawing according to outlet number.

C. Telecom closets shall be designated as Telecom Room A, Telecom Room B, etc. All jack numbers will be preceded by the letter designator for the closet that feeds it, i.e., A1 through An, and B1 through Bn, or A0101 through A0196, etc. Buildings with a single closet shall be designated as TELECOM ROOM A.

D. Patch Panels and Jack Numbers
   1. Under the Universal Wiring Model, patch panels shall be identified by the closet designator (A, B, etc.), and a two digit panel number; A01, A02, A03, etc., using 36 point medium width numbers. Factory jack numbers (1-96) shall be retained, therefore specific jack numbers are identified as to the closet, patch panel and jack number. Examples: A0101, B0196, etc. The jack number shall be identified on the faceplate.
   2. Under the Universal Wiring Model, the Voice Jack Panels shall be identified by the designator “X” and a two digit panel number; X01, X02, X03, etc., using 36 point medium width numbers. Factory jack numbers (1-96) shall be retained. The corresponding 110 block shall have the same designation, and the 110 wiring blocks shall be identified to directly correspond to the patch panel jack numbers.
   4. Coax patch panels shall be identified by the designator “V” and a two digit panel number; V01, V02, V03, etc, using 36 point medium width numbers. Each port will be marked with 10 point medium width numbers with 3/8 inch tape, white on black tape. Each port will be numbered starting with 1 through (n) in numerical order left to right, top to bottom on the jack side of the panel. This same number shall be identified on the faceplate, examples: V0101, V0196, etc.

E. 110 blocks will be marked with 10 point medium width numbers with 1/2 inch black clear tape. The numbering sequence will be 1 through (N) in numerical order starting with the top left to right, top to bottom. Per vertical column. Column will expand left to right.

2.9 ACCEPTANCE TESTING

A. Cable testing. All category 6 cable will be link-tested to include the jack at the faceplate, and the patch panel or terminated block using test parameters as outlined in the TIA/EIA TSB-67 standard. Tests will be completed with a test set that complies with TSB-67 Accuracy Level II. Results will be provided on a CD and submitted to Telecommunications and Network Services (TNS) for approval. If special software is required to access the test results, a copy of the software or download URL shall also be provided.

B. Coaxial cables are to be tested with a TDR to verify location, leakage and dB Attenuation loss. A printed copy of the results will be turned over to TNS for approval.

C. Inside fiber optic cables are to be tested in both directions with a power meter. A printed copy of the results will be turned over TNS for approval.
D. Outside Plant Fiber Optic Cable Testing

Provide the following documentation for each fiber:

1. OTDR trace from each end at a wavelength of 830 nm or 1300 nm in hard copy form or on a disk. A leader spool of sufficient length to exceed the dead zone of the OTDR is required.
2. Power meter measurements of optical loss at wavelength of 830 nm or 1300 nm for each fiber from each end. Recorded readings are to be supplied in hard copy form or on a disk.

E. Contractor shall provide a complete set of as-built drawings and completed Jack Matrix (see below), within 3 days of completion of final testing and installation.

F. Contractor will provide a Jack Matrix in an Excel spreadsheet format. TNS will provide the format to the contractor. The Jack Matrix will indicate, for each installed jack, the Building Number, Outlet Number, Room Number, Jack Type (V=Data, U=Voice, C=Universal, U=Coax, F=Fiber, Jack number, Telecom Room number. This will be turned over to TNS for approval.

2.10 TRANSFER OF SERVICE

1. Copper Cable

   a. The Contractor shall be responsible for extending the building feed from the existing location to the new Telecommunications room. The incoming copper cable shall be bridged ahead of the existing termination or protection and extended to the new protection within the new room. (see section 2.01 Entrance Cable) The bridge shall be left in place until all working service is transferred to the new Telecommunications room. The bridge splice shall be accomplished by use of Lucent 710 splicing modules or 3M 4000 series splicing modules. All cables shall be bonded across the splice opening using cable bonding clamps and 1/2 inch wide grounding braid with eyelet’s. The ground integrity of the distribution cable shield shall be maintained at all times. A air dam shall be installed on the incoming side of the splice and shall be equipped with a valve to be used for testing the air pressure on the incoming side of the dam. The splice shall be wrapped to provide mechanical protection until the service is transferred and the bridge can be cut out.

   b. The Contractor shall be responsible for transferring the working service into the new wiring. Test results will be provided to TNS before service is transferred.

   c. After all service has been transferred the Contractor shall remove the bridge, existing cable, termination devices and terminal housings. The splice shall be enclosed with a Lucent 2000 series fire retarding closure or approved equivalent designed for use in building applications.

2. Coax Cable:

   a. The Contractor shall place two RG-11 coax cables from the entrance facility to the new Telecommunications room. These cables shall terminate on grounding blocks with F-connectors in the Telecommunications room and have F-connectors installed at the entrance facility with enough cable to connect to the 1/2-inch building feed trunk cable. The grounding blocks shall be bonded to the TMGB in the Telecommunications room.

   b. The University shall be responsible for transferring the working service.
c. After the service is transferred the Contractor shall be responsible for removing the wiring that the service was removed from.

3. **Fiber Cable**

   The contractor shall place fiber optic cable between the current telecommunications room and the new telecommunications room. See drawing [C]

**PART 3 - Section 3 – Materials**

### 3.1 **ENTRANCE CABLE**

A. Cable, twisted pair, building entrance, shall be of the pair quantity as indicated on the drawings. Cable shall be UL listed type CMR or CMP if required, unless otherwise noted on the drawings. All cable shall be plenum rated unless otherwise noted.

B. Cable, twisted pair, outside plant, shall be of the pair quantity as indicated on the drawings. Provide gel filled or air pressurized as noted on the drawings.

C. Cable, coaxial, shall be of the quantity and type as shown on the drawings.

D. All entrance cable shall be run in IMC conduit as required by the NEC.

E. Outside plant splices shall be Lucent 710 splicing modules or 3M 4000 series splicing modules, unless otherwise noted on the drawings or required to match existing. All cables shall be bonded across the splice opening using cable bonding clamps and ½ inch wide grounding braid with eyelets. The ground integrity of the distribution cable shield shall be maintained at all times.

1. For air-pressurized applications, an air dam shall be installed on the incoming side of the splice and shall be equipped with a valve to be used for testing the air pressure on the incoming side of the dam.

2. The splice shall be housed in a closure designed for use in underground or aerial applications, as required for the location.

3. Closures for air-pressurized application shall be specifically designed for use in air pressure system.

4. Closures for gel filled cable applications shall be filled with a re-enterable encapsulant which can be removed from the splice closure for future splicing operations.

5. Splice/Closures shall be chosen based on the size, pair count and number of cables entering and exiting the splice closure. Provide straight, branch, butt or special closures as required for the application and space available within manholes.

F. Provide entrance cable pair protection for all buildings. Provide AT&T 188 110 type unless noted. Provide pair count adequate for entrance cable. All protector panels shall be fully populated with 4B1E-W protectors, unless a different type of protector is noted.

### 3.2 **DISTRIBUTION RACK, PATCH PANELS AND ACCESSORIES**
A. The distribution rack must be 84-inches high and 19-inches wide, double sided, made of aluminum and equipped with vertical and horizontal cable management system. Per EIA/TIA Standards.

B. Provide vertical wire management brackets equivalent to LEVITON cat. No. 49260-BKT. Provide at a minimum of 6 per vertical rack section, located at the top of each horizontal wire management section.

C. Horizontal cable management shall be 3.5" Hubbell MCCMP2U, B-Line SB-719-19-2XL, T & B Wire guide, 19" x 3" model 028-9971-X2-20, or equivalent. Locate one (1) between each Patch Panel.

D. Patch Panel shall be 7" high, 96 port (ONLY), Category 6, Hubbell P696U or equivalent by Leviton or Amp. Provide one port for each horizontal cable run intended to terminate at the patch panel. Provide approximately 10% spare ports, with a minimum of 12 spare ports, and a maximum of 96 spare ports per building.

E. Voice Jack Panel shall be 7" high, 96 port (ONLY), Category 6, Hubbell P696U or equivalent by Leviton or Amp. Provide one port for each trunk cable pair unless otherwise indicated on drawings. See drawings for details.

F. Provide a center rail, single sided aluminum cable tray continuously bolted with 1/2" x 8" carriage bolt across the top of the racks. Tray shall be bolted from top of the rack up through the tray, with the excess bolt length extending up above the tray. Provide a lock washer at the rack side, and a fender washer on the top of the tray. The Tray shall have 6" load depth, 12" width and 6" rung spacing. Provide B-Line “Half- Rack” model C6A1H0612 or equivalent in lengths as required. Provide additional tray between the racks and the walls as shown on the drawings. Provide wall mount brackets, bend and tee accessories as required for a complete installation.

3.3 CATEGORY 6 PREMISE CABLE

B. Horizontal UTP cable, CMR or CMP rated sheathing, four pairs of 24 AWG solid conductor verified Category 6, enhanced performance cable per jack. Cable shall use only non-bonded pairs and shall be round in configuration.

C. All terminal blocks and mounting brackets are to be from one manufacturer, 110 type, Category 6 rated, and meet EIA/TIA Standards.

3.4 JACKS

A. Universal- Category 6, jack, T568B, gray, Hubbell Catalog number HXJ6GY or equivalent by Leviton.

3.5 CATEGORY 6 PATCH CABLES

A. Provide all necessary Category 6 patch cables necessary to perform the service transfer. [C]
B. Provide (1) patch cable for each telecommunications cable. [C]

C. Patch cables shall be 4-pair and a suitable length for the installation. Slack in excess of 20% of the cable length is not acceptable.

D. Patch cables shall be suitable for use in high-density patch panels and electronics.

E. Patch cables shall be factory assembled. Field terminated patch cables are not acceptable.

F. Patch cables for voice applications shall be violet and data applications shall be orange.

3.6 FIBER OPTIC CABLE

A. Single Mode Loose Tube Fiber
   1. Shall have the following specifications:
      a. a core diameter of 8.3 microns
      b. a cladding diameter of 125 microns
      c. a maximum attenuation of:
         1) 0.44 dB/Km @ 1310 nm
         2) 0.35 dB/Km @ 1550 nm
      d. a zero dispersion wavelength of 1310+/-10 nm
   2. Shall have a sheath rated and marked OFNR for riser applications per NEC.
   3. Shall have distances marked on the outside in feet in such a way that normal installation does not rub them off or make them unreadable.
   4. Shall have a nonmetallic strength member.
   5. Shall be non-armored.
   6. Shall be suitable for underground and aerial installation.
   7. Have a minimum of 6 and a maximum of 12 fibers per buffer tube
   8. Shall use standard color codes on sub buffers per EIA/TIA. SPECIFICATION 598:
      a. Blue    g. Red
      b. Orange  h. Black
      c. Green   i. Yellow
      d. Brown   j. Violet
      e. Slate   k. Rose
      f. White   l. Aqua
   9. Shall have loss and zero dispersion wavelength data sheets supplied for all fibers.
   10. Shall have a pull cord to facilitate the removal of the sheath. KEVLAR cords are NOT acceptable.
   11. Shall have the footage specified -0%+1%.
   12. Termination and Splicing
      a. Fiber will be terminated in a patch panel at each end to facilitate cross-connections.
      b. Fiber will be directly terminated with SC compatible connectors.
      c. Fiber may be spliced using fusion splices.
      d. All patch panels will be labeled as to sheath number (ie. UNF##), fiber number, and location of the opposite end. This information will be provided on the splicing drawings supplied by Penn State.

B. Multimode Loose Tube Fiber
1. Shall be 62.5/125 um, multimode, graded index, dual window.
2. Shall have a numerical aperture of 0.275.
3. Shall be rated FDDI Plus
   a. i.e. have a maximum attenuation of:
      1) 3.75 dB/Km @ 850 nm
      2) 1.5 dB/Km @ 1300 nm
4. have a minimum bandwidth of:
   a. 160 Mhz-Km @ 850 nm
   b. 500 Mhz-Km @ 1300 nm
5. Shall have a rating of OFNR
6. Shall have distances marked on the outside in feet
7. Shall have a nonmetallic strength member
8. Shall be non-armored
9. Shall be suitable for underground installation in conduits
10. Have a minimum of 6 and a maximum of 12 fibers per buffer tube
11. Use standard color codes per EIA/TIA specification 598.
    a. Blue         g. Red
    b. Orange       h. Black
    c. Green        i. Yellow
    d. Brown        j. Violet
    e. Slate        k. Rose
    f. White        l. Aqua
12. Shall have loss and bandwidth data sheets supplied for all fibers.
13. Shall have a pull cord to facilitate the removal of the sheath. KEVLAR cords are NOT acceptable.
14. Shall have the footage specified -0%+1%.
15. Shall be supplied on nominal 1 km reels
16. Terminating and slicing
    a. Fiber will be terminated in a patch panel at each end to facilitate cross-connections.
    b. Fiber will be directly terminated with ST compatible connectors.
    c. The fiber will be protected with a subunit buffer from the connector to the buffer tube in the outside cable so that no bare or acrylic clad fiber is exposed.
    d. Fiber will be fusion spliced were splicing is required.
17. All patch panels will be labeled as to sheath number (ie. UNF##), fiber number, and location of the opposite end. This information will be provided on the splicing drawings supplied by Penn State.
18. Hybrid fiber cable shall be one piece with fiber counts as indicated, with the fiber in accordance with the above specifications.
19. Tight-buffered fiber optic cable shall have 900 micron buffer diameter, with the fiber in accordance with the above specifications.

3.7 FIBER OPTIC PATCH PANEL

Provide Lucent Technologies Fiber Optic Shelf Termination, LST1U Series. Panel shall be rack mounted, front and clear accessible. Provide with all associated mounting and accessory hardware. Provide in 12, 24 or 72 fiber capacity as required.
3.8 VIDEO CABLE AND ACCESSORIES

A. Cable, coaxial shall be RG-6 with a CATVR or CATVP rated sheath, 75-ohm (+ or - 2 ohms) with a 60% aluminum or copper braid and inner-shield aluminum tape bonded to the dielectric, one home run per outlet.

   Foam dielectric
   Bonded-foil type
   18 AWG Copper-covered steel center conductor
   Outer shield of polyvinylchloride or polyethylene
   Maximum attenuation from 5 to 750 MHz shall be 5.65 dB/100ft
   Com Scope F660BVR (riser) or 2275V (plenum) or equivalent

B. Coax cable patch panel shall be wall mounted 96 port bottom hinged panel. Provide 96 “F” type female to female splice (Barrel) connectors in each patch panel.

C. Video splitters will be capable of 1 Ghz bandpass with a maximum insertion loss of 14 dB and have a return loss of greater than 15dB and have minimum port-to-port isolation of 20 dB. They will be capable of being mounted on a plywood backboard and have provision for the attachment of a #10 ground wire that will be run to the TGB in the closet.

3.9 WALL PLATES

Outlet wall plates shall be satin-finished 20 gauge, stainless steel. Plates shall be single gang with 4 openings or double gang with 6 openings as appropriate for the outlet location. Screws shall be stainless steel with counter sunk heads and finished to match the plates. Plates shall accommodate various manufacturers high-density jacks so that the surface of the jack is flush with the surface of the faceplate. They shall also accommodate a snap in adapter to hold a coax barrel and a blank snap in for unused holes. The surface of these snap in adapters shall also be flush with the surface of the faceplate. Provide Semtron model 1FM-(4)OE or 2FM-(6)OEA, or equivalent.

Wall phone plates shall be satin-finished 20 gauge, stainless steel, single gang. Screws shall be stainless steel with counter sunk heads and finished to match the plates. Plates shall accommodate various manufacturers high-density jacks. Provide Semtron model WP505-PHONE-DP, or equivalent.

3.10 BONDING AND GROUNDING

The metallic shield of all the entrance cables, backbone cables, all wire trays, racks, panels and protectors shall be bonded to the TMGB with a minimum #6 AWG insulated wire.

All eight way splitters, chassis grounding points for key system and power units shall be bonded to the TMGB with #10 AWG wire.

All electronic devices and equipment shall be bonded to the TMGB per the manufacturers specifications.
All requirements of ANSI/TIA/EIA-607 shall be met.

3.11 EQUIPMENT CABINETS

2. Equipment cabinets shall meet the following requirements:
   a. NEMA-4 classification
   b. Dimensions – 30"W x 32"D x 87"H
   c. Inside of cabinet shall contain standard EIA 19" rack-mount equipment mounting rails full height, centered in the width of the unit.
   d. Have two flush, removable side walls.
   e. Have flush, swing open front and rear doors, with door switch and lockable handle on the front door. Lockable handle may be either suitable for hasp lock, or may be integral with the handle. All doors and removable panels shall be fully gasketed.
   f. Finish shall be black or gray, textured powder paint.
   g. Construction – Fully welded and rigid fabricated from 11 GA, 12 GA and 13 GA steel minimum. Doors and removable sides shall be constructed of 16 GA steel minimum.
   h. Allow Bottom Cable Entry

3. Equipment cabinets shall be equipped with air conditioning meeting the following requirements:
   a. 3925 BTU (+/- 10%) Top Mount Air conditioner, 9.2A, 115V, single phase.
   b. Provide with filters, air deflectors and condensate drain line.
   c. Provide digital thermometer/thermostat.
   d. All electrical and control circuits for the Air Conditioner shall be completely pre-wired, to a single junction box, suitable for a single connection by the installation contractor.

4. Equipment cabinets shall come equipped with the following accessories:
   a. Enclosure Light, 15W fluorescent, 18", with on/off switch
   b. Ground Bus and Grounding Kit
   c. Grounded Power Strip with three stage surge protection, illuminated power switch (illuminated when "on"), circuit breaker protection with reset switch. Power strip shall be mounted in one of the inside support rails, accessible from the front of the cabinet. Power strip shall have a minimum of six (6) NEMA 5-15R receptacles
   d. Four (4) adjustable leveling feet

5. The light, power strip and AC unit shall be pre-wired to a single junction box. The power strip and light shall be on one circuit, the AC unit on a separate, 2nd circuit. [C]
3.12 CONDUIT AND FITTINGS

Conduits

Fittings:

EMT: Couplings: Malleable iron or galvanized steel, compression type. Connectors and bushings: Same as couplings, except factory pre-insulated. Manufacturer: Appleton, Crouse Hinds, Killark, Thomas & Betts, or approved equal.

RS and IMC: Couplings and connectors of same material as conduit; threaded.

Flexible Conduits: Squeeze clamp type or screw-in type. Factory pre-insulated.

Sleeves:

The contractor shall provide and install sleeves where required to protect equipment or facilities in the installation. Each sleeve shall extend through its respective floor, wall or partition and shall be cut flush with each surface unless otherwise required.

Sleeves in bearing and masonry walls, floors and partitions shall be of standard weight steel pipe finished with smooth edges. For other than masonry partitions through suspended ceilings, and for concealed vertical piping, sleeves shall be No. 22 U.S.G. galvanized iron.

All sleeves shall be properly installed and securely cemented in place.

Floor sleeves shall extend 1 inch above the finished floor. Space between floor sleeves and passing conduit shall be caulked with graphite packing and waterproof caulking compound as approved.

Sleeves through exterior walls below grade shall have the space between conduit and sleeve caulked watertight.

Installation:

The contractor shall provide and install inserts of an approved metallic type for all hangers. Where two or more parallel conduits are installed, continuous inserts may be used. Where required to distribute the load on the inserts, a piece of reinforcing steel of sufficient length shall be passed through the insert.

Fasten conduits to pull boxes, cabinets, terminal boxes, etc., with two locknuts or acceptable fittings and provide insulation bushing. Bushings shall not function as fastening device in lieu of interior locknut. Conduits shall be concealed in finished spaces.
Bends: Pre-manufactured type for larger than (one) 1 inch. Bends shall not reduce original free cross section area.

Ground entire conduit system.

Expansion Joints: provide where conduits cross building expansion joints, where exposed conduit runs in straight lengths exceeding 150 feet.

f. All empty conduits shall have conduit measuring tape installed within them. The measuring tape shall be suitable for use as a pulling line. The conduit measuring tape shall be 130 lb. tensile strength Greenlee 435, or equal. On conduit size two (2) inches or larger, the conduit measuring tape shall be of minimum of 600 lb. Test. All pull lines shall be suitably identified as to origin, intermediate pull points, and termination. Specific locations of origin, intermediate pull points and termination point shall be indicated.

g. Exposed Conduits shall be installed parallel or at right angles to walls, ceilings and structural members. Exposed conduits in painted areas shall be painted to match the existing finish, and shall only be installed with prior approval.

h. Rigid Steel Conduit (RSC) and Intermediate Metal Conduit (IMC) shall be used regardless of location for all conduits larger than 4 inches, unless otherwise specified.

3.13 NAMEPLATES:

Black and white laminated lamicoid.

Lettering engraved through black surface exposing white lamination beneath.

Mount with minimum two machine screws or pop rivets. Glued-on nameplates not acceptable.

Size and letters 3/16 inch minimum.

3.14 OUTLET BOXES:

Interior - Recessed mounted: Galvanized or sherardized, one piece pressed steel, knock-out type. Ensure box depth is compatible with wall assembly. In plastered walls use a minimum double-gang outlet box. Check field conditions for exact location to center with architectural features, panels, tiles, etc. Approximate locations are shown on drawings. Outlet boxes shall be recessed in finished spaces where possible.

Interior - Surface mounted: Select to match surface raceway. Surface mounted installations in finished spaces are acceptable only if walls cannot be fished. Check field conditions for exact location to center with architectural features, panels, tiles, etc. Approximate locations are shown on drawings. Outlet boxes shall be recessed in finished spaces where possible.

Exterior or mechanical plenum spaces: Cast iron with threaded hub. Gasketed cover. Type FS or FD as required.

3.15 PULL BOXES:

Provide as required. Code gauge galvanized steel. Removable cover fastened with minimum four machine screws. Slide-on or snap-on cover not acceptable.
3.16 **FIRE STOPPING**

Firestop systems shall be installed in all openings and around all penetrating elements or devices as required by these Contract Documents, and as required by applicable design, building and construction codes, subject to the interpretation of the authority having jurisdiction.

Firestop materials shall have the approval of the authority having jurisdiction.

Nelson FSP, Flame seal: A ready to use, permanently pliable intumescent putty.

Nelson CLK: A one part, silence based, non-sagging, adhesive sealant.

Nelson CMP: A non-slump, cementitious sealant.

Nelson PLW: A ready to use, intumescent fibrous material enclosed a strong polyethylene envelope.

Nelson RSW: Intumescent coated mineral wool strips which may be used in conjunction with Nelson CLK.

Verify that all penetrating elements and supporting devices have been installed and all temporary lines have been removed.

Surfaces in contact with penetration seal materials shall be clean and free of dust, dirt, grease, oil, loose materials, rust or other substances.

Install penetration seal materials in accordance with design requirements and manufacturer’s instructions.

Follow manufacturer's recommendations to obtain a smooth, professional finish.

If forms or damming materials are installed, they shall be removed after the designated cure time unless the support materials used are of a fire resistant or non-combustible nature.

END OF SECTION 27 15 00
PART 1 - GENERAL

1.1 SCOPE OF WORK

A. Introduction

The Contractor shall provide, install, and program a functionally complete integrated access control, electronic locking, and door monitoring system per Manufacturer’s guidelines and codes, as described in the following specifications.

B. Work included under this section

1. Installation of access control system including:
   a. Sensormatic access control panel.
      • Sensormatic iStar panel in T217
   b. Eight (8) Card reader doors/door sets.
   c. Two (2) Electric locking, controlled doors/door sets
   d. Two (2) Monitored doors/door sets.

2. Equipment Schedule

See Appendix 1 for Equipment Schedule.

See Appendix 2 for door library for Type

3. System Wiring

   a. All system wiring shall be plenum rated.
   b. Wire gauge and shielding shall follow the manufacturer’s installation guidelines.
   c. All wiring shall be installed in accordance with the National Electric Code (NEC) and the National Fire Protection Agency (NFPA).
   d. All wiring shall be concealed where possible. All exposed wiring shall be installed in a protective housing such as conduit or Wiremold.
   e. Cables penetrating floors and firewalls must be routed through a metallic sleeve and properly fire stopped to meet national and local fire codes. All walls and floors shall maintain their existing fire rating.

4. System Programming

   a. The Contractor shall complete the programming of all inputs, outputs, readers, events, doors, and iStar panels.
   b. The Contractor shall utilize the University’s standard naming conventions.

5. Related Work Specified under Other Sections of these Specifications (Related sections)

   a. This work shall be done in strict accordance with these Contract Documents prepared for The Pennsylvania State University, herein after referred to as “Owner”.
   b. The Contractor shall perform all work described in this document along with any work not expressly mentioned in the specifications, but obviously necessary, for the proper execution of the same. It is not the intent to delineate or describe every detail and feature of work. No additions to the contract sum will be approved for any materials, equipment, and/or labor to perform work hereunder unless it can be clearly shown to be beyond the scope and intent of the drawings and specifications and absolutely essential to the proper prosecution of the work.
c. Work under this contract consists of the complete installation and includes, but is not necessarily limited to, the furnishing of all labor, superintendence, material, tools, and equipment necessary to complete all the work as specified hereinafter.

1.2 GENERAL CONDITIONS

A. Submittals at Bid Time

For bid evaluation, bid submittals shall include two (2) sets of the items described below:

1. Specification sheets (cut sheets) of all proposed equipment.

2. Equipment list identifying:
   a. Model number of each unit
   b. Quantities of each type of device
   c. Unit costs

3. Specification Compliance: Shall constitute a letter submitted with the bid, responding to specification sub-sections individually, indicating exceptions, substitutions, and alternatives. The Contractor shall submit requests for substitutions (as well as all relevant technical data pertaining to substituted equipment) to the specifier ten (10) days prior to the close of bid for evaluation and approval.

B. Documentation to be Submitted by Contractor after Award of Contract

1. Drawings: Shop drawings to provide details of proposed system and the work to be provided. These include point-to-point drawings of systems and wiring diagrams of individual devices.

2. Permits: The Contractor shall be responsible for identifying requirements for permits from all building, police, and fire authorities for the installation of the system(s) specified herein and shall assist Owner in obtaining the relevant permits.

C. Documentation to be Submitted by Contractor upon Completion of System Installation

1. “As-builts”: Upon completion of installation, the Contractor shall prepare “as-built” drawings of the system. These “as-builts” shall be AutoCAD (Revision 14 or greater) drawings of each floor plan indicating exact device locations, panel terminations, cable routes, and wire numbers as tagged and color-coded on the cable tag.

   In addition, final point-to-point wiring diagrams of each type of device (in AutoCAD) shall be included in the “as-builts.”

   “As-builts” shall be submitted to the Owner for approval prior to the system acceptance walk through.

2. Operation and Maintenance Manuals: One (1) set of operating manuals shall be provided explaining the operation and maintenance of the system.

3. Paperwork to be placed inside of iStar panel:
   a. iStar installation manual
   b. Reader and reader interface manual
   c. Door release hardware manuals
   d. Request to exit motion detector manuals
   e. Power supply manuals
f. All wiring notes

D. On-site Security Personnel Training

Upon completion of the installation, the Contractor shall furnish training in the complete operation of the system.

E. System Approvals

1. The system shall be the standard product of one manufacturer, and the manufacturer shall have been in business manufacturing similar products for at least five (5) years.
2. After-Sales Support: The Contractor shall be a factory-authorized and trained dealer of the system and shall be certified to maintain/repair the system after system acceptance.

F. Quality Assurance

1. All equipment, systems, and materials furnished and installed under this section shall be installed in accordance with the applicable standards of:
   a. National codes: NEC and NFPA
   b. Approvals and Listings: UL
   c. Pennsylvania Department of Labor and Industry
   d. EIA/TIA Telecommunications wiring standards
   e. Local Authorities Having Jurisdiction

G. Guarantee of Work

All components, parts, and assemblies supplied by the Manufacturers and installed by the Contractor shall be warranted against defects in material and workmanship for a period of at least twelve (12) months (parts and labor), commencing upon date of acceptance by Owner. A qualified factory-trained service representative shall provide warranty service.

H. Service/Maintenance

1. The Contractor shall be responsible for maintenance and repair of the system during the warranty period, free of charge (parts and labor), including the repair of workmanship defects.
2. The installer shall correct any system defect within six (6) hours of receipt of call from Owner.
3. The Contractor shall offer extended service/maintenance agreements up to four (4) years after the warranty expires. The agreement shall be renewable monthly, quarterly, or yearly.

I. Building Security

Building security shall remain functional during installation. Doors and door locking shall remain operational. University Police must be notified if it is not possible to lock the doors at the end of each workday. Failure to comply will result in removal from the approved vendor list.

1.3 HANDICAPPED DOOR OPENER INTERFACE

A. Handicapped Door Operation

1. Exterior Handicapped Button
   a. Button is disabled when building is locked.
   b. Button is enabled with a valid card read when building is locked.
   c. Button opens door without card read when building is unlocked.
2. Interior Handicapped Button
   a. Button unlocks door then opens door when building is locked.
   b. Button triggers request to exit input on RM-4 module.
c. Button opens door when the building is unlocked.

1.4 READER LED OPERATION

A. LED Sequencing

1. LED table for Mercury card readers and Schlage VIP open architecture locks:

<table>
<thead>
<tr>
<th>Red LED</th>
<th>Green LED</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>Off</td>
<td>Online – Door Locked</td>
</tr>
<tr>
<td>Off</td>
<td>Off</td>
<td>Offline or reader tamper</td>
</tr>
<tr>
<td>Off</td>
<td>On</td>
<td>Access granted or door unlocked</td>
</tr>
<tr>
<td>Off</td>
<td>Fast flash</td>
<td>Access Granted</td>
</tr>
<tr>
<td>Off</td>
<td>Slow flash</td>
<td>Door unlocked</td>
</tr>
<tr>
<td>Fast flash</td>
<td>Fast flash</td>
<td>Alarm: door forced/held open</td>
</tr>
</tbody>
</table>

2. Sensormatic card readers use standard set-up as specified in apC/iStar technical manual.

1.5 MAGNETIC LOCKS

A. Approvals

Due to the life safety concerns the use of magnetic locks is prohibited unless approvals from A.C.E.S Group and A.H.J (Authority Having Jurisdiction) are granted. All approved magnetic locks shall be installed in accordance with all life safety regulations and NFPA codes.

PART 2 - Products

2.1 ACCESS CONTROL SYSTEM

A. Access Control System Description

The Pennsylvania State University has initiated a multi-phase access control project for the University Park campus. The existing system utilizes Software House CCure800/8000 software running on a CCure server. The hardware consists of Sensormatic iStar Controller and associated hardware, which provides for the physical connection to readers, locking hardware, door status switches, and request to exit devices.

Sensormatic has been approved as a Proprietary Item and substitutions will not be permitted without permission of Owner.

B. Sensormatic System Feature/Capability

The following indicates system capabilities and capacities:

1. LAN/WAN Communications: CCure host server to local iStar panel.
2. The iStar panels shall have a minimum of 64MB RAM to exceed the University requirement of 10,000 card records and 3,000 event storage capabilities to retain event information in the case of network failure.
3. Programming Software: The Programming Software shall include the following features:
   a. LAN/WAN connection with CCure Host
   b. Fully configurable user authority level control
   c. CCure parameter editing and storage
   d. CCure and iStar software upgrade ability
C. Sensormatic System Interface Requirements
1. All Installations: The Sensormatic access control system shall be installed in accordance with the National Electric Code and the local Authority Having Jurisdiction (AHJ).
2. The Sensormatic access control hardware shall be installed in accordance with UL requirements.

2.2 SENSORMATIC SYSTEM MATERIALS

A. Sensormatic System Hardware Description
1. Sensormatic System: The access control system shall be provided, at a minimum, with the following components. Additional accessories shall be provided based on the quantities and features required for the application.
   a. Sensormatic panel iStar.
      • System Accessories:
        1) 64 MB RAM or greater
        2) iStar power supply with 7 amp hour battery backup for panel and door strikes
           a) Mercury part # WS-10 hood required for outdoor readers.
           b) Mercury MR-10 Card Readers
           c) Sensormatic RM-4 personality module
           d) Von Duprin PS873 power supplies for electric latch retraction activation
           e) Von Duprin exit hardware mounted request-to-exit switches
           f) Von Duprin electric latch retraction solenoids
           g) Von Duprin 6000 Series electric door strikes
           h) Sentrol #1078C door monitor switches
           i) Detection Systems DS150i request-to-exit motion detectors
           j) System Sensor PA440 door ajar sounders
           k) Tripp-Lite Model# IBAR4 or equivalent surge suppressor.
           l) Handicapped door opener interfaces.
           m) Altronix AL400ULACMCB or equivalent power supply
           n) Von Duprin EPT-10 power transfer device
2. Sensormatic iStar (Advanced Processing Controller)

B. iStar Advanced Processing Controller Description
   The iStar specified herein shall be used to control the locking/unlocking of doors

C. iStar Feature/Capability Summary
   The following indicates the iStar / iStar capabilities, capacities, and formats:
1. Advanced Processing Controller (iStar): The iStar shall include the following features:
   a. Must have re-programmable FLASH memory for software upgrades and future product enhancements.
   b. Must contain a 3,000 Event history buffer (minimum)
   c. Must support 50,000 or greater card holders
   d. Possess the capability of 255 time commands for automatic input, output, and reader mode control
   e. Must have the ability of elevator control
   f. Must possess real-time full-year clock and calendar
D. iStar System Interface Requirements
1. Grounding: The Contractor shall properly earth ground the iStar panel to prevent electrostatic charges and other transient electrical surges from damaging the iStar panel.
2. Primary power: The Contractor shall connect the iStar panel to a dedicated 120 VAC power source through the external iStar power supply.
3. Power supervision: The external power supply shall provide contacts that activate when there is an AC power failure and the system will report a “Power Failure” message to the CCure server.
4. Communications: The Contractor shall connect the iStar to the Universities SecLAN for communications and programming with the CCure host server.
5. Housing: The Contractor shall install the iStar in a 16 AWG metal wall mounted lockable cabinet with tamper switches on the front and rear. (Standard Sensormatic Cabinet).

2.3 MERCURY SECURITY CORPORATION – MODEL MR-10 CARD READER

A. MR-10 Card Reader Description
The card reader specified herein shall be used to read Pennsylvania State University id+ cards for the purpose of providing access control to secured areas of the University Park campus.

B. MR-10 Feature/Capability Summary
The following indicates reader capabilities and formats:
1. The MR-10 shall be used to read standard ABA (American Banking Association) Track II cards.
2. Read speed shall be from 3 to 50 inches per second.
3. Communication formats shall be either clock/data or Wiegand.
4. Reader head shall provide a life expectancy greater than 1,000,000 reads.
5. Outdoor applications shall have the optional weather hood installed.
6. Reader shall be equipped with two visual indicators (LEDs) and an audible tone.
7. Housing shall be die cast metal and the mounting hardware shall be stainless steel.
8. Reader shall be capable of normal operation indoor, outdoors, and between the temperatures of –40°C and +75°C.

C. MR-10 Interfacing Requirements
1. Sensormatic RM-4 Personality Module: The Contractor shall install an RM-4 to interface the MR-10 reader to the iStar panel.
2. Grounding: The Contractor shall properly earth ground the RM-10 reader to prevent electrostatic charges and other transient electrical surges from damaging the reader.
3. Mounting: The Contractor shall mount the reader vertically, except where it is not possible. Then, the reader should be mounted with read slot along the bottom of the unit.

2.4 SENSORMATIC RM-4 PERSONALITY MODULE

A. RM-4 Personality Module Description
The RM-4 module specified herein shall connect and work as an interface between the MR-10 reader and the iStar access control panel. The RM-4 shall also provide inputs and outputs for the connection of a door status switch, request to exit switch, and door strike relay.

B. RM-4 Feature/Capability Summary

The following outlines RM-4 capabilities and formats:
1. The RM-4 shall be used to interface communications between the MR-10 card reader and the iStar access control panel.
2. The RM-4 shall be used to connect and supervise the door status switch and the request to exit switch/motion.
3. Provide an output/trigger for door strike relay.
4. Convert the clock/data communication format from the reader to RS485.
5. Create an address for the reader to the iStar.

C. RM-4 System Requirements

1. Grounding: The Contractor shall properly earth ground the RM-4 to prevent electrostatic charges and other transient electrical surges from damaging the RM-4.
2. Housing: The Contractor shall install the RM-4 in a NEMA Type 1 hinged, lockable enclosure along with the door strike relay (Altronix RSBN-TTL or Equivalent).

2.5 SENTROL 1078C DOOR MONITOR SWITCH

A. Sentrol 1078C Description

The 1078C Door Monitor Switch specified herein shall provide a means of monitoring the status of the controlled door. The switch will monitor the door for forced entry and indicate if the door is left ajar after a valid card read.

B. 1078C Feature/Capability Summary

1. Contact shall be hermetically sealed magnetic reed switch.
2. Reed switch shall be potted in the contact housing with a polyurethane-based compound.
3. Housings shall be molded of flame retardant ABS plastic.

C. 1078C System Requirements

1. RM-4 Connection: The Contractor shall connect the 1078C to the appropriate input on the RM-4.
2. Supervision Resistor: The Contractor shall connect the supervision resistor provided with the RM-4 at the 1078C for the supervision of the wiring between the resistor and the RM-4.
3. Securing the 1078C: The Contractor shall secure the 1078C in place by placing a light coating of silicon RTV caulk.

2.6 SENSORMATIC DS-150I REQUEST TO EXIT MOTION DETECTOR

A. DS-150i Request to Exit Motion Detector Description

The DS-150i request to exit motion detector specified herein shall provide a means to shunt the Door Monitor Switch and/or the unlocking of the controlled door upon exiting.

B. DS-150i Feature/Capability Summary

1. Coverage: The DS-150i shall provide coverage for single or double door use.
2. DS-150i shall be mounted above the door on the wall or ceiling.
3. Two sets of relays that shall be Form "C" contacts.
4. Selectable fail safe/secure modes
C. DS-150i System Interface Requirements
   1. RM-4 Connection: The Contractor shall connect the DS-150i to the RM-4 module.

2.7 ALTRONIX MAXIM3D POWER SUPPLY (OR EQUIVALENT)

A. Altronix Power Supply Description
   The MAXIM3D distributes and routes power to access control systems and accessories. It will
   convert an 115VAC 50/60Hz input into eight (8) independently controlled PTC protected class 2
   power limited 12VDC or 24VDC outputs. Outputs are activated by an open collector sink or
   normally open (NO) dry trigger input from an Access Control System, Card Reader, Keypad,
   Push Button, PIR, etc.

   The unit will route power to a variety of access control hardware devices including: Mag Locks,
   Electric Strikes, Magnetic Door Holders, etc. Outputs will operate in both fail-safe and/or fail-
   secure modes.

   The FACP Interface enables Emergency Egress, Alarm Monitoring, or may be used to trigger
   other auxiliary devices. The fire alarm disconnect function can be configured for the following
   modes: a) eight (8) outputs affected or b) four (4) outputs affected and four (4) outputs unaf-
   fected (50/50 mode).

B. Altronix Power Supply Features/Capability Summary
   1. 4 amp continuous supply cu rrent at 12 VDC or 24 VDC.
   2. Eight (8) Access Control System trigger inputs.
   3. Fire Alarm disconnect
   4. Automatic switchover to stand-by battery when AC fails.
   5. Thermal and short-circuit protection with auto reset.
   6. Battery failure and battery presence supervision.
   7. AC failure supervision.

C. Altronix Power Supply Interface Requirements
   1. Primary Power: The Contractor shall co nnect the power supply to a non-switched,
      dedicated 120 VAC power source.
   2. Power Supervision: The C ontractor shall connect the pow er supply’s supervisory outputs
      to the iStar.
   3. Battery Back-up: The Contractor shall provide for a minimum 12 hours of back-up power
      in the event of primary power failure.

2.8 VON DUPRIN 98/99 SERIES - ELECTRIC LATCH RETRACTION AND REQUEST TO EXIT OPTIONS

A. Von Duprin Electric Latch Retraction and Request to Exit Description
   1. Electric Latch Retraction (EL)- Option
      The EL feature allows for the remote unlocking of exit devices. A control station operator
      can flip a switch or an access control system can activate an output to retract the latch
      bolt and immediately change an exit door to push-pull operation. A powerful, continuous-
      duty solenoid retracts the latch bolt for unlocking either momentary or for extended
      periods of time. The EL feature is an alternative to manual dogging. EL devices are also
      useful with automatic door operators and may be applied to fire-rated devices when
      under the control of an automatic fire alarm system.

   2. Request to Exit (RX)-- Option: The RX (Request-to-Exit) feature is used to signal the use
      of an opening. These devices are equipped with one internal SPDT switch which
      monitors the touch bar. The device can be connected to a security console or may be
used as a single door alarm when used with a horn and power supply. A continuous current electric transfer must be used for transferring power from the frame to the door.

B. Von Duprin Features/Capability Summary
   1. Electric Latch Retraction
      a. Fail secure to keep door locked in the event of power failure
      b. Interfaces with automatic door opener for handicapped entrances.
      c. Can be retrofit into existing Von Duprin door hardware
   2. Request to Exit
      a. One internal SPDT switch
      b. Can be retrofit into existing Von Duprin door hardware

C. Von Duprin Interface Requirements
   1. Electric Latch Retraction
      a. Power: EL requires a separate power supply Von Duprin PS 873 with 872-1 option board.
      b. Power supply requires 120VAC
      c. The Contractor shall provide a continuous current electric transfer for transferring power from the frame to the door.
      d. iStar Connection: The Contractor shall connect the electric latch retraction to the iStar panel through a set of SPDT contacts.
   2. Request to Exit
      a. RM-4 Connection: The Contractor shall connect the RX switch to the RM-4 module.
      b. The Contractor shall provide a continuous current electric transfer for transferring power from the frame to the door.

2.9 VON DUPRIN 6000 SERIES ELECTRIC DOOR STRIKES

Electric door strikes shall be Von Duprin 6000 Series of the appropriate model for the associated door's lock. Any other substitution shall be submitted to PSU for approval. Note: Security vendor shall be responsible for specifying and installing of the appropriate model of electric strike.

A. Von Duprin 6000 Series Door Strike Description

Von Duprin electric door strikes provide remote release of a locked door. They allow the door to be opened without retracting the latchbolt. When the door closes the beveled latchbolt rides over the lip and falls into the electric strike pocket. With the Dual switch monitoring option, the strike has two SPDT contacts; one switch monitors the tripper, which is depressed when the latchbolt is inserted into the strike pocket. The second switch monitors the condition of the strike lip, open or closed and locked.

2.10 VON DUPRIN 6000 SERIES FEATURES/CAPABILITY SUMMARY

A. Fail secure to keep door locked in the event of power failure
B. Rated for continuous duty for daytime unlocking of doors
C. Tested to over 500,000 cycles
D. Holding strength greater than 1500 lbs.
E. UL Listed for Burglary-Resistant and Electric Strike for fire doors and frames.
F. Dual Switch Monitoring for latchbolt status and strike condition. Option: DS-LC (Latchbolt Status Switch)

1. Von Duprin 6000 Series Interface Requirements
   a. Power: The Contactor shall connect the electric strike to the Altronix power supply.
   b. Latchbolt Status Switch Connection: The Contractor shall connect the latch bolt status switch to the appropriate input on the iStar panel.
   c. Supervision Resistor: The Contractor shall connect the supervision resistor provided with the iStar panel at the latch bolt status switch for the supervision of the wiring between the resistor and the panel.

2.11 SYSTEM SENSOR PA400 MINI-ALERT SOUNDER

A. System Sensor PA400 Mini-Alert Sounder Description
   The PA400 Mini-Alert Sounder is a low current sounder (12mA @ 12VDC) that is affixed to a standard single gang electrical box. It will be used for annunciation of doors that have been propped open. It will typically be installed adjacent to the monitored door.

B. System Sensor PA400 Mini-Alert Sounder Features/Capability Summary
   1. The PA400 is capable of producing greater than 90db of audio.
   2. Mounts to a standard 2-1/2” deep single-gang box.

C. System Sensor PA400 Mini-Alert Interface Requirements
   1. Connection: The Contractor shall connect the PA400 to the appropriate outputs on the RM-4 module or apC8/X panel.
   2. Mounting: The Contractor shall mount the PA400 above the protected door unless otherwise specified.
   3. Activation: The PA400 shall be programmed to activate when the door is held or propped open.

PART 3 - Execution

3.1 INSTALLATION
   Install all equipment and materials in accordance with the “current” recommendations of the manufacturer. The work shall also be in accordance with:

   A. Installation criteria defined in these specifications and in the construction documents.
   B. Approved submittals.
   C. Applicable requirements of the referenced standards.

3.2 SUPERVISION
   The contractor shall provide the following services as part of the contract:

   A. Supervision of sub-contractors.
   B. Coordination of other contractors for system related work (electrical contractor, finish hardware contractor, door contractor, architect, and general contractor).
   C. Attend construction meetings.
D. Keep updated drawings at the site.
E. Meet construction deadlines per schedule.

3.3 PROGRAMMING
Programming of the system shall include the following tasks:
A. Programming system configuration parameters (hardware and software, door location/number, communication parameters).
B. Programming operational parameters such as unlocking/locking times, events, door shunt times, and communication failure/restore times.
C. Other programming tasks required by Owner. These additional programming requirements shall be coordinated between Owner and Contractor.

3.4 TESTING
A. Operational Testing: The contractor shall perform thorough operational testing and verify that all system components are fully operational.
B. Hard-copy System Printout: The contractor shall submit a hard-copy system printout of all components tested and certify 100 percent operation indicating all devices/panels/units have passed the test criteria set forth by the manufacturer.
C. Acceptance Test Plan Form: An Acceptance Test Plan Form shall be prepared/provided by the contractor prior to the acceptance walk through.
D. This form shall include separate sections for each device/panel/unit as well as a column indicating the manufacturer’s performance allowance/margin, a column indicating the result of the testing performed by the contractor (pass/fail), and an empty column for recording findings during the walk-through.

3.5 COMMISSIONING
The Contractor shall certify completion in writing and schedule the commissioning walk-through. The contractor shall provide all the tools and personal needed to conduct an efficient commissioning process.

3.6 TRAINING
Contractor shall provide up to three (3) hours of onsite training which shall include training on the proper installation and programming of all related hardware and software and include training of departmental end-user.
Appendix

1. Equipment Schedule

- Room T217 iStar Panel Location
  1- Sensormatic iStar pro panel to include:
    1- I-Star Pro General Controller Module (GCM II)
    2- I-Star Pro 8 Reader Add-on Access Control Module (ACM II)
    1- Sensormatic I-Star Enclosure
  Additional Required Equipment:
    1- Altronix MAXIM3D power supply or equivalent
    4- 12VDC @ 7 Amp-Hour Battery
    1-Tripp-Lite Model#IBAR4 or equivalent surge suppressor
    1- 50’ RJ-45 Ethernet cable (Cat 5 or better)

- Telecommunications Room P005 (CR) Type 1.30
  1- Mercury card reader
  1- Sensormatic RM-4 personality module
  1- Electric door strike with latchbolt status switch
  1- Door status switch (DSM)
  1- Request to exit motion detector
  1- Door Ajar Sounder

- Academic Record Storage Room 004 (CR) Type 1.30
  1- Mercury card reader
  1- Sensormatic RM-4 personality module
  1- Electric door strike with latchbolt status switch
  1- Door status switch (DSM)
  1- Request to exit motion detector
  1- Door Ajar Sounder

- Server Room 034 (CR) Type 1.30
  1- Mercury card reader
  1- Sensormatic RM-4 personality module
  1- Electric door strike with latchbolt status switch
  1- Door status switch (DSM)
  1- Request to exit motion detector
  1- Door Ajar Sounder

- Vestibule F101 (CR) Type 2.00ADA
  1- Mercury card reader
  1- Mercury weather hood
  1- Sensormatic RM-4 personality module
  2- Electric latch retraction with latch bolt monitoring
  1- Electric latch retraction power supply
  2- Door status switches
  1- Door ajar sounder
  1- Request to exit motion detector
  1- Handicapped Opener Interface

- Vestibule F102 (CR) Type 2.00ADA
  1- Mercury card reader
  1- Mercury weather hood
  1- Sensormatic RM-4 personality module
  2- Electric latch retraction with latch bolt monitoring
  1- Electric latch retraction power supply
  2- Door status switches
  1- Door ajar sounder
1- Request to exit motion detector
1- Handicapped Opener Interface

- Vestibule F102 (EL) **Type 2.33**
  2- Electric latch retraction with latch bolt monitoring
  1- Electric latch retraction power supply
  2- Door status switches
  1- Request to exit motion detector

- Stair B Z102 F101.2 (DSM) **Type 1.10**
  1- Door ajar sounder
  1- Door status switch
  1- Request to exit switch

- Vestibule F105 (CR) **Type 2.00ADA**
  1- Mercury card reader
  1- Mercury weather hood
  1- Sensormatic RM-4 personality module
  2- Electric latch retraction with latch bolt monitoring
  1- Electric latch retraction power supply
  2- Door status switches
  1- Door ajar sounder
  1- Request to exit motion detector
  1- Handicapped Opener Interface

- Vestibule F105 (EL) **Type 1.40**
  1- Electric latch retraction with latch bolt monitoring
  1- Electric latch retraction power supply
  1- Door status switch
  1- Request to exit motion detector

- Conference/Classroom Room 116 (DSM) **Type 2.10**
  1- Door ajar sounder
  2- Door status switches
  1- Request to exit switch

- Telecommunications Room T217 (CR) **Type 1.30**
  1- Mercury card reader
  1- Sensormatic RM-4 personality module
  1- Electric door strike with latchbolt status switch
  1- Door status switch (DSM)
  1- Request to exit motion detector
  1- Door Ajar Sounder

- Secure Data Storage Room 305 (CR) **Type 1.30**
  1- Mercury card reader
  1- Sensormatic RM-4 personality module
  1- Electric door strike with latchbolt status switch
  1- Door status switch (DSM)
  1- Request to exit motion detector
  1- Door Ajar Sounder

3. Materials Supplied by Others

1. Electrical Contractor
   a. Conduits from accessible space in ceiling to power transfer units located on doorjamb.
   b. Conduits from accessible space in ceiling to a single-gang electrical box for card readers.
   c. Conduits from accessible space in ceiling to a horizontally mounted single-gang electrical box centered above door for request to exit motion detector. Only where required.
   d. Conduit from accessible space in ceiling to a single-gang electrical box for door-ajar sounders.
   e. 120 VAC N/E electric power for electric latch retraction power supplies.
   f. 120 VAC N/E electric power electric room T217 at the access control panel.
   g. CAT5 cable from access control panel to SecLAN switch.

4. Building Drawings
   See drawing

END OF SECTION 28 13 00
SECTION 28 16 00 - INTRUSION DETECTION

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. Introduction

The Contractor shall provide, install, and program a functionally complete burglar alarm system per Manufacturer’s guidelines, codes, described, and these specifications.

1.2 WORK INCLUDED UNDER THIS SECTION

A. Installation of security system including:
   1. One (1) Bosch/Radionics D7412 control panel.
   2. One (1) Octo-popit point expansion module
   3. One (1) keypad.
   4. Seven (7) Tamper wires with 1/8” male mono-phono jack installed at projector for ceiling projectors.
   5. Three (3) Minatronics Lightgard II fiber-optic alarms for podiums.

B. System wiring

   • Wire gauge and shielding shall follow the manufacture’s installation guidelines.
   • All wiring shall be installed in accordance with the National Electric Code (NEC) and the National Fire Protection Agency (NFPA).
   • All wiring shall be concealed where possible. All exposed wiring shall be installed in a protective housing such as conduit, or Wiremold.
   • Cables penetrating floors and firewalls must be routed through a metallic sleeve and properly fire stopped to meet national and local fire codes. All walls and floors shall maintain their existing fire rating.

C. System programming

   • The Contractor shall complete the programming of security system
   • The Contractor shall not data lock the alarm control panel to prevent University personnel or any University authorized vendor from editing or revising the programming.

1.3 RELATED WORK SPECIFIED UNDER OTHER SECTIONS OF THESE SPECIFICATIONS (RELATED SECTIONS)

A. This work shall be done in strict accordance with these Contract Documents prepared for The Pennsylvania State University, Owner.

B. The Contractor shall perform all work described in this document and not expressly mentioned in the specifications, but obviously necessary for the proper execution of the same. It is not the intent to delineate or describe every detail and feature of work. No additions to the contract sum will be approved for any materials, equipment, and/or labor to perform work
hereunder unless it can be clearly shown to be beyond the scope and intent of the drawings and specifications and absolutely essential to the proper prosecution of the work.

C. Work under this contract consists of the complete installation and includes, but is not necessarily limited to, the furnishing of all labor, superintendence, material, tools, and equipment necessary to complete all the work as specified hereinafter.

1.4 GENERAL CONDITIONS

A. Submittals at bid time

For bid evaluation, bid submittals shall include one (1) set of the items described below:

1. Specification sheets (cut sheets) of all proposed equipment.
2. Equipment list identifying:
   a. Model number of each unit.
   b. Quantities of each type of device.
   c. Unit costs
3. Specification compliance: A letter submitted with the bid, responding to specification subsections individually, indicating exceptions, substitutions, and alternatives. The Contractor shall submit requests for substitutions (as well as all relevant technical data pertaining to substituted equipment) to the specifier 10 days prior to the close of bid for evaluation and approval.

B. Documentation to be submitted by Contractor after award of contract

1. Drawings: Shop drawings to provide details of proposed system and the work to be provided. These include point-to-point drawings of systems and wiring diagrams of individual devices.
2. Permits: The Contractor shall be responsible for identifying requirements for permits from all building, police, and fire authorities for the installation of the system(s) specified herein and shall assist the owner in obtaining the relevant permits.

C. Documentation to be submitted by Contractor upon completion of system installation

1. “As-builts” Upon completion of installation, the Contractor shall prepare “as-built” drawings of the system. These “As-builts” shall be AutoCAD (Revision 14 or greater) drawings of each floor plan indicating exact device locations, panel terminations, cable routes, and wire numbers as tagged and color-coded on the cable tag.

   Additionally, final point-to-point wiring diagrams of each type of device (in AutoCAD) shall be included in the “as-builts.”

   “As-builts” shall be submitted to the Owner for approval prior to the system acceptance walk through.

2. Operation and maintenance manuals: One (1) set of operating manuals shall be provided explaining the operation and maintenance of the system.
3. Paperwork to be placed inside of alarm panel:
   - Panel programming and installation manual
   - Power supply manuals
   - System operation manual (if owner is unknown)
   - Component manuals to include, keypads, motion detectors, smoke detectors, etc.
D. On-site security personnel training

Upon completion of the installation, the Contractor shall furnish training in the complete operation of the system.

E. System approvals

1. The system shall be the standard product of one manufacturer, and the manufacturer shall have been in business manufacturing similar products for at least 5 years.

2. After-sales support: The Contractor shall be a factory-authorized and trained dealer of the system and shall be factory-trained and certified to maintain/repair the system after system acceptance.

F. Quality assurance

1. All equipment, systems, and materials furnished and installed under this section shall be installed in accordance with the applicable standards of:
   a. National codes: NEC and NFPA
   b. Approvals and Listings: UL
   c. Pennsylvania Department of Labor and Industry
   d. EIA/TIA Telecommunications wiring standards
   e. Local Authorities Having Jurisdiction

G. Guarantee of Work

All components, parts, and assemblies supplied by the Manufacturers and installed by the Contractor shall be warranted against defects in material and workmanship for a period of at least 12 months (parts and labor), commencing upon date of acceptance by Owner. A qualified factory-trained service representative shall provide warranty service.

H. Service/Maintenance

1. During the warranty period the Contractor shall be responsible for maintenance and repair of the system including the repair of workmanship defects, free of charge (parts and labor).

2. The installer shall correct any system defect within six (6) hours of receipt of call from Owner.

3. The Contractor shall offer extended service/maintenance agreements up to four years after the warranty expires. The agreement shall be renewable monthly, quarterly, or yearly.

I. Building Security

Building security shall remain functional during installation. Doors and door locking shall remain operational. University Police must be notified if it is not possible to lock the doors at the end of each workday. Failure to comply will result in removal from the approved vendor list.

PART 2 - Security System

2.1 SECURITY SYSTEM

A. Security System Description

Bosch/Radionics D7412 control panel.
B. Security System Feature/Capability

The following indicates system capabilities and capacities:

1. Minimum of seventy-five (75) points and eight (8) partitions.
2. Standby power capable of maintaining system operation for a minimum of 12 hours and the ability to transmit a trouble signal before failure.
3. A digital communicator capable of communicating with a Bosch/Radionics D6600 central station receiver.

C. Security System Interface Requirements

1. All Installations: The security system shall be installed in accordance with the National Electric Code and the Local Authority Having Jurisdiction.
2. The security control hardware shall be installed in accordance with UL requirements.

2.2 SECURITY SYSTEM MATERIALS

A. Security System Hardware Description

1. Security System: The security system shall be provided, at a minimum, with the following components. Additional accessories shall be provided based on the quantities and features required for the application.
   a. Bosch/Radionics D7412 panel with enclosure.
      • System Accessories:
        1) AC power supply
        2) Conettix DX4020 Ethernet Network Interface Module
        3) Minimum: 7 amp hour battery back up
        4) Panel tamper switch
   2. One (1) Bosch octo-popit point expansion module
   3. One (1) Bosch/Radionics D1255 keypad
   4. Seven (7) Ceiling projector tamper wires with 1/8” male mono-phone jacks
   5. Three (3) Minatronics LightGard II Fiber Optic Cable Security Boxes
      http://www.minatronics.com/

2.3 SECURITY SYSTEM EQUIPMENT LOCATIONS

A. Bosch D7412 intrusion alarm panel, room T217
   1. Bosch D1255 keypad, room 102 outside entrance door
   2. Lightgard II, podiums room 022, 102, 102A
   3. Projector tamper wires, room (4) 022, (2) 102, (2) 102A

PART 3 - Execution

3.1 INSTALLATION

Install all equipment and materials in accordance with the “current” recommendations of the manufacturer. The work shall also be in accordance with:

A. Installation criteria defined in these specifications and in the construction documents.
B. Approved submittals.
C. Applicable requirements of the referenced standards.
3.2 **SUPERVISION**
The contractor shall provide the following services as part of the contract:

A. Supervision of sub-contractors.

B. Coordination of other contractors for system related work (electrical contractor, finish hardware contractor, door contractor, architect, and general contractor).

C. Attending construction meetings.

D. Keeping updated drawings at the site.

E. Meeting construction deadlines per schedule.

3.3 **PROGRAMMING**
Programming of the system shall include the following tasks:

A. Programming system configuration parameters (hardware and software, door location/number, communication parameters).

B. Programming operational parameters such as arm/disarm combinations, entry/exit delay times, and communication failure/restore times.

C. Other programming tasks required by the Owner. These additional programming requirements shall be coordinated between the Owner and the Contractor.

3.4 **TESTING**

A. Operational Testing: The contractor shall perform thorough operational testing and verify that all system components are fully operational.

B. Hard-copy System Printout: The contractor shall submit a hard-copy system printout of all components tested and certify 100 percent operation indicating all devices/panels/units have passed the test criteria set forth by the manufacturer.

C. Acceptance Test Plan Form: An acceptance test plan form shall be prepared/provided by the contractor prior to the acceptance walk through.

D. This form shall include separate sections for each device/panel/unit as well as a column indicating the manufacturer's performance allowance/margin, a column indicating the result of the testing performed by the contractor (pass/fail), and an empty column for recording finding during the walk-through.

3.5 **COMMISSIONING**
The Contractor shall certify completion in writing and schedule the commissioning walk-through. The contractor shall provide all the tools and personal needed to conduct an efficient commissioning process.
3.6 TRAINING

Up to one hour of on site training shall be provided which shall include training on the use of the system to the departmental end-user.

Appendix

1. Zone List

Partition 1 - Account # (provided at time of installation)
1. Panel tamper (24 hr silent alarm)
2. Room 022 ceiling projector
3. Room 022 ceiling projector
4. Room 022 ceiling projector
5. Room 022 podium
6. Room 102 ceiling projector
7. Room 102 ceiling projector
8. Room 102 podium
9. Room 102A ceiling projector
10. Room 102A ceiling projector
11. Room 102A podium

2. Material Supplied by Others

1. OTC
   a. A dedicated VOIP to analog telephone line in room T217 adjacent to security panel for central station communications.

2. OPP CCS
   a. Security LAN connection for security panel for central station communications.

END OF SECTION 28 1600
SECTION 28 23 00 - VIDEO SURVEILLANCE

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. Introduction

The Contractor shall provide, install, and program a functionally complete video surveillance system per Manufacturer’s guidelines, codes, described, and these specifications.

1.2 WORK INCLUDED UNDER THIS SECTION

A. Installation of Closed Circuit Television system including:

1. Eleven (11) IP video cameras
2. One (1) network video recorder (NVR)
3. One (1) 24 port POE (Power Over Ethernet) Ethernet switch
4. One (1) camera power supply

B. System wiring

- All system wiring shall be plenum rated.
- Video transmission cable shall be plenum rated Cat 5e or greater for all camera runs. Lengths exceeding 300' will require repeaters or other methods of transmission.
- Wire gauge and shielding shall follow the manufacture’s installation guidelines.
- All wiring shall be installed in accordance with the National Electric Code (NEC) and the National Fire Protection Agency (NFPA).
- All wiring shall be concealed where possible. All exposed wiring shall be installed in a protective metallic housing such as conduit, or Wiremold.
- Cables penetrating floors and firewalls must be routed through a metallic sleeve and properly fire stopped to meet national and local fire codes. All walls and floors shall maintain their existing fire rating.

C. System programming

- The Contractor shall complete the initial programming of the network video recorder
- The Contractor shall adjust cameras (aim and focus) and verify with customer that the field of view is acceptable.
- The Contractor shall not data lock any of the security equipment to prevent University personnel or any University authorized vendor from editing or revising the programming.

D. Related work specified under other sections of these specifications (Related sections)

1. A. This work shall be done in strict accordance with these Contract Documents prepared for The Pennsylvania State University, Owner.
2. B. The Contractor shall perform all work described in this document and not expressly mentioned in the specifications, but obviously necessary for the proper execution of the same. It is not the intent to delineate or describe every detail and feature of work. No additions to the contract sum will be approved for any materials, equipment, and/or labor to perform work hereunder unless it can be clearly shown to be beyond the scope and
intent of the drawings and specifications and absolutely essential to the proper prosecution of the work.

3. Work under this contract consists of the complete installation and includes, but is not necessarily limited to, the furnishing of all labor, superintendence, material, tools, and equipment necessary to complete all the work as specified hereinafter.

1.3 GENERAL CONDITIONS

A. Submittals at bid time

For bid evaluation, bid submittals shall include (1) set of the items described below:

1. Specification sheets (cut sheets) of all proposed equipment.
2. Equipment list identifying:
   - Model number of each unit.
   - Quantities of each type of device.
   - Unit costs
3. Specification compliance: A letter submitted with the bid, responding to specification subsections individually, indicating exceptions, substitutions, and alternatives. The Contractor shall submit requests for substitutions (as well as all relevant technical data pertaining to substituted equipment) to the specifier 10 days prior to the close of bid for evaluation and approval.

B. Documentation to be submitted by Contractor after award of contract

1. Drawings: Shop drawings to provide details of proposed system and the work to be provided. These include point-to-point drawings of systems and wiring diagrams of individual devices.
2. Permits: The Contractor shall be responsible for identifying requirements for permits from all building, police, and fire authorities for the installation of the system(s) specified herein and shall assist the owner in obtaining the relevant permits.

C. Documentation to be submitted by Contractor upon completion of system installation

1. “As-builts”: Upon completion of installation, the Contractor shall prepare “as-built” drawings of the system. These “As-builts” shall be AutoCAD (Revision 14 or greater) drawings of each floor plan indicating exact device locations, panel terminations, cable routes, and wire numbers as tagged and color-coded on the cable tag. Additionally, final point-to-point wiring diagrams of each type of device (in AutoCAD) shall be included in the “as-builts.”

   “As-builts” shall be submitted to the Owner for approval prior to the system acceptance walk through.

2. Operation and maintenance manuals: One (1) set of operating manuals shall be provided explaining the operation and maintenance of the system.
3. Required security paperwork:
   - DVR installation and operation manual
   - Hardware manuals, to include cameras and power supplies
   - Wiring notes with equipment locations

D. On-site security personnel training

Upon completion of the installation, the Contractor shall furnish training in the complete operation of the system.
E. System approvals
1. The system shall be the standard product of one manufacturer, and the manufacturer shall have been in business manufacturing similar products for at least 5 years.
2. After-sales support: The Contractor shall be a factory-authorized and trained dealer of the system and shall be factory-trained and certified to maintain/repair the system after system acceptance.

F. Quality assurance
1. All equipment, systems, and materials furnished and installed under this section shall be installed in accordance with the applicable standards of:
   a. National codes: NEC and NFPA
   b. Approvals and Listings: UL
   c. Pennsylvania Department of Labor and Industry
   d. EIA/TIA Telecommunications wiring standards
   e. Local Authorities Having Jurisdiction

G. Guarantee of Work
All components, parts, and assemblies supplied by the Manufacturers and installed by the Contractor shall be warranted against defects in material and workmanship for a period of at least 12 months (parts and labor), commencing upon date of acceptance by Owner. A qualified factory-trained service representative shall provide warranty service.

H. Service/Maintenance
1. During the warranty period the Contractor shall be responsible for maintenance and repair of the system including the repair of workmanship defects, free of charge (parts and labor).
2. The installer shall correct any system defect within six (6) hours of receipt of call from Owner.
3. The Contractor shall offer extended service/maintenance agreements up to four years after the warranty expires. The agreement shall be renewable monthly, quarterly, or yearly.

I. Building Security
Building security shall remain functional during installation. Doors and door locking shall remain operational. University Police must be notified if it is not possible to lock the doors at the end of each workday. Failure to comply will result in removal from the approved vendor list.

PART 2 - CLOSED CIRCUIT TELEVISION (CCTV)

2.1 CCTV

A. CCTV Description
The following specifications are provided to establish minimum installation and operational requirements for the proposed video surveillance system. The University will consider and must approve reasonable alternatives that are proposed for any element or component or the proposed system.

The Bidder will provide as part of the Quotation documentation the Manufacturers Specifications for each component to be included in the Quote. A quotation without proper documentation will not be considered.
B. CCTV Feature/Capability
1. Cameras shall be high resolution color day/night mini dome IP cameras
2. Cameras shall have a minimum of at least 1.3 megapixels of resolution
3. Cameras shall be equipped with lenses that have an automatic iris and a variable focal length of 4 to 8 millimeters
4. Camera housings shall be vandal resistant
5. Exterior cameras shall be pendant mounted
6. Exterior cameras shall include integral infrared illumination.

C. CCTV Requirements
1. The CCTV equipment shall be installed in accordance with the National Electric Code and the Local Authority Having Jurisdiction.
2. The CCTV equipment hardware shall be installed in accordance with UL requirements.

2.2 CCTV MATERIALS

A. CCTV Camera
1. AXIS 216MFD-V Network Camera

B. Additional Equipment
1. 24 Port POE Ethernet switch

**NOTE:** Exact camera locations to be coordinated with owner at time of installation.

2.4 NETWORK VIDEO RECORDER (NVR)
Installed in room T217
A. Network Video Recorder (NVR) Description Intellex IP
1. The product specified shall be a PC-based Network Video Recorder that provides mass video storage capability by providing 1000GB or greater hard drive storage capacity, as required by the application. The NVR is designed to simultaneously record, search, play back, archive, and display composite video. Activity is detected by motion, contact inputs, or both. Pan/Tilt/Zoom control is operational via the local unit or remote workstation software.

2. A remote software program shall be supplied by the manufacturer to allow interaction with the main unit from remote workstations via a 10/100/1000 Base-T Ethernet network connection. The remote software program shall be capable of viewing live or recorded video and P/T/Z camera control.

3. The NVR shall be compatible with the Software House C*Cure 800/9000 Security Management System

B. NVR Feature/Capability Summary
1. The system shall consist of a PC-based network video recorder unit, PC mouse and keyboard. The recorder is supplied with a DVD/CD-RW drive. Administrator or User programming and control shall be accomplished via a Graphical User Interface displayed on a customer supplied SVGA monitor. NVR shall be capable of remote viewing and playback of video via TCP/IP communications

2. The NVR specified shall be capable of recording at system frame rate of 480 images per second (ips) or greater, as required by the application.

3. Security shall be provided via fully definable users that may be granted or denied access to system administration functions, recorded video, PTZ camera control, and live viewing of video. Activities to the recorder such as alarm events, motion, video loss, etc. shall be maintained in a user event log.

4. A local smart motion search function of the specified recorder shall allow recorded video to be searched for motion activity in any area of the recorded video images and produce search results accordingly.

5. Each camera shall be independently programmable for alarm inputs, motion detection, and recording rates so that customized or specialized requirements may be met. Scheduled recording by time, day, motion and alarms may also be programmed. Video recording shall be easily searched by time, date, motion, or alarms based upon a color-coded scheme search. Searching the recorded video using this color-coded scheme feature shall be provided in the local recorder and via the remote viewer workstation software.

6. The recorder shall provide simultaneous recording of live video while the operator is viewing the playback of recorded video.

7. The recorder shall provide a full screen or multi-screen display of any camera inputs selectable with or without the GUI displayed.

8. In addition to the standard post alarm or motion detection recording, the recorder shall allow selection of 5 seconds of pre-alarm recording from an alarm(s) input or upon motion detection. Five configurable motion detection zones per camera shall be programmable.

9. The manufacturer shall include a remote viewing software program that operates in a remote PC workstation running Windows NT 4.0 SP6, Windows 2000 Pro SP3, Windows XP Pro or Windows 7. This remote software allows access to viewing live images as well as the recorded images stored in the specified video recorder. Recorded images may be viewed based upon time, date, motion, or alarms. The remote viewer software shall include Graphical User Interface (GUI) software to allow access via an Ethernet network connection to live and recorded video.
PART 3 - EXECUTION

3.1 INSTALLATION
Install all equipment and materials in accordance with the “current” recommendations of the manufacturer. The work shall also be in accordance with:

A. Installation criteria defined in these specifications and in the construction documents.
B. Approved submittals.
C. Applicable requirements of the referenced standards.

3.2 SUPERVISION
The contractor shall provide the following services as part of the contract:

A. Supervision of sub-contractors.
B. Coordination of other contractors for system related work (electrical contractor, finish hardware contractor, door contractor, architect, and general contractor).
C. Attending construction meetings.
D. Keeping updated drawings at the site.
E. Meeting construction deadlines per schedule.

3.3 PROGRAMMING
Programming of the system shall include the following tasks:

A. Programming system configuration parameters (hardware and software, camera location/number, communication parameters).
B. Other programming tasks required by the Owner. These additional programming requirements shall be coordinated between the Owner and the Contractor.

3.4 TESTING

A. Operational Testing: The contractor shall perform thorough operational testing and verify that all system components are fully operational.
B. Hard-copy System Printout: The contractor shall submit a hard-copy system printout of all components tested and certify 100 percent operation indicating all devices/panels/units have passed the test criteria set forth by the manufacturer.
C. Acceptance Test Plan Form: An acceptance test plan form shall be prepared/provided by the contractor prior to the acceptance walk through.
D. This form shall include separate sections for each device/panel/unit as well as a column indicating the manufacturer’s performance allowance/margin, a column indicating the result of
the testing performed by the contractor (pass/fail), and an empty column for recording finding during the walk-through.

3.5 COMMISSIONING
The Contractor shall certify completion in writing and schedule the commissioning walk-through. The contractor shall provide all the tools and personal needed to conduct an efficient commissioning process.

3.6 TRAINING
Up to three hours of on site training shall be provided which shall include training on the proper installation and programming of all related hardware and software and training of departmental end-user.

END OF SECTION 28 2300
SECTION 28 31 11 - DIGITAL, ADDRESSABLE FIRE-ALARM SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary
   Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Fire-alarm control unit.
   3. System smoke detectors.
   4. Nonsystem smoke detectors.
   5. Heat detectors.
   7. Magnetic door holders.
   10. Digital alarm communicator transmitter.
   11. System printer.

1.3 DEFINITIONS

A. LED: Light-emitting diode.

1.4 SYSTEM DESCRIPTION

A. Noncoded, UL-certified addressable system, with multiplexed signal transmission, dedicated to
   fire-alarm service only.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and
   attachments to other work.
   1. Comply with recommendations in the "Documentation" Section of the "Fundamentals of
      Fire Alarm Systems" Chapter in NFPA 72.
   2. Include voltage drop calculations for notification appliance circuits.
   3. Include battery-size calculations.
   4. Include performance parameters and installation details for each detector, verifying that
      each detector is listed for complete range of air velocity, temperature, and humidity
      possible when air-handling system is operating.
   5. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts,
      drawn to scale and coordinating installation of duct smoke detectors and access to them.
      Show critical dimensions that relate to placement and support of sampling tubes, detector
      housing, and remote status and alarm indicators. Locate detectors according to
      manufacturer's written recommendations.
6. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits.

C. General Submittal Requirements:
1. Submittals shall be approved by authorities having jurisdiction prior to submitting them to Architect.
2. Shop Drawings shall be prepared by persons with the following qualifications:
   a. Trained and certified by manufacturer in fire-alarm system design.
   b. NICET-certified fire-alarm technician, Level III minimum.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
   2. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
   3. Record copy of site-specific software.
   4. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:
      a. Frequency of testing of installed components.
      b. Frequency of inspection of installed components.
      c. Requirements and recommendations related to results of maintenance.
      d. Manufacturer's user training manuals.
   5. Manufacturer's required maintenance related to system warranty requirements.
   6. Abbreviated operating instructions for mounting at fire-alarm control unit.

B. Software and Firmware Operational Documentation:
   1. Software operating and upgrade manuals.
   2. Program Software Backup: On magnetic media or compact disk, complete with data files.
   3. Device address list.
   4. Printout of software application and graphic screens.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Lamps for Remote Indicating Lamp Units: Quantity equal to 10 percent of amount installed, but no fewer than 1 unit.
   2. Lamps for Strobe Units: Quantity equal to 10 percent of amount installed, but no fewer than 1 unit.
   3. Smoke Detectors, Heat Detectors: Quantity equal to 10 percent of amount of each type installed, but no fewer than 1 unit of each type.
   4. Detector Bases: Quantity equal to 2 percent of amount of each type installed, but no fewer than 1 unit of each type.
   5. Keys and Tools: One extra set for access to locked and tamperproofed components.
   6. Audible and Visual Notification Appliances: One of each type installed.
   7. Fuses: Two of each type installed in the system.
1.8 QUALITY ASSURANCE

A. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.

B. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer. Components shall be compatible with, and operate as, an extension of existing system.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. NFPA Certification: Obtain certification according to NFPA 72 by an NRTL.

E. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.

F. NFPA Certification: Obtain certification according to NFPA 72 in the form of a placard by an FMG-approved alarm company.

1.9 PROJECT CONDITIONS

A. Interruption of Existing Fire-Alarm Service: Do not interrupt fire-alarm service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:
   1. Notify Construction Manager no fewer than 7 days in advance of proposed interruption of fire-alarm service.
   2. Do not proceed with interruption of fire-alarm service without Construction Manager's written permission.

1.10 SEQUENCING AND SCHEDULING

A. Existing Fire-Alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service and label existing fire-alarm equipment "NOT IN SERVICE" until removed from the building.

B. Equipment Removal: After acceptance of new fire-alarm system, remove existing disconnected fire-alarm equipment and wiring.

1.11 SOFTWARE SERVICE AGREEMENT

A. Comply with UL 864.

B. Technical Support: Beginning with Substantial Completion, provide software support for two years.

C. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.
   1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.
PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Provide Siemens MXL system with CMI300 modem per University Standards.

2.2 SYSTEMS OPERATIONAL DESCRIPTION

A. Fire-alarm signal initiation shall be by one or more of the following devices and systems:
   2. Heat detectors.
   3. Smoke detectors.
   4. Duct smoke detectors.
   5. Verified automatic alarm operation of smoke detectors.
   6. Automatic sprinkler system water flow.
   7. Heat detectors in elevator shaft and pit.

B. Fire-alarm signal shall initiate the following actions:
   1. Transmit an alarm signal to University Fire Command Center.
   2. Continuously operate alarm notification appliances.
   3. Identify alarm at fire-alarm control unit and remote annunciators.
   4. Unlock electric door locks in designated egress paths.
   5. Release fire and smoke doors held open by magnetic door holders.
   6. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.
   7. Close smoke dampers in air ducts of designated air-conditioning duct systems.
   8. Recall elevators to primary or alternate recall floors.
   9. Activate emergency lighting control.
   10. Activate emergency shutoffs for gas and fuel supplies.
   11. Record events in the system memory.
   12. Record events by the system printer.

C. Supervisory signal initiation shall be by one or more of the following devices and actions:
   1. Valve supervisory switch.
   2. Low-air-pressure switch of a dry-pipe sprinkler system.
   3. Elevator shunt-trip supervision.

D. System trouble signal initiation shall be by one or more of the following devices and actions:
   1. Open circuits, shorts, and grounds in designated circuits.
   2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
   3. Loss of primary power at fire-alarm control unit.
   4. Ground or a single break in fire-alarm control unit internal circuits.
   5. Abnormal ac voltage at fire-alarm control unit.
   7. Failure of battery charging.
   8. Abnormal position of any switch at fire-alarm control unit or annunciator.

E. System Trouble and Supervisory Signal Actions: Initiate notification appliance and annunciate at fire-alarm control unit and remote annunciators. Record the event on system printer.

2.3 FIRE-ALARM CONTROL UNIT

A. General Requirements for Fire-Alarm Control Unit:
1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864 and listed and labeled by an NRTL.
   a. System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
   b. Include a real-time clock for time annotation of events on the event recorder and printer.
2. Addressable initiation devices that communicate device identity and status.
   a. Smoke sensors shall additionally communicate sensitivity setting and allow for adjustment of sensitivity at fire-alarm control unit.
   b. Temperature sensors shall additionally test for and communicate the sensitivity range of the device.
3. Addressable control circuits for operation of mechanical equipment.

B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.
1. Annunciator and Display: Liquid-crystal type, 3 line(s) of 40 characters, minimum.
2. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters.

C. Circuits:
1. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class B.
   a. Initiating Device Circuits: Style B.
   b. Notification Appliance Circuits: Style Y.
   d. Install no more than 50 addressable devices on each signaling line circuit.

D. Smoke-Alarm Verification:
1. Initiate audible and visible indication of an "alarm-verification" signal at fire-alarm control unit.
2. Activate an NRTL-listed and -approved "alarm-verification" sequence at fire-alarm control unit and detector.
3. Record events by the system printer.
4. Sound general alarm if the alarm is verified.
5. Cancel fire-alarm control unit indication and system reset if the alarm is not verified.

E. Elevator Recall:
1. Smoke detectors at the following locations shall initiate automatic elevator recall.
   a. Elevator lobby detectors except the lobby detector on the designated floor.
   b. Smoke detector in elevator machine room.
   c. Smoke detectors in elevator hoistway.
2. Elevator lobby detectors located on the designated recall floors shall be programmed to move the cars to the alternate recall floor.
3. Water-flow alarm connected to sprinkler in an elevator shaft and elevator machine room shall shut down elevators associated with the location without time delay.
   a. Water-flow switch associated with the sprinkler in the elevator pit may have a delay to allow elevators to move to the designated floor.

F. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke barrier walls shall be connected to fire-alarm system.
G. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory, and print out the final adjusted values on system printer.

H. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.

I. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.

J. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory and digital alarm communicator transmitters shall be powered by 24-V dc source.
   1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.

K. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.

L. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.4 MANUAL FIRE-ALARM BOXES

A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
   1. Single-action mechanism, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
   2. Station Reset: Key- or wrench-operated switch.
   3. Indoor Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.

2.5 SYSTEM SMOKE DETECTORS

A. General Requirements for System Smoke Detectors:
   1. Comply with UL 268; operating at 24-V dc, nominal.
   2. Detectors shall be four-wire type.
   3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
   4. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
5. **Self-Restoring:** Detectors do not require resetting or readjustment after actuation to restore them to normal operation.

6. **Integral Visual-Indicating Light:** LED type indicating detector has operated and power-on status.

7. **Remote Control:** Unless otherwise indicated, detectors shall be analog-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by fire-alarm control unit.
   a. Rate-of-rise temperature characteristic shall be selectable at fire-alarm control unit for 15 or 20 deg F per minute.
   b. Fixed-temperature sensing shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg F.
   c. Provide multiple levels of detection sensitivity for each sensor.

**B. Photoelectric Smoke Detectors:**

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.

2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
   a. Primary status.
   b. Device type.
   c. Present average value.
   d. Present sensitivity selected.
   e. Sensor range (normal, dirty, etc.).

**C. Duct Smoke Detectors:** Photoelectric type complying with UL 268A.

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.

2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
   a. Primary status.
   b. Device type.
   c. Present average value.
   d. Present sensitivity selected.
   e. Sensor range (normal, dirty, etc.).

3. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.

4. Each sensor shall have multiple levels of detection sensitivity.

5. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.

### 2.6 HEAT DETECTORS

**A. General Requirements for Heat Detectors:** Comply with UL 521.

**B. Heat Detector, Combination Type:** Actuated by either a fixed temperature of 135 deg F or a rate of rise that exceeds 15 deg F per minute unless otherwise indicated.

1. Mounting: Twist-lock base interchangeable with smoke-detector bases.

2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

**C. Heat Detector, Fixed-Temperature Type:** Actuated by temperature that exceeds a fixed temperature of 190 deg F.

1. Mounting: Twist-lock base interchangeable with smoke-detector bases.
2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.7 NOTIFICATION APPLIANCES

A. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated and with screw terminals for system connections.
   1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated and with screw terminals for system connections.

B. Horns: Electric-vibrating-polarized type, 24-V dc; with provision for housing the operating mechanism behind a grille. Comply with UL 464. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet from the horn, using the coded signal prescribed in UL 464 test protocol.

C. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch-high letters on the lens.
   1. Rated Light Output:
      a. 15/30/75/110 cd, selectable in the field.
   2. Mounting: Wall mounted unless otherwise indicated.
   3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
   4. Flashing shall be in a temporal pattern, synchronized with other units.
   5. Strobe Leads: Factory connected to screw terminals.

2.8 MAGNETIC DOOR HOLDERS

A. Description: Units are equipped for wall or floor mounting as indicated and are complete with matching doorplate.
   1. Electromagnet: Requires no more than 3 W to develop 25-lbf holding force.
   2. Wall-Mounted Units: Flush mounted unless otherwise indicated.
   3. Rating: 24-V ac or dc.

B. Material and Finish: Match door hardware.

2.9 REMOTE ANNUNCIATOR

A. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
   1. Mounting: Flush cabinet, NEMA 250, Type 1.

B. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

2.10 ADDRESSABLE INTERFACE DEVICE

A. Description: Microelectronic monitor module, NRTL listed for use in providing a system address for alarm-initiating devices for wired applications with normally open contacts.
B. Integral Relay: Capable of providing a direct signal [to elevator controller to initiate elevator recall] [to circuit-breaker shunt trip for power shutdown] <Insert functions>.

2.11 DIGITAL ALARM COMMUNICATOR TRANSMITTER

A. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.

B. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture two telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on either line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.

C. Local functions and display at the digital alarm communicator transmitter shall include the following:
   1. Verification that both telephone lines are available.
   2. Programming device.
   3. LED display.
   5. Communications failure with the central station or fire-alarm control unit.

D. Digital data transmission shall include the following:
   1. Address of the alarm-initiating device.
   2. Address of the supervisory signal.
   3. Address of the trouble-initiating device.
   4. Loss of ac supply or loss of power.
   5. Low battery.
   6. Abnormal test signal.
   7. Communication bus failure.

E. Secondary Power: Integral rechargeable battery and automatic charger.

F. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.

2.12 SYSTEM PRINTER

A. Printer shall be listed and labeled by an NRTL as an integral part of fire-alarm system.

2.13 DEVICE GUARDS

A. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.
   1. Factory fabricated and furnished by manufacturer of device.
   2. Finish: Paint of color to match the protected device.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

A. Comply with NFPA 72 for installation of fire-alarm equipment.
B. Install wall-mounted equipment, with tops of cabinets not more than 72 inches above the finished floor.
   1. Comply with requirements for seismic-restraint devices specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."

C. Connecting to Existing Equipment: Verify that existing fire-alarm system is operational before making changes or connections.
   1. Expand, modify, and supplement existing monitoring equipment as necessary to extend existing monitoring functions to the new points. New components shall be capable of merging with existing configuration without degrading the performance of either system.

D. Smoke- or Heat-Detector Spacing:
   3. Smooth ceiling spacing shall not exceed 30 feet.
   4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Appendix A in NFPA 72.
   5. HVAC: Locate detectors not closer than 3 feet from air-supply diffuser or return-air opening.
   6. Lighting Fixtures: Locate detectors not closer than 12 inches from any part of a lighting fixture.

E. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.

F. Heat Detectors in Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location.

G. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.

H. Audible Alarm-Indicating Devices: Install not less than 6 inches below the ceiling. Install bells and horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille.

I. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inches below the ceiling.

J. Device Location-Indicating Lights: Locate in public space near the device they monitor.

K. Fire-Alarm Control Unit: Surface mounted, with tops of cabinets not more than 72 inches above the finished floor.

L. Annunciator: Install with top of panel not more than 72 inches above the finished floor.

3.2 CONNECTIONS

A. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 3 feet from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
   1. Smoke dampers in air ducts of designated air-conditioning duct systems.
2. Alarm-initiating connection to elevator recall system and components.
3. Alarm-initiating connection to activate emergency lighting control.
4. Supervisory connections at valve supervisory switches.
5. Supervisory connections at low-air-pressure switch of each dry-pipe sprinkler system.

3.3 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

B. Install framed instructions in a location visible from fire-alarm control unit.

3.4 GROUNDING

A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

3.5 FIELD QUALITY CONTROL

A. Field tests shall be witnessed by authorities having jurisdiction.

B. Tests and Inspections:
   1. Visual Inspection: Conduct visual inspection prior to testing.
      a. Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
      b. Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.

   3. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.

   4. Test audible appliances for the private operating mode according to manufacturer's written instructions.

   5. Test visible appliances for the public operating mode according to manufacturer's written instructions.

C. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.

D. Fire-alarm system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

F. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.
G. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.6 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain fire-alarm system.

END OF SECTION 28 31 11
SECTION 31 16 41 – SIDEWALKS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Requirements for furnishing and installing reinforced cement concrete sidewalks.

B. Related Sections:
   1. Section 03 11 00: Concrete Forming.
   2. Section 03 30 53: Miscellaneous Cast-in-Place Concrete.
   3. Section 31 20 00: Earth Moving.

1.2 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   3. AASHTO M 182, Standard Specification for Burlap Cloth Made from Jute or Kenaf.

B. American Society for Testing and Materials (ASTM):
   4. ASTM C 116, Fibrous Concrete Reinforcing.

1.3 SUBMITTALS

A. Submit the following information to the Engineer for approval:
   1. Shop Drawings:
      a. Working Drawings for the layout of expansion joints
      b. Working Drawings for the layout of construction joints.
   2. Samples:
      a. Subbase aggregate
   3. Quality Assurance/Control Submittals:
      a. Design Data:
         1) Concrete mix designs
      b. Certificates:
         1) Certificates of Compliance
            a) Concrete.
            b) Air-entraining admixture.
            c) Concrete reinforcement.
            d) Concrete curing compounds.
            e) Concrete curing and protecting covers.
            f) Expansion joint fillers.
            g) Stone aggregate.
1.4 QUALITY ASSURANCE

A. Qualifications:
   1. Quality Assurance Testing and Inspection Agency Qualifications:
      a. Employ an independent quality assurance testing and inspection agency qualified
to perform the inspections and testing required by this Section.
         1) Materials and fabrication procedures are subject to inspection and testing at
            the source and the field by the independent quality assurance testing and
            inspection agency.
         2) Inspections and tests performed by the quality assurance testing and
            inspection agency do not relieve the Contractor of responsibility for
            providing materials and fabrication procedures in compliance with specified
            requirements.
      b. The independent quality assurance testing and inspection agency must conform to
         the quality standards of the nationally recognized associations and agencies that
         promulgate the test standards, particularly ASTM E 329.

   B. Certifications:
      1. Submit certified copies of test reports from the independent quality assurance testing and
         inspection agency for all analyses and tests required by the referenced AASHTO and
         ASTM Standards.
         a. Direct the independent quality assurance testing and inspection agency to submit
            certified written reports that document the results of all tests and inspections
            performed directly to the Engineer immediately after the work is performed.
            1) In the reports, state whether the tested and inspected items comply with
               specified requirements or deviate from them.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Concrete:
   1. Portland Cement: Normal strength, Type 1A air entrained, conforming to ASTM C 150.
      a. Cement concrete shall be a minimum of six and maximum of eight 96-pound bags
         per cubic yard.
      b. Fine aggregate shall be Type A. Do not use fine aggregate produced from
         limestone in concrete wearing surfaces.
      c. Coarse aggregate shall be Type A, No. 57 as specified in PENNDOT 408, Section
         703.2 Tables B, C, and D.

C. Potable water.

D. Concrete shall have an entrained air content of 6% in the plastic state with a tolerance of +/-1.5% during the work. Entrained air in the hardened concrete shall not be less than 3.5% or
greater than 7.5%. Testing for air entrainment shall be in accordance with PENNDOT 408.

E. Concrete Forms:
   1. Furnish acceptable wood or metal forms that meet the requirements and that extend the
      full depth of the concrete.
   2. Erect forms true to line and grade. Maintain alignment using steel stakes at intervals not
      greater than 4 feet.
F. Concrete Reinforcement:
   1. Fibrous concrete reinforcing to meet ASTM C 116: Fibermesh, 4019 Industry Drive,
      Chattanooga, TN 37416, (615) 892-7243 or approved equal.

G. Expansion Joint Fillers:

H. Stone Aggregate:
   I. Crushed Stone: PENNDOT No. 2A coarse aggregate conforming to PENNDOT 408, Section
      703.2 and as specified in Part 2.3.C of Section 31 20 00: Earth Moving.

2.2 MIXES

A. Provide Class B Concrete to the following criteria and in accordance with Section 033000.
   1. Compressive strength at 28 days: 3300 psi.
   2. Slump: 3 inches.
   3. Aggregate size: 1 inch.

2.3 SOURCE QUALITY CONTROL

A. Submit Certificates of Compliance from the quality assurance testing and inspection agency
   certifying that the materials provided comply with the specified requirements.

B. Have the quality assurance testing and inspection agency perform acceptance testing of the
   stone aggregate at the source.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that previously installed protection measures are in place.

B. Verify that all surfaces abutting new concrete pavement are clean, true, and free from chips,
   etc.

C. Beginning installation means acceptance of existing conditions.

3.2 PREPARATION

A. Do not place crushed stone on soft, muddy, or frozen areas. Correct irregularities or soft areas
   before placing crushed stone.

B. Place and secure forms to correct location, dimension, and profile.

C. Assemble formwork to permit easy stripping and dismantling without damaging concrete.

D. Proof roll prepared subbase to check for unstable areas and need for additional compaction.

E. Moisten base to minimize absorption of water from fresh concrete.
3.3 INSTALLATION OF AGGREGATE BASE

A. Maintain optimum moisture content of materials in order to attain required compaction density.

B. Spread crushed stone on prepared subgrade, in a manner not causing segregation, in locations and to attain depth shown on Drawings, after final compaction. Use acceptable equipment and methods per PENNDOT Publication 408.
   1. Compact uniformly spread crushed stone to not less than 100% of the maximum dry-weight density, which will be determined in accordance with PTM No. 106, Method B.
   2. Proceed with compaction gradually from sides to center, with each succeeding pass uniformly overlapping the previous pass. Continue until the entire area is shaped and compacted.
   3. If crushed stone does not contain sufficient moisture after placement, add water to obtain proper compaction.

C. Top surface of compacted crushed stone shall be plus or minus ¼ inch from required depth.

3.4 INSTALLATION OF CONCRETE

A. Comply with ACI recommendations when placing concrete.

B. Mix and deliver concrete in accordance with ASTM C 94-92A.
   1. Add fibrous concrete reinforcing at the rate of 1.5 pounds of fiber to 1 cubic yard of concrete or as per manufacturer’s recommendations.
   2. Use accelerating admixtures in cold weather only when approved by Owner. Use of admixtures will not relax cold weather placement requirements.
   3. Use set-retarding admixtures during hot weather only when approved by Owner.

C. Place expansion joint filler between new and existing work and as shown on drawings and secure to formwork during concrete placement.
   1. Provide joint filler abutting existing concrete, concrete curbs, catch basins, inlets, manholes, and any other fixed objects.
   2. Recess joint filler ¼ inch from top of slab.

D. Construct control and construction joints in locations indicated on the Drawings.
   1. Form control joints in fresh concrete by grooving top portion with cutting tool and finishing edges with a metal edger having a ¼-inch radius.
      a. Control joints shall have a depth of at least ¼ of the concrete thickness.
      b. Space control joints at the width of the sidewalk, 6’ maximum.
   2. Place construction joints at the end of placements and at locations where placement operations are stopped for more than ½ hour except where placements stop at expansion joints.
      a. Place expansion joints at 30’ maximum spacing.
      b. Construct joints using standard metal keyway section forms.
   3. The concrete around light standards, poles, fire hydrants, access frames, and covers to underground utilities, manhole frames and covers, and similar structures shall be scored, by edging or grooving, in a block 8 inches wider than the maximum dimensions of the structure.

E. Maintain records of concrete placement. Record date, location of pour, quantity, air temperature, and test samples taken.

F. Provide concrete pavement with a light broom finish.
G. The edges and perimeter and expansion and control joint scoring of all slabs shall be edged with a metal edger having a $\frac{1}{4}$-inch radius to produce a dense compact border outlining each slab.

3.5 CONCRETE CURING

A. Immediately after placement, protect concrete from premature drying, excessive hot or cold temperatures, and mechanical injury.
   1. Maintain concrete with minimal moisture loss at a relatively constant temperature for the period necessary for hydration of cement and hardening of concrete.
   2. When the average daily temperature is less than 40 degrees F, maintain temperature of newly placed concrete between 50 to 70 degrees F during the required curing period.
   3. When the average daily temperature is above 70 degrees F, protect the newly placed concrete from high temperatures and drying winds by keeping the concrete surface continually wet and by providing wind breaks during the required curing period.

3.6 PROTECTION

A. Protect the walks from damage until acceptance of the work.
   1. Exclude pedestrians from walks for at least 3 days after placement.
   2. Provide necessary watchmen to prevent vandalism to freshly poured concrete walks.

3.7 FIELD QUALITY CONTROL

A. Submit samples of the subbase aggregate obtained from the construction site to the quality assurance testing and inspection agency for verification testing.

3.8 CLEANING

A. Sweep the concrete walks.

B. Wash the concrete walks so they are free of stains, graffiti, discoloration, dirt, and other foreign materials.
   1. Completely remove graffiti from graffiti-marked sidewalks.

C. Satisfactorily dispose of unsuitable and surplus materials provided under this Contract.

END OF SECTION 31 16 41
SECTION 31 20 00 - EARTH MOVING [C]

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: Excavation for pavement; excavation and placement of compacted fill and backfill for structures and drainage; construction of embankments; subgrade and foundation preparation; and subsurface extraction of miscellaneous structures and facilities indicated to be removed.

B. Related Sections:
1. Section 02 41 00: Demolition.
2. Section 33 01 01: Maintenance and Support of Existing Utilities.
3. Section 31 22 00: Grading.

1.3 DEFINITIONS [C]

A. Earthwork Terminology: Terms used in this Section and not defined herein shall be interpreted in accordance with the definitions given in ASTM D 653.

B. Approved Material: Material which meets specified requirements for use as embankment, fill, or backfill.
C. Backfill: Soil or soil-rock material used to backfill excavations and to backfill excavated spaces around foundation walls, building walls, retaining walls, and abutments.

D. Borrow: Soil material used in embankment or other construction which is excavated from any location other than required onsite excavations.

E. Embankment: Soil or soil-rock material placed to raise the subgrade or natural grade of the site for embankment construction.

F. Excavation: The removing of all materials encountered within the indicated or specified limits, regardless of the nature of the material encountered and the method by which removed, and further defined in Article 1.5 below.

G. Excess Excavation: Material excavated beyond or below cross section shown, as well as unavoidable overbreakage in rock.

H. Imported Material: Soil or granular material which is hauled in from off-site areas.

I. Optimum Moisture Content: The water content at which a soil can be compacted to a maximum dry unit weight by a given compactive effort.

J. Relative Compaction: The ratio, expressed as a percentage, of the in-place dry density of fill material as compacted in the field to the maximum dry density of the same material as determined by laboratory test ASTM D 698, Method D.

K. Soil Classification: Soil classification is based on the Unified Soil Classification system given in ASTM D 2487. Group symbols, when used, conform with the symbols of ASTM D 2487.

L. Subgrade: Subgrade is the lowest elevation of excavation and the highest elevation of embankment required to accommodate the indicated construction.

M. Unsuitable Material: Excavated material or material below the natural ground surface in embankment areas or below subgrade elevation in excavated areas, which is unsuitable for its planned use as determined by the Engineer. Unsuitable material is further defined as material determined to be:
   1. Of such unstable nature as to be incapable of being compacted to specified density using ordinary methods at optimum moisture content; or
   2. Too wet to be properly compacted and circumstances prevent suitable in-place drying prior to incorporation into the work; or
   3. Potentially expansive material such as mine tailings, pyritic shale and slag. All fill and backfill materials shall have less than 0.1% total sulfur by weight as determined by ASTM D 4239. Suspected expansive shale should additionally be subjected to wet-dry durability testing in accordance with PENNDOT PTM 519. Final determination of expansive potential will be at the discretion of the geotechnical engineer-of-record; or
   4. Otherwise unsuitable for the planned use.

1.4 QUALITY ASSURANCE

A. Inspections and Tests: The Contractor shall provide quality control inspections and tests as specified under Article 3.14 to assure compliance with specified requirements.

B. Laboratory and Geotechnical Services: Engage the services of an approved independent soils testing laboratory to perform the above-specified inspections and tests. Foundation and subgrade preparation and the placement and compaction of fills shall be performed under the surveillance of a (state) registered geotechnical engineer employed by the Contractor.
C. Tolerances:
1. Construct finished subgrades to plus 0 or minus 1/2 inch of the elevations indicated.
2. Construct finished grade of slopes not steeper than 3:1 plus or minus 1/2 inch and on slopes steeper than 3:1 plus or minus 2 inches. Do not encroach upon the trackway bed or roadbed.
3. Maintain the moisture content of fill material as it is being placed within plus or minus two percent of the optimum moisture content of the material as determined by the laboratory tests herein specified.

D. Blasting: Not allowed in the performance of the earthwork.

1.5 SUBMITTALS

A. In accordance with the applicable Division 1 Submittals section, submit the following:
1. A schedule of all tests specified to be performed by the Contractor.
2. Three (3) copies each of test reports of all tests specified to be performed.
3. Samples: Furnish and deliver samples of Common Fill, Selected Compacted Fill and Aggregate Backfill materials as selected by the Engineer for testing and analysis.
4. Permits for disposal of excavated material:
   a. Obtain written permits and releases from owners of property where material will be deposited.
   b. Submit copies of each permit and release from each property owner absolving the (owner) from responsibility in connection with such disposal.

B. Delivery Tickets: Submit a delivery ticket with each load of imported borrow material delivered to the site, stating the type of fill material and the quantity.

1.6 CLASSIFICATION OF EARTHWORK

A. No consideration will be given to the nature of materials encountered in excavating operations. Therefore, as unclassified excavation no additional payment will be made for difficulties occurring in excavating and handling of materials.

B. Where the required quantity of backfill exceeds the quantity of suitable site material, provide material at no increase to the Contract Price.

C. No right of property in materials is granted the contractor of excavated materials prior to backfilling. This provision does not relieve the contractor of his responsibility to remove and dispose of surplus excavated material of excavated material not suitable for backfilling.

1.7 JOB CONDITIONS

A. Unfavorable Weather Conditions:
1. Excavating, filling, backfilling, and grading work shall not be performed during weather conditions which might damage or be detrimental to the condition of existing ground, in-progress work, or completed work. When the work is interrupted by rain, excavating, filling, backfilling, and grading work shall not resume until the site and soil condition (moisture content) are suitable for compaction.
2. Subgrade shall be free from mud, snow, ice, and deleterious material when work is resumed.
3. Soil material which is too wet for compaction shall be left to drain, to be aerated and dried by diskimg and harrowing or other approved method until the moisture content of the area is uniform and within the specified limits.
B. Erosion Prevention: Protect stockpiles, ditches, embankments, filled, backfilled, and graded areas to prevent erosion until such time as permanent drainage and erosion control measures have been installed.

C. Barricade open excavations and post with warning lights those excavations occurring on property adjacent to or within public access. Operate warning lights during hours from dusk to dawn each day and as otherwise required.

D. Do not allow proof rolling equipment to enter area within seven feet of piers, abutments, and retaining walls retaining more than ten feet if equipment's gross weight exceeds 35 tons. Do not operate vibratory compactor having a gross weight more than 5,000 pounds closer than five feet to face of retaining wall. Do not operate non-vibrating equipment having an axle load of 21,000 pounds or greater closer than three feet from back of retaining wall. Grade to essentially finish grade on both sides of wall before starting to proof roll.

E. Do not operate proof rolling equipment having one axle loading of more than 21,000 pounds within height-of-fill-being-retained of retaining walls retaining less than ten feet.

F. Before moving equipment, including proof rolling equipment that exceeds 21,000 pounds for any axle, across underground duct banks having less than four feet of cover, place decking on the path of that equipment. Extend decking outward from each side of the duct bank for a distance equal to the depth of the bottom of the duct bank, but not further than four feet. Decking shall consist of a three inch thick timber platform or one inch thick steel plate. If duct bank is exposed, do not place decking directly on duct bank.

G. Use of Explosives: Is not permitted.

H. Toxic and Combustible Substances:
   1. During excavation, provide equipment and carry out such tests as necessary to detect presence of toxic and combustible substances.
   2. If the presence of noxious or explosive gas is indicated, immediately discontinue excavation operations and notify the Engineer. Do not resume work at this location until the necessary safety measures have been enforced and further tests indicate the absence of noxious and explosive gases.
   3. Take action to safeguard persons and property in accordance with rules and regulations of jurisdictional agencies and utility owners.
   4. Promptly notify utility owners when problems concerning their facilities become apparent.

I. The Contractor is cautioned that on-site materials do not meet the requirements for Selected Compacted Fill.

PART 2 PRODUCTS

2.1 FILL AND BACKFILL MATERIALS

A. General Requirements:
   1. Fill, backfill, and embankment material: Inert, non-expansive soil, free from organic matter and other deleterious substances and of such quality that it will compact thoroughly without the presence of voids when watered and rolled. Excavated on-site material will be considered suitable for fill, backfill, and embankment construction if it is free from organic matter and other deleterious substances and conforms to the requirements specified herein.
2. Excavated material which is suitable for fill, backfill, and embankment construction shall be conditioned for reuse and properly stockpiled for later filling and backfilling operations. Conditioning shall consist of spreading material in layers not to exceed 8 inches and raking free of debris and rubble. Oversize material and deleterious material shall be removed from the site and disposed of as specified herein under Disposal of Surplus Material.

3. Where conditions require the importing of fill or backfill material, the material shall be an inert, non-expansive soil or soil-rock material free of organic matter and meeting or exceeding the minimum requirements specified herein for the location.

B. Specific Requirements:
   1. Common Fill: Soil or soil-rock mixture free of topsoil, unsuitable material, vegetation, lumber, metal and refuse; and free of rock or similar hard objects larger than three inches in any dimension, with the exception that highly plastic clays and silts will not be permitted.
   2. Selected Compacted Fill: Soils meeting the requirements for Common Fill with a maximum particle size of 3 inches and classifying as GW, GM, GC, SW, SM, SC in accordance ASTM D 2487. Soils classifying as CL will be acceptable if the liquid limit, determined in accordance with ASTM D 4318, does not exceed 40.
   3. Aggregate Backfill: No. 2A Coarse Aggregate conforming to PENNDOT Section 703.2.
   4. Structural Foundation Backfill: Class C Concrete conforming to PENNDOT Section 704.1.

2.2 MATERIALS FOR EARTHWORK [C]
   A. Fill and Backfill Materials: Where specific fill, backfill, and embankment materials are not indicated on Contract Drawings, conform to the following requirements:
      1. Fill below Paved or Landscaped Areas: Common Fill.
      2. Fill below Slabs-on-grade and within 5 feet of Structures: Selected Compacted Fill. Provide a minimum of 6 inches of Aggregate Backfill directly below slabs-on-grade.
      3. Backfill against Concrete Walls and Waterproofing: Aggregate Backfill.
      5. Backfill for Abandoned Vaults (including airways, cross adits, and similar voids): Aggregate Backfill.
      6. Backfill Under Supporting Walls and Columns and Similar Locations: Aggregate Backfill or Structural Foundation Backfill, as directed by the Professional. [C]

2.3 SOURCE QUALITY CONTROL [C]
   A. Fill backfill, and embankment materials proposed to be used in the work shall be tested in the laboratory for compliance with specified requirements as follows:
       1. Moisture-Density Relationship: ASTM D 698, Method D.
   B. Where classification of soils is necessary to meet specified requirements, perform laboratory tests in accordance with ASTM D 2487.
   C. Aggregate Backfill shall meet the following requirements: [C]
      1. Use aggregate provided only from PENNDOT approved sources. [C]
      2. Use aggregate quarried from the following formations in the Central Pennsylvania region: [C]
         a. Limestone [C]
            1) Nealmont Formation (Rodman and Centre Hall members) [C]
2) Linden Hall Formation (Valentine, Valley View, and Stover members) [C]
3) Snyder Formation [C]
4) Hatter Formation [C]
b. Dolostone [C]
   1) Bellefonte Formation (Tea Creek and Coffee Run members) [C]
   2) Nittany Formation [C]
c. Mixed Limestone and Dolostone [C]
   1) Axemann Formation [C]

3. The selected aggregate material shall meet the following restrictions: [C]
   a. Contain less than 0.5% pyrite (i.e. 0.3% S) [C]
   b. Contain less than 1% deleterious materials [C]
   c. Limit the sulfur content to 0.1% if it is in the form of frambooidal pyrite in a carbonaceous shale or as whisker pyrite veins [C]
   d. Contain less than 15% thin, elongate, or platy pieces. [C]

4. Provide advance examination and testing according to methods referenced, or as directed, for aggregate materials. [C]
   a. Conduct aggregate quality tests in accordance with requirements of PENNDOT Section 703. [C]
   b. Conduct petrographic examination of aggregate samples representative of proposed material according to procedure defined in ASTM C 295. Examination shall be performed by an experienced petrographer. [C]
   c. Conduct chemical analysis of aggregate samples representative of proposed materials according to procedure defined in ASTM C 1580. [C]
   d. Professional reserves the right to accept aggregate materials based on certification from supplier that aggregate originates from a source approved by PENNDOT and that the aggregate complies with specified PENNDOT requirements and the additional requirements included herein. [C]

5. Contractor providing aggregate shall submit Independent Testing Agency test results indicating compliance with the above conditions prior to the start of work and every 3 months thereafter. In addition, Independent Testing Agency shall perform testing of aggregate samples any time the source of aggregate is changed. [C]

2.4 SOURCE OF MATERIALS

A. To the extent that it is available, obtain material from excavation operations. If sufficient suitable materials are not available to meet embankment, fill and backfill requirements, obtain material meeting specified requirements from outside sources at no additional cost to the Owner.
   1. Earth excavation may contain excess moisture in its natural state or may take on excess moisture during handling and stockpiling. Manipulation to dry material to proper moisture content prior to compaction may be necessary. Earth excavation will not be considered as unacceptable backfill material by virtue of its moisture content only.

B. Use only material whose quality, source, and zone of placement in the fill have been approved.

C. If borrow areas are provided by the Owner within the right-of-way, dress and shape such areas to ensure positive drainage when borrow operations are completed.
PART 3 EXECUTION

3.1 STAKING AND GRADES

A. Layout the work, establish all necessary markers, benchmarks, grading stakes, and other stakes as required.

B. Perform surveys in accordance with the requirements of the applicable Division 1 specification section. Surveys shall include:
   1. Initial survey of original ground.
   2. Final surveys when excavations, backfills, and embankments are completed.

3.2 EXISTING UTILITIES

A. Verify on site the location and depth (elevation) of all existing utilities and services before performing any excavation work. Perform excavation within 3 feet of a utility line by hand.

B. Remove abandoned sewers, piping, and other utilities encountered during excavation and plug the ends.

C. Report immediately to the Engineer any active utility lines encountered, which are not indicated in the Contract Documents, and notify utility owners involved. The Project Manager and utility authorities shall be permitted free access to determine the measures deemed necessary to repair, relocate, or remove the utility.

3.3 EARTHWORK GENERAL REQUIREMENTS

A. Erosion Protection: Prevent erosion of the site at all times. Construct temporary berms and dikes and cut temporary swales to promote natural drainage of site.

B. Construction Traffic: Disperse travel paths of traffic and construction equipment over entire width of compacted surfaces so as to aid in obtaining uniform compaction. Protect exposed soil layers with high moisture content from excessive wheel loads.

C. On-Site Excavation or Borrow Pits: Do not excavate or remove any material from the project site or right-of-way which is not within the designated excavation, as indicated by the slope and grade lines.

D. Salvaging Topsoil:
   1. Salvage topsoil within the neat lines indicated on the Contract Drawings, and stockpile on the site at a location determined by the Engineer. Prevent topsoil from contamination by other materials, and provide adequate drainage and erosion protection.
   2. Place stockpiled topsoil in areas designated on Contract Drawings.

E. Stockpiling of Fill and Backfill Material:
   1. Excavate and separately stockpile suitable fill and backfill material. Save sufficient suitable excavated material, if available, for later filling, backfilling, and embankment construction.
   2. Store materials from required excavations which are suitable for fill, backfill, and embankment as excavated, in stockpiles segregated by type.

F. Disposal of Surplus Material:
   1. Haul from the site and legally dispose of excess excavated materials and those materials determined to be not suitable for fill or backfill.
2. Location of disposal site and length of haul shall be the Contractor's responsibility.
3. Surplus material may be disposed of within the site as directed by the Engineer.

G. Maintenance of Excavations, Slopes, and Embankments:
1. Excavate and remove material outside the limits of excavation which is unstable and constitutes potential slides, and material which comes into excavations for any reason including from the driving of piles.
2. Maintain slopes and embankments until final completion and acceptance of the work. Promptly repair slides, slipouts, washouts, settlements, and subsidences which occur for any reason, and refinish the slope or embankment to the indicated lines and grades.

3.4 SUBSURFACE EXTRACTION

A. Remove subsurface facilities and obstructions to the extent indicated.

B. When subsurface facilities are encountered during excavation which interfere with new construction, and such facilities are not indicated, notify the Engineer promptly for corrective determination.

3.5 ROUGH GRADING AND FILLING

A. Prior to commencement of structural earthwork, perform such soil and rock removal and filling as may be required to facilitate the progress of the work and bring all elevations to the rough grading lines indicated on Contract Drawings. Grading shall be by blading or as herein specified under Article 3.6.

B. Fill or backfill wells, test pits, or holes which will not be completely removed by excavation, with Structural Foundation Backfill, Aggregate Backfill or Selected Compacted Fill, and compact as herein specified in layers not exceeding 6 inches after compaction.

C. Fill or backfill holes, swales, and low points which will not otherwise be removed in the course of the work, to the indicated grades.

3.6 DEWATER

A. Keep excavations free from water during the performance of the work. Provide and operate dewatering equipment of sufficient capacity for dewatering the excavations.
1. Provide for the disposal for the water removed from excavations in such manner as not to cause injury to the public health, to public or private property, to the work of others, to the portion of the work completed or in progress, nor to cause an impediment to the use of streets, roads, and highways.
2. Control groundwater and surface water during construction in order to maintain soil stability.
3. Maintain the water table elevation sufficiently below the levels of excavation so that slopes will remain stable and bottoms of excavations will not become loosened by flow of water.
4. If the foundations material looses its strength due to improper dewatering techniques, over-excavate the material and replace it with Structural Fill at no increase in Contract Price.
5. Dewatering efforts are to be maintained until excavations are closed or when determined by the Owner or Engineer no longer necessary.
6. Maintain site drainage throughout earthwork operations to minimize wet weather delays, reduce the accumulation of moisture from run off and precipitation, and reduce risk of sinkhole related subsidence.
3.7 EXCAVATION

A. General Excavation Requirements:
1. Perform excavating as indicated and required for concrete footings, foundations, exterior paving, floor slabs, concrete walks, and for site levels and grading, and provide shoring, bracing, underpinning, cribbing, pumping, and planking as required.
2. The bottoms of excavations shall be level, firm, undisturbed earth, clean and free from loose material, debris, and foreign matter.
3. Excavate to the lines and grades indicated on the Contract Drawings.
4. Support and maintain excavations so that sides are stable and will not move. Excavations may be maintained by sloping cut faces where space permits, or by providing structural support of earth walls.
   a. Where the sides of excavations are sloped, angle of slopes shall be as approved by the Engineer but shall not be steeper than allowed by the Title 29 Code of Federal Regulations, Part 1926, Safety and Health Regulations for Construction (OSHA).
   b. Maintain sides and slopes of excavations in safe condition until backfilling is completed.
   c. Where the Contractor elects to slope the sides of excavations, backfill of the over-excavated areas shall be made in the same manner specified for the adjacent excavated area. All additional backfill required shall be at no additional cost to the Owner.
5. Limits of excavations shall allow for adequate working space for installing forms, wall waterproofing, and as required for safety of personnel. Cut excavations in solid rock accurately to the neat lines indicated on Contract Drawings, or to the width of the duct bank or concrete encasement.
6. Remove unstable bottom material. Remove large stones, debris, and incompressible soils from common excavation bottoms to a minimum depth of 12 inches. Where required to excavate to rock, it shall be understood to mean sound bedrock. Remove friable and unsound material.
7. Except as otherwise indicated, preserve the material below and beyond the lines of excavations. Where excavation is carried below the indicated grade, backfill to the indicated grade as herein specified.
8. Excavation and its restoration, for convenience of the Contractor, shall be at no additional expense to the Owner.
9. Place excavated material at sufficient distance from edge of excavation so as not to cause cave-ins or bank slides, but in no case closer than 3 feet from the edge of excavations.
10. Unauthorized over excavations for footings and foundations shall be filled with approved materials to indicated elevations.
11. Condition excavated earth material which is suitable for fill, backfill, or embankment for re-use and properly stockpile for later filling and backfilling operations as herein specified. Test, screen, and mix as necessary to meet specified requirements.
12. Proceed with caution in areas of utility facilities; expose them by hand excavation or other methods acceptable to the facility owner.
13. If unsuitable materials are encountered at the required subgrades, the Engineer may authorize the removal of such unsuitable materials and replacement with suitable compacted fill or with concrete.

B. Rock Excavation:
1. Rock which cannot be broken up and removed by ripper equipment shall be excavated and removed by drilling.
2. If the depth of the cut is more than can be drilled from the top, an 18 inch offset will be allowed in the slope to begin succeeding drilling operations. The end result shall be a relatively smooth shear plane with localized irregularities which do not exceed 2 feet
behind or 1 foot in front of the shear plane surface and which do not extend within the
neat lines of the excavation.
3. Where footings or foundations are to be placed on rock which is not horizontal, key the
center of the foundation approximately 12 inches in depth throughout an area
approximately equal to the dimensions of the column or footing to be placed on the rock,
or the entire width of the slab, at not more than 10-foot intervals. Remove loose
fragments, and clean and fill all seams with lean concrete. Dowels may be considered if
the surface of the rock dips greater than 20 degrees from horizontal. Spacing, size and
depth of dowels will be as directed by the Engineer.
4. Material excavated beyond or below the indicated cross section shall be at the
Contractor's expense. Fill overbreakage to required invert with Structural Foundation
Backfill at no additional expense to the Owner.
5. Leave the side slopes of rock cuts with reasonably uniform faces whether the excavation
is carried beyond the specified side slopes or not. Conform sloped surfaces to the typical
section indicated or to natural cleavage planes, where these are compatible with the
typical section.
6. Solid rock boulders 24 inches in greatest dimension and boulders of lesser dimension,
broken rock, and all stones occurring within the construction limits and not required for
other construction, may be used for rock fill if suitable.

3.8 EMBANKMENT CONSTRUCTION

A. Place initial layer of embankment, fill, and backfill only on subgrade which has been inspected
and accepted by the Engineer.

B. Construct embankments to lines, grades, and contours indicated, in layers as nearly uniform
and horizontal as is consistent with the indicated finished contour and profile. Maximum
thickness of the layers shall conform to the following requirements:
   1. Fill, Selected Compacted Fill and Aggregate Backfill: 8 inches before compaction and 6
      inches after specified compaction.

C. Compact each layer to specified density for entire width of the fill or embankment. Achieve
required compaction by rolling with compaction equipment suitable for type and condition of the
particular material. Roll in a longitudinal direction parallel to longest dimension, starting at outer
edges and progressing toward the center.

D. Moisture-condition embankment, fill and backfill material as required to achieve its compaction
to the specified density, within the tolerances specified herein.

E. Do not compact material which contains excessive moisture. In such cases, scarify to the full
depth of the layer having excessive moisture content and dry by reworking, mixing with dry
materials, or other approved methods.

F. Remove material which cannot be compacted to required density within specified tolerances,
and replace with suitable material at no additional expense to the Owner.

G. Where pipes, culverts, or structures extend into embankments, construct embankment to at
least 2 feet over and 10 feet on either side of the pipe, culvert, or structure location prior to
excavation.

H. Do not commence final shaping until above specified requirements have been completed.
Shape entire surface of trackway and the slopes of cuts and embankments to true grade,
alignment, and cross section indicated. Leave cut slopes in rock with uniform surface, and
remove all loose overhanging rock. Open ditches, drains, and culverts resulting from
construction operations to drain effectively.
I. Where utility facilities and structures are supported in place, use special equipment and techniques as required to achieve specified compaction under and around them.

J. When backfilling against structures, place material approximately simultaneously on both sides of structures to equalize opposing horizontal pressures.
1. Compact embankment, fill, or backfill materials within five feet of retaining walls, abutments or other structures using lightweight compactors.
2. Backfilling against new structures without approval is prohibited.

K. When backfilling on tops of structures, place material in six inch lifts over full area.

L. Prior to placing embankment against slopes greater than one vertical to four horizontal cut benches into existing slopes. Height of bench not to exceed two feet unless otherwise approved.

M. Protection of Existing Facilities:
1. During excavation, monitor existing structural elements for settlement in a manner approved by the Engineer, recording elevations to 0.001 foot.
2. Monitor existing structures within a distance of three times the depth of excavation for footings and mats.
3. Obtain the Engineer's approval of the number and location of monitoring points. Take elevations before beginning construction, daily during excavation and backfill, weekly for two weeks after completing backfill, or as directed by the Engineer.

3.9 SUBGRADE PREPARATION

A. Perform all cutting, blading, and shaping as required to cut and shape the subgrade to the grades and elevations indicated.

B. Subgrade preparation includes proof rolling, fine grading, reworking as necessary, and preparation of cut, fill, or embankment upon which structure and equipment foundations, pipe, subballast, subbase, base, and pavement will be placed.

C. Remove rigid pavements, slabs, and foundations which would be within five feet of finished grade and subgrade. Rigid pavements and slabs which will be five feet and more below finished grade and subgrade may be left in place only if broken into pieces not larger than three feet in greatest dimension.

D. Subgrade Proof Rolling of Building Pad Locations: Notify the Engineer two days prior to proof rolling operations.
1. Perform proof rolling following removal of topsoil, after excavation to subgrade (or acceptable limits) in cut areas, and before any fill material is placed or other construction performed. Perform proof rolling as shortly as possible before fill materials are placed on subgrade, in order to maximize the chances of disclosing any weak areas that developed during the time the subgrade was exposed to rainfall.
2. Perform proof rolling with a large piece of rubber-tired equipment, such as a loaded tandem-axel dump-truck or pan excavator having a weight of at least 70,000 pounds. Equipment tires to make a minimum of two complete passes over the area being proof rolled, one pass in each direction, traveling at a speed of 2 to 3 miles per hour (about the pace of a slow walk).
3. Proof rolling to be observed by an experienced Engineer who can evaluate the suitability of the subgrade soils, and delineate the area and depth of any unsuitable materials encountered.
4. Problem areas may exhibit excessive settlement, or outright collapse in the case of voids extending close enough to subgrade. If loose, soft or otherwise unstable areas are found, they shall be excavated to firm material and backfilled with suitable material.

5. Perform proof rolling only when weather conditions permit. Do not proof roll wet or saturated subgrades. When materials are degraded by proof rolling a wet or saturated subgrade, replace such materials as directed by the Engineer at no additional expense.

D. Scarify and mix entire surface of subgrade to a depth of at least 6 inches.

E. After the material has been loosened, accurately construct and fine grade the subgrade to indicated line, grade, and contour with high and low spots eliminated. Compact for full width to the specified density. Remove soft spots developed during working, fill with approved material, and re-compact.

F. Finish subgrade to straightedge or template within specified tolerances with the finished surface bladed to a uniform, dense, smooth texture.

3.10 FOUNDATION PREPARATION

A. Complete construction of the excavation support and dewatering systems prior to placement of structure and equipment foundations.

B. Avoid disturbing bottom of excavation. If bottom is disturbed, restore and stabilize the bearing foundation at no additional expense to the Owner.

C. Foundations shall bear on sound rock. If top of rock is below foundation elevation, excavate to top of rock and backfill to foundation elevation with Structural Foundation Backfill (Class C Concrete).

D. Excavate and clean soil seams or depressions where encountered in the rock surface to a minimum depth equal to the width of the soil filled fracture at the top of the rock surface. At the direction of the Engineer, fill excavated seams or depressions with Structural Foundation Backfill (Class C Concrete).

3.11 SUBGRADE FILLING/RAISING GRADE

A. Construct compacted fill for raising of subgrade to indicated elevation by approved and accepted methods. Spread fill material in uniform lifts not exceeding 8 inches in uncompacted thickness. Fill material which does not contain sufficient moisture to compact properly shall be sprinkled with water; if it contains excess moisture it shall be aerated or permitted to dry to the proper water content. Fill material and water shall then be thoroughly mixed before being compacted. Compact each layer of spread fill material to the specified density.

B. Control of fill shall consist of field inspection and testing to determine that each layer has been compacted to the required density and to ensure that optimum moisture is being obtained. Any layer or portion of a layer that does not attain the compaction required shall be scarified and recompacted until the required compaction is obtained.

C. Perform spreading and compacting as required to produce the required density and a uniform surface smooth and true to grade.
3.12 COMPACTION

A. Compaction Density: Compact each layer of embankment, fill, and backfill material to not less than the indicated or specified compaction. Required compactions are defined as Class I or Class II, as follows:

Class I Compaction: 97 percent of the maximum dry density, with a moisture content within two percentage points of optimum moisture content, as determined by ASTM D 698 D. If the material is too coarse to satisfactorily use this method, compaction will be determined by the Engineer based on non-movement of the material under compaction equipment. Vibratory compaction of coarse material will be required.

Class II Compaction: 100 percent of the maximum dry density, with a moisture content within two percentage points of optimum moisture content, as determined by ASTM D 698 D. If the material is too coarse to satisfactorily use this method, compaction will be determined by the Engineer based on non-movement of the material under compaction equipment. Vibratory compaction of coarse material will be required.

B. Required Compactions:
1. Common Fill where surface will be landscaped area: Class I for full depth.
2. Common Fill where surface will be paved area: Class I under top 12 inches; Class II for top 12 inches.
3. Selected Compacted Fill: Class II for full depth.
4. Aggregate Backfill: Class II for full depth.
5. Cut and Cover Backfill: Class I to 36 inches above structure or utility; Class II for balance.
6. Original Ground or Cut Subgrade:
   a. Under paved or landscaped areas, provide Class I compaction for at least 12 inches in depth.
   b. Below slabs-on-grade and within 5 feet of structures, provide Class II compaction for at least 12 inches in depth.

3.13 BACKFILLING

A. Use materials removed from site excavations if such material meets specified requirements.

B. Backfilling is required around all substructures. Fill all abandoned vaults, shafts, airways, adits, holes, pits, and other voids.

C. Place backfill in layers not to exceed 8 inches of loose material, and compact each layer to specified density before the next layer is placed.

D. Place backfill material in such manner that unbalanced horizontal loads will not be applied to a newly-placed structure or portion of structure, utilities, or pipelines. Do not backfill around portions of structures requiring backfill on only one side or on less than all sides, until the concrete has reached the specified strength to withstand the earth pressures.

E. When placing material for backfill around waterproofed structures, protect such structures and the waterproofing thereof with a shield when necessary to prevent displacement or injury by stones or other hard substances in the backfill.

F. Do not backfill on or against structural concrete until the specified 28-day concrete strength has been attained.
G. Complete backfill for end bents and abutments, including backfill for wingwalls, in accordance with the above specified time limit. Step slopes behind abutments, unless otherwise indicated, to prevent backfill from acting as a wedge against the abutment. Provide drainage behind abutments and wingwalls as indicated.

H. Do not use compaction equipment and methods that produce excessive horizontal or vertical earth pressures.

3.14 FINISH GRADING

A. Finish grade all areas to elevations and grades indicated. In areas to receive topsoil and landscape planting, finish grading shall be performed to a uniform 6 inches below the grades and elevations indicated.

B. Place and spread stockpiled topsoil to a uniform thickness of 4 to 5 inches (approximately) in areas to receive topsoil and landscape planting. Place and spread to a uniform thickness approximately 1 to 2 inches below finish grades indicated.

3.15 FIELD QUALITY CONTROL

A. Inspections and Tests by the Contractor:
   1. Density Tests: Compacted fill, backfill, and embankment shall be tested to verify compliance with specified requirements in accordance with ASTM D 2922. Minimum frequency of tests shall conform to the following requirements:
      a. Expansive Horizontal Areas: One test per 100 cubic yards, or fraction thereof, of fill or backfill placed.
      b. Confined Areas, Trenches, and Embankments: One test per lift of fill, backfill, or embankment placed.
   2. Tests for compaction shall be made in accordance with test procedures outlined in ASTM D 698, Method D, as applicable. Field testing of soils or compacted fill in place shall be performed in accordance with applicable requirements of ASTM D 2922.
   3. Moisture Content Tests: Compacted fill, backfill, and embankment shall be tested to verify compliance with specified requirements in accordance with ASTM D 3017. Minimum frequency of tests shall be as specified above for density tests.

B. Inspections by the Engineer:
   1. Site preparation, cutting and shaping, excavating, filling, backfilling, and embankment construction shall be carried out under the inspection of the Engineer, who will have the Contractor perform appropriate field and laboratory tests, as necessary, to evaluate the suitability of fill and backfill material, the proper moisture content for compaction, and the degree of compaction achieved. Fill or backfill that does not meet the specified requirements shall be removed or recompacted until the requirements are satisfied.
   2. Cutting and shaping, excavating, conditioning, filling, backfilling, and compacting procedures require approval of the Engineer as they are successively performed. Work found to be unsatisfactory or work disturbed by subsequent operations before approval is granted shall be corrected in an approved manner as directed by the Engineer.

END OF SECTION 31 20 00
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Excavation, backfill, and embankment necessary to grade site to lines indicated on Drawings.

B. Related Sections:
   1. Submittal Procedures: Applicable Division 1 specification section.
   2. Section 31 41 00: Shoring.
   3. Section 31 20 00: Earth Moving.
   5. Section 31 25 00: Erosion and Sedimentation Control.

1.3 DEFINITIONS

A. Rock Excavation: Consolidated hard mineral material mass exceeding 1/2 cubic yard in volume that, in Engineer's opinion, cannot be excavated except by drilling and blasting or drilling and wedging. Structure foundations of concrete or of masonry or stone laid in cement mortar is also classified as rock if volume requiring removal at a single location exceeds 1/2 cubic yard.
B. Earth Excavation: Materials in excavation that, in opinion of Engineer, cannot be classified as rock excavation.

C. Unclassified Excavation: Material removal of any kind in excavation, including Rock Excavation.

D. Subgrade: Prepared earth surfaces where on or over additional materials are placed or work is performed.

1.4 SUBMITTALS

A. Test Reports: Submit for approval complete sieve analysis, compaction density, liquid limit, and plastic limit test reports for on site and borrow excavated material desired to be used for backfill and embankment fill. Test in accordance with specified Reference Standards. For disapproved material, either submit for approval above data for new borrow material, or procedures and materials proposed to be used to obtain approved stabilizations and densities for excavated materials.

B. Testing Agency: Submit name and qualifications of Testing Agency performing tests to Engineer for approval prior to proceeding with operations.

1.5 PROJECT CONDITIONS

A. Classification of Excavated Materials: No consideration will be given to nature of materials encountered in site grading operations. Therefore, as unclassified excavation, no additional payment will be made for difficulties occurring in excavating and handling of materials.

B. Environmental Requirements:
   1. Do not perform grading when soil or weather conditions are unsuitable. Unsuitable conditions include moisture saturated or frozen in place soil and precipitation present on soil or occurring during Work.
   2. Exercise necessary means and methods to control dust on site as well as in off site work areas where excavation and grading are required.
   3. Do not leave site in a dusting condition following work of this Section. If necessary, employ a watering schedule to control dust.
   4. Do not use frozen material in performing work or place materials on frozen surfaces.
   5. When it is necessary to haul soft or wet soil material over roadways, use suitably tight vehicles to prevent spillage. Clear away spillage of materials on roadways caused by hauling at no expense to Owner.
   6. Plan work so as to provide adequate protection during storms with provisions available constantly for preventing flood damage.
   7. Slope trench excavations and embankments to prevent puddling. Control runoff in accordance with Section 31 25 00: Erosion and Sedimentation Control.

C. Explosives and Blasting: Not permitted in performance of site grading work.

D. Protection: Assume risks attending presence or proximity of overhead or underground public utility and private lines, pipes, conduits and support work, existing structures and property of whatever nature, in or over excavations or adjacent to excavations. Assume complete responsibility for replacement and restitution work of whatever nature to above, as damaged or destroyed by work of this Contract, and at no expense to Owner.
   1. Outside Property Limits or Rights-of-Way: Take necessary precautions to protect trees, shrubs, lawns and other landscaping from damage. Restitution work for damages rests solely with Contractor and at no expense to Owner.
2. Temporary Protective Construction: Erect and maintain without expense to Owner, substantial barricades to exclude pedestrians or vehicles.

E. Borrow Excavation: Where required quantity of backfill exceeds quantity of suitable material excavated within limits of project site and Rights-of-Way, obtain sufficient material to complete backfill at no additional cost to Owner. If borrow excavation is needed, notify Engineer sufficiently in advance of borrow excavation requirements to permit Engineer to verify need for borrow excavation and to view proposed borrow pit. Borrow excavation from outside sources is subject to approval of Engineer. Obtain written consent before use of borrow excavation from outside sources.

F. Excess Materials: No right of property in materials is granted of excess on site materials prior to completion of Site Work. This provision does not relieve responsibility to remove and dispose of surplus excavated materials. Dispose of legally off site, unsuitable materials including sod, stumps, spongy soil, as well as excess rock.

G. Accommodation of Traffic: Do not obstruct streets, roads, and highways. Unless Municipality, Governing Agency, or Engineer authorizes in writing complete closing of street, road, or highway, employ necessary measures at no expense to Owner to keep street, road, or highway open and safe for traffic.

H. Excavation Limits: Excavate to lines, grades and slopes indicated on Drawings or to depths and dimensions required to produce a satisfactory foundation surface as determined by Engineer.

I. Slopes of Opencut Excavation: Maintain stable slopes, and comply with OSHA requirements for slopes of opencut excavation. Overexcavation without authorization by Engineer will not be paid for, nor will payment be made for overexcavation and refill. Remove slides of material and repair at no additional cost.

1. Excavate slopes to angles necessary to ensure safe working conditions and stable slopes.

J. Scaling: Scaling of excavated rock and earthen surfaces is required throughout life of Contract. Scaling produces surfaces free from loose and dangerous rock. Utilize protective fencing at toes of slopes, mesh coverings on slopes, or other devices where recurring problems exist or where scaling alone is not sufficient.

K. Temporary sheeting, shoring and bracing as specified in Section 31 41 00: Shoring.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Embankment and Backfill in Areas 5 Feet Beyond Structures (General Fill): Use on site or borrow excavated soil or soil rock material free of topsoil, plant life, lumber, metal, and refuse and meeting following requirements for site grading backfill and embankment 5 feet beyond structures. Rocks contained in suitable material must pass through a 6 inch by 3 inch opening, and not exceed 10 percent of backfill or embankment volume. Provide soil with at least 60 percent passing #4 sieve when tested in accordance with ASTM D 422; a liquid limit of not more than 45 and a plasticity index of not more than 25 when tested in accordance with ASTM D 4318; and a maximum dry density of not less than 100 pounds per cubic foot.
B. Backfill and Embankment in Areas Below or within 5 feet of Structures (Select Compacted Fill):
On site or borrow excavated soil meeting above requirements for General Fill and embankment areas 5 feet beyond structures, except size of rock not to exceed 3 inches in largest dimension.

PART 3 - EXECUTION

3.1 PREPARATION

A. Salvaged Topsoil: Within areas indicated for grading, strip topsoil to depth of suitable topsoil material and stock pile for subsequent topsoiling operations. See Section 31 20 00: Earth Moving.

3.2 PERFORMANCE

A. Erosion Control: Implement erosion control measures prior to and during performance of work of this Section. Erosion Control as specified in Section 31 25 00: Erosion and Sedimentation Control.

B. Excavation of Borrow Material: Perform excavation of borrow material in a manner satisfactory to Engineer. Strip borrow pits of brush, trees, roots, grass and other vegetation prior to removal of material for use in backfill. During excavation operation, grade borrow area to ensure free drainage of water from area. Place and maintain erosion control devices after completion of excavation, grade excavated area including side slopes to drain and present a uniformly trim appearance merging into surrounding terrain. After borrowing operations are completed, regrade area, if necessary, to prevent erosion.

C. Removing Obstructions: Where rock is encountered at proposed subgrade elevations and topsoil is required, remove rock for a depth of twelve inches below proposed subgrade.

D. Preparation of Subgrade for Embankments: Perform sufficient in place density tests on supporting material to show that material is in stable condition with proper density. Compact supporting material if necessary.

E. Placement and Compaction of General Fill: Construct embankments, except embankments for roadways and around new structures, in accordance with following paragraphs.

1. Place fill in lifts no thicker than one foot and compact using approved equipment. Carry whole embankment up evenly to required elevation without breaks or irregularities in material distribution or in formation of layers. Trim embankment slopes to lines indicated on Drawings and leave in a neat and acceptable condition.

2. Add water to fill not containing sufficient moisture to obtain required compaction. Harrow, or use other approved methods, to work moisture into material until a uniform distribution of moisture is obtained. Fill containing moisture in excess of moisture required to obtain necessary compaction density may not, without written approval, be incorporated in embankment until allowed to dry to a moisture content not greater than two percentage points above optimum for that particular material. Do not place frozen material, ice, or snow in embankments.

3. Fill existing natural or other depressions resulting from site work to level of adjacent ground elevation in manner specified for formation of embankment prior to starting initial embankment layer. Provide material for this operation of type used adjacent to structures.
4. Remove existing embankment foundation material when determined unsatisfactory by Engineer. Backfill areas to original elevation with general fill, placed and compacted as specified herein.

5. Scarify embankment foundation surface where embankment of three feet or more in height is placed. If compacted surface of any layer of material is determined to be too smooth to bond properly with succeeding layer, loosen surface by harrowing or by other method approved by Engineer before placing succeeding layer.

6. Plow existing embankment foundations having a slope steeper than four to one to provide embankment binding when required by Engineer. On steeper slopes Engineer may require foundation be cut into steps or berms.

7. Compact each lift with at least 5 passes of compaction equipment suitable for material being placed and suitable for requirements of fill. Suitability of equipment for fills to be determined by Engineer based on field performance of equipment. Furnish alternate compaction equipment if Engineer deems equipment being utilized is ineffective or inappropriate for conditions and requirements of fill being placed.

8. During dumping and spreading process, maintain a constant force of workers, adequate to remove and dispose of stones with dimensions greater than 3 inches by 6 inches, roots, and debris from embankment materials.

9. During construction, keep top of partially completed embankments shaped and drained continuously.

F. Placement and Compaction of Select Compacted Fill: As specified in Section 31 20 00: Earth Moving.

G. Topsoil: As specified in Section 31 22 19: Finish Grading.

3.3 FIELD QUALITY CONTROL

A. Field Moisture-Density Tests: When deemed necessary by Engineer, conduct a minimum of two field moisture-density determinations per 500 square feet placed in a horizontal layer at locations designated by Engineer. Field dry density to equal or exceed 95 percent of maximum dry density, and in place moisture content to be within percentage points of optimum moisture contents, as determined per ASTM D 1557.

1. Moisture content at which maximum density of backfill is obtained with a given compactive effort, AASHTO T 99, is considered optimum moisture content.

2. Field compaction density may be determined by Sand Cone Method ASTM D 1556, Rubber Balloon Method ASTM D 2167, Nuclear Method ASTM D 2922, or other acceptable method as approved by Engineer.

END OF SECTION 31 22 00
SECTION 31 22 19 - FINISH GRADING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Placement and supplemental additions to topsoil as required to restore disturbed areas.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):
   1. ASTM C 602, Agricultural Liming Materials.

1.3 SUBMITTALS

A. Test Reports: Submit laboratory test reports of soil analysis and supplement recommendations to Engineer for approval prior to adding any soil supplements to topsoil.
   1. Laboratory reports to recommend both grade and application rates of fertilizer, and such other soil supplements as required.
   2. Take sufficient quantity of topsoil samples to give a representative analysis of on-site topsoil and topsoil from outside sources, if any.

B. Soil Supplement Product Certification: Submit certificates certifying such products to have a guaranteed analysis in conformity with Engineer approved laboratory soil supplement recommendations report.

1.4 QUALITY ASSURANCE

A. Quality Control:
   1. Packaged Products to indicate manufacturer’s guaranteed analysis on each package and arrive on site as originally packaged and unopened.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver packaged products to site in unopened containers with labels intact and legible.

B. Store packaged products in a manner to prevent moisture damage and other forms of contamination.

1.6 PROJECT CONDITIONS

A. Environmental Requirements: Do not perform work of this Section when soil or weather conditions are unsuitable. Unsuitable conditions include moisture saturated or frozen in place soil and precipitation of any kind present or occurring during work.

B. Existing Conditions: Following performance of related construction and prior to Finish Grading, perform debris removal and site leveling as necessary in preparation for Finish Grading. Dispose of debris legally off site.

C. Dust Control: Exercise necessary means and methods to control dust on site as well as in off site work areas where Topsoiling and Finish Grading are required.
PART 2 - PRODUCTS

2.1 MATERIALS

A. Topsoil: Use fertile, friable, natural, productive surface soil as is available on site, if any. Use topsoil free of subsoil, clay, stones, or similar hard objects larger than 1 inch in greatest dimension and partially disintegrated debris and materials toxic or harmful to growth. Acceptable topsoil to contain organic matter in range of 1.5 percent to 20 percent.

B. Borrow Topsoil: Use productive topsoils from Contractor's source and of a quality meeting requirements specified above for Topsoil. Furnish any additional topsoil necessary to complete work at no additional expense to Owner.

2.2 SOIL SUPPLEMENT MATERIALS

A. Agricultural Liming Materials: Products containing calcium and magnesium compounds capable of neutralizing soil acidity and containing not less than 80 percent of total carbonates. Use liming materials meeting requirements of ASTM C 602 and conforming to applicable state liming material regulations.

B. Fertilizer: Commercial fertilizer of uniform composition, free-flowing and in conformity with applicable state fertilizer laws.

1. Analysis: As recommended by laboratory soil supplement recommendations report.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare subsoil surface for finish grading by dressing and shaping to provide for uniform placement of topsoil.

B. Prepare subsoil surface for topsoiling by loosening to a depth of 4 inches and dressing and shaping to provide for uniform placement of topsoil.

C. Remove surface rock or other foreign objects exceeding 3 inches in greatest dimension. Dispose of rock and debris off site in a lawful manner.

3.2 PERFORMANCE

A. Placement: Place topsoil over areas indicated for new grading contours. Ensure construction work in topsoiled areas is completed before topsoil placement. Observe precautions as follows:

1. Do not place topsoil over areas indicated to receive paving or walkways.

2. Do not work topsoil while frozen or wet. Do not work topsoil into a dusting condition. Moisten topsoil to prevent a dust nuisance.

3. Scarify subsoil to a depth of 4 inches for bonding topsoil with subsoil.

4. On sloped areas, work topsoil into subsoil to blend so as to eliminate any semblance of slip-planing between two soils; but leave a sufficient cover of topsoil to ensure seed germination. Perform blending of soils by ridging or serrating subsoil on slopes.

5. Place topsoil as needed for dressing-up minor depressions due to settling and erosion and to eliminate any other minor irregularities.
B. Finished Elevations and Lines: Grade topsoiled areas of site to within a tolerance of plus or minus 1/10 of a foot of elevations and lines indicated and in accordance with following:

1. Grade a uniform longitudinal fall in swales and other surface drainage areas to provide a drainage flow line that can easily be maintained and traversed with normal lawn maintenance equipment.
2. Establish finish grade of topsoil 1/2 to 3/4 inch below top of abutting walks or paving to provide positive drainage.
3. Do not finish grade topsoil to a depth less than 6 inches or greater than 12 inches.
4. Leave finish grade surfaces free of objectionable material larger than one inch in greatest dimension. Dispose of objectionable material in a legal disposal area off site.

C. Compaction: Compact finish grades as final operation using a light roller weighing not over 120 pounds per foot width of roller.

D. Tillage: Till finish graded soil over areas indicated for lawn regardless of type of lawn work performed. Use equipment and methods common to such work, and till soil to a 2-inch depth minimum.

E. Soil Supplement Addition: Soil supplements for lawn areas, as required according to Engineer approved laboratory test reports, may be incorporated into soil during tillage operations.

END OF SECTION 31 22 19
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Excavating, placing bedding, backfilling, and compacting trenches for pipelines and utility structures specified or indicated on Drawings.

B. Related Sections:
1. Section 31 41 00: Shoring.
2. Section 02 41 00: Demolition.
3. Section 33 01 01: Maintenance and Support of Existing Utilities.
4. Section 31 25 00: Erosion and Sedimentation Control.
5. Section 31 10 00: Paving and Surfacing.
7. Section 33 49 00: Storm Drainage Structures.
8. Section 03 30 53: Miscellaneous Cast-In-Place Concrete.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):
1. ASTM D 698, Standard Test Methods for Laboratory Compaction Characteristics of Soil using Standard Effort (12,400 ft.-lb/ft.3).
2. ASTM D 1556; Test Method for Density of Soil in Place by the Sand Cone Method.
4. ASTM D 2922, Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).

B. Commonwealth of Pennsylvania Department of Transportation (PENNDOT), Specifications Publication 408, as supplemented.
1. PENNDOT Section 703.1, Fine Aggregate.
2. PENNDOT Section 703.2, Coarse Aggregates.
3. PENNDOT Section 703.3, Select Granular Material (2RC).

1.3 DEFINITIONS

A. Earth Excavation: Removal down to subgrade elevation of clay, silt, loam, sand, gravel, slate, hard pan, pavements, soft sandstone, loose stone in masses, and boulders measuring less than 1/2 cubic yard.
1. Earth Excavation is Unclassified.

B. Rock Excavation: Removal down to subgrade elevation of large rock and boulders measuring more than 1/2 cubic yard or drilling and wedging in opinion of Engineer.
1. Rock excavation is unclassified.

D. Subgrade: Trench bottom prepared as specified to receive Bedding, Concrete Cradle, or Concrete Encasement, or excavation bottom prepared to receive pipeline structures.
1.4 SUBMITTALS

A. Test Reports:
   1. Submit testing laboratory aggregate test reports based on requirements stated in Quality Control.
   2. Compaction density test reports based on method of density determination as specified in Reference Standards and method approved by Engineer.

B. Certificates: Submit certificate from aggregate supplier based on requirements stated in Quality Control, when requested by Engineer.

C. Product Data: Submit catalog cuts and such other data required to provide information for the following:
   1. Geotextiles.
   2. Warning Tape.

D. Calibration of Equipment: Submit a list of equipment; calibration procedure and frequency calibrated.

1.5 QUALITY ASSURANCE

A. Quality Control:
   1. Laboratory Tests: In accordance with the applicable Division 1 specification section for Quality Requirements, aggregate materials under Part 2 - Products require advance examination or testing according to methods referenced, or as required by Engineer.
      a. Arrange for testing laboratory to furnish Engineer test result reports in triplicate. Test reports are considered sufficient evidence of acceptance or rejection of materials represented.
      b. Conduct aggregate quality tests in accordance with requirements of appropriate Referenced Standard.
      c. Engineer reserves right to accept aggregate materials based on certification from supplier that aggregate originates from a source approved by PENNDOT and that aggregate complies with specified PENNDOT requirements.

1.6 PROJECT CONDITIONS AND EXECUTION

A. General Requirements: Excavate and backfill trenches necessary for completing work of this Contract. Excavate and backfill trenches by machinery or by hand; The Engineer is empowered, if necessary in his opinion, to direct that hand excavation and backfilling be employed. Excavate whatever substances encountered, to grades and depths indicated on Drawings, as specified, or as directed by Engineer. Remove and waste excavated material not required for backfill.

B. Environmental Requirements:
   1. Do not perform trenching, backfilling, or compacting when weather conditions or condition of materials will prevent satisfactory work, in opinion of Engineer.
   2. Do not use frozen materials as backfill or wet materials containing moisture in excess of quantity necessary for satisfactory compaction.
   3. Prior to use, moisten dry backfill material not having sufficient moisture to obtain satisfactory placement or compaction.
   4. Plan work to provide adequate protection during storms with provisions available constantly for preventing flood damage. Protect installed piping and other work against damage from uplift due to high ground water levels.
   5. Accommodation of Drainage: Keep gutters, sewers, drains, and ditches open constantly for surface drainage. No damming, ponding, water in gutters, or other waterways
permitted, except where stream crossings are necessary and then only to extent Engineer considers necessary. Do not direct water flows across or over pavements except through approved pipes or properly constructed troughs. When required, provide pipes or troughs of sizes and lengths required at no expense to Owner. Perform grading in vicinity of trenches so that ground surface is properly pitched to prevent water running into trenches.

6. Pumping: Keep excavations free from water during performance of work at no expense to Owner. Build dams and other devices necessary for this purpose, and provide and operate pumps of sufficient capacity for dewatering excavations. Provide for disposal of water removed from excavations in a manner not to cause injury to public health, public or private property, work of others, portions of work completed or in progress, or produce an impediment to street, road and highway usage.

7. When necessary to haul soft or wet soil material over roadways, use suitably tight vehicles to prevent spillage. Clear away spillage of materials on roadways caused by hauling.

8. Provide effective dust control by sprinkling water, use of calcium chloride or other method approved by Engineer. Employ dust control when, where and in a manner required by Engineer.

C. Explosives and Blasting: Not permitted in performance of trenching work.

D. Hydraulic hoe-ram equipment may be used with written approval of The Pennsylvania State University. Hoe-ram use may be limited as to time of day and size of unit.

E. Responsibility for Condition of Excavation: Assume responsibility for condition and results of excavation. Remove slides and cave-ins at whatever time and under whatever circumstance they occur.

F. Protection: Assume risks attending presence or proximity of overhead or underground public utility and private lines, pipes, conduits and support work, existing structures and property of whatever nature. Assume responsibility for damages and expenses for direct or indirect injury to structures or to person or property by reason of them or by reason of injury to them; whether structures are or are not shown on Drawings, by work of this Contract.

1. Outside Project Limits: Take necessary precautions to protect trees, shrubs, lawns and other landscaping from damage. Restitution work for damages rests solely with Contractor and at no expense to Owner.

2. Pipe Supports: Adequately support underground pipes or conduits exposed as a result of excavations. Provide adequate support along entire exposed length by timber or planking. Install supports in a manner that backfilling may be performed without dislodging pipes or conduits. Place and carefully compact Coarse Aggregate around supports, and leave supports in place as a guard against breakage due to backfill settlement. No additional payment will be made for support material left in place or for labor of installing and maintaining supports.

G. Structure Supports: Where trenching past buildings or structures that by their construction or position might exert detrimental pressure upon trench, right is reserved by Engineer to require that buildings or structures, be underpinned or supported and protected, or special sheeting be driven, or that short lengths of trench be opened at one time.

H. Removal of Obstructions:

1. Remove, realign, or change direction of above or below ground utilities and appurtenant supports, if required in opinion of Engineer. Perform as extra work unless performed by owner of obstruction without cost to Contractor. However, uncover and sustain obstruction at no additional cost prior to final disposition of obstruction. No claims for damage or extra compensation due to presence of obstructions or delay in removal or
rearrangement of obstructions will be made. Additional precautions concerning obstructions as follows:

a. Do not interfere with persons, firms, corporations, or utilities employing protective measures, removing, changing, or replacing their property or structures, but allow taking measures necessary or advisable under circumstances, without relieving responsibilities of Contract.
b. Without extra compensation, break through and reconstruct if necessary, invert or arch of sewers, culverts or conduits encountered if structure is in a position, in judgment of Engineer, as not to require its removal, realignment or complete reconstruction.

I. Advance Trenching: Where existing utilities or other suspected underground obstructions are within close proximity of proposed pipelines, uncover and verify exact location of obstructions far enough in advance of pipelaying to allow changes in pipe alignment or grade required to bypass obstructions and to avoid removing sections of pipe already installed. If sections of installed pipe require removal and reinstallation as a result of not verifying utilities or other underground obstructions far enough in advance, remove and reinstall pipe at no additional cost.

J. Excess Materials: No right of property in materials is granted for excavated materials prior to backfilling. This provision does not relieve responsibility to remove and dispose of surplus excavated materials. Obtain written consent and any necessary permits and approvals before disposing of excess materials at an off-site location.

K. Borrow Excavation: Where required quantity of backfill exceeds quantity of suitable material excavated within limits of Project site, obtain sufficient material to complete backfill at no additional cost to Owner. If borrow excavation is needed, notify Engineer sufficiently in advance of borrow excavation requirements to permit Engineer to verify need for borrow excavation and to view proposed borrow pit and determine suitability of material to be provided. Borrow excavation from outside sources is subject to approval of Engineer. Obtain written consent and any necessary permits and approvals before use of borrow excavation from outside sources.

L. Change of Trench Location or Depth:
1. Should Engineer require a change in location of a trench from that indicated on Drawings due to presence of an obstruction, or from other cause, and change in location is made before excavation is begun, no extra compensation or claim for damages will be granted.
2. If a change in trench location made at requirement of Engineer involves abandonment of excavation already made, abandoned excavation, together with necessary refill is classed as unclassified excavation and backfill as applicable, in case full width of trench has not been abandoned.
3. If a change in trench location made at requirement of Engineer involves abandonment of excavation already made, abandoned excavation, together with necessary refill is classed as earth or rock excavation and backfill as applicable, in case full width of trench has not been abandoned.
4. If a changed location of a trench is authorized by Engineer upon Contractor's request, Contractor is not entitled to extra compensation or to a claim for damage. If change of trench location involves abandonment of excavation already made, abandoned excavation and refill is at Contractor's expense.

M. Classification of Excavated Materials: No consideration is given to nature of materials encountered in trenching operations. Therefore, no additional payment will be made for difficulties encountered in handling, disposal, or replacement of materials removed.

N. Bedding: Excavate trench and construct bedding as shown on the Construction Detail Drawings.
1. Excavate the trench to at least six inches below the required bottom of pipe. Excavate further if necessary, in the opinion of the engineer, to reach suitable material for support of the utility.

2. Place AASHTO #8 bedding material, compacting in 4" layers to cover the bottom one-quarter of the pipe. Hand shape a cradle conforming to the bottom of the pipe.

3. Fill the spaces beside and over the pipe to a depth of 12" above the top of pipe. Where the pipe is rigid, tamp this material in layers 4" thick. Where the pipe is corrugated metal or plastic storm sewer pipe, avoid tamping directly over the pipe. See the Construction Detail Drawings.

O. Backfill: Install backfill on top of the completed bedding as shown on the Construction Details and as follows:

1. In areas under lawn or otherwise not paved nor exposed to vehicular traffic, fill the trench to one foot below finished grade with suitable backfill obtained from site excavation or imported. Backfill must be compacted in layers not to exceed 6”.

2. Complete filling the trench to finish grade with topsoil.

3. In vehicular areas, fill the trench above bedding with AASHTO #57 Coarse Aggregate, compacted in 6” layers, to subgrade elevation.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Reuse only materials free of topsoil, plant life, lumber, metal, refuse, coal waste, slag, and cinders. Remove all other material from the site.

B. Approved Backfill: On-site excavated soil or soil-rock mixed materials free of rocks or similar hard objects larger than six inches in any dimension. Rocks or similar hard objects may not represent more than 20 percent of backfill by volume.

C. Select Backfill: On site excavated material free of rocks or similar hard objects larger than one inch in any dimension.

D. AASHTO No. 57 Stone and as specified in Part 2.3.C of Section 31 20 00: Earth Moving.

E. Pipe Bedding: AASHTO No. 8 Stone and as specified in Part 2.3.C of Section 31 20 00: Earth Moving.

F. Concrete Cradle and Encasement: Per requirements of Section 03 30 53: Miscellaneous Cast-In-Place Concrete and of Class B: 3000 psi.

G. Underground Warning Tapes: Printed polyethylene metallic detection tape, six inches minimum width, color coded, one inch minimum lettering, printed with name of utility buried below, and suitable for installation in all soil types.

1. Provide detection tape for the following pipe lines and utilities as installed or encountered:
   a. Sanitary Sewers – Green
   b. Storm Sewers – Green
   c. Sewage Force Main – Green
   d. Water Line - Blue
   e. Gas Line – Yellow tape plus a tracer wire where indicated by the Utility
   f. Electric – Red
   g. Telephone – Orange
h. CATV Conduit – Orange
i. Petroleum Line - Yellow

H. Flowable Backfill:
1. Cement: Type I or II conforming to PENNDOT Section 701.
2. Fine Aggregate: Type A, B, or C conforming to PENNDOT Section 703.1, except having a maximum loss of 20 percent in the Soundness Test.
3. Coarse Aggregate: Type C or better, AASHTO No. 10, conforming to PENNDOT Section 703.2.
5. Admixtures: Conforming to PENNDOT Section 711.3. Can be used when specifically approved.
6. Mix Design (Per Cubic Yard):
   a. Provide design mix in accordance with PENNDOT 704.1 (c).
8. Compressive Strength (PTM No. 604):
   a. 3 days: 500 minimum.
   b. 28 days: 900.

END OF SECTION 31 23 33.13
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provision for soil erosion and sedimentation control work as indicated on Drawings.

B. Related Sections:
1. Section 31 20 00: Earth Moving.
2. Section 31 22 00: Grading.
3. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.

1.3 SUBMITTALS

A. Furnish certificates from manufacturers of following materials, certifying their products meet requirements of these Specifications.
   1. Matting for Erosion Control.
   2. Fabric for Silt Barrier Fencing.

1.4 PROJECT CONDITIONS

A. Environmental Requirements:
   1. See applicable section for environmental protection, erosion control general requirements, and scheduling.

PART 2 - PRODUCTS

2.1 STONE FOR RIPRAP

A. Provide riprap obtained from an offsite source from an approved PENNDOT Type A source. Do not use stone for riprap protection containing boulders, or cobbles from soil or gravel deposits, earth, roots, debris, or similar material. Each stone to weigh not less than 162 pounds per cubic foot, based on saturated dry specific gravity, determined in accordance with ASTM C 97.

B. Provide stone that is predominantly angular and blocky in shape rather than elongated, with sharp clean edges at intersection of relatively flat faces. Following shape limitations are specified for stone used for riprap protection.
   1. Not more than 25 percent of stones reasonably well distributed throughout gradation to have a length more than 2.5 times breadth or thickness.
   2. Do not use stone having a length exceeding 3.0 times its breadth or thickness.

C. Stone for riprap protection obtained from an offsite source to conform to gradation requirements for Rock Lining as specified in PENNDOT Section 850. "R" classification is as indicated on Drawings. Stone protection material may contain up to 5 percent, by weight of air dried rock, fragments, spalls, and dust with each particle weighing less than permissible minimum stone size and be defined as a stone in stone protection material. In computing percentages by weight of stones in required gradation, do not include weight of a particle weighing less than permissible minimum stone size in total weight.

2.2 MATTING FOR EROSION CONTROL

A. Jute Matting: PENNDOT Section 806.2(a)1.

B. Wood Excelsior Blanket: PENNDOT Section 806.2(a)2.

C. Mulch Control Netting: PENNDOT Section 806.2(d).

D. Nylon Erosion Control Mat: PENNDOT Section 806.2(b)2.

E. Staples: PENNDOT Section 806.2(e).

2.3 EROSION CONTROL DEVICES

A. Straw Bale Barriers:
1. **Bales**: Straw stalks of threshed grain or tall hay grass stalks commercially available locally.
2. **Stakes**: Wood Stakes. Sound, rough sawn, red, or white cedar or hardwood measuring two inches by two inches; of required length, with tapered point.
3. **Reinforcement Bars**: ASTM A 615 (S1), Grade 60, Deformed.

B. **Wire**: ASTM A 82.

C. **Filter Fabric Fence**: PENNDOT Section 865.2.

D. **Rock Construction Entrance**:  
   1. **Crushed Stone**: PENNDOT Section 703.2, AASHTO No. 1.  
   2. **Filter Cloth**: PENNDOT Section 735, Class 4.

E. **Pumped Water Sediment Control Device (PWSCD)**:  
   1. Nonwoven geotextile fabric sewn with double needle machine using high strength thread.  
   2. Provide PWSCD with opening large enough to accommodate a 4 inch discharge hose with attached strap to tie off the hose preventing pumped water from escaping from PWSCD without being filtered.
   3. **Properties**:  
      | PROPERTY       | TEST METHOD    | TEST RESULT |
      |----------------|----------------|-------------|
      | Weight         | ASTM D 3776    | 10 oz./yd.  |
      | Grab Tensile   | ASTM D 4632    | 270 lbs.    |
      | Puncture       | ASTM D 4833    | 150 lbs.    |
      | Flow Rate      | ASTM D 4491    | 70 gal./min./ft.² |
      | Permittivity   | ASTM D 4491    | 1.3 sec⁻¹   |
      | UV Resistance  | ASTM D 4355    | 70%         |
      | AOS % Retained | ASTM D 4751    | 100         |
      | Seam Strength  | ASTM D 4884    | 100 lbs./in.|

   All properties are minimum average roll value except the weight of the fabric which is given for information only.

4. **Manufacturer**:  
   a. ACF Environmental, Dirtbag.  
   b. Or approved equal.

F. **Inlet Sediment Control Device (ISCD)**:  
   1. Woven geotextile fabric sack sewn with double needle machine using high strength thread. Geotextile fabric sack to have an average wide width strength of 100 lb/in per ASTM D 4884.  
   2. Provide ISCD manufactured to fit openings of the inlets.  
   3. Provide ISCD with integral dump straps, lifting loops and restraining strap.  
   4. **Properties**.

### 2.5 SOIL SUPPLEMENT MATERIALS

**A.** As specified in Section 31 22 19: Finish Grading.

### 2.6 MULCHING MATERIALS

**A.** Mulches: As specified in PENNDOT Section 805.2(a)1.

**B.** Mulch Binding: As specified in PENNDOT Section 805.2(b).

**C.** Wood Chips: Wood chips, recovered from clearing and grubbing operations is acceptable as mulch for seeding and used at a rate of 35 cubic yard per acre.

### PART 3 - EXECUTION

### 3.1 INSTALLATION

**A.** Bedding Material for Riprap: Place bedding material uniformly on prepared base, in a satisfactory manner, over areas to receive riprap and to a minimum thickness of 6 inches. Repair damage to surface of bedding base during placement of bedding material or riprap before proceeding with work. Compaction of bedding is not required, but finish to present a reasonably even surface, free from wounds or windows.

**B.** Riprap: Firmly bed each stone abutting against other stones to form a layer, with interstices filled with suitably sized spalls. Take care in placing stone so that its weight is carried by underlying material and not by adjacent stones. Surface of each stone is not to vary more than four inches from surface plane. Depths of abutting stones are not to differ by more than 4 inches. Progress by fitting additional and abutting stones with well broken joints so that most compact mass of riprap is developed.

**C.** Trench Plugs:

1. Provide temporary trench plugs at intersections between interceptor terraces and open pipeline trench to prevent unconsolidated soils from being washed down trench during periods of rainfall. Temporary trench plugs consist of eight foot long dams of compacted earth.
2. Provide permanent trench plugs on critical slopes and on each side of creek crossings to form a solid barrier against subsurface water movement. Permanent trench plugs consist of earth filled sacks packed tightly around pipe.

**D.** Silt Barrier Fence: Install fence near limits of excavation or fills where indicated on Drawings or as directed by Engineer to control erosion until disturbed areas are permanently stabilized.

1. Construct silt barrier fencing with Class 3 geotextile material with wire or plastic mesh support fencing fastened to support posts. Overall height of fabric above ground to be nominally 18 inches. Provide geotextile material of width required including an 8 inch to 12 inch section for embedment.
2. Excavate a trench 6 inches wide by 6 inches deep on fabric side of barrier and along inside of post line.
3. Install posts a minimum of 18 inches deep, by an approved method, on downstream edge of trench at a maximum spacing of 10 feet.
4. Provide wire or plastic mesh support fence when used, of sufficient height to extend from top of fabric to ground or into excavated trench and be securely fastened to posts. Provide staples for wood posts and tie wires for steel and plastic posts, with a minimum of three fasteners per post.
5. Secure geotextile fabric material by fasteners to top of wire mesh and posts, keeping sag to a minimum, and at a maximum spacing of 30 inches. Extend fabric 8 to 12 inches into excavated trench for embedment. Backfill and compact over geotextile material to prevent water from flowing under fabric. Overlap fabric roll ends a minimum of 6 inches at post locations.
6. Preassembled silt barrier fence systems to be approved by Engineer. Install preassembled fence systems in accordance with manufacturer's recommendations.
7. Construct silt barrier fence across a ditch or swale area of sufficient length to eliminate end flow, with ends pointing upstream and upslope.
8. Maintain silt barrier fence satisfactorily to keep functional. This includes removal of trapped sediment and cleaning fabric of trapped sediment by tapping fabric material when dry. Replace fabric not functioning due to clogging, damage, or deterioration as directed by Engineer.
9. Remove fencing when no longer required, as determined by Engineer. Dispose of fencing materials in a suitable manner and restore area where fence had been erected at no additional cost to Owner.

E. Pumped Water Sediment Control Device (PWSCD):
1. Install the PWSCD on a slope. It should be placed so the incoming water flows into the bag and will flow through the PWSCD and then flow off the site without creating more erosion. The neck of the PWSCD should be tied off tightly to stop the water from flowing out of the PWSCD without going through the walls of the bag. To increase the surface area being used, the PWSCD may be placed on a gravel bed to allow water to flow in all directions.
2. The PWSCD is considered full and should be disposed when it is impractical for the bag to filter the sediment out at a reasonable flow rate and should be replaced with a new PWSCD.
3. Disposal may be accomplished as directed by the Engineer. If the site allows, the PWSCD may be buried on site and seeded, visible fabric removed and seeded or removed from site to a proper disposal area.

F. Inlet Sediment Control Device (ISCD):
1. Installation and emptying instructions in accordance with manufacturers printed instructions.

G. Temporary Seeding and/or Mulching:
1. General: Engineer reserves right to direct temporary seeding and/or mulching of disturbed areas in event permanent grading and seeding cannot be immediately performed. Include cost of temporary erosion control measures in appropriate pay item.
2. Liming: Lime application rates will be determined on basis of tests performed by Contractor or apply a minimum of 800 pounds of agricultural lime stone per 1000 square yards.
3. Fertilizer: Apply fertilizer at a rate of 140 pounds per 1000 square yards of 10-20-20 fertilizer or in conformance with results of soil tests performed.
4. Tilling: Till seedbed to a depth of 3 inches prior to seeding. Lime (if required) and fertilizers may be applied during tilling operation.
5. **Seeding:** Type of temporary seed mixture to be used is determined by Engineer. Sow seed at rate indicated in Temporary Seeding Mixtures Article. Cover seed with 1/2 inch of topsoil and lightly roll seeded area.

6. **Mulching:** Apply hay or straw mulch at rate of three tons per acre on slopes of 1.5 to 1 or flatter. Apply asphalt material to anchor mulch at rate of 50 gallons per ton on straw or hay mulch. Apply wood cellulose fiber mulch on slopes steeper than 1.5 to 1 at a rate of 1500 pounds per acre. Wood chips, recovered from clearing and grubbing operations, is acceptable as mulch for temporary seeding. Use at a rate of 35 cubic feet per acre in lieu of straw or hay.

H. **Mulching Alone:** For embankments or cuts 1.5 to 1 or flatter, susceptible to critical erosion during periods of cold weather or other site conditions, Engineer may require a three ton per acre application of straw or hay mulch for temporary erosion control and later seeding. Apply asphalt for anchoring mulch at a rate of 50 gallons per ton. Straw or hay may be rolled immediately with a sheepsfoot roller to anchor mulch in lieu of using asphalt. When weather becomes favorable, seed areas provided with a mulch cover alone using normal application rates of seed, fertilizer, and lime. If additional mulch is needed, rate of application and area to be mulched will be as determined by Engineer.

I. **Matting for Erosion Control:** Provide matting in lieu of mulch on slopes 3:1 and steeper or when directed by Engineer.
   1. Prepare area to be covered as a fine seedbed, fertilized, and seeded. Place matting immediately and water to give a firm bond to soil and start germination of seed. Either jute or excelsior matting may be used.
   2. **Jute Matting:** Lay jute matting snugly to ground with a 4-inch overlap on edges and a 12-inch overlap on ends. Make check slots from a 2-foot-wide strip of jute matting folded and buried in a 6-inch-deep trench with a 6-inch flap extending on each side of trench. Place check slots perpendicular to water flow, tamped and stapled in place before jute matting is laid. Use check slots for jute matting when slope exceeds a 5 percent grade. On grades or slopes steeper than 5 percent, Engineer will determine spacing of check slots.
   3. **Excelsior Matting:** Lay excelsior matting with netting on top and fibers in contact with soil over entire area. Butt ends and sides of excelsior blanket snugly and staple. It is not necessary to dig check slots, anchor ditches, or bury ends of excelsior matting.
   4. **Staples:** Hold matting in place by means of wire staples driven at a 90-degree angle to soil surface. Space staples not more than 3 feet apart in three rows for each strip, with one row along each edge and one row alternately spaced in middle. Space staples 6 inches apart across matting ends and check slots width.

3.2 **MAINTENANCE**

A. Begin maintenance operations immediately and continue throughout construction period until Contract is completed. Inspect sediment control structures and repair after each storm.

3.3 **SOIL EROSION AND SEDIMENTATION PLAN**

A. An approved Erosion and Sedimentation Control Plan is indicated on Drawings. Should Contractor desire to modify this Plan, obtain necessary approvals prior to implementing any provisions at no additional cost to Owner.
SECTION 31 41 00 - SHORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The work specified in this Section consists of providing shoring which conforms to federal, state, and local laws, rules, regulations, requirements, precautions, orders, and decrees.

1.2 QUALITY ASSURANCE

A. Requirements of Regulatory Agencies: Shoring materials and installation work shall conform to Federal, State and local laws, rules, regulations, requirements, precautions, orders, and decrees. These include, but are not limited to,
   1. Occupational and Safety Health Administration (OSHA), Construction Standards for Excavation (29 CFR 1926.650 to .652)
   2. OSHA, Technical Manual

The duty or responsibility for inspection, determination, compliance, and enforcement of Federal, State, and local laws, rules, regulations, requirements, precautions, orders and decrees, rests with such department or agency and not with the Owner or Engineer.

B. Shoring Design: The design and the adequacy of the shoring installed is the responsibility of the Contractor.

1.3 SITE CONDITIONS

A. Responsibility for Condition of Excavation: The Contractor is solely responsible for the condition of the excavations.
   1. The failure or refusal of the Engineer to suggest the use of Shoring, or a better quality, grade, or section, or larger sizes of Shoring materials, or to suggest that Shoring be left in place, shall in no way or extent relieve the Contractor of his responsibility concerning the condition of excavation or of his obligations under the Contract, nor impose liability on the Engineer or the Owner.
   2. No delay, whether caused by an action or want of action on the part of the Contractor, or by an act of the Engineer, Owner, or their agents, or employees, resulting in the keeping of any excavation open longer than would otherwise have been necessary, shall relieve the Contractor from the necessity of properly and adequately protecting the excavation from caving or slipping, nor from his obligations under the Contract relating to injury to persons or property, nor entitle him to claims for extra compensation.

B. Shoring of Excavations: In order to help minimize the impact of excavations on adjacent structures, utilities, roadways, plantings, and sidewalks, the Contractor shall be required to install permanent shoring, as necessary, to prevent movement of such structures. Permanent sheeting shall be left in place at the end of construction, unless otherwise directed by the Engineer.
   1. It is the Contractor’s responsibility to assess the relevant subsurface and loading conditions at the locations where shoring is required, and to design, install, and maintain support systems which will prevent detrimental movement of adjacent soils or structures.
   2. Groundwater may be encountered during excavation. The Contractor is responsible for preventing migration of soils retained by shoring due to groundwater inflow or other
means. Shoring shall be adequately tight to ensure minimal migration of retained soils into excavations. The Contractor shall replace any soils that migrate due to groundwater inflow or other means and at no increase in the Contract Price.

3. The Contractor shall repair damage to utilities, which in the opinion of the Construction Manager and/or Engineer, was caused by shoring or shoring-related installations, or ground movement associated with adjacent excavation(s). Repair such damage to the Owner’s satisfaction and at no increase in the Contract Price.

4. The Contractor shall repair damage to structures, which in the opinion of the Construction Manager and/or Engineer, was caused by shoring or shoring-related installations, or ground movement associated with adjacent excavation(s). Repair such damage to the Owner’s satisfaction and at no increase in the Contract Price.

C. Tight Sheeting Requirements Concerning Piping and Conduits: In order to reduce backfill material pressures exerted on pipe lines and conduit runs (and their associated in-line structures, if any) which are located within the excavation limits for building foundations or other structure foundations, the Contractor shall have the option to provide either of the following:

1. Option One: For excavations deeper than five feet, provide tight sheeting from top of original grade to below planned structure foundation subgrade, except for excavations where stable rock is encountered. If stable rock is encountered at a depth greater than five feet but above the structure foundation subgrade, carry tight sheeting to top of rock.

2. Option Two: For excavations deeper than five feet, omit tight sheeting, slope the excavation, and provide Select Granular Material on undisturbed earth up to the level of pipe bedding and conduit bedding (or encasement) with such material being placed in eight-inch compacted layers.
   a. Select Granular Material shall conform to the Commonwealth of Pennsylvania Department of Transportation, Specifications Publication 408, as supplemented, Section 703.3.

3. No increase in Contract Price will be allowed for either option. Additionally, regardless of the option selected, the responsibility for the condition of excavation remains the Contractor’s responsibility.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Shoring materials shall conform to Federal, State and local laws, rules, regulations, requirements, precautions, orders, and decrees.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Shoring installations shall conform to Federal, State and local laws, rules, regulations, requirements, precautions, orders, and decrees.

B. Shoring Left in Place: The Contractor shall have no claim for additional compensation for shoring left in place at his volition and without the Engineer’s written requirement.

C. Cut off excess portions of shoring left in place whenever and at such points as the Engineer shall require, and remove from the work the portion cut off. No additional compensation shall be paid for such shoring cutting and removal.
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 32 10 00 - PAVING AND SURFACING [C]

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The work specified in this Section consists of the paving and repaving operations for the areas indicated for new bituminous paving.

B. Related Sections:
1. Section 31 20 00: Earth Moving.
2. Section 31 22 19: Finish Grading.
3. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
4. Section 03 30 53: Miscellaneous Cast-In-Place Concrete.
5. Section 32 16 13.16: Cast-in-Place Concrete Curbs.
6. Section 32 12 00: Asphalt Overlay Paving.

1.2 REFERENCES

A. PENNDOT References: The PENNDOT Sections noted herein refer to sections contained in the Commonwealth of Pennsylvania Department of Transportation (PENNDOT) Specifications Publication 408, as supplemented. The payment provisions do not apply to work to be performed under this Specifications Section.
1. PENNDOT Section 305 Bituminous Concrete Base Course.
2. PENNDOT Section 350 Subbase.
3. PENNDOT Section 401 Plant Mixed Bituminous Concrete Courses.
4. PENNDOT Section 403 Recycled Plant-Mixed Bituminous Concrete Courses.
5. PENNDOT Section 420 Bituminous Wearing Course ID-2 and Bituminous Wearing Course ID-2, RPS.
6. PENNDOT Section 421 Bituminous Binder Course ID-2 and Bituminous Binder Course ID-2, RPS.
7. PENNDOT Section 460 Bituminous Tack Coat.
8. PENNDOT Section 461 Bituminous Prime Coat.
9. PENNDOT Section 491 Milling of Bituminous Pavement Surface.
10. PENNDOT Section 702 Bituminous Material.
11. PENNDOT Section 703 Aggregates.
12. PENNDOT Section 962, Painting Traffic Lines and Markings.

B. Commonwealth of Pennsylvania Department of Transportation Bulletin 25 and Bulletin 27.

C. American Society for Testing and Materials (ASTM):
2. ASTM D 2167, Test Method for Density of Soil in Place by the Rubber-Balloon Method.

D. American Association of State Highway and Transportation Officials (AASHTO):
1. AASHTO T 180, Moisture-Density Relations of Soils Using a ten pound Rammer and an 18-inch Drop.

1.3 DEFINITIONS

A. Specified Maximum Trench Width: The applicable maximum trench width as shown on the Contract Drawings.
B. Street: Unless otherwise specifically qualified herein, the term Street as used in this Section is understood to mean a street, highway, avenue, boulevard, road, alley, lane, driveway, parking lot, or any other area used as a way for vehicles.

1.4 QUALITY ASSURANCE

A. Source Quality Control: Maintain the quality of work by using the products of a qualified bituminous concrete producer and qualified plant operating workmen.
1. Use products of a bituminous concrete bulk producer regularly engaged in production of hot-mix, hot-laid bituminous concrete conforming to the standards referenced herein.
2. Use materials conforming to the requirements of the Commonwealth of Pennsylvania Department of Transportation Specifications Publication 408, as supplemented.

B. Workmen Qualifications: Provide at least one person thoroughly trained and experienced in the skills required and who readily understands the design and is completely familiar with the application of bituminous concrete paving work.
1. During progress of bituminous concrete paving work the trained person shall be present to direct the performance of work.
2. For actual finishing of bituminous concrete surfaces and operation of the equipment, use only personnel thoroughly trained and experienced in the skills required.

1.5 PROJECT CONDITIONS

A. Environmental Requirements:
1. Dust Control: Provide effective dust control by sprinkling water, by the use of calcium chloride, or by other methods as approved by the Engineer. Use dust control measures where and when, and in a manner as required by the Engineer.
2. Temperature Limitations: Terminate placement of bituminous concrete surface courses of permanent pavement between October fifteenth and thirty-first, and do not resume placement prior to April first to fifteenth; interim days between date limits may be used for placement as determined by the Engineer depending upon weather temperature conditions.
   a. Do not install aggregate courses when ambient temperature is below or is expected to fall below freezing.
   b. Do not use aggregate containing frost nor place aggregate courses on frozen subgrade.
   c. Do not place bituminous concrete surface courses of permanent pavement when the ambient temperature is 40 degrees F. or lower; nor when the temperature of the pavement, base or binder on which it is to be placed is 40 degrees F. or lower.
3. Paint Application Limitations: Adhere to manufacturer’s data on air and surface temperature limits and relative humidity during application and curing of coatings.
   a. Do not spray- apply paint when wind velocity is above 15 mph.
   b. Schedule painting work to avoid dust and airborne contaminants.
   c. Apply paint during daylight hours only.

PART 2 - PRODUCTS

2.1 BASE COURSE MATERIALS [C]

A. Subbase: Composed of Coarse Aggregate Type C (or better) stone conforming to PENNDOT Section 703.2, No. 2A coarse aggregate and as specified in Part 2.3.C of Section 31 20 00: Earth Moving. [C]

B. Bituminous Concrete Base Course: Conforming to PENNDOT Section 305 and Section 403 for RAP requirements.
C. Bituminous Material: Use one of the following conforming to PENNDOT Section 702 and Bulletin 25.

2.2 SURFACE COURSE MATERIALS

A. Bituminous Materials:
   2. Bituminous Tack Coat: Class E-1, E-6, or E-8 emulsified asphalt conforming to PENNDOT Bulletin 25.
   3. Bituminous Prime Coat: Conforming to bituminous material requirements of PENNDOT Section 461.2(a).

B. Bituminous Pavement Materials:
   1. Wearing Course: Hot mixed, hot laid, Bituminous Wearing Course ID-2: Conforming to PENNDOT Section 420.

C. Traffic Zone Paint: Provide products meeting requirements of PENNDOT Section 962 for the following:

2.3 MISCELLANEOUS MATERIALS

A. Traffic Zone Paint: PENNDOT Section 704:
   1. Yellow Traffic Zone Paint: Low-heat, rapid-dry formulation for center lines; reflective.
   2. White Traffic Zone Paint: Low-heat, rapid-dry formulation for edgelines and stop bars; reflective.
   3. Paint Quality: Paint material composition shall conform to AASHTO Type F paint formulation and AASHTO M-247, Type (standard gradation) for reflective media (glass beads).

2.4 PAVEMENT MIXES

A. Composition of Mixtures: Binder and wearing course mixture composition shall conform to the requirements of PENNDOT Section 401.
   1. Establish a job-mix formula prior to beginning work which shall not be changed during the progress of work without the Engineer’s approval. Job-mixing tolerances shall not be presumed to permit acceptance of materials whose gradations fall outside the master ranges set in the specified PENNDOT Sections.
   2. The approved job-mix formula shall lie within the specification limits and be suitable for the layer thickness and other conditions prevailing. It shall not be changed after work has started without the approval of the Engineer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Subgrade Preparation: Just prior to subbase installation, as specified in Section 31 20 00: Earth Moving, perform grading and finish rolling.
   1. Perform subgrade preparation only after site grading, trenching, etc., have been completed and accepted by the Engineer.
   2. The moisture content of the subgrade material at the time of compaction shall not exceed two percentage points above the optimum moisture content.
3. Subgrade over Trenches: Backfill and compact trenches as specified in Section 31 33.13: Trenching and Backfilling for Site Utilities.

B. General Requirements for Pavement Removal: Cut existing pavement to neat lines with a mechanical saw.
   1. At joints between existing pavements and new paving work, cut and neatly trim the edges of existing pavements in a manner subject to the Engineer’s approval. Provide an application of Class AC-20 petroleum asphalt at the locations where new bituminous paving joins existing bituminous paving.

3.2 PERMANENT PAVING INSTALLATION

A. General Requirements: Methods of preparing paving mixture, placing paving mixture, compaction, and protection of in-place bituminous concrete pavement shall comply with PENNDOT Sections 305.3 and 401.3. The specified thicknesses are the compacted thicknesses.
   1. Location of types and thicknesses of pavements are delineated on Drawings.
   2. Install surface course of replacement pavement with top surface flush with surface of adjacent pavement.

B. Base Course Installation:
   1. Bituminous Concrete Base Course: Construct in accordance with the requirements of PENNDOT Section 305.

C. Binder Course Installation:
   1. Bituminous Concrete Binder Course: Construct in accordance with the requirements of PENNDOT Section 421.

D. Wearing Course Installation:
   1. Bituminous Concrete Wearing Course: ID-2, construct in accordance with the requirements of PENNDOT Section 420.
      a. Use Bituminous Tack Coat material to seal joints in wearing courses as specified in PENNDOT Section 401.3 (j) 3.

3.3 MISCELLANEOUS MATERIALS INSTALLATION

A. Cement Concrete Curbs: Curbs to shape, thickness, workmanship and finish as delineated on drawings and per referenced specifications unless otherwise required by the Engineer. Construction methods as specified in PENNDOT Section 630.

3.4 PAVEMENT MARKING

A. Paint Application: Strictly follow paint manufacturer's label instructions for mixing, thinning, proper spreading rate, and drying time. In no case shall film thickness be less than manufacturer's recommendations nor shall area coverage per gallon exceed manufacturer's recommendations.
   1. Preparation: Prior to pavement marking, clean pavement surface free of contaminants that will prohibit paint adhesion.
   2. Thinning: If material has thickened or must be diluted for application, the coating shall be built up to the same film thickness achieved with undiluted material. Do not use thinner to extend coverage of the paint.
   3. Coverage Rate: Regardless of the surface condition, apply paint to achieve a suitable finish either by decreasing the coverage rate or by applying additional coats of paint.
   4. Provide temporary satisfactory barriers for at least 30 minutes, or until the paint is dry and track free from vehicular traffic. Repaint marked or damaged areas.
B. Parking Area Traffic Lines and Markings: Striping shall consist of white four-inch wide painted lines of length and spacing indicated on the Drawings. Paint lines accurately with sharp, clearly defined edges. Paint solid colored areas free of skips and holidays. Make linework straight and uniformly spaced.

3.5 MAINTENANCE

A. Continuously maintain temporary pavement without additional compensation until it is replaced with permanent pavement.

B. Without an increase in Contract Price, maintain the work done under this Section for a period as stated in the Agreement after the date of the Owner’s approval of the Substantial Completion Certificate issued by the Engineer. Maintenance shall include the repair or removal and replacement of such work which has failed, or wherever surface depressions have developed. Materials and methods used to repair or replace such work shall conform to the applicable requirements of this Section.

C. Should the Contractor fail to perform required maintenance or repairs within three days after receiving written notice from the Owner or Engineer, the Owner may perform such maintenance or repairs and deduct the cost thereof from monies due or to become due the Contractor.

END OF SECTION 32 10 00
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The work specified in this Section consists of the overlay paving operations for the areas indicated on the Contract Drawings.

B. Related Sections:
1. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
2. Section 32 10 00: Paving and Surfacing.

1.2 REFERENCES

A. The PENNDOT Sections noted herein refer to sections contained in the Commonwealth of Pennsylvania Department of Transportation (PENNDOT) Specifications Publication 408, as supplemented. The payment provisions do not apply to work to be performed under the Contract.
1. PENNDOT Section 401 Plant Mixed Bituminous Concrete Courses.
2. PENNDOT Section 420 Bituminous Wearing Course ID-2 and Bituminous Wearing Course ID-2, RPS.
3. PENNDOT Section 421 Bituminous Binder Course ID-2 and Bituminous Binder Course ID-2, RPS.

1.3 DEFINITIONS

A. Specified Maximum Trench Width: The applicable maximum trench width shown on the Contract Drawings.

B. Street: Unless otherwise specifically qualified herein, the term street as used in this Section is understood to mean a street, highway, avenue, boulevard, road, alley, lane, driveway, parking lot, or any other area used as a way for vehicles.

1.4 QUALITY ASSURANCE

A. Source Quality Control: As specified in Section 32 10 00.

B. Workmen Qualifications: As specified in Section 32 10 00.

C. Requirements of Regulatory Agencies: As specified in Section 32 10 00 with the following additional requirement.
1. Unless otherwise specified or required by the Engineer, overlay paving work will not be permitted until all other work to be performed under the Contract has been completed.
1.5 PROJECT CONDITIONS

A. Environmental Requirements: As specified in Section 32 10 00.

B. Time Requirements: As specified in Section 32 10 00.

PART 2 - PRODUCTS

2.1 SURFACE COURSE MATERIALS

A. Bituminous Materials:
   2. Bituminous Tack Coat: Class E-1, E-6 or E-8 emulsified asphalt conforming to PENNDOT Bulletin 25.
   3. Bituminous Prime Coat: Conforming to bituminous material requirements of PENNDOT Section 461.2(a).

B. Bituminous Pavement Materials:
   1. Binder Course: Hot mixed, hot laid, Bituminous Binder Course ID-2 conforming to PENNDOT Section 421, using asphalt cement.
   2. Wearing Course: Hot mixed, hot laid, Bituminous Wearing Course ID-2: Conforming to PENNDOT Section 420.
   3. Bituminous Seal Coat: Conforming to PENNDOT Section 470.2.
   4. Bituminous Surface Treatment: Conforming to PENNDOT Section 480.2.

2.2 PAVEMENT MIXES

A. Composition of Mixtures: Binder and wearing course mixture composition shall conform to the requirements of PENNDOT Section 401.
   1. Establish a job-mix formula prior to beginning work which shall not be changed during the progress of work without the Engineer's approval. Job-mixing tolerances shall not be presumed to permit acceptance of materials whose gradations fall outside the master ranges set in the specified PENNDOT Sections.
   2. The approved job-mix formula shall be within the specification limits and be suitable for the layer thickness and other conditions prevailing. Do not change the formula after work has started without the approval of the Engineer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Surface Preparation of Existing Paving:
   1. Prior to overlay paving, condition the existing paving in accordance with PENNDOT Section 401.3(g).

B. Patching Existing Paving:
   1. Prior to overlay paving, patch potholes and other damaged areas in the existing paving. The location and extent of the pavement patching will be determined by the Engineer.
   2. Prior to overlay paving, level low and depressed areas on roadways. Location and extent of leveling will be determined by the Engineer.
3. Thoroughly clean and remove loose material, dry and prime with a light coat of emulsified asphalt areas to be patched or leveled.

4. Use (Bituminous Binder Course) (Bituminous Wearing Course ID-2) material placed by hand, spread with rakes, lutes, brooms or shovels to obtain uniform placement. Use hand operated vibratory compactor or similar equipment for compaction. When approved by Engineer, mechanical pavers or conventional power rollers may be used in areas requiring leveling.

5. When patch exceeds one-inch in depth, cut the edges of pavement square and vertical to provide mechanical shoulder.

C. Adjustment of Height of Gas and Water Service Boxes and Frames of Underground Structures:
1. Adjust the heights of gas and water service boxes and frames of other underground utility structures if they are existing within the limits of overlay paving. Adjust these boxes and frames to the new finish grade elevations of the overlay paving.
2. Make the necessary arrangements with the respective utility companies for adjustment of their service boxes and frames of underground structures.
3. Do not proceed with the overlay paving until the heights of service boxes and frames of underground structures have been adjusted to the satisfaction of the Engineer.
4. No separate or additional payment will be made for adjusting the heights of service boxes, and frames of other underground structures, it being understood and agreed that such costs be included in the Contract unit price per square yard for furnishing and placing the overlay paving.

D. Painting Curbs: Prior to placing the bituminous concrete overlay pavement, paint the inside faces of existing curbs below the reveal with a thin application of asphalt cement to provide a closely bonded, watertight joint.

E. Tack Coat: Prior to placing the bituminous concrete overlay pavement, apply a Bituminous Tack Coat consisting of a thin application of emulsified asphalt to the existing paved surface at such rate and in such manner as set forth in PENNDOT Section 460. Prior to applying the tack coat, clean loose and foreign material from existing pavement surface.

F. Make joints of overlay pavement as specified in PENNDOT Section 401.3 (j).

G. At joints between existing pavement and new paving work, cut the edges of existing pavements neatly trimmed as approved by the Engineer. Cut paving with a mechanical saw. Apply asphalt cement at locations where new bituminous paving joins existing bituminous paving.

3.2 INSTALLATION

A. General Requirements: Method of placing, compacting and the protection of in-place bituminous concrete for pavement shall comply with PENNDOT Section 401.3.

B. Limits of Overlay Paving: Provide overlay pavement to the limits specified herein and to such additional limits as required by other agencies having jurisdiction, or the Engineer.
1. Provide overlay pavement for existing access roads, service roads, parking areas and sidewalks on site as indicated on the Drawings.

C. Overlay Paving, Bituminous Wearing Course ID-2:
1. Use materials, composition of mixture and methods to construct the bituminous concrete overlay paving conforming to the applicable requirements of PENNDOT Section 420 for Bituminous Wearing Course ID-2.
2. Minimum thickness of overlay pavement after compaction shall be the greater of:
   a. One inch (1”).
   b. The depth of milling.
3. Install a leveling course of bituminous material in depressions as required and as specified herein.
   a. Include the cost of this extra thickness in the cost of overlay paving. No separate or additional payment made for installing leveling course

3.3 MAINTENANCE

A. As specified in Section 32 10 00 with the exception of maintaining temporary paving.

B. Should the Contractor fail to perform required maintenance or repairs within three days after receiving written notice from the Owner or Engineer, the Owner may perform such maintenance or repairs and deduct the cost thereof from any monies due or to become due the Contractor.

END OF SECTION 32 12 00
SECTION 32 1400 - UNIT PAVING [C]

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Brick pavers set on sand setting beds on a concrete base for the Garden Seating Area.
   2. Cut-stone pavers set in mortar setting beds on concrete base for the Entries and Lawn Terrace Area.

B. Related Sections include the following:
   1. Division 03 Section 03 3000 Cast-in-Place Concrete, for installation of the paver base.

1.2 SUBMITTALS

A. Product Data: For the following:
   1. Brick Pavers.
   2. Cut Granite Pavers.
   3. Joint Sealant

B. Sieve Analyses: For aggregate setting-bed materials, according to ASTM C 136.

C. Samples for Initial Selection: For the following:
   1. Each type of unit paver indicated.
   2. Joint materials involving color selection.
   3. Granite sample for curb color.

D. Samples for Verification:
   1. Full-size units of each type of unit paver indicated.
   2. Joint materials.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of unit paver, joint material, and setting material from one source with resources to provide materials and products of consistent quality in appearance and physical properties.

B. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
2. Size and locations to be determined.

C. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Store liquids in tightly closed containers protected from freezing.

1.5 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or aggregate setting beds. Remove and replace unit paver work damaged by frost or freezing.

PART 2 - PRODUCTS

2.1 REGIONAL MATERIALS

A. Provided regional materials for LEED compliance wherever possible: mortar aggregate mortar cement and lime grout aggregate and grout cement

2.2 BRICK PAVERS

A. Glen Gery Brick Pavers:
   1. Non-modular molded 53-DD
   2. Color: Full range
   3. Thickness: 2-1/4 inches
   4. Face Size: 4 by 8 inches non-modular

B. Efflorescence: Brick shall be rated "not effloresced" when tested according to ASTM C 67.

2.3 STONE PAVERS AND BANDS

A. Dimensional Cut Granite Pavers: Type 1A
   1. Manufactured by North Carolina Granite, Inc, or equal.
   2. Use: Entries and Lawn Terrace:
   3. Size: 18"x24"x2"thick, modular size
   5. Type: Virginia Mist, Jet Mist or equivalent.
B. **Dimensional Cut Granite Pavers: Type 1B**
   1. Manufactured by North Carolina Granite, Inc, or equal.
   2. Use: Lawn Terrace trim along the skylight:
   3. Size: 8"x24"x2" thick, modular size
   5. Type: Virginia Mist, Jet Mist or equivalent.

C. **Dimensional Cut Granite Pavers: Type 2**
   1. Manufactured by Structural Stone, Inc, or equal.
   2. Use: Lawn Terrace:
   3. Size: Random sizes, 2" thick.
   5. Type: Southern Yellow Waterjet, or equivalent

2.4 **AGGREGATE SETTING-BED MATERIALS [C]**

A. In addition to meeting more stringent specifications that may be found in various sections of the project manual, all stone or aggregate used for, or as a component of, Structural fill shall meet the following requirements. Structural fill is defined as all fill placed under and around foundations, floor slabs, utilities, sidewalks and pavements.
   1. Be provided only from PENNDOT approved sources.
   2. Be quarried from the following formations in the Central Pennsylvania region:
      a. **Limestone**
         1) Nealmont Formation (Rodman and Centre Hall members)
         2) Linden Hall Formation (Valentine, Valley View, and Stover Members)
         3) Snyder Formation
         4) Hatter Formation
      b. **Dolostone**
         1) Bellefonte Formation (tea Creek and Coffee Run members)
         2) Nittany Formation
      c. **Mixed Limestone and Dolostone**
         1) Axemann Formation
   3. The selected aggregate material shall meet PENNDOT Specifications and these additional restrictions shall apply:
      a. Contain less than 0.5% pyrite (i.e.0.3% S)
      b. Contain less than 1% deleterious materials
      c. Limit the sulfur content to 0.1% if it is in the form of framboidal pyrite in a carbonaceous shale or whisker pyrite veins
      d. Contain less than 15% thin, elongate, or platy pieces.

B. Graded Aggregate for Subbase: Sound, crushed stone or gravel complying with ASTM D 2940, subbase material and requirements in Division 2 Section "Earthwork" for subbase material.

C. Sand for Leveling Courses 1" or less: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C 33 for fine aggregate.

D. Stone Screenings for Leveling Courses greater than 1": Sound stone screenings complying with ASTM D 448 for Size No. 10.

E. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing No. 16 sieve and no more than 10 percent passing No. 200 sieve.

F. Drainage Geotextile: (If Required), Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater
than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability: Class 2; AASHTO M 288.
2. Apparent Opening Size: No. 40 sieve, maximum; ASTM D 4751.
3. Permittivity: 0.5 per second, minimum; ASTM D 4491.
4. UV Stability: 50 percent after 500 hours’ exposure; ASTM D 4355.

G. Herbicide: Commercial chemical for weed control, registered with the EPA. Provide in granular, liquid, or wettable powder form.

2.5 MORTAR SETTING-BED MATERIALS

A. Laticrete 220, Medium bed or Laticrete 226 Thick bed floor and wall, sand base mortar or approved equal.

B. Laticrete 3701 latex mortar Admix for use with 220 or 226 Laticrete materials, or approved equal.

C. Grout: Laticrete SpectraLock PRO grout, or approved equal meeting ANSI A118.3. Grout color to be determined.

2.6 EDGING

A. Stainless Steel 2-1/2"x 2-1/2"x1/16"thick angle. Provide bolt holes for fasteners at a maximum spacing of 18” o.c.

2.7 FOUNTAIN GRATING

A. McNichols Molded Fiberglass from polyester resin mix
   1. Molded Square Pattern, SPF Polyester
   2. Type, MS S-150
   3. 1-1/2” height,
   4. 3'-0” x 3'-0” square
   5. Color Dark Gray
   6. Fit to concrete fountain reservoir structure
   7. Order from Micnichols.com, or 1-800-237-3820
   8. Or Equal.

2.8 GRATE SUPPORTS

A. Westile Screwjack adjustable pedestal supports.
   1. Model B4 with C4 to support Fiberglass fountain grating
   2. Meets ASTM D746 and D1525
   3. Westile, Inc Littleton, CO 800-433-8453
   4. Or Equal

2.9 JOINT SEALANTS

A. See Section 07 9200 for approved exterior joint sealants.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas indicated to receive paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

   1. Proceed with installation only after unsatisfactory conditions have been corrected.

   2. Where pavers are to be installed over waterproofing, examine waterproofing installation, with waterproofing Installer present, for protection from paving operations. Examine areas where waterproofing system is turned up or flashed against vertical surfaces and horizontal waterproofing. Proceed with installation only after protection is in place.

3.2 CONCRETE BASE AND SETTING BED AT GARDEN

A. Install concrete base as per Section 03 3000. Extend the slab 3” beyond the pavers to include the paver edge restraint.

B. Clean concrete substrates to remove dirt, dust, debris, and loose particles.

C. For pavers set on sand setting beds, paving contractor shall verify that the 3” diameter slab through drains have been installed and are functioning. If these are not installed or there is a low spot or depression that is not draining, then contractor shall core drill the slab with additional through drains. Backfill each with clean 3/4” crushed aggregate stone.

D. Lay the sand setting bed and screed to level. The stainless steel edging may be installed along one side of the paver area to aid in installation. Maintain level and straight-line courses.

3.3 STAINLESS STEEL EDGE RESTRAINTS

A. Provide edge restraints as indicated.

   1. Install Stainless Steel edge restraints into concrete base. Depending on locations and applications, angles may be bolted to either the inside or outside of the pavers.

   2. Cut the base angle to allow the edging to curve in the configuration and dimensions shown on the Lawn Terrace pavers.

   3. Edging must contain a minimum of ½ the dimensional edge height of the paver. Shim as required maintaining a continuous edge along the face of the pavers.

3.4 MORTAR BED APPLICATIONS

A. Place mortar setting bed where indicated for granite paving installations. Coordinate with stonewall contractor for setting pavings around wall dimensional stone. If wall stone is set prior to pavers adjust stone so that there will be adequate depth for mortar setting bed and paver.
B. Screed setting bed to a nominal depth of 3/4 inch. Adjust thickness as necessary to allow accurate setting of unit pavers to finished grades indicated.

C. Use approved latex mortar material for the paver setting bed. Mix and apply according to manufacturers instructions. Do not mix more than can be set prior to the mortar compound setting up.

3.5 GRANITE PAVER INSTALLATION

A. Do not use unit pavers with chips, cracks, voids, discolorations, and other defects that might be visible in finished work.

B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.

D. Granite Stone Pavers over Waterproofing: Exercise care in placing pavers and setting materials over waterproofing so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Carefully replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with paving.

E. Install granite pavers with 3/8” joints typical on 3/4” latex mortar setting bed. After pavers have set and final patterns approved, tool joints with mortar to within 1” of paver surface.

F. Tolerances: Do not exceed 1/16-inch unit-to-unit offset from flush (lippage) nor 1/8 inch in 24 inches and 1/4 inch in 10 feet from level, or indicated slope, for finished surface of paving.

G. Install backer rod and approved sealant along all paver joints. Install as per manufactures recommendation. Protect sealant from airborne debris and allow to thoroughly dry (48 hours) before allow any traffic over pavers.

3.6 BRICK PAVER INSTALLATION

A. Prior to brick paver installation, verify that the fountain basin and mechanical systems have been installed. Verify grades and slopes for conformance with the plans.

B. Install screw jacks and fiberglass grating; verify that grating is slightly lower than the final brick grade of the garden. This is to allow the low point of the paving to be at the opening to the fountain nozzle. Note: bricks laid on grating are open joints, with no sand.

C. Do not use unit pavers with chips, cracks, voids, discolorations, and other defects that might be visible in finished work.

D. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

E. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.
F. Brick Joint Patterns: Shall be Running bond, with cross bond with Stretcher and Header courses, as shown on detail paving plans.

G. Tolerances: Do not exceed 1/16-inch unit-to-unit offset from flush (lippage) nor 1/8 inch in 24 inches and 1/4 inch in 10 feet from level, or indicated slope, for finished surface of paving.

H. Fill and sand sweep brick joints with fine masonry sand ASTM C144. Repeat as required. Do not fill open joints over the fountain reservoir basin.

3.7 REPAIRING, POINTING, AND CLEANING

A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

B. Pointing: During tooling of joints, enlarge voids or holes and completely fill with grout. Point up joints at sealant joints to provide a neat, uniform appearance, properly prepared for sealant application.

END OF SECTION 32 1400
SECTION 32 16 13.16 - CAST-IN-PLACE CONCRETE CURBS

PART 1 - GENERAL

1.1 SUMMARY

A. The work specified in this Section consists of furnishing and installing concrete curbs.

B. Related Sections:
   1. Section 31 20 00: Earth Moving.
   2. Section 32 10 00: Paving and Surfacing.
   3. Section 03 30 53: Miscellaneous Cast-In-Place Concrete.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):
   2. ASTM D 1190, Specification for Concrete Joint Sealer, Hot-Poured Elastic Type.

B. American Association of State Highway and Transportation Officials (AASHTO):
   1. AASHTO M43, Standard Size of Coarse Aggregate for Highway Construction.

1.3 SUBMITTALS

A. Submit the following:
   2. Mix design for each change of ingredients or ingredient sources, including admixtures.
   3. Certificates of Compliance to specifications of materials provided as work of this Section.

PART 2 - PRODUCTS

2.1 FORMS

A. Steel forms:
   1. Approved flexible forms of steel or wood may be used for construction of circular curb where radius is 200 feet or less.

B. Forming:
   1. Use acceptable metal forms, except on sharp curves, and short tangent sections, where wood forms may be used if acceptable to the Contracting Officer.
   2. Forms shall extend full depth of the concrete.
2.2 MATERIALS

A. Concrete: Concrete conforming to requirements of Section 03 30 53: Miscellaneous Cast-in-Place Concrete except use No. 8 coarse aggregate, conforming to AASHTO M43, for concrete placed by extrusion method.
   1. Maximum Slump: 3 inches. For curbs placed by extrusion, maximum slump: 1 1/2 inches.
   2. Class A, Compressive strength 3000 psi at 28 days minimum.

B. Preformed Expansion Joint Filler:
   1. Fiber Type, ASTM D 1751.

C. Joint Sealer:
   1. Hot-applied: Rubberized joint sealing material, ASTM D 1190 or ASTM D 3405.
   2. Cold-applied: Elastomeric type, ASTM C 920.

PART 3 - EXECUTION

3.1 PREPARATORY WORK

A. Excavation: Excavate to the required depth, then compact the material upon which the curb is to be constructed to a firm, even surface.

B. Forms
   1. Erect forms true to line and grade.
   2. Secure forms in-place with iron stakes spaced on not more than four-foot centers.
   3. Indicate line and grade of curb tops by an offset guideline for extrusion placement.

3.2 CONSTRUCTION

A. Placing Concrete:
   1. Cast-In-Place: Conform to requirements of Section 03 30 53: Miscellaneous Cast-in-Place Concrete except place the concrete in the forms in layers not exceeding 5 inches in depth when spading, or layers not exceeding 15 inches in depth when using a vibrator to eliminate voids.
   2. By extruding machine (Where approved by the Contracting Officer):
      a. Uniformly feed the concrete to the machine so that concrete maintains the shape of the section without slumping after extrusion.
      b. Voids or honeycombs on the surface of the finished curb will not be allowed. Apply any additional surface finishing required immediately after extrusion.

B. Joints: Construct joints as follows:
   1. Expansion Joints:
      a. Space expansion joints at 30’ maximum or to match the adjoining sidewalk.
      b. Place 1/2 inch preformed expansion joint filler at expansion joints at ends of curb returns, and at junctures with structures. Place filler in single piece conforming to curb cross-section and depressed 1/2 inch below finished surface.
      c. Where curb is constructed in conjunction with adjacent sidewalk, the expansion joint in the curb and sidewalk shall coincide.
   2. Contraction Joints:
      a. For curb not constructed integrally with new base or pavement, form or saw contraction joint 3/16 inch wide, to a depth of 1/5 of the curb height at 10 foot
intervals. Saw as soon as possible after the concrete has set sufficiently to preclude raveling during the sawing.

b. Fill joint with hot-applied joint sealer.

3. Tool the edges of all joints adjacent to expansion filler to a 1/4 inch radius, leaving all joints free of mortar and concrete. Leave the joint filler exposed for the full length of the joint with clean and true edges.

C. Removal of Forms: Do not remove forms until such time that it will not be detrimental to the concrete. Correct irregular faces by rubbing with a carborundum stone.

D. Finishing:
1. Finish top edge of face to a one inch radius.
2. Trowel curb faces smooth either to a depth of not less than two inches below top of pavement or to the flow line of integral curb and gutter. Hand finish the face of curb with a steel trowel.
3. Provide a final fine brush finish to the top and face of curb with brush strokes parallel to the line of the curb.
4. Allow no coarse aggregate to show on the finished curb surface.

E. Curing: Conform to requirement of Section 03 30 53: Miscellaneous Cast-in-Place Concrete, except that liquid membrane curing compound shall not be used on curb when temperature tends to go lower than 40 degrees F within 24 hours after application.

F. Sealing Joints:
1. Seal all expansion joints, all joints between curb and vehicular pavements, and all joints between gutters and vehicular pavements to within 1/8 inch of the surface. (Do not seal other joints unless otherwise indicated or directed by the Contracting Officer.
2. Seal joints with (poured) joint sealer in conformance with the manufacturer's recommendations.

G. Backfilling:
1. As soon as possible after the removal of forms, and finishing as specified herein, backfill the voids in front and back of the curb using acceptable embankment material as specified in Section 31 20 00: Earth Moving.
2. Complete embankments in back of raised curb, as indicated, and as specified in Section 31 20 00: Earth Moving, except carefully compact the embankment by means of mechanical tampers, or rollers, if permitted, not exceeding 8 tons.
3. Where curbs are constructed in existing paved areas, all backfill between curb face and pavement shall be made with bituminous concrete base course material, thoroughly compacted in place in accordance with Section 32 10 00: Paving and Surfacing.

END OF SECTION 32 16 13.16
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 32 84 00 - PLANTING IRRIGATION [C]

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Integrated Rainwater storage tank and pump system:
      a. In-tank submersible pump with associated prefabricated, self-contained, VFD controls and electric panels, including pre-filter units.
   2. Irrigation Controller.
   3. Low Voltage Control Wiring.
   4. Sprinkler heads.
   5. Pipe and Fittings.
   6. Valves, including: Automatic, Manual, Quick-Coupling, Combination Air-Vent/Vacuum-Relief, and Drain.
   7. Sleevings: Soil-to-soil and Building wall, interior-to-soil.
   8. Coordination and interface with work of other involved trades, including: Landscaping, Plumbing, Electrical, Cast in Place Concrete, Waterproofing, and Site Drainage.
   9. Commissioning - Check, Test, Start-up, Adjust, and Demonstrate system.
   10. Other appurtenances necessary to provide a complete, operable, automated irrigation system sourced from cistern-stored rainwater with Domestic Water back-up.
   11. Close-Out Items, including: Record Drawings, Maintenance & Operation Manuals, and instruction of Owner Personnel.
   12. Warranties.

B. Related work:
   1. Primary Electrical service from source to Pumpstation Control Panel in Storage Room, and from Control Panel to submersible pump and other equipment in tank.
   2. Power to Irrigation System Controller – 120 Vac.
   3. Combined Rainleader connection to inlet of initial flush assemblies and “dirty water” discharge piping to site Storm.
   4. Tank overflow piping to site Storm.

C. Related Divisions include the following:
   1. Remainder of Division 32 – EXTERIOR IMPROVEMENTS.
   2. Division 03 – CONCRETE.
   3. Division 07 – THERMAL AND MOISTURE PROTECTION.
   4. Division 22 – PLUMBING.
   5. Division 26 – ELECTRICAL.
   6. Division 31 – EARTHWORK.
   7. Division 33 – UTILITIES.
1.3 SUBMITTALS

A. Submit Product Data/Catalog cuts for the following:
   1. From a single source:
      a. Fiberglass Tank (cistern), including features and options.
      b. Pump Station and Control Panel, including wiring schematics.
      c. Rainwater filter units.
   2. Irrigation Control system with related equipment (decoders, moisture sensor, etc.).
   4. Rain Sensor.
   5. Remote Control Zone Valve (RCV).
   6. Combination Air-Vent/Vacuum-Relief Valve.
   7. Quick-Coupling Valve.
   10. Communication Cable and Low Voltage Control Wires.
   11. Wire Splice Waterproofing materials and methods.
   13. PVC Pipe and Fittings.
   15. Solvent Cement and Primer.
   17. Valve Tags and Valve Tag Schedule for Interior Make-up water Valves.

B. Qualification Data: For firms and persons specified in “Quality Assurance” paragraph below to demonstrate capabilities and experience: Include with Bid, a list of three (3) completed projects with project names and location, names and phone numbers of Owners and system Operators.

C. Hydrostatic Mainline Pressure Test.

D. Record Documents (“AS-BUILTS”) and Maintenance & Operating Manuals. See paragraph 1.7, below.

1.4 QUALITY ASSURANCE

A. Visit site prior to formulating Bid.

B. Installer Qualifications: Irrigation Sub-contractor must be certified as a Certified Irrigation Contractor (CIC) and for Commissioning operations, must be a Certified Landscape Irrigation Auditor (CLIA), certified by the Irrigation Association (IA), Fairfax, VA.

C. Ensure experienced, competent, English-speaking Foreman is on-site at all times when irrigation work is in progress. In addition, Foreman must be fluent in dominant language of crew.

D. Applicable requirements of accepted Standards and Codes, in effect at Date of Issue of Bid Documents, apply to Work of this Section, including:
   1. American Society for Testing and Materials (ASTM)
   2. American Water Works Association (AWWA)
   3. Unified Plumbing Code (UPC)
   4. National Electrical Code (NEC)
   5. National Sanitary Foundation (NSF)
   6. American Society of Irrigation Consultants (ASIC)
   7. The Irrigation Association (IA)
E. In addition to meeting more stringent specifications that may be found in various sections of the project manual, all stone or aggregate used for, or as a component of, Structural fill shall meet the following requirements. Structural fill is defined as all fill placed under and around foundations, floor slabs, utilities, sidewalks and pavements.
1. Be provided only from PENNDOT approved sources.
2. Be quarried from the following formations in the Central Pennsylvania region:
   a. Limestone
      1) Nealmont Formation (Rodman and Centre Hall members)
      2) Linden Hall Formation (Valentine, Valley View, and Stover Members)
      3) Snyder Formation
      4) Hatter Formation
   b. Dolostone
      1) Bellefonte Formation (tea Creek and Coffee Run members)
      2) Nittany Formation
   c. Mixed Limestone and Dolostone
      1) Axemann Formation
3. The selected aggregate material shall meet PENNDOT Specifications and these additional restrictions shall apply:
   a. Contain less than 0.5% pyrite (i.e.0.3% S)
   b. Contain less than 1% deleterious materials
   c. Limit the sulfur content to 0.1% if it is in the form of framboidal pyrite in a carbonaceous shale or whisker pyrite veins
   d. Contain less than 15% thin, elongate, or platy pieces.

1.5 TESTS

A. Perform tests in presence of designated Owner’s Representative.

B. See applicable paragraphs under Part 3 – Execution, below.

1.6 DELIVERY, HANDLING, AND STORAGE

A. Pack, ship, deliver, receive, handle, store, and prepare and install materials and equipment in accordance with Manufacturers’ recommendations and in such manner as to protect from damage due to weather, vandalism, thievery, job-site activities, or other cause.

B. Coordinate on-site materials storage with General Superintendent.

1.7 MAINTENANCE & OPERATION INSTRUCTIONS

A. Not later than 45 days following completion of work and prior to application for acceptance and final payment, submit to Landscape Architect:
   a) Two (2) three-ring binders titled MAINTENANCE & OPERATING INSTRUCTIONS FOR PSU HENDERSON BIOBEHAVIORAL HEALTH BUILDING IRRIGATION SYSTEM PUMPING PLANT, for Manufacturer’s materials relating to the tank and pumpstation; and, b) Two (2) three-ring binders titled MAINTENANCE & OPERATING INSTRUCTIONS FOR PSU HENDERSON BIOBEHAVIORAL HEALTH BUILDING IRRIGATION SYSTEM, for information relating to general system components – control system, valves, etc. – maintenance and troubleshooting.

B. Include the following in b): One (1) half-scale black-line print of Record Document Drawings (“AS-BUILTS”); One (1) set of APPROVED irrigation submittals listed above; and, description of procedures to be followed for Winterization and Spring Start-up of system.
C. Perform first two (2) years' Winterization and Spring Start-up operations in presence of Owner’s designated representative.

1.8 EXTRA MATERIALS

A. Provide at Closeout:
   1. Two (2) 30” long by 3/8” diameter formed and welded “devil’s fork” valve wrenches by Weather*matic or equal, for cross-handle and RCV flow control handles.
   3. Two (2) QCV Keys with Swivel-Hose ells.
   4. Two (2) Controller Door Keys.

1.9 WARRANTIES

A. For Pre-fabricated Pumpstation: One (1) year from date of Start-up or eighteen (18) months from date of shipment, whichever is the shorter.

B. For general irrigation system parts and labor – Heads, valves, piping, wiring, etc.: Two (2) years from date of Start-up.

C. Control System: Provide five (5) year warranty in accordance with Manufacturer’s Instructions.

PART 2 - PRODUCTS

2.1 GENERAL

A. Provide new materials conforming to applicable Standards and in accordance with APPROVED Submittals.

B. Provide most recent model of named Manufacturers’ products. Application for substitution(s) may be considered based on equivalency of performance, features, and options. Owner’s Representative will be sole arbiter as to equivalency of products.

2.2 SYSTEM EQUIPMENT AND MATERIALS

A. Tank, Pump, Filtration equipment, and Pump Controls: All components from single supplier/manufacturer. See Drawing LI 2.2 for notes and Specifications: SkyHarvester tank and pump assembly, including controls and accessories, manufactured by WaterTronics, Inc., Hedland, WI, including:
   1. Tank with pump, hold-down straps, access Manway, less manhole ring and cover at finish grade.
   2. Initial Filtration Units.
   3. Submersible Pump in tank and Control Panel in Storage Rm.
   4. Domestic Water Make-up Valve assembly.

B. Final Filter: Netafim 1½", Model DF150-120, 120 mesh disc filter.

C. Control System: Baseline, BaseStation 3200, wall-mount model, remote-ready, manufactured by BASELINE, LLC, Traverse City, MI, with the following features/accessories:
   1. byline (two-wire) path - #14AWG.
   2. biCoders.
   3. Soil Moisture Sensor – BL-5315, 18”L.
   4. Water Budget – 25% to 200% by program.
5. Up to 10 programs; up to 8 start times per program.
7. Surge protection.

D. Remote Control Device: TRC Commander System with Permanent Receiver Card and Transmitter, manufactured by TRC Irrigation Remotes, Kirkland WA. Provide Phantom Antenna Valve Box.

E. Rain Sensor: Model RDS-CEx manufactured by Rain Bird Corporation, Tucson, AZ.

F. Communication Cable and Low Voltage Wire:
2. From biCoders to RCV solenoid: Single conductor, #14AWG, Type PE, UL-labeled Cable, RED and WHITE.
3. Rain Sensor: BROWN.
4. Splice waterproofing: Gel-filled insulator tube, DBY-6 or DBR-6, 600V rated, manufactured by 3M Company, Austin, TX.

G. Remote Control Valve (RCV): PESB Series, Manufactured by Rain Bird Corporation, Tucson, AZ.

I. Quick-Coupling Valves: Model 33-DNP with 33-DK Key, and SH-0 Swivel Hose Ell, manufactured by Rain Bird Corporation, Tucson, AZ.

J. Combination Air-Vent/Vacuum-Relief Valve: Crispin, Model AL10, manufactured by Multiplex Corp., Berwick, PA.

K. Valve and Splice Boxes:
1. In turf areas: Polyconcrete box and lid, “H-20” Series with 1¼” cover, manufactured by Carson Industries, Glendora, CA. Provide drill-holes.
2. In planted areas: HDPE, VB Series, manufactured by Rain Bird Corp., Tucson, AZ, or Specification Grade, manufactured by Carson Industries, black, with black, bolt-down lids.

L. PVC Pipe and Fittings: Manufactured by Cresline Plastic Pipe Company, Inc., Evansville, IN, Charlotte Pipe and Foundry, JM, or Silverline.
1. Interior piping: Materials and methods in accordance with Division 22 – Plumbing.
2. Exterior piping (below-grade) and fittings: Sch-40 PVC, ASTM D 1784, ASTM D 1785, fittings, SCH-40 PVC, ASTM D 1784, ASTM D2466, solvent-weld, or threaded to match connected equipment.

M. Wall sleeves: Link-Seal, Model “C”, with water-stop flange, manufactured by Pipeline Seal and Insulator, Inc.

N. Manual Isolation Ball Valves: PVC, Safety-block, full bore, True Union, minimum 150 PSI, by Spears Manufacturing Co., Sylmar, CA, or equal by Nibco or Dura.
O. PVC Primer and Solvent Cement: Manufactured by NIBCO/Chemtrol, Christy's, Hercules, Weld-On, or equal, NSF and UPC labeled.
   1. Primer: Purple in color, F 656.
   2. Solvent Cement: Clear, Blue, or Gray in color, ASTM D 2564.

P. Trench-Marking Tape: Two-inch wide, detectable, BLUE or GREEN, marked “Buried Water Line” or other appropriate wording, manufactured by Christy’s or Seaton.

Q. Valve Tags: 1½” diameter Brass or laminated plastic, with “IRR #XX” lacquer-filled or stamped, manufactured by Christy’s or Seaton.

PART 3 - EXECUTION

3.1 GENERAL

B. Install equipment and materials in accordance with Manufacturers’ recommendations unless otherwise indicated/directed.

C. Make field measurements for Work noting relationship of irrigation Work to existing and new work of other trades. Coordinate with other trades (paving, landscaping, electrical, mechanical, and other site trades). Lay out project essentially as indicated on Irrigation Plans and Details, making adjustments for variations in planting bed lines, pavement and building conditions, critical tree root-zone areas, and interference with new and existing utilities. Piping layouts indicated in the Documents are diagrammatic to the extent that no attempt has been made to indicate all potentially-required offsets and fittings.

D. Stake tank and filter units locations, routing of mainlines and wiring, lateral piping, sprinkler heads, air-vent valve, and valve boxes. Review intended routes with Owner Representative. Existing utilities, critical tree root zone areas, and other conditions may require re-routing of irrigation piping.

E. Complete project in stages. Once begun, complete section without unnecessary delay. Do not leave project unmanned unless progress delayed by job conditions or weather. Owner representative and irrigation foreman will agree in determining justification for leaving project unmanned. If to be left unmanned for period exceeding 18 hours, backfill and tamp trenches. Broom and hose-clean pavements.

F. Conduct installation so as to protect new and existing landscaping, site electric, drainage systems, paving, structures, walls, footings and foundations, waterproofing, and other work and utilities, from damage. Piping installed overstructure is to be hand-placed prior to placement of select fill, or hand trenches if installed following fill placement. No mechanical trenching overstructure will be permitted. No vibratory plow installation will be allowed for on-grade piping installation. Report damage to work of other trade(s) to Owner Representative immediately. Make or arrange repairs to satisfaction of Owner Representative.

G. See Drawings LI-2.1 and LI-2.2 for Details and notes.
3.2 EXCAVATION, BACKFILL, AND PIPE INSTALLATION

A. Locate, identify, and mark existing below-grade utilities including site-lighting electrical wire paths. Contact local utility location service provider three (3) days prior to commencing excavation work. Review Site Utility Drawings for existing and new utilities. On-site utilities not located by utility locator are to be located by Contractor with assistance of Owner Representative.

B. Determine in field locations of pavement crossings. Ensure sleeving is placed as construction progresses.

C. On-grade piping: Excavate with minimum-width trenched chain for installation of piping and wiring. Excavate to a depth of within +1" of pipe invert, provided a suitable base, i.e., no sharp edges or rocks over 1" in diameter, is available. If not, excavate to 1” below invert and provide sand or clean fill base on which to lay pipe. Provide Manual Angle drain valve at low end of mainline vehicular pavement crossings. Manually “pot-hole” (dig test pit) at existing utilities to determine actual location and depth.
   1. Over-structure piping: Employ no mechanical trenching. Ensure no damage to waterproofing system. Hand-place piping on waterproofing mat prior to placement of select fill, or hand-trench if following fill placement.

D. Cut plastic pipe square and true with hand saw or pipe-cutting tool. Remove burrs at cut ends. Make solvent-weld joints in accordance with manufacturer’s recommendations relating to preparation, temperature, humidity, and cure-time. Make certain not to apply an excess of primer or solvent, and wipe excess solvent from each made connection. Allow connections to set as recommended before assembly is moved or pressure is applied to system.

E. Ensure no stress to piping at fitting shoulders at interface with trench bottom.

F. Valve wiring: Lay in same trench, and at same invert, as mainline. See paragraph below.

G. Backfilling: Initial 6”: Exclude foreign matter, frozen soil, and rock larger than 1/2” diameter. Carefully place fill material around pipe and wire filling voids, and hand-tamp. Remainder of backfill: Lay-up in 6” lifts and mechanically tamp to match compaction of surrounding undisturbed areas. Install trench-marking tape at 6” to 8” depth. Top 6”: Topsoil quality and without foreign material, frozen soil, and unsuitable trenching spoils. Record pipe and wire locations daily on field-kept “AS-BUILTS”.

3.3 TANK AND ASSOCIATED EQUIPMENT INSTALLATION

A. See Drawing LI-2.2, Plumbing, and Civil Drawings. Coordinate installation with General Superintendent. Ensure equipment and wiring is installed in accordance with Manufacturer’s recommendations and APPROVED submittals.

B. Control Panel: Form, pour, level, and finish concrete housekeeping pad in accordance with Division 3 – Concrete, in Storage Rm.
   1. Mount, wire, ground, and test in accordance with Manufacturer’s instructions.

3.4 VALVE INSTALLATION

A. Automatic valve (RCV): Set in Standard size valve box with adjusting handle and solenoid vertical-up. Provide line-size isolation ball valve at inlet. Wiring shall be of sufficient length to permit solenoid to be brought to surface. Coil extra wire neatly in valve box. Provide filter fabric
and 4” to 6” washed gravel under each valve box. Bring gravel up to pipe invert. Do not cover components with gravel.

1. Set, connect, wire, and ground decoder in accordance with Manufacturer’s Recommendations.

B. Quick-Coupling Valves: Install on prefabricated three-ell SCH-80 swing joint in 10” diameter valve box set to finish grade. Stake with re-bar and stainless steel hose clamps

3.5 SPRINKLER INSTALLATION

A. Set to finish grade. Maintain 3” to 4” clearance from side of sprinkler cap to nearest hardscape. Reset sprinklers to finish grade during warranty period if necessary. See flushing requirements below.

B. Reset sprinklers to finish grade during warranty period if necessary.

C. Swing pipe: 1/2” swing pipe with barbed fittings. Maximum length-14”; minimum length-10”.

D. Rigid risers above grade not permitted.

3.6 CONTROLLER INSTALLATION

A. Wall-mount generally where indicated. Mounting height: 4’-6” above finish floor (AFF) to bottom of cabinet. Determine final location in Storage Rm. in field.

B. Above-ground wire and wire to soil: Install in conduit conforming to requirements of Division 26 – Electrical. Provide Link-Seal waterproof wall sleeves at exterior walls.

C. Wire, ground, and test in accordance with Manufacturer’s recommendations.

D. Moisture Sensor (bisensor): Install, check, and adjust in accordance with Manufacturer’s Recommendations.

3.7 RAIN SENSOR INSTALLATION

A. Locate generally as indicated on outside wall.

B. Install, wire, ground, and test in accordance with Manufacturer’s recommendations.

C. Exposed/above-grade wiring: Install in rigid galvanized conduit.

3.8 WIRE INSTALLATION

A. Power wiring. Wiring greater than 30 Vac: Install in conduits in accordance Division 26 - Electrical.

B. Low voltage control wiring: Install in conduits within Building and as detailed.

1. Two-wire path below-grade: Install adjacent to, and at same invert as, mainline piping using open-trench method. Provide additional slack at changes of direction. Wiring shall at no time be installed taut. Provide moisture-proof junction-box as wiring exits Building and continue wire as direct-bury.

3.9 START-UP AND ADJUST OPERATIONS – PIPING AND SPRINKLERS
A. To be performed by a CLIA.

B. Flushing: After piping, valves and sprinkler bodies are in place and connected, but prior to installation of sprinkler internals, flush piping under full head of water until discharge runs clear and clean. Install internals and proceed to adjust system.

C. Leak Test: Flush, cap, and test mainlines for leaks: Test Pressure: 150 PSI; Time: 2 hrs. Maximum pressure drop: 5 PSI. Repair leaks and re-test until satisfactory results are obtained. Provide pump and necessary equipment to accomplish testing. Mainlines may be tested in sections at Contractor option. Laterals: Test at system normal operating pressure. Backfilling may be done prior to testing.

D. Adjustment: Adjust sprinkler heads for optimum performance and to prevent over-spray onto walks, pavement, and structures. Adjustments may include changes in nozzle sizes, and/or degrees of arc, and/or distance of throw. Overthrow onto walks and buildings, is not permissible. Set/adjust sprinkler heads perpendicular to finish grade unless shown or directed otherwise.

E. Coverage Test: Perform coverage test in presence of Owner Representative. Coordinate coverage test/walk-through with Owner Representative. Representative will determine if water coverage is complete and adequate. Re-adjust heads or head locations as necessary to or directed to achieve proper coverage.
3.10 **START-UP AND ADJUST OPERATIONS – CONTROL SYSTEM**

A. To be performed by a CLIA.

B. Control system shall be programmed and checked-out in accordance with manufacturer’s recommendations. See also requirements of Para. 1.7, MAINTENANCE AND OPERATION INSTRUCTIONS.

3.11 **START-UP AND ADJUST OPERATIONS – PUMPSTATION**

A. To be performed by Factory-trained technician in accordance with Manufacturer’s Recommendations and Instructions.

B. Do not operate pump prior to start-up operations.

3.12 **CLEAN UP**

A. Following completion of installation work, remove leftover materials and equipment from site and dispose of in safe and legal manner. Re-tamp work areas, replace sod and mulch and broom-clean and hose-off pavements.

B. Leave site in at least as neat and clean condition as when irrigation installation was begun.

3.13 **CLOSE-OUT**

A. See DIVISION 01 - GENERAL REQUIREMENTS for additional requirements.

B. To be performed by a CLIA.

C. At completion of “walk-through” and instruction of OWNER personnel, and prior to application for final payment, ensure that following are in order:

1. Permits: Signed-off by appropriate parties.

2. Hydraulic test: Signed-off by Owner Representative.

4. Submit completed and signed Extended 5-year Equipment Warranty Application for Baseline control system within 30 days of Controller installation.

5. Record Documents (“AS-BUILTS”): Completed and included in M & O Manuals.

6. Maintenance & Operating Manuals: Assembled and delivered to Owner Representative.

END OF SECTION 32 84 00
SECTION 32 9100 - PLANTING SOILS

PART 1 – GENERAL

1.1 SUMMARY

A. The work in this section includes all labor, materials, and installation methods for:
   1. Adherence to PSU commitment to protecting its native soils, through Soil Protection Zones and measures after excavating and stockpiling soils.
   2. Assess salvaged stockpiled topsoil for use in planting mixes and backfills.
   3. Separating of salvaged topsoil that is found suitable for use and determining topsoil quantity.
   4. Furnishing approved topsoil from outside sources should existing salvaged topsoil not be of sufficient quantity to complete the project.
   5. Provide soils tests and data for evaluation and approvals of the soil mixes, topsoil, sand and organic materials.
   6. Restoration of compacted soils and preparation of existing subgrade to receive planting mixes and restoration of lawn areas, including the HUB Lawn that is disturbed or damaged by the work.

1.2 RELATED SECTIONS AND REFERENCES

A. Related Sections:
   1. Section 01 5639 – Temporary Tree and Plant Protection
   2. Section 31 1000 – Earthwork
   3. Section 32 8400 – Irrigation
   4. Section 32 9200 – Turf and Grasses
   5. Section 32 9300 – Exterior Plants
   6. Section 32 9500 - Vegetated Roof Assemblies
   7. Section 32 9510 – Lawn Terrace Roof Assembly

B. References:

   1. The following references and standards are used herein and shall mean:

      b. USDA: United States Department of Agriculture.

1.3 SUBMITTALS

A. Product Data: Submit manufacturer product data and literature describing all products required by this section to the University Representative for approval. Provide initial submittal twelve weeks before the installation of Planting Mixes and Roof Assemblies for the Auditorium.

B. Material Certificates: Submit material certificates for all natural and bulk material indicating that the material meets the requirements of the specification to the University Representative for approval. Provide initial submittal twelve weeks before the installation of Planting Mixes.
C. Certification from an approved independent testing laboratory experienced in testing rubberized asphalt material, that the material meets the CGSB-37.50-M89 standard for rubberized asphalt membranes, including applicable ASTM procedures.

D. Certification showing full time quality control of production facilities responsible for the manufacture of the rubberized asphalt and that each batch of material is tested to insure conformance with the manufacturers published physical properties.

E. Certification showing that all components of the green roof assembly are being supplied and warranted by a single-source manufacturer

F. Certification that the roof membrane assembly is currently Class A listed with Underwriters Laboratories.

G. Documentation that the extruded polystyrene insulation if used is free from CFC's.

H. Provide product data on all components of the green roof assembly.

I. Samples: Submit samples of each product and material where required by the specification to the University Representative for approval. Label samples to indicate product, specification number, characteristics, and locations in the Work. Delivered materials shall closely match the samples.

1. Submit four (4) -1 gallon samples of all topsoil (salvaged and imported), coarse sand, and organics and one-gallon samples of planting mixes, and soil additive products in this section. The number of samples shall be as required for each material.

   a. Samples should be labeled to include the location of the source of the material.
   
   b. Samples of all topsoil, drainage fill, coarse sand, and planting mixes shall be submitted at the same time as the particle size and physical analysis of that material.
   
   c. Planting mixes shall be labeled as to the percentage of each component in the mix.
   
   d. Samples of all products and planting mix components shall be submitted twelve weeks before the installation of planting mixes. Planting mixes shall be submitted within two weeks following approval of the mix component.

2. Submit soil test analysis report for each sample of topsoil and planting mix from an approved soil-testing laboratory below.

   a. The soil testing laboratory shall be approved by the University Representative in advance if differs from the testing labs recommended below and shall have a minimum of 5 years experience with the test protocols of the United States Golf Association - Green Section.
   
   b. Provide a particle size analysis including the following gradient of mineral content:

   USDA Designation  Size in mm.
Gravel +2mm
Very Coarse Sand 1-2 mm
Coarse Sand 0.5 -1 mm
Medium Sand 0.25-0.5 mm
Fine Sand 0.1-0.25 mm
Very Fine Sand 0.05-0.1 mm
Silt 0.002-0.05 mm
Clay minus 0.002 mm

c. Provide a chemical analysis including the following:

1. pH and Buffer pH.
2. Percent organic content by oven dried weight.
3. Nutrient levels by parts per million including nitrogen, phosphorus, potassium magnesium, manganese, iron, zinc and calcium. Nutrient test shall include the testing laboratory recommendations for supplemental additions to the planting mix for the plant material specified.
4. Soluble salt by electrical conductivity of a 1:2 soil water sample measured in Milliohm per cm.
5. Cation Exchange Capacity (CEC).

d. Provide a physical analysis of each planting mix to include the following test results to the University Representative for approval:

Water permeability with the sample compacted between 80% and 85% maximum proctor density utilizing proctor test (ASTM D 698-91).

Bulk density with sample compacted between 80% and 85% maximum proctor density utilizing proctor test (ASTM D 698-91).

e. All testing will be at the expense of the Contractor. The University Representative may request additional planting mix tests on different mix component ratios in order to attain results that more closely meet the mix requirements.

D. Submit the manufacturer's particle size analysis for all Coarse Sand to the University Representative for approval. Provide the manufacturer's Fines Modulus Index for each Coarse Sand source.

E. Submit the manufacturer’s particle size analysis, pH and certificate of length of composting period for all pine bark and other organic materials to the University Representative for approval.

F. Testing of soils and planting mixes shall be performed by:

CLC Labs
325 Venture Drive
Westerville, Ohio 43081
614 888 1663
or approved equal.

G. Water permeability and bulk density testing if required shall be performed by:
1.4 SOIL BULK DENSITY TESTING

A. Undertake all soil bulk density testing at the contractor's expense. All soil testing shall be undertaken by a soil testing service experienced in both bulk density and proctor density testing protocols.

B. Submit soil compaction testing service firm’s qualifications for approval.

1.5 SEQUENCING AND SCHEDULING

A. General: Prior to the start of Work, prepare a detailed schedule of the work for coordination with other trades. Schedule shall include sampling and laboratory turnaround time, including time for re-submittals if required to satisfy requirements of the specifications.

B. Schedule the installation of planting mixes after the area is no longer required for use by other trades and work.

C. Schedule all utility installations prior to beginning work in this section.

1.6 QUALITY ASSURANCE

A. Contractor is solely responsible for quality control of the Work.

B. The installer shall be a firm having at least 5 years of successful experience of a scope similar to that required for the Work, including the preparation, mixing and installation of custom planting mixes in urban locations and over building structures.

C. Comply with applicable requirements of the laws, codes, ordinances and regulations of federal, State and municipal authorities having jurisdiction. Obtain necessary approvals from all such authorities.

D. Comply with all requirements for control of silt and sediment during soil installation work as indicated in the contract documents.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Weather: Do not mix, deliver or place soils in frozen, wet, or muddy conditions.

B. Protect soil and planting mix stockpiles from rain and washing that can separate fines and coarse material. Cover stockpiles with filter cloth at the end of each workday.

C. Protect planting mix stockpiles from contamination by chemicals, dust and debris that may be detrimental to plants or soil drainage.
1.8 SITE CONDITIONS

A. It is the responsibility of the Contractor to be aware of all surface and sub-surface conditions, and to report any circumstances that will negatively impact soil drainage. Do not proceed with work until unsatisfactory conditions have been corrected.

1.9 PROTECTION OF EXISTING UTILITIES

A. Prior to any work being performed the Contractor shall insure that all existing utilities within and surrounding the project site have been clearly marked in accordance with the Pennsylvania Underground Utility Line Protection Act 287 as amended by Act199.

B. Carefully examine the civil, record, and survey drawings to become familiar with the existing underground conditions before digging.

PART 2 – PRODUCTS

2.1 SALVAGED STOCKPILED TOPSOIL

A. Acceptable friable loamy soil that is reasonably free of subsoil, clay, brush, roots, weeds, other objectionable vegetation, stones, or other foreign material larger than 2 inches in any dimension, litter, and/or other material unsuitable or harmful to the growing of vegetation.

B. If conditions permit contractor shall remove and salvage as much Brown to grey/brown loam to clay loam organic soil prior to the start of construction and stockpiled at the site.

C. Soils encountered that contain quantities of orange/brown to orange clay soil shall be discarded and not used.

D. Quantities of usable material are not confirmed. The Contractor shall confirm the quantities of existing soil available at the site.

2.2 IMPORTED TOPSOIL

A. Shall have the same criteria as outlined above for Salvaged and Stockpiled Topsoil containing not less than 2.0% or more than 10% percent by weight organic matter. The soils obtained shall be obtained from a site where the soil quality has proven ability to grow crops. The pH value shall be between 6.0 and 7.0.
   1. The Contractor is responsible for the reconditioning of the area from which the topsoil is obtained, and in accordance with all Local, State, and Federal regulations.
   2. The contractor shall supply necessary documentation verifying that topsoil is free of contamination.

B. Soil Texture: Loam to Coarse Sandy loam with clay content between 15 and 20% and sand content between 45 and 60%.

C. Soil shall be lighting screened and shredded prior to mixing but shall retain some of the original soil structure with ped sizes (clods) not greater than 2” diameter.
E. Provide a minimum of 3 soil tests that represents the range of the soil types available at any one-source location.

F. Provide four (4) 1-gallon samples from each topsoil source with soil testing results. The sample shall be a mixture of the multiple samples taken throughout the source stockpile or field.

2.3 PINE BARK

A. Horticultural grade milled loblolly pine bark, size 0.1 mm - 15.0 mm. Pine bark shall be aged at least nine months and shall be screened. pH shall range between 4 and 5. Pine bark shall be Pro Base, as manufactured by Summit Inc., Wakefield, VA. Or approved equal.

B. Provide a one-gallon sample with manufacturer’s literature and material certification that the product meets the requirements.

2.4 COARSE SAND

A. Coarse concrete sand, ASTM C-33 Fine Aggregate, with a Fines Modulus Index of 2.8 and 3.2.

1. Coarse Sands shall be clean, sharp, natural sands free of limestone, shale and slate particles. Coarse Sand pH shall be lower than 7.0.

2. Provide the following particle size distribution:

<table>
<thead>
<tr>
<th>Sieve</th>
<th>Percent Passing</th>
</tr>
</thead>
<tbody>
<tr>
<td>3/8 inch (9.5mm)</td>
<td>100</td>
</tr>
<tr>
<td>No 4 (4.75mm)</td>
<td>95-100</td>
</tr>
<tr>
<td>No 8 (2.36mm)</td>
<td>80-100</td>
</tr>
<tr>
<td>No 16 (1.18mm)</td>
<td>50-85</td>
</tr>
<tr>
<td>No 30 (.60mm)</td>
<td>25-60</td>
</tr>
<tr>
<td>No 50 (.30mm)</td>
<td>10-30</td>
</tr>
<tr>
<td>No 100 (.15mm)</td>
<td>2-10</td>
</tr>
</tbody>
</table>

B. Provide two 1-gallon samples with manufacturer’s literature and material certification that the product meets the requirements.

2.5 INORGANIC SOIL AMENDMENTS

A. Lime: ASTM C 602, agricultural limestone containing a minimum 80% calcium carbonate equivalent and as follows:

1. Class: Class T, with a minimum 99 percent passing through No. 8 (2.36-mm) sieve and a minimum of 75% passing through No. 60 (0.25-mm) sieve.

2. Class: Class O, with a minimum 95 percent passing through No. 8 (2.36-mm) sieve and a minimum of 55% passing through No. 60 (0.25-mm) sieve.

3. Provide Lime in the form of dolomitic limestone.

B. Sulfur: Granular, biodegradable, containing a minimum of 90% sulfur with a minimum 99% passing through No. 6 (3.35-mm) sieve and a minimum of 10% passing through No. 40 (0.425-mm) sieve.

C. Iron sulfate: Granulated ferrous sulfate containing a minimum of 20% iron and 10% sulfur.
D. Aluminum Sulfate: Commercial Grade, unadulterated.

E. Agricultural Gypsum: Finely ground, containing a minimum of 90% calcium sulfate.

F. Zeolites: Mineral clinoptilolite with at least 60 percent water absorption.

2.5 ORGANIC MATTER

A. Organic blended material composted sufficiently to break down all woody fibers, seeds and leaf structures, free of toxic and non-organic matter. Source material shall be limited to the following:

1. Aerobically composted yard debris. Note compost made from primarily green yard waste shall not be acceptable.
2. Hardwood bark fines and organic material designed to produce compost high in fungal material.
3. Biosolids compost, or combination of the above.
5. Submit one-pound sample and supplier’s literature certifying STA compliance for approval.

B. Compost shall be a homogeneous material free of soil clods, lumps, roots, stones, and foreign material. The compost shall be screened such that a minimum of 90% passes US standard 0.25” sieve and no more than 20% passes a US Std. No. 10 sieve.

C. Provide a one-gallon sample with manufacturer’s literature and material certification that the product meets the requirements.

D. pH of 5.5 to 6.5.

E. Soluble Salts: less than 6.0 milliohms per cm when determined on saturation extract.

F. Organic Matter Content: 35% or greater, as determined by weight by ASTM D2974-87 Method C.

G. Carbon Nitrogen Ratio: less than 36:1

H. All compost testing shall be done in conformance with the U.S. Compost Council’s publication Test Methods for the Examination of Composting and Compost unless specified otherwise.

I. Selective Herbicides: EPA registered and approved, of type recommended by manufacturer for application.

2.6 CHEMICAL ADDITIVES

A. Chemical materials designed to increase soil fertility. All material shall be delivered to the site in unopened containers and stored in a dry enclosed space suitable for the material and meeting all environmental regulations. Biological additives shall be protected from extreme cold and heat. All products shall be freshly manufactured and dated for the season in which the products are to be used.
1. Fertilizer for planting shall be organic fertilizer, derived from organic sources. Fertilizer selections shall be based on the recommendations of the soil tests. Submit manufacturers' product literature for approval.

2.7 GENERAL PLANTING AND LAWN MIX (Off Structure)

A. General planting mix shall be of 100% approved and tested salvaged soils or imported topsoil.

B. DO NOT overly mix or screen soil. Planting mix should contain individual soil peds (clods) averaging between 1-2 inches in diameter from the original soil structure. No clods are to be larger than 2 inches in diameter in any direction.

C. Adjust the final mix pH to 6.0-7.0.

D. Provide a one-gallon sample with soil test results as requested by the University Representative.

PART 3 – EXECUTION

3.1 SITE EXAMINATION

A. Protect of Existing Vegetation: All existing vegetation to remain shall be protected at all times in accordance with Section 01 3956 – Temporary Tree and Plant Protection.

B. Examine the grades and soil conditions for any circumstances that might be detrimental to soil drainage, including but not limited to: uneven subgrades and waterproofing that may hold or pond water; deposits of construction-related sediment, waste or soil contamination; storage of material or equipment; soil compaction or poor drainage. Confirm that all utility work and installation of planter or on structure drainage has been completed and tested. Examine the grading verifying all elevations. Confirm that all other work in the area of planting mix installation is completed. Confirm that subgrade conditions present positive flow to outfall or building edge conditions such that all planting areas will have positive subsurface drainage.

C. Notify the University Representative in writing of any unsatisfactory conditions.

3.2 COORDINATION WITH PROJECT WORK

A. The Contractor shall coordinate with all other work that may impact the completion of the work of this section. Do not place soils or mixes in any locations if they will be adversely compacted or disturbed from other trades work. Coordinate with the General Contractor to protect installed soils and planting mix from compaction by other trades.

B. Assure that all sediment control required by the project manual and as shown on the drawings is in place during the installation of planting mixes. Provide additional sediment control to retain planting mixes within the project limits as needed.

3.3 GRADE AND ELEVATION CONTROL
A. Provide grade and elevation control during installation of soils and planting mixes. Utilize grade stakes, surveying equipment and other means and methods to assure that grades and contours conform to the grades indicated on the drawings.

B. Maintain grade stakes until University Representative has viewed and approved the grades.

### 3.4 PLANTING MIX DESIGN AND TESTING

A. This specification is based on the assumption that the soils to be provided are natural and will vary in quality from location to location within the soil sources, and that mixing of soil will result in variety within the mix. The Contractor is expected to provide samples that represent the range of product quality to be provided and monitor for consistency during the mixing operations.

B. The Contractor shall submit mix specifications and proportions with test results for evaluation. Multiple rounds of testing and evaluations may be required before an approved planting mix can be determined. For each test mix, submit representative samples of the mix material along with the test results.

C. Note it is important for the contractor to understand that placing soils that are above 30% combined silt and clay particle content with inadequate or incorrect amounts of course sands additives may result in soils that once compacted will lock-up and not drain, thus not meeting the important soil permeability rates.

D. Schedule the planting mix testing phase such that all testing and mix design can be expected to be completed and approved a minimum of six weeks prior to the installation of planting mix on the Lawn Terrace. Contractor is cautioned not to wait until the progress of the project is almost complete and ready for planting mixes to begin his testing and mix approvals, as this will result in a delay of the mix placement and plantings.

### 3.5 PREPARATION OF SUBGRADE

A. Prior to commencing any soil placement and finish grading operations Contractor shall notify the University Representative allowing enough time for a thorough inspection of the Subgrade. Proceed with installation only after unsatisfactory conditions have been corrected and approved by the University Representative.

B. Prior to any work the Contractor shall have all utilities located by calling PA One-Call at (800) 242 1776.

C. Do not proceed with the installation of soils or planting mix, until all utility work in the area has been installed. Do not begin planting mix installation until all subsurface drainage, irrigation main lines, and lateral lines shown on the drawings are viewed and approved by University Representative.

D. Prior to grading, apply ROUND-UP or other approved herbicide as per the manufacturer’s directions if required to eliminate any existing weeds. Allow sufficient time for the herbicide to take effect.

E. Do not excavate beds in areas that may damage existing tree roots of mature trees.

F. If any areas are overly compacted or a hardpan, the subgrade shall first be rototilled or chisel plowed at least 12 inches deep to permit proper loosening, drainage, and preparation of the...
ground. The subgrade shall be loosened and graded by harrowing, discing, or dragging, as dictated by the conditions of the subgrade. See Section 32 9300 EXTERIOR PLANTS for additional instructions and perk tests to verify soil drainage in planting beds where required.

G. The entire subgrade shall then be raked and all stones over 1-1/2 inches, removed, as well as asphalt, concrete, aggregates, contaminated soils, brickbats, grade stakes, rubbish, and general debris, or any items deemed not conducive to good and normal plant growth and lawn establishment. Haul off-site and satisfactorily dispose of all unsuitable material.

H. Protect adjacent walls, walks and utilities from damage or staining by the soil or placement operations. Use 1/2-inch plywood and or plastic sheeting as directed to cover existing concrete, metal and masonry work and other items, and as directed by the University Representative during the progress of the work.
   1. Clean up any soil or dirt spilled on any paved surface, including at the end of each working day.
   2. The Contractor shall repair damages to the pavings or architectural finishes to the satisfaction of the University Representative.

I. Protect the prepared subgrade areas from traffic until the planting mix is installed. DO NOT allow the subgrade to become compacted. In the event that the roughened prepared areas become compacted, loosen the area again prior to installing soils or planting mixes.

### 3.6 GENERAL SOILS INSTALLATION

A. Begin installing approved soils and planting mixes by backfilling the beds and planting areas with the first lift by tilling or blending with existing loosened subgrade. Note soil pedds in the 1-2 inch range is acceptable and often aid in soil adhesion and drainage.

B. Soils and planting mixes shall be spread with approved equipment to a minimum depth of 6 inches to permit a 1-inch settlement. Place soils in 6-inch lifts compacting lightly to not more than 80-85% at the depths and elevations shown on the drawings.

C. Any surface irregularities shall be corrected to prevent the formation of low spots and pockets that would retain water.

D. Soils and planting mixes shall not be placed when the subgrade is frozen, excessively wet, or extremely dry, and no soils shall be handled when in a frozen or muddy condition.

E. Protect the tilled area from traffic until the planting mix is installed. DO NOT allow the subgrade to become compacted. In the event that the roughened area becomes compacted, loosen the area again prior to installing the planting mix.

### 3.7 APPLICATION OF ORGANICS AND CHEMICAL ADDITIVES

A. Contractor shall add up to 15% organic material in the top 24" of backfilled soils in planting beds.

B. Do not use fertilizers unless recommended by soils tests.
C. Following the installation of each planting mix, apply chemical additives in rates as recommended by the soil tests, and appropriate to the planting mix and specific plants to be installed.

D. Types, application rates and methods of application shall be approved by the University Representative prior to any applications.

E. Approximately one month after any application of chemical additives, re-sample and test the soil and apply additional applications if the soil tests indicate further chemical applications would be beneficial. Make sufficient tests to analyze each soil type and each plant association within that soil type.

3.8 RESTORATION OF DISTURBED SOIL – COMPACTED TOPSOILS

A. In any area of the site where existing lawn and planting areas have become compacted by construction activity, modify the soils bulk density to provide for suitable growing environments.

1. Compacted soil is defined as soil where vehicle traffic, storage, Contractor lay down or soil stockpiles have increased the soil bulk density in excess of:

<table>
<thead>
<tr>
<th>Soil type</th>
<th>Bulk density</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sandy loam</td>
<td>1.65 Mg/m³</td>
</tr>
<tr>
<td>Silt loam</td>
<td>1.55 Mg/m³</td>
</tr>
<tr>
<td>Clay loam</td>
<td>1.45 Mg/m³</td>
</tr>
</tbody>
</table>

B. Compaction shall be modified according to the following methods:

1. Renovated Lawns: Using a commercial grade power tiller, Toro Dingo Tiller model #22445 or a tiller with equivalent performance, till the compacted soil to a depth of 6”.
   Spread 3 inches of Pine Bark over the tilled area. Re-till the area to incorporate the Pine Bark into the compacted soil.

2. Proposed Shrub and tree beds outside of the tree protection area: Spread 6 inches of Pine Bark over the compacted area. Using a backhoe, dig through the Pine Bark to a depth of 24 inches below the original grade, lift the soil and turn the soil mass to break up the massive soil into clumps, and clods, allowing the Pine Bark to fall between the clumps and clods. Cover the resulting broken soil with 4 inches of organic matter and till into the top 6 inches of the soil. Fine grade and apply 2 inches of mulch.

3. Tree Preservation Areas: Should construction activities result in compacted soils Contractor may be required to perform vertical mulching or other soil aeration operations prior to mulching. These activities shall be recommended and monitored by the project Arborist. Vertical mulch the soil as follows. Using an air knife or similar pneumatic digging tool make holes in the soil 4 to 6 inches in diameter and 6 to 9 inches deep 24 inches on center. Fill the holes with a mixture of 50% 3/8-inch size expanded shale, Carolina Stalite or equal and 50% Pine Bark. Do not till if in the vicinity of existing mature trees.

4. In all areas, remove any soil or debris deposited on to the existing grades prior to implementing compaction reduction.

3.9 PROTECTION
A. Protect planting mix from compaction and contamination by dust, debris, and any toxic material harmful to plants or humans after placement. Any area, which becomes compacted, shall be tilled to a depth of 6". Any uneven or settled areas shall be filled and re-graded.

B. Phase the installation of the planting mix such that equipment does not have to travel over already installed planting mix.

3.10 CLEAN-UP

A. During installation, keep pavements clean and work area in an orderly condition.

B. Keep the site free of trash and debris at all times. Immediately dispose of wrappings or waste materials associated with products necessary for the completion of the work.

C. All trash shall be kept in a central collection container. Do not bury trash or debris in back-fill.

D. Once installation is complete, remove any excess soil from pavements, walls or other surfaces.

3.11 PROTECTION DURING CONSTRUCTION

A. The Contractor shall protect soil work and materials from damage due to landscape operations, operations by other Contractors or trespassers. Install 1/2-inch plywood mats over the soil wherever vehicles, equipment or foot traffic must enter the area. Maintain protection during installation until acceptance. Treat, repair or replace damaged planting mix installation work immediately.

B. Till compacted planting mix and replace planting mix that has become contaminated as determined by the University Representative. Planting mix shall be tilled or replaced by the Contractor at no expense to the Owner.

3.12 REPAIR OF SETTLED PLANTING MIX

A. At the end of twelve months after the date of substantial completion of the planting mix installation work, inspect the site and restore any areas where the grades have settled beyond the elevations shown on the drawings by an amount greater than 5% of the soil depth.

1. In shrub planting areas where the settlement is 3 inches or less, remove the mulch, top dress the area with the specified planting mix and re-mulch.

2. In all ground cover areas and shrub planting areas where the settlement is greater than 3 inches remove the mulch and plants, add the specified planting mix, re-plant and re-mulch.

3. In lawn areas, remove the sod. Till the surface and add the specified planting mix and re-sod using new sod.

END OF SECTION 32 9100
SECTION 32 9200 - TURF AND GRASSES

PART 1 - GENERAL

1.1 SUMMARY
A. The work in this section includes all labor, materials, and installation methods necessary to establish the highest quality turf areas:
   1. Preparation of the site and placing soils as per Section 32 9100,
   2. Seeding lawn areas as indicated,
   3. Sod Lawn Terrace area as indicated,
   4. Lawn renovation in disturbed areas,
   5. Clean-up and protection of completed turf areas,
   6. Lawn maintenance until acceptance,
   7. Guarantee of all work, warranty of lawn areas.

1.2 RELATED SECTIONS
A. Section 32 9100, Planting Soils
B. Section 32 9300, Exterior Plants

1.3 DEFINITIONS
A. Initial Acceptance: Is defined as the event when the work is substantially completed and approved by the University Representative, and establishes the date for Lawn Maintenance period to commence.
B. Maintenance Turnover: Is the date of maintenance turn over to PSU for them to assume responsibility for the maintenance of the turf areas.
C. Finish Grade: Elevation of finished surface of planting soil for turf establishment.

1.4 REFERENCES
A. Chemical Soil Testing Procedures for the North Central Region (NCR-221)
C. U.S. Compost Council: Test Methods for the Examination of Compost and Composting

1.5 SUBMITTALS
A. Prior to the start of any seeding activity, the Contractor shall have the existing soil tested by an approved soil testing laboratory and the preparation of Soil Test Reports as per Section 32 9100 Planting Soils. Contractor shall furnish copies of the soil test results to the University Representative prior to any grading, seeding, or sodding.
B. The Contractor shall submit a Percolation Rate Test prior to commencing of and seed activity. This test is intended to determine the rate of percolation of the existing subgrade.

C. The Contractor will provide an inspection certification indicating the origin and health of seed and or sod material.
   1. Seed must be Blue Tagged Certificate Seed and must contain requirements indicated in PART 2 PRODUCTS, Lawn Seed, below. The contractor shall submit seed breakdowns tags to the University Representative for approval. Tags will be show percentages of seed varieties, weed seed, inert matter, and date of “Germination Test” done within a nine-month period prior to sale of the seed.
   2. Sod must be certified and must contain requirements indicated in PART 2 PRODUCTS Sod, below.

D. The contractor shall provide submittals indicating the type and application rates of fertilizers as recommended in accordance with the soil test.

E. Chemical Spraying Program: No Spraying of Herbicides, insecticides, fungicides nematicides, fumigants, or other chemicals shall be done without first submitting a spray program to the University Representative. Application of herbicides will only be permitted by licensed applicators. Applicators should consult any Chemical Hypersensitivity Registries for the area.

F. Product Data: For each type of product indicated.

1.6 QUALITY ASSURANCE

A. Seed Producer: Manufacturers specializing in grass seed production with minimum of 5 years experience and certified by the Pennsylvania Department of Agriculture as outlined in Title 3 (Agriculture) of the Pennsylvania Consolidated Statues.
   1. Seed: Must comply with all Commonwealth of Pennsylvania seed certifications.

B. Sod Producer: Manufacturers specializing in sod production and harvesting with minimum of 5 years experience and certified by the Pennsylvania Department of Agriculture as outlined in Title 3 (Agriculture) of the Pennsylvania Consolidated Statues.
   1. Sod: Minimum age of 18 months with root development that will support its own weight, without tearing, when suspended vertically by holding the upper two corners.

C. Installer Qualifications: A qualified landscape installer whose work has resulted in successful lawn establishment.
   1. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when planting is in progress.

D. Perform work in accordance with all applicable laws, codes and regulations required by authorities having jurisdiction over such work and for all inspections and permits required by Federal, State, and local authorities in furnishing, transporting, and installing materials.

E. Certificates of inspection required by law for transportation shall accompany invoice for each shipment of seeds and sod. Submit copies of certificate after University Representative’s acceptance of material. Inspection by Federal or State Governments at place of growth does not preclude rejection of material at project site.

F. Comply with Federal Seed Act.
G. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Seed:
1. Each seed container shall be in sealed bags labeled by manufacturer and/ or grower indicating weight and analysis.
2. Bulk deliveries of seed shall be accompanied with delivery tickets specifying percentage germination, purity, and noxious weed content.
3. Seed shall be kept in dry storage away from contaminants, insects, and rodents.

B. Sod:
1. All sod shall be reviewed by the University Representative at the job site prior to installation. The University Representative reserves the right to reject any sod they deem unacceptable.
2. All sod delivered from the supplier shall be installed on the same day as delivered.
3. Each palette, flat, or specified group of sod shall be labeled by the grower or manufacture as separate items.
4. During harvesting, delivery, and storage, sod materials shall be protected from any drying or contamination by detrimental material.
5. Sod shall not be dropped or dumped from vehicles.

C. Fertilizer and Lime: Each container of fertilizer and /lime shall be labeled by manufacturer as separate items indicating weight and analysis of the container.

D. Topsoil: Shall not be muddy or frozen at time of grading.

E. Storage
1. Store products in accordance with producer’s recommendations and as noted.

1.8 PROJECT CONDITIONS

A. Protection of Existing Utilities:
1. Prior to any work being performed the contractor shall insure that all existing utilities within and surrounding the project site have been clearly marked in accordance with the Pennsylvania Underground Utility Line Protection Act, Act 287 as amended by Act 199.

B. Site Conditions:
1. Site and utility construction: Do not proceed with seeding or sodding operations until Henderson Building, walls, walks and terrace construction is completed or as directed by the University Representative.
2. Turf areas will be free of waste or debris developed by other trades. Any discrepancy from such conditions shall be reported to the University Representative before beginning any installation.

C. Planting Seasons:
1. Seeding: The Planting of turf sod specified on the drawings shall be performed during the following timeframe: April 1st and May 15th or between September 1st and October 15th.
2. Sodding: The planting of turf sod specified on the drawings shall be performed during the following timeframe: April 1st to October 31st.
3. Environmental: No seeding shall be done on frozen ground, when the temperature is 32 degrees F (or lower) or 90 degrees F or higher.
D. Protect existing utilities, paving, and all other facilities from damage caused by lawn installation operations.

E. Contractor is responsible for protecting newly sodded areas. Contractor shall take measures to reasonably reduce or minimize pedestrian traffic through Lawn Terrace areas during the lawn establishment period or as required to maintain lawn areas.

F. Water will be available on site, but the Contractor shall provide all manpower and conveyances such as water trucks, hoses, etc. to maintain soil moisture requirements to all lawn areas.

1.9 LAWN MAINTENANCE (Seed and Sod)

A. Begin maintenance of sodded lawns immediately after each area is installed and continue until acceptable lawn is established and final acceptance by the University Representative. Maintain and establish lawn by watering, fertilizing, weeding, mowing, trimming, replanting, and other operations.

B. Watering: Water shall be applied frequently enough to keep the grass and soil from drying out. The University shall provide the water source. The contractor is responsible for all hoses, sprinklers or other watering devices and he/she shall ensure proper backflow protection on the water source.

1. Water in a manner to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.

C. All areas and spots that do not show a prompt catch of grass or signs of browning shall then be reseeded or re-sodded as required until complete coverage is obtained.

D. Mowing: When the average height of the grass reaches 3 to 4 inches, grass shall receive an initial mowing to a height of 2 to 3 inches or removal of 1/3 of the grass blade.

1. Repeat mowing to maintain specified height without cutting more than 1/3 of grass height at a time. Remove no more than 1/3 of grass-leaf growth on subsequent mowings.

2. Do not delay mowing until grass blades bend over and become matted.

3. Do not mow when grass is wet and will mat.

E. Remediation: Any depressions or irregularities in the lawn surface shall be leveled off and reseeded or re-sodded.

1. Roll, regrade, and replant bare or eroded areas and re-sod to produce a uniformly smooth lawn.

F. Maintenance shall cease after the third cutting and final acceptance by the University Representative, provided all grass areas are properly established and free of washouts, depressions, bare spots, weeds, and large off-color areas.

1. If seeding or sodding is completed in the autumn, the Contractor shall complete the three cuttings in the following spring as required to establish an acceptable stand of turf grass.

1.10 ACCEPTANCE

A. Final Inspection: At the end of the maintenance period, the University Representative and the Contractor will make an inspection of the project turf grass areas.
B. Any lawn area under this contract that is not in satisfactory condition, as determined by the University Representative shall be reworked as soon as conditions permit. All reworked lawn areas shall be maintained as previously specified in SECTION 1.9 MAINTENANCE above, until final inspection and acceptance occurs.

PART 2 - PRODUCTS

2.1 LAWN SEED

A. Shall be clean and fresh, packaged in sealed bags showing net weight, composition of mix, date of germination tests and suppliers name.

B. Seed must be Blue Tagged Certified and must not contain more than 0.1% by weight weed seed, no more than 1.5% inert matter, no more than 0.1% other crop seed and no noxious weeds seed or undesirable grass species.

C. Composite of the mix shall contain 60% bluegrass, 20% fine fescue, and 20% ryegrass. The varieties are started as follows and no substitutions of mixes and/or percent of mixes is allowed.
1. Bluegrass: A maximum of 20% of each variety for a total of 60% (Three different Varieties)
   -America
   -Award
   -Awesome
   -Beyond
   -Freedom
   -Langara
   -Midnight II
   -Nudestiny
   -Nuglade
   -Quantum Leap

2. Fine Fescue: A maximum of 10% of each variety for a total of 20% (Two different Varieties)
   -Banner III
   -Bridgeport
   -Brittany
   -Jasper II
   -Longfellow II
   -Reliant II
   -Rescue 911
   -Shadow II
   -Treasure
   -Victory

3. Perennial Ryegrass: A maximum of 10% of each variety for a total of 20% (Two different Varieties)
   -Applaud
   -Cadence
   -Caddieshack
   -Cutter
   -Fiesta
   -Hawkeye
   -Jet
   -Mach I
   -Manhattan III
   -Topgun

2.2 LAWN SOD

A. Sod type shall be a Kentucky bluegrass blend consisting of 3 different varieties.

B. Sod shall be field grown in same climatic conditions as that of the project site.

C. Sod shall be strongly rooted, not less than 18 months old, free of weeds and undesirable native grasses. Furnish viable sod of uniform density, color and texture, strongly rooted and capable of vigorous growth and development when installed.
D. Sod shall be installed within 36 hours from the time it is cut. Do not allow sod to dry out during transport or on site storage.

2.3 WOOD CELLULOSE FIBER MULCH

A. Shall consist of especially prepared wood cellulose processed into uniform fibrous physical state.

B. Shall by dyed green or contain a green dye in the package that will provide an appropriate color to facilitate visual inspection of the uniformly spread slurry.

C. Shall contain no germination or growth inhibitors.

D. Shall be manufactured and processed in a manner that the wood cellulose fiber mulch will remain in uniform suspension in water under agitation and will blend with other additives to form a homogeneous slurry.

E. Shall form a blotter-like groundcover, on application, having moisture absorption and percolation properties and shall cover and hold grass seed in contact with the soil without inhibiting the growth of the grass seedlings.

F. Shall not contain elements or compounds at concentration levels that will be phyto-toxic.

G. Must conform to the following physical requirements.
   1. Fiber length to approximately 10mm. Diameter approximately 1mm.
   2. pH range of 4.0 – 8.5.
   3. Ash content of 1.6% maximum.
   4. Water holding capacity of 90% minimum.

2.4 TOPSOIL

A. Imported and or Salvaged Topsoil: See Section 32 9100.

PART 3 - EXECUTION

3.1 SITE PREPARATION

A. Prior to commencing any finished grading or seeding operations Contractor shall notify the University Representative allowing enough time for a thorough inspection of the Subgrade. Proceed with installation only after unsatisfactory conditions have been corrected and approved by the University Representative.

B. Prior to any work the Contractor shall have all utilities located by calling PA One-Call at (800) 242 1776.

C. Prior to grading, apply Round-up or other approved herbicide as per the manufacturer’s directions to eliminate any existing weeds. Allow sufficient time for the herbicide to take effect.

D. Provide protection to existing site features, structures, walls, and walks, etc., to prevent damage settlement, movement, undermining or erosion. Protect existing trees and landscape features.
E. Contractor shall move temporary protection, silt fencing, and other erosion control measures to complete the installation of this work. Reinstall and/or maintain inlets and swales as required by Pennsylvania State Erosion Control and as directed by the University Representative.

F. Grading: Perform all finished grading necessary to bring the site to the required finished elevations indicated on the grading plan and as noted in SECTION 32 9100.
   1. Apply 1” of approved organics over all areas to receive Sod.
   2. Hand rake and smooth out roto-tilled areas to remove all dirt clods, debris and stones larger than 1/2”, or other matter not conducive to the establishment of lawns.
   3. Protect all prepared fine graded areas to receive seed from damage from truck and foot traffic compaction. Failure to do so may require the contractor to regrade and repair soil prior to seeding operation.
   4. Obtain University Representatives approval of finish grades prior to the installation of sod. Make corrections and adjust grades as specified above. Restore damage resulting from lack of protection, or improper installation of protection, as approved by the University Representative.

3.2 PROTECTION

A. Protect sod to prevent damage from pedestrian traffic. Restore damage resulting from lack of protection or improper installation of protection during seeding and sodding operations.

3.3 SOD INSTALLATION

A. Install sod during favorable soil conditions. Soil shall not be frozen or in a saturated condition.

B. Lay sod directly on cleaned and raked areas laying in staggered rows, butting joints tightly together. Do not allow joints to separate greater than 1/2” apart. Spade cut sod along pavement and bed edges, do not tear apart.

C. Install sod on Lawn Terrace so that the top of sod soil line is slightly below (1”) from the top of the adjacent terrace paving or concrete surfaces, to allow for drainage off these surfaces

D. Maintain a minimum uniform slopes for positive surface drainage to drain inlets.

E. Roll sod with a lightweight roller to provide full soil/sod root contact.

F. Hand water sod immediately after installation. Sod shall be kept well watered and fertilized during the initial growing period, a minimum three weeks. DO NOT ALLOW SOD TO DRY OUT. Apply slow release fertilizer at rate recommended by manufacturer on fertilizer product.

3.4 LAWN RENOVATION

A. Renovate existing lawn.

B. Renovate existing lawn damaged by Contractor’s operations, such as storage of materials or equipment and movement of vehicles.
   1. Reestablish lawn where settlement or washouts occur or where minor regrading is required.

C. Remove sod and vegetation from diseased or unsatisfactory lawn areas; do not bury in soil.
D. Remove topsoil containing foreign materials resulting from Contractor's operations, including oil drippings, fuel spills, stone, gravel, and other construction materials, and replace with new topsoil.

E. Mow, dethatch, core aerate, and rake existing lawn.

F. Remove weeds before sodding. Where weeds are extensive, apply selective herbicides as required. Do not use pre-emergence herbicides.

G. Remove waste and foreign materials, including weeds, soil cores, grass, vegetation, and turf, and legally dispose of them off Owner's property.

H. Till stripped, bare, and compacted areas thoroughly to a soil depth of 6 inches.

I. Apply soil amendments and initial fertilizers required for establishing new lawns and mix thoroughly into top 4 inches of existing soil. Provide new planting soil to fill low spots and meet finish grades.

J. Apply sod and protect as required for new lawns.

K. Water newly planted areas and keep moist until new lawn is established.

3.5 LAWN ESTABLISHMENT & MAINTENANCE

A. Contractor shall water sodded lawn areas adequately to thoroughly moisten the sod bed and to produce an even stand of turf. Do not over water.

B. Maintain sod areas as required until final acceptance of the turf grass.
   1. Mowing:
      a. When grass reaches 3", mow to 2" in height.
      b. Maintain grass between 2 1/2" to 3 -1/2" height.
      c. Do not cut more than 33% of grass leaf in a single mowing.
      d. Remove grass clippings.
      e. Re-sod and mulch all spots, not having a uniform stand of grass.
   2. Weed eradication:
      a. If necessary, apply herbicide uniformly at manufacturer's recommended rate between the first and the third mowing.

3.6 PROTECTION

A. Protect all sodded areas from any foot traffic until the turf acceptance.

3.7 CLEAN UP

A. Perform cleaning during installation and upon completion of the work.

B. Remove from site all excess materials, soil, debris, and equipment. Repair damage resulting from installation operations in order to meet all contract document requirements in every respect.
SECTION 32 9300 - EXTERIOR PLANTINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Work of this section describes the labor, materials, and installation requirements necessary to complete plantings with the highest possible quality standards:
   1. Planting area soil excavations and installation of underdrainage,
   2. Installation of trees, shrubs, and groundcovers,
   3. Mulches and planting accessories,

1.2 RELATED WORK SPECIFIED ELSEWHERE:

A. Section 32 8400, Irrigation

B. Section 32 9200, Turf and Grasses

1.3 REFERENCES

A. Standards: Comply with applicable recommendations of the following:

B. "Standardized Plant Names", American Joint Committee on Horticultural Nomenclature.

C. "American Standard for Nursery Stock", The American Nursery & Landscape Association (ANLA), ANSI Z60.1-2004

1.4 DEFINITIONS

A. Initial Acceptance: Is defined as the event when the work is substantially completed and approved by the University Representative, and establishes the date for the Warrantee and Maintenance periods to commence.

B. Partial Acceptance: Is defined as the event when the work is substantially completed on a portion of the work and the contractor will be delayed one planting season from completing the remainder of the work. The University Representative may grant a partial acceptance for the approved portion of the work that qualifies, and will establish the date for the warrantee and maintenance period to commence only on the completed portion. Granting of partial acceptance shall also extend the Warranty period correspondingly.

C. Maintenance Turnover: Is defined as the date of maintenance transition for all plant material installed as part of this contract, over to the University with their knowledge and agreement. From that date the University will assume responsibility for the maintenance of all plant material.
D. Final Acceptance: Is defined as the event when the warrantee and maintenance periods are over, and the contractor has complied with all provisions of the contract documents, and the University Representative grants the contractor release from further contractual obligations as they pertain to the provisions specified only in this Section.

1.5 SUBMITTALS

A. Guarantee: Written guarantee warranting the plant material to be in healthy condition at the time of expiration of the 120 day "Landscape Establishment Period".

B. Contractors Qualifications: If the subcontractor has not been prequalified and accepted by the University, submit the following information:
   1. Installer qualifications, verifying years of experience.
   2. List of completed projects having similar Scope of Work identified by date, name, and location.
   3. A minimum of three current references with names and phone numbers to be contacted.

C. Plant material quantities shall be as shown on the Landscape Drawings. Submit the following items:
   1. The specific variety, quantity and size of plant to be provided,
   2. Nurseries, where plant material is to be obtained,
   3. Unit prices for each type and size,
   4. Submit a planting schedule showing dates for planting in each of the project site.

D. Product Data: Submit the following manufacturer's information and source data:
   1. Commercial fertilizers,
   2. Chemical additives,
   3. Organics,
   4. Lime,
   5. Iron Sulfate,
   6. Filter Cloth/Soil Separator,
   7. Erosion Control Fabric.
   8. Drainage Boards.

E. Material Samples: Submit one pound samples, packaged in plastic bags, to the University Representative for examination and approval prior to any landscape operations.
   1. Mulches,
   2. Salvaged Topsoil,
   3. Imported Topsoil,
   4. Organics,
   5. Soil mixes.

F. Warranty and Maintenance:
   5. Submit written warranty and maintenance agreement for all workmanship and materials specified.

1.6 QUALITY ASSURANCE

A. Installer Qualification: Not less than 5 years documented successful experience in installation of work similar to Work of this Project.

B. Standards: Comply with applicable recommendations of the following:

C. Plant Substitutions- Pre-Bid:
1. It is the landscape contractor’s responsibility to make every reasonable effort to find the plant material specified by the Project.
2. Contractor is also responsible for qualifying their bid, to document any plant suitability or availability problems.
3. Contractor may offer substitutions to the University Landscape Architect through the University Representative for consideration if there are legitimate availability problems.
4. Contractor may also offer substitutions if there are known diseases or insect resistant species that can be substituted for a pest prone plant, if specified.
5. Contractor shall submit a Base Bid as per plans and specifications, plus any price changes or clarifications for all recommended plant substitutions.

D. Plant Substitutions- Post-Bid, Pre Installation:
1. It is the intent to reduce or eliminate post-bid pre-installation substitutions by the contractor,
2. Substitutions of plant materials will not be permitted unless authorized in writing by University Landscape Architect or their designee.
3. If proof is submitted that any plant accepted during the bidding process is not attainable, a proposal will be considered for use of nearest equivalent size or variety, with corresponding adjustment of Contract price if necessary.
4. These provisions do not relieve Contractor of responsibility for obtaining required materials in advance if special growing conditions or other arrangements that must be made in order to provide the required materials.

E. Preliminary Plant Acceptance:
1. University Landscape Architect, University Representative or his designee may view plants at their place of growth or upon delivery. However, University Landscape Architect or University Representative reserves the right to tag plants at their place of growth.
2. The University has the right to make changes in plant types, provided they are of equal value and quantity prior to University Representative approvals and purchasing by the Landscape Contractor.
3. Identify place of growth and quantity of plants to be inspected.
4. For distant material, photographs may be submitted in lieu of on site inspections or for preliminary reviews prior to on site inspections and tagging.
5. Coordinate with the University Landscape Architect through the University Representative requests for plant inspection at their place of growth at least ten calendar days prior to digging.

1.7 DELIVERY, STORAGE AND HANDLING

A. The Contractor shall contact the University Representative 24 hours prior to the delivery of any plant material.

B. All plant material shall be inspected by the University Representative at the job site upon delivery. Only plants approved by the University Representative shall be stored or planted.

C. The University Representative reserves the right to refuse any plant material they deem unacceptable. Any and all rejected plant material shall be removed from the job site on the day rejection.
D. Plant identification labels shall be durable and waterproof. Labels shall be securely attached to plants, bundlers, or containers of plants and shall state the correct botanical plant name and size. Labels shall not be removed from plants until final acceptance.

E. Bulk deliveries of mulch, topsoil, and inert material shall be accompanied with delivery tickets showing weight, origin, and composite and stored in such a manner as to prevent the inclusion of foreign materials.

F. Handling:
   1. Do not bind plants with wire.
   2. Use extreme care in handling all plant material. Move plants at their base. Avoid bending and twisting trunks that may weaken the plant balls.
   3. Plants damaged in transit, storage or handling may be rejected at the sole discretion of the University Representative. Contractor shall note that consideration for plant material damage may not be life threatening, but rather cosmetic such as broken branches or scratched trunks, to qualify plant for rejection.

G. Plant Storage:
   1. Trees, shrubs, and groundcovers not installed on the day of delivery to the site shall be stored and protected. NO PLANTS SHALL BE STORED ON THE SITE FOR A PERIOD GREATER THAN 5 BUSINESS DAYS.
   2. Storage locations shall be continually shaded and protected from the wind. Plants stored on the project site shall be protected from drying at all times, covering the balls or roots with moist woodchips, shredded bark, peat moss or other suitable heel-in material.
   3. Coordinate the temporary storage of plant material with the general contractor or other trades as required to keep plants away from ongoing construction activities.

1.8 SITE CONDITIONS

A. Utilities and Underground Features:
   1. Prior to any work being performed the Contractor shall insure that all existing utilities within and surrounding the project site have been clearly marked in accordance with the Pennsylvania Underground Utility Line Protection Act 287 as amended by Act199.
   2. If there is a conflict between utilities or other underground obstructions and plant material, coordinate with the University Representative for relocating plants prior to installation.

B. Concealed Contingencies:
   1. The correction of undisclosed or discovered subsurface conditions such as rock, roots, stumps, water, clay pan, soils contaminated with toxic substances or other site obstacles encountered in the excavation work, shall be brought to the attention of the University Representative prior to preceding.
   2. After determination that the discovered or undisclosed conditions are not the Contractor responsibilities, obtain written direction for changes to the design, or to proceed with pricing in order to obtain approvals to implement corrective measures.

C. Drainage:
   1. Every effort has been made to select plants suitable for the site conditions they will encounter, however, if plants are to be in areas that show obvious poor drainage contractor shall perform drainage tests as per Section 3.2.
   2. Poor Drainage areas encountered in the plant pit excavation work, which were not apparent at the time of Bidding, shall be brought to the University Representative’s attention.
3. Contractor shall make himself aware of subsurface under drains and building foundation drains that may be available for use in providing plant bed underdrainage. Verify with the Landscape University Representative drains that may be used.

D. Site Preparation:
1. Coordinate plant material installations with waterproofing, site utilities and irrigation.
2. Planting areas shall be free of waste or debris developed by other trades. Any discrepancy from conditions shall be reported to the University Representative before beginning any installation.
3. Coordinate removal of temporary tree protection devices required for the completion of this work with the University Arborist and Representative.
4. Do not commence this work until grades have been set and planters and drains are completed.

1.9 PLANTING SEASONS

A. General: No plants may be planted when the ground is frozen or during days of extreme heat (Greater than 80 Degrees). Plants shall be installed between March 1st and June 15th or from August 15th until the ground freezes. Any change from this planting season must be approved by the University Representative.

B. Perennials:
1. May be installed as soon as the ground is workable in the spring after March 1 until November 15.
2. No perennials to be planted between November 15 and March 1

C. Annuals:
1. Cold sensitive annuals may be installed after danger of frost has passed and as soon as the ground is workable in the spring after March 1 until November 15 for cool season annuals, after April 15 (or last risk of frost) and until September 15 for warm season annuals.

D. Spring Flowering Bulbs:
1. May be installed between October 30 and the ground freezes.

E. Excluded Material:
1. The following trees may only be installed in the spring season.
   a. Oaks (Quercus varieties), Flowering Dogwood Varieties, (Cornus florida), Sweet Gum (Liquidambar styraciflua) Tulip Poplar (Liriodendron tulipifera). Plants shall have been dug prior to leaf elongation.

1.10 WARRANTY PERIOD

A. Contractor shall warrant that all trees, shrubs, vines, groundcovers, perennials, and bulbs planted under this Contract will be healthy and in flourishing condition of active growth for a Warranty Period of 120 days from date of completion and initial acceptance of the work.

B. Any delay in completion of planting operations, which extends the planting into more than one planting season shall extend the Warranty period correspondingly.

C. Contractor shall provide written warrantee certificates to the University Representative.
D. Warranty Provisions:
1. Remove plants that are in the opinion of the University Representative or University, at least 25% dead, unsightly, or not in healthy condition.
2. Replace removed plants, and plants missing due to Contractor's negligence. Replace when weather conditions permit and within specified planting period, or as directed by University Representative.
3. Provide replacement plants closely matching adjacent specimens of same species.
4. Warrant replacement plants for additional period of one year from date of their acceptance after replacement. Note that failure to replace plants in a timely and responsive manner may result in reduction and/or forfeiture of final payments.

1.11 MAINTENANCE

A. Begin maintenance immediately after plants are installed and continue for the 120-day maintenance warrantee period.

B. Maintenance Requirements:
1. Protect plants and planting areas from damage.
2. Keep plants healthy, vigorous, trim, and neat.
3. Prune to maintain plants in normal growth pattern.
4. Spray to control disease and insects.
5. Maintain mulch bed to 2-inch depth at trees and large shrubs, 1-½” for small shrubs, ½”-1” for perennials. Note: complete re-mulching of plant materials is not required as part of the contract.
6. Keep beds free of weeds.
7. Provide manpower in order to water or operate the irrigation system, all plant materials as required to maintain adequate moisture, and when directed by University Representative.
8. Maintain stakes and guys with enough tension to hold the trees stably with wires in place and safety flags clearly visible. Remove stakes and guys when no longer necessary for plant establishment, no later than one year after installation.
9. Reset plants to proper grade and upright condition if required and add topsoil and mulch to areas of settlement.
10. Provide additional stakes as required to support trees particularly evergreens in areas prone to high winds or settlement.
11. Maintain all plants until final acceptance by the University Representative and turnover of maintenance activities to the University.

1.12 ACCEPTANCE

A. Initial Acceptance:
1. Notify University Representative ten calendar days prior to date Contractor wishes the University Representative to view the progress of the work and to prepare final landscape punch lists on completion of the planting.
2. University Representative will view Work for conformance with Contract Documents. Work will be accepted provided that all requirements have been complied with, punch list items have been completed, and receipt of plant material warrantee certification.
3. When all items have been satisfied the University Representative will issue a Notice of Initial Acceptance and a Date for commencement of Warrantee timetable and start of maintenance period.

B. Partial Acceptance:
1. Acceptance may be made on partially completed Work, if approved by University Representative.
2. If Work has stopped for reasons beyond Contractor's control acceptance will be made on partially completed Work.

3. University Representative will view Work for conformance with Contract Documents. Work will be partially accepted provided that all requirements, including punch list items for those particular items have been complied with, and that plants are alive and in healthy, vigorous condition.

4. When all items have been satisfied the University Representative will issue a Notice of Partial Initial Acceptance and a Date for commencement of warrantee timetable and start of maintenance period for those areas.

C. Maintenance Turnover:
1. Prior to Final Acceptance an agreed date of Maintenance Turnover shall be confirmed by the University Representative in writing and shall be signed off, by the University and the Contractor prior to an end of on going plant maintenance activities and responsibilities.
2. Contractor shall meet with University Representative and University's representative to review and advise of general maintenance procedures prior to Maintenance Turnover.

D. Final Acceptance:
1. Notify University Representative one month prior to expiration of Warrantee period that Final Acceptance is required.
2. University Representative will review landscape and maintenance Work for conformance with Contract Documents, and note any plants requiring adjustments or replacement. University Representative will issue a letter of outstanding items.
3. The University Representative will issue final Acceptance letter, when all requirements are satisfied and contractor is released from further contractual obligations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Manufacturers offering products that comply with the requirements of this Section are listed below. Those manufacturers not listed but do offer products that comply with the requirements of this Section will be considered as substitute manufacturers, requiring the University Representatives approval.

2.2 PLANT MATERIAL

A. Quality Assurance:
1. Plants shall be of the quality and quantity indicated, true to name, properly labeled with scientific name and in accordance with the sizes and grades specified.
2. Plants shall be nursery grown, have a habit of growth that is normal for the species, and shall be sound, health, vigorous, free from insect pests, plant diseases and injuries, and shall have normal root systems.
3. All plants shall be equal or exceed the measurements specified in the plant list
4. Provide plants of "specimen quality", heavy, and symmetrical. Plants shall be tightly knit where specified on the plant material schedule.
5. No excessive tip pruning or shearing of evergreens or deciduous trees is permitted. Plants shall exhibit a natural quality.
6. Any branches with included bark shall be of a quantity and placement so that they will not significantly affect the scaffold structure of the tree if removed within the first two years after transplant.
B. Size:
1. Comply with measurements on Plant Schedule except plants larger than specified may be used if acceptable to University Representative, and at no change to Contract sum.
2. Plants shall be measured before pruning, with branches in normal position. Any necessary pruning shall be done at the time of planting.
3. Requirements for the measurement, branching, grading, quality, balling, and burlapping of plants shall follow the code of standards currently recommended by the American Association of Nurseryman, Inc. in the American Standards for Nursery Stock, ANSI Z60.1, current edition.
4. If larger plants are accepted, increase ball of earth in proportion to size of plant.
5. If size range is given, comply with minimum sizes while providing an average size that is in the mid-point of the range.

C. Nursery Cultivation:
1. Provide plants that are nursery grown in accordance with good horticultural practices, and shall conform to ANSI Z60.1.
2. Balled and Burlapped Plants: Shall have balls of earth of sufficient diameter to be in accordance with the size of the plant, of sufficient depth to include an adequate root system, and shall be properly balled, burlapped, and secured.
3. Local soils matching site soils where applicable are preferred.
4. Dig plants fresh for delivery to the project during season for planting. Should time table for plant installation be out of phase with recommended planting times please notify University Representative so that an alternative plant digging schedule can be approved.
5. Oaks for example require a spring harvesting just prior to leafing out. No B&B heeled-in plants, out of season dug, or plants from cold storage will be accepted, without prior knowledge and written acceptance from the University Representative.
6. Container Grown Plants: Shall be healthy, vigorous, well rooted, and established in the container in which they are sold. Plant development shall be sufficient so that they root mass will hold together when removed from the container. Remove plastic containers before planting.
7. Do not prune trees before delivery.
8. Trees shall have a minimum of pruning wounds that have not grown over.

2.3 SOILS
A. See Section 32 9100 for specifications regarding soils and soil planting mixes.

2.4 FERTILIZERS AND AMENDMENTS
A. Commercial Fertilizers: In accordance with the soils analysis, and recommendations, fertilizers shall be in bags showing weight, analysis, and manufactures name.

B. Organic Amendments: In accordance with the soil test recommendations, organic shall be as per those specified in Section 32 9100 Planting Soils.

2.5 HERBICIDES
A. Non-Selective Herbicide shall be ROUND-UP as manufactured Monsanto or approved equal.

B. The spraying of all herbicides must be done in accordance with the Chemical Spraying Program.
2.6 PLANTING ACCESSORIES

A. Filter Cloth / Soil Separator:
   2. Acceptable products and manufacturers:
      a. Mirafi by Mirafi Inc.
      b. Stabilenka Type T-80 by American Enka Co., or approved equals.

B. Erosion Control Fabrics: For slopes greater than 15%, or flow velocities greater than 12fps, or as directed by the University Representative.
   1. Conwed Fibers, erosion control netting, Delanco Rd. Riverside NJ 08075,
   2. Miramat, by Mirafi Inc.
   3. BonTerra Erosion Control Blanket, or approved equals.

C. Staking and Guying: Tree stakes shall be 2-inch x 2-inch hardwood, reasonably free of knots, and a minimum 6 feet long with two feet in the ground.
   1. Guying shall consist of nylon straps wrapped loosely around the trunk.

D. Drain and Trench Lines and Foundation Drain Boards:
   1. 4” diameter Schedule 40 PVC piping,
   2. Advanced Drainage Systems (ADS) N-12 or approved equal (smooth-walled interior).
      a. Provide 3 to 4-inch size perforated flexible drain lines.
   3. MiraDrain AFD System, or approved equal.
      a. Provide MiraDrain types 6000, 6000XL, for foundation and retaining wall applications.
      b. Provide MiraDrain types 5000, for trench drain applications.

2.7 AGGREGATES

A. Double Washed Bank Gravel:
   1. Provide clean washed gravel clear of fines complying with ASTM C33, Size 8 or 9 (3/4”) for use associated with required drain lines for improving soil drainage or approved equal.

B. Lightweight Aggregates:
   1. Provide lightweight aggregates to improve drainage in On-structure plantings or where soil weight will be a problem.
   2. Provide clean Solite, Isolite, or approved equal size 8-9 (3/4”), for under drainage.
   3. Also provide clean Solite, Isolite, or approved equal size 12-15 (3/8”), in soils to improve soil porosity and drainage.

2.8 MULCH & TOP DRESSINGS

A. Organic Mulch: Shall be coarse, fibrous, shredded hardwoods, free of dyes, sufficiently aged to prevent adverse reactions to plant material and subject to approval by the University Representative.

B. Provide screened pine fines for annual or perennial planting areas.
PART 3 - EXECUTION

3.1 EXAMINATION OF SITE CONDITIONS:

A. Contractor shall be responsible for making themselves familiar with all underground utilities, pipes and structures, by contacting a local Utility locating service 72 hours prior to digging. Contractor shall take sole responsibility for any cost incurred due to damage to these utilities.

B. Protect of Existing Vegetation: All existing vegetation to remain shall be protected at all times in accordance with Section 01 3956 – Temporary Tree and Plant Protection.

C. Examine conditions in which Work is to be installed. Do not proceed with Work until unsatisfactory conditions are corrected. Do not install soils or plants prematurely when the site and planters are not ready for plants or when construction conditions may damage installed material.

D. Do not willfully proceed with planting as designed when it is obvious that conditions and/or obstructions exist due to changes in building or site conditions. Such conditions shall be brought to the immediate attention of the University Representative. The Contractor may be held responsible for all necessary replanting due to failure to give notifications so that material can be relocated or conditions corrected prior to plant installations.

E. Remove any existing plant material necessary for the installation and the completion of the planting designed and contracted as part of this project.

F. Plant layout staking:
   1. Layout of plants prior to planting shall be verified by the University Representative. Any alterations to be planned layout must be approved by the University Landscape Architect and/or the designer.
   2. Stakeout ground locations in the field for trees and outlines of plant beds.
   3. Review staked layout in field with University Representative or field representative prior to planting.

3.2 PLANT MATERIAL PREPARATION:

A. Digging Plants at Nursery:
   1. Dig balled and burlapped (B&B) plants with firm, natural balls of earth of diameter not less than that recommended by American Standard of Nursery Stock; of sufficient depth to include fibrous and feeding roots. A larger than minimum ball size may be necessary to meet this requirement.
   2. Plants with cracked or broken balls are not acceptable.
   3. Remove dirt thrown onto ball top by cultivation and other nursery practices prior to digging.
   4. Root flare must be visible or structural roots must be present within the top two inches of the ball.
   5. Do not provide plants with incorporated encircling roots or that have had adventitious roots.

B. Mark north-facing side of all trees greater than 4-1/2" caliper at place of growth, and position trees in similar exposure at installation. Final positioning is to be approved by University Representative.
3.3 SOIL DRAINAGE TESTS:

A. Before planting, determine that areas to receive plant material have adequate sub–drainage, and that the Drainage installed is functioning. Contractor is responsible for correcting all drainage conditions, which may adversely impact the establishment of specified plantings.

1. Perform water percolation tests for the following areas or as required:
2. General planting areas at low spots or where the soils may be overly compacted or drain poorly such as locations under previously paved areas, minimum two tests;
3. Side lawn areas in spots where the soils may be overly compacted or poorly drain due to construction activities, perform minimum 2 tests;
4. Under or near one of the large ornamental trees, perform 1 test;
5. Total-5 tests.
6. Test by digging tree and shrub pits to the full depth and dimensions indicated on drawings.
7. Fill excavations to 1/3 depth with water and time percolation rate. A rate of one per is the allowable minimum percolation rate. Allow all water to percolate out before planting.
8. If, after 24 hours, water remains in excavation, perform a more detailed percolation test as described below and notify University Representative in writing.
9. At bottom of planting pit, excavate rectangular pit 12 inches by 12 inches by 18 inches deep. Pour water into this small pit to a depth of 6 inches (approximately 3 - 3 3/4 gallon). Note time required for water to be completely absorbed. Divide time noted by 6, to achieve average rate of absorption for 2 inches of water.

3.4 GENERAL PLANT INSTALLATIONS

A. Planting Bed Preparation:

1. The grouping of two or more plants shall constitute a planting bed or area. All unwanted vegetation shall be completely removed and hauled off site or sprayed with herbicide, in accordance with the Chemical Spraying Program, to ensure that planting beds are completely weed free.
2. If groundcover of a type normally specified in flats or pots of a 1-Gallon size or smaller is specified, the soil in the entire planting bed areas will be loosened by rototilling or similar means to a depth of 6 inches.

B. Plant Pit Excavation:

1. All planting pits shall be excavated to the depth of the existing root ball and planted on undisturbed soil. All construction debris such as plaster, concrete, stone, brick, wood, or other deleterious materials shall be removed.
2. Remove all trash, brickbats, debris or other material not contusive to plant material growth. Remove all soil contaminated by site masonry work.
3. Notify University Representative for corrective measures, if rock, tree roots, or other underground obstructions are encountered that would be detrimental to growth of plant material or require the tree to be shifted.
4. All tree pits shall be excavated circular with vertical sides. The diameter of pits for the tress and B&B shrubs shall be at least 2 feet greater than the diameter of the rootball or spread of roots.
5. Soils used for Planting shall comply with those of Section 32 9100, Planting Soils. Remove all poor soils, gravel, etc., not contusive to good plant growth.
6. If an impervious, hardpan layer remains in bottom of the pit after excavation the University Representative shall be notified prior to any additional planting activities to inspect the excavations and develop an alternate course of action.

C. Plant Installations:
1. **General:** The plant shall be set in its planting pit in such a manner that allows the bottom of the trunk flare to set 1 inch above finished grade. **NOTE:** THE TOP OF THE ROOTBALL IS NOT NECESSARILY THE BOTTOM OF THE TRUNK FLARE.

2. **Bare Root:** Build a cone of soil in the bottom of the planting pit. Place the plant in the hole, spreading the roots around the surface of the cone of soil. Gently backfill, firming the soil as you go.

3. **Balled and Burlapped:** Once the plant is set in its planting pit and at proper grade in relation to the surrounding spoil, the soil, the Contractor shall remove all wire, twine and burlap or other deleterious material.

4. **Containerized:** When the contractor removes the root ball from its container he/she shall inspect the root ball thoroughly for circling or girdling roots. The root ball shall then be scored to discourage girdling and promote the growth of feeder roots.

5. **Set plants plumb and brace rigidly in position until planting soil is tamped solidly around ball and roots.**

6. **Cut away and remove burlap, rope, wire basket etc. from the top 1/3 and sides of root balls. Remove completely where possible.**

7. **Settle backfill and eliminate voids and air pockets.**

8. **When backfill is complete water thoroughly before placing remainder of backfill. Repeat watering until no more is absorbed.**

9. **Place a 2" layer of approved shredded hardwood mulch.**

10. **At contractors discretion or if required due to plantings in high wind areas, stake as per recommended staking requirements as shown on the planting details.**

**D. Backfilling:**

1. Use specified backfill medium around the roots, filling the hole about two thirds full, and firm the soil around the root ball and /or roots.

2. Water the plant well immediately after backfilling to insure proper settling of soil around the roots. Allow the water to soak down and fill the remainder of the hole with loose soil without further packing or tamping.

3. Prepare a mound of soil around the edge of tree pit to form a shallow saucer.

**E. Pruning:**

1. Prune all dead or broken branches at the time of planting.

**F. Mulching:**

1. Mulch all plants and planting beds or areas with a 3-inch layer of specified mulch. It shall entirely cover the area of the planting pit, bed, or saucer around each plant. **DO NOT MULCH NEXT TO THE MAIN STEM OF THE PLANT.**

2. Planting saucers are not required in planting beds.

**G. Groundcovers and Perennials:**

1. In planting areas specified for Annuals or Perennials, top dress beds with a 1/2-inch to 1" layer of pine fines.

2. Smooth beds to conform to grades and adjust for settlement.

3. Layout plants for each bed by spacing them in staggered rows aligned with the outer edge of the planting beds.

4. Set plants at equal distance apart as indicated on the plant schedule.

5. Dig planting holes with hand trowel, large enough to allow for spreading roots.

6. Before planting, crush biodegradable pots and remove tops below soil level, and remove non-biodegradable pots. Set plants in planting hole and backfill soil by hand setting plants plumb, and straight.

7. Install plant so that level of root crown after settlement is same elevation at which it grew in nursery or pot.

8. Plant so that each root ball has good soil to root contact. Do not plant in mulch, but below mulch level.
9. Cover bare root plants up to crown of plant soil level.
10. Water after placing final layer of backfill and mulch.

H. Bulbs:
1. Plant bulbs at equal depths, appropriate to their species. (General rule is to plant at a depth equal to 3 times the size of the bulb).
2. Cover bulbs with minimum soil as indicated on the plant materials schedule.
3. Replace and smooth mulch layer and water.

3.5 STAKING AND PRUNING
A. Staking and guying plants shall be done immediately after trees are planted using specified staking materials.
B. Trees shall stand plumb prior to staking.

3.6 PROTECTION
A. Protect newly planted areas. Take measures to reasonably reduce or minimize pedestrian traffic from bed areas throughout the plant establishment period or as required to maintain plants.
B. Maintain adequate soil moisture for the proper establishment of all plants. Do not over water.
C. Restore damage, resulting from lack of protection or improper installation of protection as approved by the University Representative.

3.7 MAINTENANCE
A. Contractor shall be responsible for providing the following maintenance on all newly planted trees, shrubs, groundcovers, and herbaceous perennials.
1. Water: During periods of inadequate rainfall, as determined by the University Representative, all plant material shall be watered to maintain a constant suitable moisture level for adequate plant growth.
2. The Contractor shall be responsible for providing all watering hoses and other watering devices. The University will provide the water source.
B. Insect, Disease, and Weed Control: Weed control shall be by mechanical or hand weeding. The use of herbicides, insecticides, fungicides, nematicides, and fumigants or other chemicals are only acceptable upon approval by the University under provisions of the Chemical Spraying Program.

3.8 ESTABLISHMENT PERIOD
A. The Establishment Period will begin upon notice of substantial completion by the Contractor and inspection by the University Representative and will last for a total 120 day during the growing season.
B. The growing season is defined as the period between April 1st and November 1st. If planting occurs in the autumn, the Establishment Period will carry over to the next growing season until a total of 120 Days have been established.
C. Plants shall be guaranteed during the Establishment Period and shall be alive and in satisfactory growth at the end of the period. Plants, which die within the establishment period, will be removed by the Contractor within five (5) business days of notice or the University will remove the plants and bill the Contractor accordingly.

D. Replacement plants may be installed during the next appropriate planting season for the specified in the plant list.

E. All replacements shall be plants of the same kind and size specified in the Plant List. They shall be furnished and planted according to all previous specifications noted and shall be guaranteed through an additional 120 days Establishment Period, outlined above.

F. The cost of replacement shall be borne by the Contractor, except for possible replacements resulting from removal, loss or damage due to vandalism, or act of neglect on the parts of others.

3.9 FINAL INSPECTION AND ACCEPTANCE

A. At the end of the Establishment Period, an inspection will be made by the University Representative and the Contractor. Any plant determined to be of insufficient quality or unsatisfactory growth, as determined by the University Representative, shall be removed from the site and replaced at the Contractor's expense, as outlined in section 3.8 Establishment Period.

END OF SECTION 32 9300
SECTION 32 9510 LAWN TERRACE ROOF ASSEMBLY

PART I GENERAL

1.1 SUMMARY
A. The work in this section includes all labor, materials, and installation methods for:
1. Preparation and installation of the waterproof membranes, root protection mat, Drainage media and conveyance and soils for the Lawn Terrace area over the Henderson Auditorium roof structure.
2. Coordination with other trades for the installation of seat walls, paving, and irrigation systems.
3. Coordination with architectural waterproofing and insulation systems to facilitate the successful installation of the waterproofing membranes not specified here.

1.2 RELATED SECTIONS AND REFERENCES
A. Related Sections:
1. Section 03 30 53 – Cast-in-Place Concrete
2. DIVISION 07 Thermal and Moisture Protection
3. DIVISION 07 Insulation
4. DIVISION 07 Caulking and sealants
5. Section 32 84 00 – Irrigation
6. Section 32 92 00 – Turf and Grasses

1.3 REFERENCES
B. Underwriters Laboratories (UL) Class A.

1.4 DEFINITIONS
A. Green Roof -- An area of planting/landscaping, built up on a waterproofed substrate at any level that is separated from the natural ground by a man-made structure.
B. Shallow-Intensive/Lawn Green Roof -- Landscaping requiring more regular maintenance than an extensive condition but limited in plant selection due to shallower soil depths, (i.e., sod grass lawn).
C. Garden Roof® -- Patented system of drainage, water retention and root barrier components utilized in the construction of green roofs over Hydrotech’s MM 6125EV® roofing membrane.
D. Curve Number (CN) -- A number that is used with Natural Resource Conservation Service (SCS) methods to convert rainfall depth into runoff volume. The Curve Number takes into account a site’s soil type, plant cover, impervious cover, interception and surface storage.

1.5 SYSTEM DESCRIPTION
A. Furnish and install a completed Shallow-Intensive/Lawn Garden Roof® Assembly including, surface conditioner, Monolithic Membrane 6125EV®-FR and flashings, protection course, root barrier
protection, STYROFOAM® brand insulation, drainage/water retention component, filter fabric, lightweight engineered growing medium (soil).

1.6 SUBMITTALS

A. Certification from an approved independent testing laboratory experienced in testing rubberized asphalt material, that the material meets the CGSB-37.50-M89 standard for rubberized asphalt membranes, including applicable ASTM procedures.

B. Certification showing full time quality control of production facilities responsible for the manufacture of the rubberized asphalt and that each batch of material is tested to insure conformance with the manufacturers published physical properties.

C. Certification showing that all components of the green roof assembly are being supplied and warranted by a single-source manufacturer.

D. Documentation that the roof membrane assembly is currently Class A listed with Underwriters Laboratories.

E. Documentation that the extruded polystyrene insulation if used is free from CFC's.

F. The plant manufacturing the rubberized asphalt material shall have ISO 9001-2000 approval as evidenced by a notarized copy of the official certificate.

G. Provide product data on all components of the green roof assembly.

1.7 QUALITY ASSURANCE

A. The Roofing/Waterproofing Contractor shall demonstrate qualifications to perform the work of this Section by submitting the following documentation:
   1. Certification or license by the membrane manufacturer as a locally based, authorized applicator of the product the installer intends to use, for a minimum of five (5) years.
   2. List of at least three (3) projects, satisfactorily completed within the past five (5) years, of similar scope and complexity to this project. Previous experience submittal shall correspond to specific membrane system proposed for use by applicator.
   3. Include single-source for all components from the manufacturer.

B. The rubberized asphalt membrane product shall contain an inert clay filler and crumb rubber to enable the product to be resistant to acids (fertilizers, building washes and acid rain) and maintain membrane thickness during application.

C. Membrane Manufacturer shall have available an in-house technical staff to assist the contractor, when necessary, in application of the products and final inspection of the assembly.

D. Membrane Manufacturer Qualifications: Manufacturer shall demonstrate qualifications to supply materials of this section by certifying the following:
   1. Membrane Manufacturer shall show evidence that the specified rubberized asphalt has been manufactured by the same source for fifteen (15) years and successfully installed on a yearly basis for a minimum of fifteen (15) years on projects of similar scope and complexity.
   2. Membrane Manufacturer shall not issue warranties for terms longer than they have been manufacturing their hot fluid rubberized asphalt membrane.
E. Green roof supplier shall provide data and calculations to verify that the green roof assembly meets the project criteria for storm water runoff volume and rate control.
   1. Calculations shall be based on actual testing of suppliers' green roof components to be used for the project including but not limited to the growing media formulation and water retention/drainage materials.
   2. Calculations shall account for vegetated and un-vegetated portions of the roof and local climatic conditions including rainfall depth, intensity, duration, and timing.

F. Green roof supplier shall provide data demonstrating that the composite C-factor and Curve Number parameters for the specified green roof assembly are less than or equal to those factors used in the engineering design and analysis for the projects drainage and storm water systems analysis.

G. Pre-Construction Conferences. The manufacturer will meet with the necessary parties at the jobsite to review and discuss project conditions as it relates to the integrity of the roofing assembly.

1.8 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original unopened containers of packaging clearly labeled with manufacturer's name, brand name, instruction for use, all identifying numbers, and U.L. labels.

B. Materials shall be stored in a neat, safe manner, not to exceed the allowable structural capacity of the storage area.

C. Store materials in a clean, dry area protected from water and direct sunlight.

D. Store all adhesives at temperatures between 60°F (15.5°C) and 80°F (26.6°C). If exposed to lower temperatures, restore materials to 60°F (15.5°C) minimum temperature before using.

1.9 PROJECT CONDITIONS

A. Application of the membrane shall not commence nor proceed during inclement weather. All surfaces to receive the membrane shall be free of water, dew, frost, snow and ice.

B. Application of membrane shall not commence nor proceed when the ambient temperature is below 0°F (-17.7°C).

C. Preparation and application of membrane shall be conducted in well-ventilated areas.

D. Over its service life, do not expose membrane or accessories to a constant temperature in excess of 180°F (82°C) (i.e., hot pipes and vents or direct steam venting, etc.).

E. Adhesives contain petroleum distillates and are extremely flammable. Do not breathe vapors or use near an open fire. Do not use in confined areas without adequate ventilation. Consult container or packaging labels and Material Safety Data Sheets (MSDS) for specific safety information.

F. Do not allow waste products (petroleum, grease, oil, solvents, vegetable or mineral oil, animal fat, etc.) to come in contact with the roof membrane. Any exposure to foreign materials or chemical discharges shall be presented to membrane manufacturer for evaluation to determine any impact on the roof membrane assembly performance.

G. Concrete Deck Surface Condition. IMPORTANT - Refer to 1.2 Related Sections.
H. Deck Preparation; refer to Section 3.02 Preparation.

I. General Contractor shall assure that adequate protection is provided after installation so other trades do not damage membrane.

1.10 WARRANTY

A. Upon completion of the work, the contractor shall supply the owner with a single-source warranty of U.S. origin direct from the manufacturer.

B. Each warranty varies in scope and terms. Contact Hydrotech for exact warranty terms and conditions to meet the specific project requirements.

C. Warranties available from the manufacturer:

1. Material Warranty: excludes labor.
   Duration: 20-year

2. Water-tightness Warranty: includes labor and material to maintain watertight condition and replacement of Hydrotech supplied roof substrate board.
   Duration: 20-year

3. Thermal Warranties: includes 80% retention of the original thermal value and remain on the deck at 70 mph wind gust. Duration 20-year

4. Total System Warranties; covers components of the green roof assembly, including membrane, flashing, insulation, Garden Roof® components and pavers. Includes removal and replacement of the Garden Roof® components, pavers and soil (≤24 inches deep) when supplied by and installed per Hydrotech’s requirements and replacement of Hydrotech supplied roof substrate board.
   A. Duration of Membrane/Flashing: 20-year
      (water-tight condition)
   B. Duration of Insulation: 20-year
      (80% of original thermal value; remain on the deck withstanding wind speeds not to exceed 70 mph)
   C. Material Integrity of Garden Roof® Components: 10-year
   D. Duration of Pavers: 10-year
      (will not crack, split or disintegrate due to freeze-thaw)

PART 2 - PRODUCTS

2.1 GENERAL

A. All components shall be obtained as a single-source from the membrane manufacturer to ensure total system compatibility and integrity.

Manufacturer: American Hydrotech, Inc.
303 East Ohio Street
Chicago, Illinois 60611-3318
800-877-6125 or 312-337-4998
FAX: 312-661-0731
Web Site: http://www.hydrotechusa.com
2.2 MATERIALS

A. Membrane:

1. Membrane shall be a hot, fluid applied, rubberized asphalt membrane meeting the CGSB-37.50-M89 standard and other pertinent physical properties:

2. American Hydrotech, Inc., Monolithic Membrane 6125EV® (up to 25% post-consumer recycled-content)

B. Surface Conditioner:
1. Asphaltic surface conditioner for concrete surfaces only. American Hydrotech, Inc., Surface Conditioner

C. Reinforcing:
2. 60-mil (1.5 mm) thick, uncured neoprene (heavy duty) reinforcing sheet. American Hydrotech, Inc., Flex Flash UN®

D. Flashing:
1. 60-mil (1.5 mm) thick, uncured neoprene sheet - American Hydrotech, Inc., Flex Flash UN®

E. Adhesives/Sealant:
1. Contact adhesive to bond elastomeric flashing together - American Hydrotech, Inc., Splicing Cement
2. Contact adhesive to bond elastomeric flashing to an approved substrate - American Hydrotech, Inc., Bonding Adhesive
3. Sealant to seal elastomeric flashing seam edge - American Hydrotech, Inc., Lap Sealant
F. Separation/Root Barrier Protection Course
1. 160-mil thick polyester reinforced, modified asphalt sheet with granular surface and root inhibiting additive. –American Hydrotech, Inc., Hydroflex® RB

G. Insulation:
1. Extruded polystyrene rigid board insulation for use above membrane. - STYROFOAM® Brand insulation Plazamate as manufactured by The Dow Chemical Company, marketed by American Hydrotech, Inc.
   a. Insulation shall meet ASTM C-578, Type VII.
   b. Minimum compressive strength, ASTM D-1621, 40 or 60 psi (276 or 414 kPa) (variance by type of product)
   c. Maximum water absorption by volume per ASTM C-272, 0.1%
   d. Water vapor permeance for 1" product per ASTM E-96, 1.0 perm (max.) (63 ng/Pa/s/m²)
   e. Insulation shall have an R value of 5.0°F ft² h/Btu/in. (0.88 K m²/W) of thickness when tested at 75°F (23.9°C) mean temperature in accordance with ASTM C-518
   f. Product shall be free of CFC's

H. Air Layer
1. Required air space over STYROFOAM® insulation when moisture mat is required shall be composed of a crush-proof core and non-woven filter fabric - American Hydrotech, Inc., Hydrodrain 300.

I. Drainage/Water Retention Component (Edit to project requirements, consult Hydrotech)
1. Three-dimensional, molded panels of recycled polyethylene with drainage channels top and bottom sides and water retention reservoirs top side - American Hydrotech, Inc., Gardendrain®
2. Shallow-Intensive/Lawn Conditions: Gardendrain GR30

J. Filter Fabric

K. Soil
1. Custom growing media mix capable of supporting vigorous growth of the specified vegetation, complying with the following specification. - American Hydrotech, Inc., Shallow-Intensive/Lawn LiteTop® Growing Media

- magnesium \(3 - 15\)

**CEC CAPACITY** \(>5\,\text{cmol/kg}\)

Compost Fraction

- Meet or exceed USEPA Class A standard, 40 CFR 503.13, Tables 1 & 3 (chemical contaminants) and 40 CFR 503.32(a) (pathogens) and/or be permitted in the state of origin to produce Class A material.
- Meet US Compost Council STA/TMECC criteria or equal for Class I or II stable, mature product.
- * Values may be adjusted due to availability of local materials or special project conditions related to plant selection and/or environmental conditions.
- ** Nutrients shall be adjusted with appropriate slow-release fertilizer with micronutrient additions if below lower target range.
- Expanded lightweight aggregate for use as fill material for drainage/water retention component as required. – American Hydrotech, Inc., LiteTop® Lightweight Aggregate 3/8” - 3/4” (9.5 - 20 mm) expanded, lightweight aggregate

**PART 3 - EXECUTION**

### 3.1 INSPECTION

A. The roofing contractor shall examine all surfaces to receive the roofing assembly to verify it is acceptable and proper for the application of the membrane. Refer to American Hydrotech’s Pre-Installation & Application Guidelines.

B. The roofing contractor shall not proceed with the installation of the roof membrane assembly until all roof defects have been corrected.

### 3.2 PREPARATION

A. All surfaces must be dry, smooth, free of depressions, voids, protrusions, clean and free of unapproved curing compounds, form release agents and other surface contaminants.
  1. Cast in-place concrete/Composite deck
a. Poured in place concrete must be monolithic, smooth, and free of voids, spalled areas, laitance, honeycombs, and sharp protrusions.
b. Refer to Section 1.02 of this specification, Division 3.

B. Substrate cleaning:
   1. Thoroughly sweep the substrate which is to receive the roof membrane.
   2. Substrate must also be blown clean using an air compressor to remove any remaining loose debris.
   3. Final check to determine if concrete has been properly cleaned is to apply a test patch of Monolithic Membrane 6125® to the surface and check its adhesion.

3.3 INSTALLATION

A. Surface conditioner application (to concrete substrates only)
   1. Apply the surface conditioner only to concrete using a hand held sprayer evenly at a rate of 300 to 600 SF/gallon (7.4 - 14.7 m²/L) depending on surface texture. Surface conditioner shall “tan” the surface, not blacken it.
   2. Allow sufficient time for the surface conditioner to thoroughly dry prior to the membrane application.

B. Membrane preparation
   1. The membrane shall be heated in double jacketed, oil bath or hot air melter with mechanical agitation, specifically designed for the preparation of a rubberized asphalt membrane.
   2. Heat membrane until membrane can be drawn-free flowing at a temperature range between 350°F (176°C) and 375°F (190°C).

C. Detailing/Flashing
   1. All detailing and flashing shall be done in accordance with the manufacturer’s standard guideline details.
   2. All detailing and flashing shall be completed before installing the membrane over the field of the substrate.

D. Membrane Application
   1. Apply the rubberized asphalt membrane at a rate to provide a continuous, monolithic coat of 90 mil minimum (approximately 2.3 mm), into which shall be fully embedded a layer of the spunbonded polyester fabric reinforcing sheet, followed by another continuous monolithic coat of membrane at an average thickness of 125 mil (approx. 3.2 mm). Total membrane thickness shall be 215 mils average (approx. 5.5 mm), 180 mils minimum.
   2. Overlap fabric reinforcing sheet 1-2 inches (25.4 mm - 50.8 mm) with membrane between sheets.

3.4 SEPARATION/PROTECTION COURSE INSTALLATION

A. Separation/Protection course shall be installed as follows: (Edit to project requirements)
   1. Embed the Hydroflex® RB protection/root barrier protection course into the membrane while it is still hot to insure a good bond.
      a. Overlap adjoining sheet edges 4” (100 mm) and seal the laps with a propane torch.

3.5 WATER TEST

A. The roof area or portions thereof shall be leak tested by means of electronic testing or by ponding water at a minimum depth of 2” (50.8 mm) for a period of 48 hours to check the integrity of the membrane installation.
   1. Electronic beach detection testing shall be required prior to the placement of subsequent overburden in the event of excessive damage to the membrane assembly.
   2. VERIFY that the structure can support the deadload weight of a watertest before testing.
B. If leaks should occur the water must be drained completely and the membrane installation repaired.

3.6 GARDEN ROOF® COMPONENTS INSTALLATION

A. Root Barrier Protection.
   1. Where Hydroflex RB was previously installed, no additional root protection shall be required.

B. Insulation. Where specified, STYROFOAM® brand insulation shall be installed loose-laid in accordance with manufacturer's recommendations.

C. Air Layer. When insulation and Moisture Mat are specified an air layer shall be required between the surface of the insulation and the water retention mat. A layer of Hydrodrain® 300 shall be installed over the insulation. The 4 inch (100 mm) salvage edge of the geotextile fabric overlaps adjoining sheets and can be held in place with duct tape. Extend the Hydrodrain 6” into the Gardendrain GR30 medium below the soil to provide a continuous air layer throughout the roof assembly.

D. Drainage/Water Retention Component.
   1. Gardendrain® GR30 shall be installed with holes through the dimples on top, over the root barrier protection, water retention mat (if used) or STYROFOAM® insulation (if used). Adjacent panels may be butt together or overlapped approximately 1 inch (25 mm).
   2. Gardendrain shall be cut to fit around penetrations, etc. with a heavy-duty utility knife or small toothed saw.
   3. The cups of the Gardendrain shall be filled with lightweight aggregate level with the top surface of the panels.

E. Filter Fabric.
   1. A layer of Systemfilter shall be laid over the Gardendrain, lapping adjacent rolls a minimum of 6 inches (150 mm). Enough material shall be left to be drawn up above the anticipated soil level. Any excess shall be trimmed down to the level of the soil.
      a. Filter fabric shall be laid at penetrations, terminations, etc.

3.7 SOIL INSTALLATION

A. LiteTop soil shall be placed carefully to avoid damage or displacement of other materials such as walls, paving, drainage components, filter fabric, and roofing membrane.

B. LiteTop soil shall be placed to within 1 inch greater than final grade or to a depth of no greater than 8 inches and compacted as described in 3.08.C. below. For final grades less than 8 inches only one round of compaction shall be performed and remaining soil loosely placed such that top of soil exceeds final grade by 1 inch (see 3.08.D. below). For final grades greater than 8 inches, place soil at no greater than 6 inches and repeat procedure until soil has been compacted within 1 inch of final grade.

C. Compaction shall be performed with a 200 – 300 lb. landscape roller or lightly compacted with a hand held mechanical compactor to achieve a 50 – 60 % compaction as determined by ASTM D1557.

D. After compaction remaining soil shall be placed at 1 inch greater than final grade and thoroughly watered or jetted over entire area. Low settled areas shall be filled with additional soil and re-wet to achieve uniform prescribed final grade.

3.8 VEGETATION INSTALLATION

A. Supply and install specified Sod Lawn in accordance with Section 32 9200, after Irrigation system is fully operational to ensure lawn maintenance and survival.
SECTION 33 01 01 - MAINTENANCE AND SUPPORT OF EXISTING UTILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Coordination, maintenance, support, and protection and restoration requirements of existing public and private utilities affected by construction.

B. Existing Utility Facilities: Existing utility facilities include, but are not limited to the following:
   2. UGI – Gas distribution and services.
   5. PPL – Electrical.

C. Related Sections:
   1. Summary of Work: Applicable section of Division 1
   2. Summary of Project: Applicable section of Division 1.
   3. Project Coordination: Applicable section of Division 1.
   4. Regulatory Requirements and Safety: Applicable section of Division 1.
   5. Special Project Procedures: Applicable section of Division 1.
   7. Section 02 41 00: Demolition.
   8. Section 31 20 00: Earth Moving.
   9. Section 31 22 00: Grading.
   10. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
   11. Section 33 40 00: Storm Drainage Utilities.
   12. Section 33 01 03: Utility Relocation.

1.2 DEFINITIONS

A. Facility: Utility structures and system components belonging to a Utility Company including service lines which are used to provide service to the Utility's customers and the product these facilities convey.

B. Utility: The company, agency, authority, owner, or operator of the facility concerned.

C. Abandoned: The use of existing facilities has been discontinued by the owners and operators.
   1. Demolish or remove these facilities insofar as they conflict with the proposed work.

D. To Be Abandoned: Use of a particular facility will be discontinued after written notice from the appropriate utility company or the Engineer has been received by the Contractor that the service is no longer required.
   1. Perform all work necessary to maintain service for as long as is required, which may include temporary support, rerouting, substitution of temporary facility or other required means. Demolish or remove these facilities insofar as they conflict with the proposed work after a written notification has been received from the owner.
   2. Abandon water and sewer facilities to remain in place only after receipt of a written approval.

E. Maintenance: Providing continuous and satisfactory service during construction.
F. To Be Maintained: The support and maintenance, in serviceable condition, of existing facilities during construction. It may include constructing permanent support, temporary support as indicated on the Contract Drawings, or other means necessary, as directed by the Engineer, to maintain continuous service utilizing the existing facility.

1.3 QUALITY ASSURANCE

A. Codes, Regulations, Reference Standards, and Specifications:
   1. Codes and regulations of the jurisdictional authorities.
   2. Published standards of owning utility agency.

1.4 SUBMITTALS

A. In accordance with applicable Division 1 Specification for Submittals, submit the following:
   1. Shop Drawings and Working Drawings:
      a. Submit working and shop drawings indicating plan and scheduling for performance of work to the appropriate utility for review and approval.
      b. Show actual location of existing facilities, interference which these facilities present to new work, proposed method of proceeding with actual construction and details of proposed support systems. Contractor’s support systems shall be constructed similarly to the detail shown on the Contract Drawings.
      c. Do not commence work until written approval has been received from the Engineer and the affected utilities.
   2. Documentation:
      a. Notice of commencement of work:
         2) Give notice of at least two weeks and as otherwise required by the affected utilities prior to date of intended commencement of operations to parties having surface, subsurface or overhead structures and facilities in the construction area.
         3) Provide copies of notices to the Engineer.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Coordinate with the specified utility companies who are furnishing materials for the work to determine availability, locations, and required methods of storage and care of materials prior to incorporation into the work.

B. Transport, store, and handle materials in accordance with the requirements of the utilities.

1.6 JOB CONDITIONS

A. Location of Facilities:
   1. Make every effort to indicate, properly, all existing utilities.
   2. Prior to start of any work, contact the Pennsylvania One Call System (POCS) at 1-800-242-1776 in order to provide for locating and marking underground facilities.
   3. Locations of existing facilities shown on the Contract Drawings are plotted from available records; however, these locations are not guaranteed.
   4. Verify locations of facilities by field investigation within and adjacent to limits of project which may be affected by construction operations. Avoid damage or disruption of facilities during operation.
   5. Upon encountering existing facility which is not shown or upon ascertaining that facility differs from that shown, determine ownership, use, and disposition of such facility and proceed as follows:
a. If facility is abandoned or is to be abandoned, perform necessary work for either
c condition as shown or specified.
b. If facility is to remain in service, perform support and restoration work in
accordance with these specifications and the Contract Drawings.

B. Coordination with Utilities:
1. Establish direct and continual contact with the following list of Utilities and cooperate with
them in all phases of work. Coordinate Contractor’s work schedule with that of the utility
company’s schedule to perform work on the utility owned facility, so that conflicts and
interruption of work sequence will be prevented.
a. Telecommunications, Water, Sewer, Electric:
   The Pennsylvania State University
   Office of Physical Plant
   Physical Plant Building
   University Park, PA 16802
   Telephone: (814) 865-7194
b. Gas:
   Craig Seibler
   UGI Utilities, Inc.
   1233 Cumberland Street
   Lebanon, PA 17042
2. Contact the Utility allowing sufficient time to accomplish the work they are required to
perform giving special consideration to required lead times. Provide the Utility with the
schedule of utility facility relocation/protection to permit coordination with the sequence of
the work.

C. Responsibilities of Contractor:
1. Maintain and protect facilities.
2. Give notice of commencement of work as specified.
3. Notify the Engineer, Owner, and the utility of damage to facilities caused by construction
operations. Pay for repair of such damage; damaged cables will be repaired or replaced
as determined by the utility with all costs borne by the Contractor.
4. Provide accesses for inspection of facilities and for emergency involving utility services.
5. Permit free and clear access to utility personnel for purposes of inspection, maintenance,
providing additional service and construction of new facilities.
6. Pay utility directly if, as an aid to the Contractor’s construction, the utility performs work
not shown.
7. When approved working or shop drawings show temporary facility provided for the
Contractor’s benefit, supply necessary materials, and perform necessary work.

D. If existing pipe is found to be encased with asbestos material, and the work of this contract does
not involve any modification to this pipe nor does the work involve removal of asbestos material,
proceed as follows:
1. Use a temporary barricade to protect the pipe from contact by contractor’s personnel and
equipment. If there is any disturbance or potential for disturbance of asbestos containing
materials, or there is a potential for fiber release, or if any "asbestos abatement"
operations are initiated, conform to the following regulations:
a. PA Act 194 (63PS§2101, et seq) - Asbestos Occupations Accreditation and
   Certification Act.
b. National Emissions Standard for Hazardous Air Pollutants (NESHAPs) [40 CFR
   Part 61].
d. EPA Standards.
e. PADEP Standards.
PART 2 - PRODUCTS

2.1 MATERIAL

A. Backfill: In accordance with Sections 31 20 00: Earth Moving and 31 23 33.13: Trenching and Backfilling for Site Utilities.

B. Utility Facilities: As specified in other Sections of these specifications and as required by the Utility owner.

PART 3 - EXECUTION

3.1 GENERAL

A. Maintain complete in place continuity of service, provide proper support, and protect utility facilities in accordance with the specifications of the utility affected.

B. Support facilities so as not to expose them to undue vibrations. Support and maintenance of these facilities will be subject to inspection by the utility.

C. Repair or replace public utilities damaged during construction at no cost to Owner, to the satisfaction of the utility.

D. Assume the cost for repair or replacement of private utilities damaged during construction, which will be repaired or replaced by the private utility.

E. Conform to the specifications and standard practices of the affected utility owners. Coordinate with utility owners which work shall be done by Contractor and which work shall be done by the utility owner.

F. Provide, install, and maintain all temporary facilities required to provide interim utility service when a utility facility is to be relocated and when a utility facility to be replaced is abandoned prior to replacement.

3.2 EXCAVATION AND BACKFILLING OF UTILITY TRENCHES

A. Excavate and backfill utility trenches in accordance with Section 31 23 33.13: Trenching and Backfilling for Site Utilities and with the requirements of the affected utility.

B. Proceed with caution in areas of utility facilities; expose them by hand excavation or other methods acceptable to facility owner.

3.3 PAVEMENTS, SIDEWALKS, CURBS, AND GUTTERS

A. Where necessitated by utility trenches and in accordance with Section 02 41 00: Demolition, remove pavements, sidewalks, curbs, gutters, other existing features and those which may interfere with the work and may be directed to be removed by the Engineer.

B. Replace removed pavements, sidewalks, curbs, and gutters, other existing features required to be replaced or directed to be replaced by the Engineer, in accordance with other sections of these specifications.
C. Place temporary pavements where necessitated by sequence of operation.

3.04 UNSAFE AND UNSUITABLE UTILITY STRUCTURES

A. General Requirements:
   1. If, upon exposure, condition or location of facility to be supported in place is found to be unsafe for maintenance or support, contact utility for repair or reconstruction procedures.

B. Electric, Communication, and Similar Type Facilities:
   1. If structures containing electrical, communication and similar types of cables shown to be maintained complete in place are found upon exposure to be incapable of being maintained in place because of condition, location or both, contact utility for repair or reconstruction procedures.
   2. When service box, manhole or conduit structure containing electrical or communication cables is broken away, contact utility for repair or replacement procedures.
   3. Exercise care when working in vicinity of telephone structures containing coaxial cable which cannot withstand movement.

3.05 STORM AND SANITARY FACILITIES

A. Except for disconnects required as work of this contract, maintain service in sewer, house connections, and laterals at all times.

B. Prevent entry into sewers of material which might clog, damage, or otherwise interfere with operation of sewer.

C. See Sections 33 40 00: Storm Drainage Utilities and 33 01 03: Utility Relocation.

3.06 WATER DISTRIBUTION AND SERVICES

A. Except for disconnects required as work of this Contract, ensure continuity of service, except as directed by Owner. Arrange and coordinate such work so as to minimize interruption of service.

B. The Contractor shall make disconnects and perform repair or reconstruction work as needed or indicated and as specified in Section 33 01 03: Utility Relocation.

C. Do not disturb, tamper with, or remove fire hydrants, water meters, meter pits, valves, and appurtenances without proper approval from Owner.

3.07 ELECTRIC TRANSMISSION, DISTRIBUTION, AND SECONDARY FACILITIES

A. Except for disconnects required as work of this Contract, maintain continuity and integrity of existing facilities in accordance with the requirements of the electric power company.

B. If repair or reconstruction work is required due to damage or negligence by the Contractor, the Contractor shall pay the costs associated with the repair or reconstruction of the damaged facility.

3.08 TELECOMMUNICATIONS FACILITIES

A. Except for disconnects required as work of this Contract, maintain continuity of existing communication services of telephone company. Support and protect facilities during construction operations as approved by Owner.
B. With the advance notice specified above, Contractor will make disconnects and will perform repair or reconstruction work of telecommunication facilities at no cost to the Contractor. If repair or reconstruction work is required due to damage or negligence by the Contractor, the Contractor shall pay the costs associated with the repair or reconstruction of the damaged facility.

3.09 GAS DISTRIBUTION AND FACILITIES

A. Maintain continuity of existing gas distribution and services. Support and protect facilities during construction operations.

B. If repair or reconstruction work is required due to damage or negligence by the Contractor, the Contractor shall pay the costs associated with the repair or reconstruction of the damaged facility.

END OF SECTION 33 01 01
SECTION 33 01 03 - UTILITY RELOCATION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section specifies the listed utility services which are located near enough to the Project site that construction operations may or will require relocation of the utility as indicated on the Drawings.
   1. Piped Utilities:
      a. Water Service.
      b. Wastewater Sewer Service.
      c. Natural Gas Service.
   2. Electric Service, Conduit, and Cable.
   3. Telephone/Communications Service.
   4. CATV Service.

B. Related Divisions
   1. Electrical: Division 16.

C. Related Sections:
   1. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
   2. Section 33 05 16.13: Precast Concrete Utility Structures.

1.2 REFERENCES

A. Electrical References: The following codes, standards, and approvals shall serve as the minimum standards and quality requirements directly appropriate to the work and workmanship.
   3. Underwriters' Laboratories, Inc. (UL) Listings, Labels, and Approvals shall govern the quality and performance of certain specified Products.

1.3 SUBMITTALS

A. Shop Drawings and Product Data:
   1. Manufacturer's published detail drawings, modified to suit design conditions if required, and Contractor prepared drawings as applicable.
   2. Manufacturer's descriptive literature and specifications covering the product required. Include installation information.

1.4 QUALITY ASSURANCE

A. Source Quality Control: Use products of companies having established reputations in the manufacture of the particular materials, equipment, or apparatus specified. Such products may be of their own make, or products of others for which they assume full responsibility when used in said outfits (which are not manufactured completely by them), and with replacement parts available.

B. Requirements of Regulatory Agencies:
   1. General Requirement: Comply with construction requirements of State, County, or other political subdivision, which requirements exceed these Specifications.
a. Service interruptions are to be kept to a minimum and are to be at times directed by the Owner of the utility. In order to keep the down time to a minimum, the Contractor shall complete as much of the work as possible prior to the interruption.

2. Certificates and Permits: Upon completion of work, and prior to final payment, furnish formal certification of final inspections to the Engineer from authorities having jurisdiction and secure required permits or certificates (if any) from such authorities. Additionally, prepare detailed diagrams and drawings which may be required by those authorities having jurisdiction.

3. Water Service: Consult the Pennsylvania State University for specific requirements concerning the work of connecting into the public water system and materials and methods to be used for such connection.

4. Wastewater Sewer Service: Consult the Pennsylvania State University for specific requirements concerning the work of connecting into the public sewer system and materials and methods to be used for such connection.

5. Natural Gas Service: Consult UGI Industries, Inc., Gas Division, for specific requirements concerning the work of connecting into the public gas system and materials and methods to be used for such connection.

6. Electric Service: Consult the Pennsylvania State University for specific requirements concerning the work of connecting into the electric system and materials and methods to be used for such connection.

   a. Code Compliance Inspection: Have the work inspected by an authorized inspection agency for compliance with National Electrical Code and obtain certificates of approval, acceptance, and compliance with code regulations. Work shall not be deemed complete until such certificates have been delivered to the Owner.

7. Telephone Service: Consult the Pennsylvania State University for specific requirements concerning the work of connecting into the Telephone system and materials and methods to be used for such connection.

8. CATV Service: Consult the Pennsylvania State University for specific requirements concerning the work of connecting into the CATV system and materials and methods to be used for such connection.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Transport and handle products in a manner recommended by the respective manufacturers of such to prevent damage and defects.

B. Store Products in accordance with manufacturer’s recommendations to avoid shock or prevent physical damage and defects.

1.6 SITE CONDITIONS

A. Environmental Requirements:
   1. Keep trenches dewatered until pipe joints have been made and concrete work, if any, has cured.
   2. Under no circumstances lay pipe (or conduit) in water or on bedding containing frost.
   3. Do not lay pipe (or conduit) when weather conditions are unsuitable, as determined by the Engineer, for pipe (or conduit) laying work.

B. Seasonal Restrictions:
   1. Where seasonal restrictions are not specified in Water Service requirements, restrict work of uncovering and connecting to existing water mains to the time period between May first and October first. This requirement may be waived at the discretion of the Engineer depending on environmental conditions if at the request of the Contractor another time for connection is desired.
C. Protection:
1. Exercise care during utility uncovering and connecting work to confine operations to the facilities as indicated on the Drawings. The physical means and methods used for protection are at the Contractor's option. However, the Contractor will be completely responsible for replacement and restitution work of whatever nature to adjacent structures and construction.
2. Exercise every precaution against flotation of both existing and new pipe (or conduit) and in-line or on-line structures. Correct damage from flotation to the satisfaction of the Engineer.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Provide materials and equipment (Products) for incorporation in the work that are new and unused standard products of recognized reputable manufacturers.
1. For each category of Products, provide Products of the same manufacturer and type.
2. Provide Products that match existing materials and are suitable for the type of service required.
3. Use pipe and fittings designed to withstand imposed trench loadings and conditions at the various locations.
4. Flexible Pipe Coupling: Clamped design with virgin PVC coupling and two type #305 stainless steel bands, such as manufactured by Fernco Joint Sealer Co. (Flexible Couplings distributed by the General Engineering Company, Frederick, Maryland).

B. Trenching and Backfilling Materials: Conforming to requirements of Section 31 23 33.13: Trenching and Backfilling for Site Utilities.

PART 3 - EXECUTION

3.1 INSPECTION

A. Inspect each section or length of pipe (and conduit), and each fitting, before laying for defects that would affect performance.

B. Promptly remove rejected Products from the Project site.

3.2 PREPARATION

A. Field Measurement: The Drawings are in general indicative of the Work with symbols and notations for clarity. However, the Drawings are not an exact representation of all conditions involved, therefore, layout piping to suit actual field measurements.
1. Submit details of proposed departures necessitated by field conditions or other causes to Engineer for approval.
2. No extra compensation will be made for Work due to differences between indicated and actual dimensions.

B. Earthwork: Perform earthwork for buried piping (and conduit) as specified in Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
1. Rest each section of pipe on pipe bedding for the full length of its barrel, with recesses excavated for pipe joints so joints can easily be made.
2. Backfill recesses with bedding material immediately following pipe joining operations.

3.3 RELOCATION

A. General Requirements: Construct piping (and conduit) from full lengths of pipe (and conduit) using short sections only for runs of less than full pipe (and conduit) length. Use reducing fittings where reduction in pipe sizes is necessary. Bushings will not be accepted.
1. Use only the proper and suitable tools and apparatus for proper and safe handling, lowering into trench and laying of pipes (and conduit).
2. Clean piping (and conduit) interior prior to installation and following installation. Keep open ends of piping (and conduit) attachment openings on equipment capped or plugged until actual connection.
3. Take up and relay pipe that is not laid true to required alignment or grade or has its joints disturbed after laying. No deviation from the required line and grade permitted, except with approval of the Engineer.
4. Pipe Joining: Exercise care when making the pipe joints and make joints in accordance with the pipe material manufacturer’s recommendations and the following requirements. In each instance of pipe joining, those portions of pipes involved must be absolutely clean just prior to assembly. If a joint is extremely difficult to assemble or sealing is not affected, disassemble the joint and correct the difficulty if possible. Remake the joint using new materials when necessary.

B. Water Service Pipe Relocation: Unless indicated otherwise, install piping with not less than four feet of cover.
1. Reaction or Thrust-backing: Stall reaction or thrust backing, or restrained joints on buried DIP at changes in direction of pipe runs.
   a. Use 3,000 pounds (Class B) concrete placed between solid undisturbed ground and fitting to be anchored. Perform concrete work as specified in Section 03 30 53: Miscellaneous Cast-in-Place Concrete.
   b. Minimum area bearing on pipe and on ground as indicated on Drawings.
2. Joint Restraints: Install on buried DIP at changes in direction of pipe runs, and at terminal ends of pipe runs in accordance with the following table:

   DUCTILE IRON PIPE RESTRAINED JOINT DIMENSIONS
   (In feet of straight pipe for each leg)

3. Setting Valves, Stops, and Boxes:
   a. Unless otherwise directed by the Engineer, set valves, curb stops and boxes truly vertical.
   b. Set valve and curb stop boxes neatly to grade and in such a way that the box does not transfer shock or stress to the valve or stop. Exercise care to center the box over the wrench nut of the valve or stop.
4. **Connection of Relocated Main to Existing Water Main:** Make connection in conformance with Water Service utility requirements exercising necessary precaution to prevent contamination to the existing main.

C. **Wastewater Sewer Service Pipe Relocation:** Lay pipe proceeding upgrade true to line and grades indicated. Lay bell and spigot pipe with bell end upgrade. Lay tongue and groove pipe with groove end upgrade.
   1. No wedging or blocking permitted in laying pipe unless by written order of Engineer.
   2. Where necessary to field cut pipe use approved pipe cutter, milling cutter, or abrasive wheel saw.
   3. Before joints are made, bed each section of pipe full length of barrel with recesses excavated so pipe invert forms continuous grade with invert of pipe previously laid. Exercise care to insure that each length abuts against the next in such manner that no shoulder or unevenness of any kind occurs along inside bottom half of pipe line. Do not bring succeeding pipe into position until the preceding length is embedded and securely in place.
   4. Walking or working on completed pipe line, except as necessary in tamping and backfilling, not permitted until trench is backfilled one-foot deep over top of pipes.

5. **Connections of Pipes to New Manholes:** As specified in Section 33 49 00: Storm Drainage Structures.

6. **Connections of Pipes to Existing Manholes:** In the case where the Wastewater Service utility has no requirements concerning such connections, make connections as follows:
   a. Cut required pipe opening by such methods so as to prevent cracking and spalling of manhole material.
   b. Make opening of sufficient size to accommodate the pipe with an installed PVC Waterstop and one (1) inch of annular grout space.
   c. PVC Waterstop of gasket design and composed of virgin polyvinyl chloride (PVC); similar to CMA Concrete Manhole Adapter by Fernco Joint Sealer Co. (distributed by The General Engineering Co., Frederick, Maryland), or equal.
   e. Form a new invert channel in the existing manhole base to properly conduct the flow through the existing manhole.

7. **Drop Connections:** In the case where a drop connection is required, make such connection as indicated on the Drawings.
   a. Use the same pipe material to construct the drop connection as is used to construct the wastewater building sewer of this Contract.

8. **Connection of Relocated Piping to Existing Piping:**
   a. When existing piping ends in a bell, remove the bell by cutting with a mechanical saw. Removing the bell or other pipe sections by hammering or chiseling is not permitted.
   b. Make connection of relocated piping to existing piping using Flexible Pipe Couplings. Provide reducing Flexible Pipe Coupling where required to accommodate differing pipe material.

D. **Natural Gas Service Pipe Relocation:** In general, install gas piping in accordance with requirements of NFPA 54 (National Fuel Gas Code) and the Natural Gas Service utility requirements exceeding NFPA.
   1. Following gas piping installation, and prior to concealing gas piping in any manner, conduct a test of the protective coating on both pipe and fittings using an approved type Holiday detector. Make repairs, if any, using the appropriate materials consistent with those provided on pipe and fittings. Repeat tests on such repairs.

E. **Underground Conduit System Relocation:** Install underground conduit systems in accordance with Article 300-5 of the NEC and the applicable Division 16 specification section.
3.4 FIELD QUALITY CONTROL

A. General Requirements: Conduct tests specified herein so that each pipe line installed in the Project is tested. Conduct tests of every kind in the presence of and to the satisfaction of the Engineer.

1. Equipment: Provide tools, materials (including water), apparatus, and instruments necessary for pipe line testing.
2. Repair and Retest: When a pipe line fails to meet test requirements specified herein, conform to the following:
   a. Determine source or sources of leakage.
   b. Repair or replace defective material, and if a result of improper workmanship, correct such.
   c. Conduct additional tests to demonstrate that pipe line meets specified test requirements.
3. Accuracy Proof: Furnish acceptable proof to the Engineer that testing apparatus, pressure gauges, etc. have been recently checked and calibrated as applicable prior to use on this Project.
4. Notification: Give the Engineer a minimum of three days advance notice of the times when pipe line acceptance testing will be conducted.

B. Water Service Pipe Line Testing and Disinfecting: Conduct testing and disinfecting in accordance with the Pennsylvania State University requirements, or in accordance with the following requirements, whichever is more stringent.

1. Prior to testing, allow those installed sections of water piping protected by concrete reaction blocking to stand undisturbed for at least seven days from concrete pour. Provide temporary blocking as required.
2. The Contractor may, at his option, completely backfill the trench or partially backfill the trench over the center section of each pipe length prior to performing the pressure test.
3. Fill the section of installed water piping being tested with water a minimum of twenty-four hours prior to testing. During filling insure the piping is free of air. Use potable water for filling.
4. Line Acceptance Test: After the water line is constructed, backfilled (as stated above), and successfully cleaned, perform a hydrostatic line acceptance test as follows:
   a. Seal water line at downstream end with a suitable pipe plug.
   b. Fill water line with potable water (as stated above).
   c. Raise hydrostatic pressure to 150 psi.
   d. Maintain test pressure for a period of not less than one hour.
   e. Also conduct a leakage test for a duration of two uninterrupted hours at the same pressure specified for the hydrostatic test and provide a means for measuring leakage. Piping being tested will not be accepted if leakage is greater than that determined by the formula $L = ND P$ in 7400 which L is the allowable leakage in gallons per hour; N is the number of joints in the length of pipeline tested; D is the nominal diameter of the pipe in inches; and P is the average test pressure in pounds per square inch (based on test pressure indicated above, measured at the low point).
   f. The leakage test may be conducted simultaneously with the pressure test, provided a suitable means of measuring leakage is provided and a record of water added to the piping being tested is kept for the two hour test period.
5. Disinfection of Water Line: Disinfect the pipe and connections installed as follows:
   a. Observe every precaution during the installation of the connection to prevent foreign material and trench water from entering the pipe and fittings during their installation.
   b. Swab the interior of pipe and fittings with a five percent hypochlorite solution. A five percent hypochlorite solution can be obtained by mixing approximately three pounds of granulated calcium hypochlorite with five gallons of water.
c. After the pipe, fittings, and valves have been swabbed, then thoroughly flush with potable water.

C. Wastewater Sewer Service Pipe Line Testing: Conduct testing in accordance with the Pennsylvania State University requirements, or in accordance with the following requirements, whichever is more stringent.
   1. Partially backfill the trench over the center section of each pipe length prior to performing line acceptance test.
   2. Line Acceptance Test: After the sewer line is constructed, backfilled (as stated above), and successfully cleaned, perform a hydrostatic head line acceptance test as follows:
      a. Seal sewer line by insertion of a test plug at point of connection with the public sewer and fill sewer line with water.
      b. Apply a head of water of not less than ten feet and maintain head for a period of not less than fifteen minutes, and longer as required to inspect each pipe joint in the sewer line.
      c. A test will be considered successful when the head of water is maintained unaided for fifteen minutes continuously and every joint in the sewer line is proven leak free.

D. Natural Gas Service Pipe Line Testing: Conduct testing in accordance with UGI service requirements, or in accordance with the following requirements, whichever is more stringent:
   1. The Contractor may, at his option, completely backfill the trench or partially backfill the trench over the center section of each pipe length prior to performing line acceptance test.
   2. Line Acceptance Test: After the natural gas line is constructed, backfilled (as stated above), and successfully cleaned, perform a pressure test as follows:
      a. Isolate gas line from the main gas line and the metering. Does not included regulation, which must be leak tested separately.
      b. Apply a pressure of at least six inches mercury or three pounds gauge.
      c. Maintain pressure for a period of not less than ten minutes and longer as required to inspect each pipe joint in the gas line.
      d. A test will be considered successful when the pressure is maintained for ten minutes continuously with the source of pressure isolated or disconnected. Measure pressure with a mercury manometer or slope gauge or an equivalent device so calibrated as to be read in increments of not greater than one-tenth (1/10) pound.

E. Electrical Service Testing: Perform testing in accordance with applicable Division 16 specification section.

END OF SECTION 33 01 03
SECTION 33 05 16.13 - PRECAST CONCRETE UTILITY STRUCTURES

PART 1 - GENERAL

1.1  STIPULATION

A. The specifications sections “General Conditions”, “Special Requirements,” and “General Requirements” form a part of this section by reference thereto and shall have the same force and effect as if printed herewith in full.

1.2  SUMMARY

A. Section Includes:
   1. Concrete rectangular manholes (cast in place and precast concrete utility structures) for Mechanical work.
   2. Precast concrete rectangular manholes (precast concrete utility structures) for Electrical and Telecommunication work.
   3. Concrete trenches and utility tunnel for steam, condensate, and compressed air piping.
   4. Concrete pipe anchors for Mechanical work.

B. Related Sections:
   1. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
   2. Mechanical Insulation: Applicable Division 17 specification.
   3. Section 33 49 00: Storm Drainage Structures.
   4. Section 03 30 53: Miscellaneous Cast-In-Place Concrete.
   5. Section 03 60 00: Grouting.

1.3  REFERENCES

A. American Society for Testing and Materials (ASTM):
   1. ASTM A 185, Specification for Welded Steel Wire Fabric for Concrete Reinforcement.
   2. ASTM A 615, Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
   3. ASTM C 31, Methods of Making and Curing Concrete Test Specimens in the Field.
   4. ASTM C 32, Specification for Sewer and Manhole Brick (Made from Clay or Shale).
   5. ASTM C 33, Specification for Concrete Aggregates.
   7. ASTM C 144, Specification for Aggregate for Masonry Mortar.
  11. ASTM C 309, Specification for Liquid Membrane-Forming Compounds for Curing Concrete.
  15. ASTM D 624 - Rubber Property - Tear Resistance.
  17. ASTM D 1004 - Initial Tear Resistance of Plastic Film and Sheeting.
  18. ASTM D 2240 - Rubber Property - Durometer Hardness.
20. **ASTM E 96 - Water Vapor Transmission of Materials.**

**B. American Association of State Highway and Transportation Officials (AASHTO) Standards as referenced throughout these Specifications.**

1. ACI 304, Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete.
2. ACI 308, Standard Practice for Curing Concrete.
3. ACI 309, Guide for Consolidation of Concrete.
4. ACI 318, Building Code Requirements for Reinforced Concrete.

**D. Federal Specifications:**

**1.4 SUBMITTALS**

**A. Shop Drawings and Product Data:** Submit product manufacturer's published detail drawings, modified to suit design conditions if required, and Contractor prepared drawings as applicable, for each product specified herein. Drawings shall indicate the following as minimum requirements:
1. Precast concrete unit dimensions; interior, exterior, and thickness.
2. Details of reinforcing, inserts, anchors, connections, accessories, joints and openings.
3. Precast concrete unit installation and setting details based on manufacturer’s shop drawings and the Professional’s Drawings.

**B. Submit manufacturer's descriptive literature and specifications covering the product specified. Include installation information.**

**C. Certificates:** Submit certified records or reports of results of shop tests, such records or reports to contain a sworn statement that shop tests have been made as specified.
1. Manufacturer's sworn certification that components and products will be manufactured in accordance with specified reference standards for components and products.
2. Manufacturer's sworn certification that the materials used are in compliance with the specified requirements.
3. Manufacturer's sworn certification that manhole frame and cover tensile test bars were poured from the same iron as castings they represent.

**1.5 QUALITY ASSURANCE**

**A. Source Quality Control; Manhole Frames and Covers:** As specified in Section 33 49 00: Storm Drainage Structures.

**B. Precast Concrete Producer Qualifications:** Provide documentation from the precast concrete unit producer that their products have been in continuous service for five years minimum.

**C. Design Criteria:** Provide documentation that the precast concrete utility structures are designed to meet the minimum structural loading requirements of AASHTO HS20-44, ACI 318, and the loads exceeding AASHTO and ACI requirements as may be indicated on the Drawings.

**D. Design Criteria shall include documentation that the structure units have negative buoyancy when subjected to the 100-year flood condition indicated on the Drawings.**
1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Handling: Transport and handle precast concrete units and their associated components, and other products specified herein, in a manner recommended by their respective manufacturers to prevent damage and defects of whatever nature.

B. Through-wall lifting holes are not permitted in structure component construction.

C. Storage: Store precast concrete structure components in accordance with their manufacturer's recommendations to prevent joint damage and joint contamination. Exercise such care in storage of other specified products as recommended by their respective manufacturers.

PART 2 - PRODUCTS

2.1 BASIC MATERIALS

A. Acceptable Manufacturers:
   1. A.C. Miller Concrete Products, Inc.
   2. Penn-Cast Products, Inc.

B. Aggregate Materials: Conforming to ASTM C 33. Both fine and coarse aggregates shall be free of deleterious substances which cause reactivity with oxidized hydrogen sulfide.

C. Reinforcing: Bars conforming to ASTM A 615 Grade 60, and wire fabric conforming to ASTM A 185.

D. Cast-In-Place Concrete Products: As specified in Section 03 30 53: Miscellaneous Cast-in-Place Concrete.

E. Non-Shrink Non-Metallic Grout: As specified in Section 03 60 00: Grouting.

F. Masonry Products: Provide the following products to field form the required adjustment to grade of the cast iron manhole frame and covers:

G. Waterproofed Mortar: Conforming to requirements of ASTM C 270 for Type M, 2500 psi. Parts by volume include: One part cement, 1/4 part lime, and sand at not less than 2-1/4 nor more than three times the sum of the volumes of cement and lime used and of the following materials:

H. Waterproofing Agent: Medusa Waterproofing Powder by Medusa Portland Cement Co.; Hydratite by Grace Construction Materials; or Hydrolox by Chem-Master Corp. Add the Medusa product in the ratio of two pounds per bag of cement; add the other products per manufacturer's recommendations.

I. Portland Cement: Conforming to ASTM C 150, Type I.

J. Hydrated Lime: Conforming to ASTM C 207, Type S.

K. Sand: Conforming to ASTM C 144.

L. Water: Clean and free from deleterious amounts of acids, alkalis, and organic materials.

M. Drainage Structure Brick: Masonry units made from clay or shale conforming to physical and dimensional requirements of ASTM C 32, Grade MS.
N. Preformed Plastic Sealing Compound: Use for section-to-section precast component joint sealing. Provide product conforming to Fed. Spec. SS-S-210A, Type 1, Rope Form, of either bitumastic base compound or butyl rubber base compound, and shipped protected in a removable two-piece wrapper.
   1. Dimensions: Size the cross-section of rope form to provide squeeze-out of material around entire interior and exterior circumference of each structure section joint when joint is completed.
   2. Acceptable Manufacturers:
      a. K.T. Snyder Company, Inc.; RAM-NEK.
      b. K.T. Snyder Company, Inc.; RUB'R-NEK.
      c. Hamilton Kent Manufacturing Company; KENT-SEAL No. 2.

O. Waterstop (Expanding-Type) Sealant: The pipe and conduit seal to be used with multiple pipe groupings and duct banks shall be a specially formulated joint waterstop sealant which swells on contact with water. The waterstop sealant shall be sized small enough so as not to expand the Non-Shrink Non-Metallic Grout fill material out of the pipe or conduit opening.
   1. Adhesive Binder: Install the waterstop on prepared pipelines or conduits entering manholes using the waterstop manufacturer's standard adhesive binder.
   2. Acceptable Manufacturers:
      a. Greenstreak; Hydrotite VCJ.

P. Waterstop (Mastic type, self sealing): Single component self-sealing mastic waterstop, plus primer.
   1. Acceptable Manufacturers:
      a. Greenstreak; Lockstop

Q. Waterproof Coating: Provide asphalt compound coating of either the solvent type or the emulsion type. However, mixtures of the two types in the Project are not permitted.
   1. Solvent Type: Brush or spray-on asphalt compound, cold-applied and conforming to Federal Specification SS-A-701 B.
   2. Emulsion-Type: Brush or spray-on asphalt-base, clay emulsion with fibers, cold-applied and conforming to Federal Specification SS-R-1781.
   3. Acceptable Manufacturers:
      a. W. R. Meadows, Inc.; SEALMASTIC.
      b. Cooper Creek.
      c. Or equal.
   4. Application: The coating may be either factory or field applied. Apply coating to the exterior of the structure components.
      a. Apply coating in two coats at the rate of 75 to 100 square feet per gallon per coat. Allow 24 hours drying between coats.

R. Insulation for Mechanical Work: As specified in applicable Division 17 specification section.

2.2 REINFORCED CONCRETE PIPE

A. Reinforced Concrete Pipe: ASTM C 76, Class II or higher, with Wall Type B; wire reinforcement; inside nominal diameter of 96 inches.

B. Fittings: Reinforced concrete.

C. Joints: ASTM C 443, rubber compression gasket.

2.3 SHEET MEMBRANE WATERPROOFING

A. Manufacturers
1. Polyken - Product 660.

B. Membrane Materials
2. Membrane: 60 mils thick; 36 in. wide roll; conforming to the following criteria:
3. Properties Test Results
4. Tensile Strength: ASTM D 412 500 min.
5. Elongation: ASTM D 412 300 min.
6. Water Absorption: ASTM D 5710 .12% by weight
7. Moisture Vapor: ASTM E 96 0.8 perms
8. Seaming Materials: As recommended by membrane manufacturer.

C. Adhesive Materials
1. Surface Conditioner: As recommended by membrane manufacturer.
2. Adhesives: As recommended by membrane manufacturer.
3. Thinner and Cleaner: As recommended by adhesive manufacturer, compatible with sheet membrane.

D. Attachment Materials
1. Reglet Strip Devices: See Section 03 30 53: Miscellaneous Cast-In-Place Concrete.
2. Sealant: As recommended by membrane manufacturer.

2.4 MANUFACTURED UNITS

A. Fiberglass Ladders: Provide vertical ladders designed and fabricated to comply with OSHA rules and regulations.
1. Material: Pultruded from heavily inlaid glass utilizing a synthetic veil for maximum chemical and ultraviolet resistance.
2. Minimum Glass Content: 50 percent, comprising both longitudinal strands and continuous strand mat so aligned as to provide both longitudinal and transverse strength and prevent splitting due to laminar shear.
3. Fire Retardance: FRP shapes shall have Class I fire retardance, with an ASTM E 84 flame-spread rating of 25 maximum.
5. Acceptable Manufacturers:
   a. Swager Communications Corp. Inc.
   b. IMCO Reinforced Plastic Inc.

B. Manhole Covers and Frames: ASTM A 48, Class 30B Cast iron construction, machined flat bearing surface, removable bolted watertight lid, closed lid design.
1. Provide sizes indicated on drawings manufactured by Neenah Foundry Company.

C. Manhole Steps: Ductile Iron rungs; formed integral with manhole sections.

D. Pipe and Conduit Seals: The Contractor shall have the option to provide the following types of pipe seals unless indicated otherwise on the Drawings:
1. Prefabricated Seals: Sleeve type design pipe seal designed to be cast integrally in the casting process of the precast concrete structure base or wall section. In general, the pipe seal shall conform to the requirements of ASTM C 923, and shall incorporate a positive compression fit gasket designed to seal around the pipe or conduit.
2. Sleeve Type Seal: Sleeve type pipe or conduit seal used for core-drilled connection of piping or conduit to structures. In general, the seal shall conform to the requirements of ASTM C 923 and shall incorporate a positive compression fit of the gasket to both the core-drilled opening and the pipe or conduit.
3. Acceptable Manufacturers:
   a. Press-Seal Gasket Corp., Concrete Products Supply Co.; PSX Seal.
4. Link-Seal (Modular, Mechanical Type): Modular, mechanical type seal used for core-drilled or precast openings. Seal component construction as follows:
   a. The seal shall consist of inter-locking synthetic rubber links shaped to continuously fill the annular space between the pipe and the wall opening.
   b. The elastomeric element of the seal shall be sized and selected in accordance with the seal manufacturer's recommendations. Elastomeric element shall conform to ASTM D 2000 requirements for EPDM material.
   c. The hardware provided in the seal shall be as recommended by the seal manufacturer for buried service such as will exist at the project site.
   d. Acceptable Manufacturers:
      1) Thunderline Corporation; Link-Seal.

2.5 PRECAST CONCRETE COMPONENTS

A. Manufacturers:
   1. A.C. Miller Concrete Products, Inc.
   2. Penn-Cast Products, Inc.

B. Materials and Fabrication: Provide steel reinforced precast concrete structure of either one piece construction, or component construction, conforming to the following:
   1. Forming: Use form of sufficient design and bracing to maintain alignment and prevent deforming under pressure during pouring and vibrating of concrete.
   2. Reinforcing: Bars conforming to ASTM A 615 Grade 60, and wire fabric conforming to ASTM A 185.
   3. Concrete: Composed of Portland cement conforming to ASTM C 150, Type 1 and aggregate conforming to ASTM C 33. Both fine and coarse aggregates shall be free of deleterious substances which cause reactivity with oxidized hydrogen sulfide. Materials shall be accurately weighed at a certified central batching facility prior to mixing. Concrete mixture shall contain cement content in amounts adequate to produce a minimum strength of 5,000 psi concrete at 28 days.
      a. The concrete strengths shall be as confirmed by cylinder strength tests in accordance with ASTM C 31 and C 39.
   4. Placing: Pour concrete in a continuous operation, without segregation or loss in ingredients, until completion of unit; all in accordance with ACI 304. Consolidate concrete by mechanical internal vibrating equipment.
   5. Curing: In general, perform concrete curing by water curing, sheet form curing, or sealing methods; all in accordance with ACI 308.
      a. If steam curing is used, cure units in forms after initial set at temperatures not to exceed 160 degrees F with temperature rise above ambient not to exceed 40 degrees F per hour.
      b. After steam curing and form stripping continue curing by water spray or liquid membrane curing using compounds conforming to ASTM C 309.
   6. Dimensions:
      a. Side Walls: Unit dimensions as indicated on Drawings and formed with pipe opening provisions.
      b. Removable Top: Top dimensions as indicated on Drawings with openings sized to accommodate manhole frame and cover.

C. Precast Base, Wall, and Top Sections: Designs as indicated on the Drawings, materials, and construction as specified previously under Materials and Fabrication.
   1. Removable Top Section: Top section of flat slab design, dimensions as indicated on Drawings. The access hatch shall be either field installed or factory installed integral with the top section during the casting process.
2. Base and Wall Sections: The base and wall sections shall be cast as a single unit except where the base section is required to be separate for installation purposes. Where the depth of the structure exceeds the limitation of single unit construction, provide the appropriately sized riser sections to meet proposed grade.

D. Waterproof Coating: Of materials as specified previously, and either shop or field applied to the precast concrete components.
   1. Apply coating in two coats at the rate of 75 to 100 square feet per gallon per coat. Allow 24 hours drying time between coats.

PART 3 - EXECUTION

3.1 PREPARATION

A. Earthwork: Perform earthwork for precast concrete utility structures installation as previously specified in 31 23 33.13: Trenching and Backfilling for Site Utilities and according to the following:
   1. Protection: During earthwork operations, keep pipe or conduit and structure interiors cleared of debris as construction progresses.
   2. Excavation Limits: Make excavations for the structures to a nearly vertical plane beginning at bottom of excavation one-foot beyond structure footer to two-feet beyond top of the structure.
      a. The excavation limits specified herein are based on allowable payment quantities in the Project.
      b. Backfill spaces outside structures using material as specified in Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
      c. If surface pavement of any type is encountered (vehicle or pedestrian ways), cut such pavement to a rectangular shape. Make limits of cut not to exceed one-foot beyond top-of-excavation limit as specified previously.
      d. No additional compensation allowed should excavation limits or surface pavement cut limit be exceeded. Additionally, should bottom-of-excavation limit be exceeded, provide at no increase in Contract Price, concrete cradle or encasement for pipes or conduits entering or leaving the structure.

3.2 CONSTRUCTION METHODS

A. Cast-In-Place Concrete Construction: Construct in accordance with design and dimensions indicated on Drawings.
   1. Concrete Work: Form, reinforce and pour concrete in accordance with requirements of Division 3 - Concrete.
      a. Use Class A (4000 psi) concrete as specified in Section 03 30 53: Miscellaneous Cast-In-Place Concrete, unless indicated otherwise on Drawings.

B. Precast Concrete Utility Structures Installation: Unless indicated otherwise, install structures on a six inch deep compacted layer of Aggregate Backfill or Foundation Backfill as selected by the Professional in the field.
   1. Section Seals Installation: Install Preformed Plastic Sealing Compound between sections (if any), and to seal the top section on the structure (if any). Install sealing compound in accordance with manufacturer's recommendations and the following:
   2. Prime joint surfaces if required by sealing compound manufacturer.
   3. If sealing compound is installed in advance structure component joining, leave exposed half of two piece protective wrapper in place until just prior to section joining.
4. Use sealing compound as the sole element utilized in sealing structure component joints from internal and external hydrostatic pressure.

5. Arrange and pay for the sealing compound manufacturer's representative to be present for first installation of the compound to instruct workmen on proper installation methods of sealing compound and to be present while structure components are being installed.

6. Following structure component installation, trowel sealing compound surface smooth and flush with interior face of structure.

C. Individual Pipe or Conduit Seals in Structures: The Contractor is allowed the option to seal individual pipes or conduits entering the Structure with Prefabricated Seals, Sleeve Type Seals, or Link-Seals. Install the Pipe or Conduit Seals in accordance with the manufacturer's installation instructions.

1. Set pipe or conduit in the seal so that an equal annular space is created on the interior and exterior of the wall of the manhole base section.

2. Following pipe or conduit installation through the seal, grout the annular space at the pipe connection, on both sides of the wall, to the spring line of the pipe. Finish the grout smooth and flush with face of manhole.

D. Multiple Pipe Groupings and Conduit Banks Seals in Structures: Seal multiple pipe groupings and conduit banks into the structure using Non-Shrink Non-Metallic Grout fill and Waterstop (Expanding Type) Sealant. Install the waterstop material to be centered within the wall thickness of the structure.

E. Waterstop Installation: Install the Surface (Expanding Type) Waterstop on the pipes or conduit bank and in accordance with manufacturer's recommendations and the following:

1. Install the waterstop on properly prepared substrates and in accordance with the environmental requirements stated in the manufacturer's instructions.

2. Under no circumstances shall the waterstop material be allowed to become wet prior to the grout installation.

3. Grout Filling the Annular Space: Install Non-Shrink Non-Metallic Grout to fill the annular space between the pipes or conduit bank and the structure. Trowel the finished grout installation smooth and flush with the structure surfaces, both inside and outside.

4. General requirements for Non-Shrink Non-Metallic Grout installation as specified in Section 03 60 00: Grouting.

F. Cast Iron Manhole Frame and Cover Installation: As specified in Section 33 49 00: Storm Drainage Structures.

G. Piping and Equipment Installation: For piping and equipment installation, see other applicable Specifications Sections of the Project Manual.

3.3 INSTALLATION OF MEMBRANE WATERPROOFING

A. Examination

1. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of waterproofing system.

2. Verify items which penetrate surfaces to receive waterproofing are securely installed.

B. Preparation

1. Protect adjacent surfaces not designated to receive waterproofing.

2. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions. Vacuum substrate clean.

3. Do not apply waterproofing to surfaces unacceptable to manufacturer or applicator.

4. Seal cracks and joints with sealant materials using depth to width ratio as recommended by sealant manufacturer.
5. Apply surface conditioner at a rate recommended by manufacturer. Protect conditioner from rain or frost until dry.

C. Installation
1. Install membrane waterproofing in accordance with manufacturer’s instructions.
3. Remove release paper layer. Roll out on substrate with a mechanical roller to encourage full contact bond.
4. Lap sides and ends in accordance with membrane manufacturer’s instructions.
5. Overlap edges and ends and seal with contact adhesive, minimum 6 in. Seal permanently waterproof. Apply uniform bead of sealant to joint edge.
6. Reinforce membrane with multiple thickness of membrane material over joints, whether joints are static or moving.
7. Weather lap joints on sloped substrate in direction of drainage. Seal joints and seams.
8. Install flexible flashings. Seal watertight to membrane.
9. Seal membrane and flashings to adjoining surfaces.
10. Extend membrane minimum of 6 in. onto vertical surfaces.
11. Seal items penetrating membrane and install counter flashing membrane material.

D. Protection of Finished Work
1. Protect finished work.
2. Do not permit traffic over unprotected or uncovered membrane.

END OF SECTION 33 05 16.13
THIS PAGE INTENTIONALLY LEFT BLANK
SECTION 33 11 13 - WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The work specified in this Section consists of construction of the on-site private water system pipelines and appurtenances.

B. Related Sections:
   1. Section 31 23 3 - Trenching, Backfilling and Compaction.
   2. Section 03 30 53 - Cast-In-Place Concrete.

1.2 REFERENCES

A. American National Standards Institute (ANSI):

1.3 SUBMITTALS
A. Shop Drawings and Product Data: Submit Shop Drawings, Catalog Cuts, or other data for products furnished in this Section.

B. Certificates: Certified records or reports of results of shop tests to contain a sworn statement that shop tests were made as specified.
   1. Manufacturer's affidavit stating that products furnished comply with applicable provisions of referenced standards and modifications described in this Section.

1.4 QUALITY ASSURANCE

A. Ductile Iron Pipe: Test in accordance with AWWA C151 (ANSI A21.51).

B. Fittings: Test gray-iron and ductile-iron fittings in accordance with AWWA C110 (ANSI A21.10) and AWWA C153 (ANSI A21.53) Compact Fittings.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle and store pipe materials, and other specified products, as recommended by respective manufacturers and supplemented in this Section, to prevent damage and defects.

1.6 PROJECT CONDITIONS

A. Inspection: Items of material furnished under this Section will be inspected prior to installation.

B. Environmental Requirements:
   1. Keep trenches dewatered while installing pipe until required pipe joints are made and trench backfilled above water table.
   2. Under no circumstances lay pipe in water or on bedding containing frost.
   3. Do not lay pipe when weather conditions are unsuitable, as determined by Architect, for pipe laying work.

PART 2 - PRODUCTS

2.1 MATERIALS

   1. Wall Thickness: Determined in accordance with AWWA C150 (ANSI A21.50), latest edition. Minimum wall thickness as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Wall Thickness</th>
<th>Thickness Class</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inches</td>
<td>Inches</td>
<td>Designation</td>
</tr>
<tr>

</tr>
<tr>
<td>12</td>
<td>0.37</td>
<td>52</td>
</tr>
</tbody>
</table>

2. Joints: Provide push-on, mechanical, or restrained joints for pipe installed underground.
a. Push-on and mechanical joints to conform to applicable provisions of AWWA C111.

3. Pipe Lining: Cement mortar lined in accordance with AWWA C104, double thickness, and asphaltic seal coated in accordance with Section 4-11, Seal Coat, of AWWA C104. Provide NSF 61 approved seal coatings.

4. Outside Pipe Coatings: Asphaltic coating in accordance with Section 51-8, Coatings and Linings, AWWA C151.

5. Acceptable Manufacturers:
   a. U.S. Pipe.
   b. American.
   c. Clow.
   d. Griffin.
   e. Atlantic States.
   f. Or equal.

B. Fittings: Gray iron or ductile iron conforming with applicable provisions of AWWA C110 or ductile iron compact fittings conforming to AWWA C153; minimum working pressure rated at 250 psi.
   1. Fittings to be mechanical or restrained joint conforming with applicable provisions of AWWA C111.
   2. Fitting Lining: Cement mortar lined in accordance with AWWA C104, double thickness, and bituminous seal coated in accordance with Section 4-12, Seal Coat, of AWWA C104. Seal coatings NSF 61 approved.
   3. Fitting Coatings: Standard bituminous coating in accordance with Section 51-8, Coatings and Linings, AWWA C151.

C. Joint Material for Ductile Iron Pipe or Fittings:
   1. Push-on Joints, Ductile Iron Pipe: Conforming to requirements of AWWA C111.
   2. Mechanical Joints, Ductile Iron Pipe and Fittings: Conforming to requirements of AWWA C111.
      a. Provide mechanical joints with retainer glands.
   3. Mechanical Couplings: Gasketed, sleeve type with diameter to properly fit specified pipe. Couplings consist of one steel middle ring; two steel, malleable iron or ductile iron followers; two specially compounded rubber gaskets; and high strength low alloy steel bolting system suitable for coupling steel or ductile iron pipe.
      a. Acceptable Manufacturers:
         1) Dresser Manufacturing Division Style 38 and 138; Transition Style 162.
         2) Smith Blair Product No. 411, transition product No. 413.
   4. Wedge Action Retainer Glands:
      a. Provide retainer glands for use on mechanical joints on fittings and valves 24 inches or less. Use fully restrained type joints on fittings and valves greater than 24 inches. Retainer glands on fittings and valves greater than 24 inches not acceptable.
      b. Retainer glands not acceptable in lieu of restrained joints.
      c. Mechanical joint retainer glands cast from ASTM A536, Grade 65-45-12 ductile iron. Wedging mechanism manufactured of ductile iron, heat treated to a hardness of 370 BHN minimum. Provide retainer glands with dimensions that can be used with standardized mechanical joint bell and tee head bolts conforming to requirements of AWWA C111 and AWWA C153. Wedge action screws incorporate twist off nuts in design to ensure proper torque. Provide mechanical joint restraining device for water working pressure rating of 250 psi minimum with a safety factor of at least 2:1.
      d. Install mechanical joint retainer glands in accordance with manufacturer's recommendations. Apply torque to T-bolts in accordance with manufacturer's recommendations. Tighten torque limiting twist off nuts in alternate manner and
clockwise direction. Apply joint deflection before T-bolts are torqued. Where retainer glands are used, limit joint deflection to 2-1/2 degrees maximum.
e. Provide retainer glands designed to prevent joint separation under following pressure ratings:

<table>
<thead>
<tr>
<th>Size (Inches)</th>
<th>Pressure Rating (psi)</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>350</td>

<td>350</td>
</tr>
<tr>
<td>10</td>
<td>350</td>
</tr>
</tbody>
</table>

5. Acceptable Manufacturers:
b. Ford Meter Box Co., Inc.; Series 1400 (Uni-Flange).
c. Or equal.

D. Gate Valves 3 Inches and Larger: Provide iron body, resilient-seated nut operated, non-rising stem, inside screw gate valves suitable for buried service. Design valves for an operating pressure of 200 psi. Test pressures to 400 psi. Design valves to operate in vertical position.
1. Shop Drawing: Furnish Shop Drawings from manufacturer showing principal dimensions, construction details, and materials used for valve parts.
2. Size and Quantity: As indicated on Drawings.
3. Record of Tests: Furnish test records in accordance with AWWA C509 and Section 6.1.
4. Valve Ends: Mechanical joint in accordance with AWWA C111 with wedge action mechanical joint retainer glands, except in restrained area.
5. Stem Seal: Use Double O ring stem seals.
6. Operating Nuts and Direction of Opening: Square operating nuts conforming to AWWA C509. Valves to open left.
7. Acceptable Manufacturers:
b. ITT Kennedy Valve.
c. Mueller Company.
d. U.S. Pipe.
e. Or approved equal.

E. Gate Valves 2-1/2 Inches and Smaller: Provide ball valves which open to the left, bronze two piece body construction, 600 WOG/150 WSP rating, bottom loaded stem and packing nut threaded to body; NPT ends. Sizes as indicated on Drawings.
1. Acceptable Manufacturers:
b. Or approved equal.

F. Combination Air Valve: Air release valve portion functions to vent air accumulating at high points in water main. Air/Vacuum valve portion exhausts larger quantities of air present in system during filling of water main and allows air to re-enter main during draining of pipe. Provide combination air valves at the locations indicated on the Drawings. Provide combination air valves with cast-iron body and cover, stainless steel float and parts, and stainless steel trim with Buna-N-seat
1. Air release orifice size 3/32-inch
2. Inlet Size: 2-inch
3. Maximum Working Pressure 300 psi
4. Manufacturers:
   a. Val-Matic Valve and Manufacturing Corp.
   b. APCO Valve and Primer Corp.
   c. G.A. Industries.
   d. Or approved equal.

G. Tapping Sleeves and Valves: Verify type of existing pipe and outside diameter of pipe where installing tapping sleeve.
1. Tapping Sleeves: Cast-iron with mechanical joint ends. Provide sleeves in two halves that can be assembled and bolted around main. Extend gaskets entire length of sleeve to form a watertight joint when side bolts are properly tightened.
2. Tapping Valve: Conforming to applicable requirements of AWWA C509 and to subparagraph A above. Provide tapping valves with flanged inlets and mechanical joint outlets.
3. Shop Drawing: Furnish Shop Drawings from manufacturer showing principal dimensions, construction details, and materials used for parts of tapping sleeves and valves.
4. Size and Quantity: As indicated on Drawings.
5. Acceptable Manufacturers:
   a. Kennedy Valve.
   b. American-Darling.
   c. Mueller Company.
   d. A. P. Smith.
   e. Or approved equal.

H. Valve Boxes: Provide cast iron valve boxes of two piece or Buffalo Type for valves up to 12 inches and of three piece for valves up through 20 inches buried in ground. Valve box design of adjustable two section screw type telescoping column or three section with separate base, column inside diameter of 5-1/4 inches, and furnished with a cover marked WATER. Hot coat inside and out with tar or asphalt compound.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Carefully examine material for defects, and do not install material known to be defective.
B. Replace material found defective in manufacture or damaged in transit or handling at no additional expense.
C. Remove defective material from jobsite.

3.2 DEFECTIVE PIPE
A. Architect reserves right to reject defective pipe shipped to jobsite or stored on site. Architect will examine pipe and determine if pipe is damaged prior to installation in trench. Failure of Architect to detect damaged pipe does not relieve Contractor's total responsibility for pipe if it leaks or breaks after installation. Set defective pipe and fittings aside for final inspection by Architect to determine if corrective repairs can be made, or material rejected. Architect will determine extent of repairs. Classify defective pipe as follows:
   1. Damage to interior and exterior paint seal coats.
   2. Damage to interior cement-mortar lining.
   3. Insufficient cement-mortar lining thickness.
4. Poor quality interior paint seal coat.
5. Pipe out of round.
6. Damage pipe barrel area to point where pipe class thickness is reduced.
7. Denting or gouges in plain end of pipe.

3.3 HANDLING OF MATERIAL

A. Handling of Pipe and Fittings:
1. Unload, handle, and store ductile iron pipe, fittings, valves and appurtenances in accordance with AWWA C600. If damage or coating abrasion occurs and is deemed repairable, repair as directed by Architect in accordance with manufacturer’s recommendations. If damage is not repairable in opinion of Architect, reject pipe, fittings, valves, or appurtenances, remove from Project site, and replace at no additional expense.
2. Keep fittings and valves drained and stored before installation in a manner protecting them from damage due to freezing of trapped water.

3.4 CLEANING PIPE AND FITTINGS

A. Clean and remove foreign matter from pipe, fittings and valves before placing in trench. Remove pipe and fittings if interior has been contaminated with oil, gasoline, kerosene or other material damaging to bituminous seal coat or cement-mortar lining and replace at no cost to Owner. Should foreign material or contaminates be observed in previously installed pipe, cease work until foreign material or contaminated pipe is decontaminated or removed.
B. Close open ends of pipe with a watertight plug when pipe laying is not in progress.

3.5 ALIGNMENT AND GRADE

A. Lay and maintain pipe at required lines and grades as indicated on Drawings. Place fittings and valves at required locations with joints centered, spigots forced home, and valve stems plumb. Do not deviate from required line and grade, except with approval of Architect.
B. Joint Deflection:
1. Maximum allowable deflection at joints for push-on joint pipe as follows:

<table>
<thead>
<tr>
<th>Size of Pipe</th>
<th>Deflection Angle</th>
<th>Maximum Deflection (18 ft. Length)</th>
<th>Maximum Deflection (20 ft. Length)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thru 12&quot;</td>
<td>2-1/2&quot;</td>
<td>9-1/2&quot;</td>
<td>10-1/2&quot;</td>
</tr>
<tr>
<td>14&quot;-36&quot;</td>
<td>1-1/2&quot;</td>
<td>5-1/2&quot;</td>
<td>6&quot;</td>
</tr>
<tr>
<td>42&quot;-48&quot;</td>
<td>1&quot;</td>
<td>3-3/4&quot;</td>
<td>4&quot;</td>
</tr>
</tbody>
</table>

2. If curve is too sharp for allowable deflection, short lengths of pipe may be used upon approval of Architect.
C. Where underground conditions indicate a change of alignment or grade, make change only with written consent of Architect. When a change in grade is indicated resulting in pipe having more cover than originally anticipated, carefully review class of pipe scheduled for installation at location to ensure it can withstand new loadings. If it cannot, replace with proper class of pipe as directed by Architect.
D. Except at points indicated on Drawings, exercise particular care that no high points are established where air could accumulate. In event field conditions necessitate a change in pipe
profile and, in opinion of Architect, resulting change requires installation of an air valve and manhole, install as additional and extra work in accordance with the General Conditions. If Contractor requests a change in pipe profile to facilitate construction, and resulting change requires installation of an air valve and manhole at high points due to requested change, cost of furnishing and installing air valve and manhole is at Contractor's expense.

3.6 LAYING PIPE

A. General Requirements: Use proper and suitable tools and appliances for proper and safe handling, lowering into trench, and laying of pipes.
1. Do not lay pipe in a wet trench, on subgrade containing frost, and when trench conditions are unsuitable for pipe laying work. If efforts fail to obtain a stable dry trench bottom and Architect determines trench bottom is unsuitable for trench foundation, he will order, in writing, type of stabilization to be constructed.
2. Thoroughly clean pipes and fittings before installing, and keep clean until acceptance of completed work.
3. Lay pipe with bell ends facing in direction of laying unless otherwise indicated on Drawings or directed by Architect.
4. Exercise care to ensure each length abuts next such that no shoulder or unevenness occurs in pipeline.
5. No wedging or blocking permitted in laying pipe unless by written order of Architect.
6. Before joints are made, bed each section of pipe full length of barrel with recesses excavated so pipe invert forms continuous grade with invert of pipe previously laid. Do not bring succeeding pipe into position until preceding length is embedded and securely in place.
7. Dig bell holes sufficiently large to permit proper joint making and to ensure pipe is firmly bedded full length of its barrel.
8. Walking or working on completed pipeline, except as required in tamping and backfilling, not permitted until trench is backfilled one foot deep over top of pipes.
9. Take up and relay pipe that is out of alignment or grade or pipe having disturbed joints after laying.
10. Take up and replace with new, at no additional expense, in-place pipe sections found to be defective.
11. Take necessary precautions to prevent floating of pipeline by accumulation of water in trench or collapse of pipeline. Should floating or collapse occur, restore at no additional expense.
12. Bedding materials and concrete work for pipe bedding as specified previously in Section 31 23 33.
13. Take every precaution to prevent foreign material from entering pipe while it is being placed in line. During laying operations, do not place debris, tools, clothing, or other materials in pipe.
14. Close openings in pipeline with watertight plugs when pipe laying is stopped at close of day's work or for rest breaks, meal periods or other reasons.
15. Place enough backfill over center sections of pipe to prevent floating.
16. Place underground warning tape over pipeline as specified in Section 31 23 33.
17. Carry out cutting of pipe with an abrasive wheel, rotary wheel cutter, guillotine pipe saw, milling wheel saw or other equipment specifically designed for that purpose. Use of chisels or handsaws not permitted. Grind smooth cut ends and rough edges, and for push-on connections, cut end should be beveled slightly.

B. Joints. Exercise care when making each joint, and make in accordance with pipe supplier's specifications and in accordance with following instructions:
1. Ductile Iron Pipe:
   a. Push-On Joints: Join pipe in accordance with AWWA C600, Section 3.4.1 or latest revision and the following.
1) Assemble push-on joint to provide tight, flexible joints that safely permit movement caused by expansion and contraction due to temperature changes and by ground movement.

2) Thoroughly clean inside of bell and outside of spigot end to remove oil, grit, excess coating and other foreign matter. Flex circular rubber gasket inward and insert in gasket recess of bell socket. Apply a thin film of gasket lubricant to either inside surface of gasket or spigot end of pipe or both. Gasket lubricant to be supplied by pipe manufacturer and approved by Architect prior to its use.

3) Enter spigot end of pipe into socket with care to keep joint from contacting ground. Complete joint by forcing plain end to bottom of socket with a forked tool or jack type tool or other device as may be approved by Architect. Mark pipe that is not furnished with a depth mark before assembly to ensure spigot end is inserted to full depth of joint. File or ground field cut pipe lengths to resemble spigot end of pipe as manufactured. Complete assembly instructions are available from pipe manufacturer.

b. Mechanical Joint: Furnish sworn statement that inspection and tests on parts of this type joint have been made and met as specified. Join in accordance with AWWA C600, Section 3.4.2., latest revision, and the following:

1) Centrally locate spigot in bell. Thoroughly brush contact surfaces of rubber gasket seal with a wire brush just prior to assembly. Remove loose rust or foreign material and brush with soapy water prior to slipping gasket over spigot end and into bell. Normal range of bolt torques applied to standard cast iron bolts in joint are as follows:

<table>
<thead>
<tr>
<th>Size Inches</th>
<th>Range of Torque Ft. - Lb.</th>

2) Above torque loads may be applied with torque measuring or indicating wrenches. Torque wrenches may be used to check application of approximate torque loads applied by men trained to give an average pull on a definite length of regular socket wrench. Following lengths of wrenches should satisfactorily produce above range of torques when used by average man:

3) When tightening bolts, it is essential that gland be brought up toward pipe flange evenly, maintaining equivalent distance between gland and face of flange at all points around socket. This may be done by partially tightening bottom bolt first, then top bolt, next bolts at either side, and last remaining bolts. Repeat this cycle until bolts are within above range of torques. If
effective sealing is not attained at maximum torque indicated above, disassemble and reassemble joint after thorough cleaning. Avoid overstressing of bolts to compensate for poor installation practice.

c. Retainer Glands: Install retainer glands as with mechanical joints, except after joint bolts are tightened. Tighten restraining screws in retainer gland. Required torque range for retaining screws as specified by retainer gland manufacturer.

d. Restrained Joints: Install in accordance with manufacturer’s recommendations.

3.7 VALVE INSTALLATION

A. Examination of Material: Prior to installation, inspect valves for direction of opening, freedom of operation, tightness of pressure containing bolting, cleanliness of valve ports and especially seating surfaces, handling damage and cracks. Correct defective valves or hold for inspection by Architect.

B. Installation: Set and join to pipe in manner specified in Article 3.06. Provide valves 12 inches and larger with crushed stone or concrete pad support so that pipe does not support weight of valve. Set truly vertical.

C. Valve Protection: Provide valves with a valve box. Set top of valve box neatly to grade of surface of existing ground, unless directed otherwise by Architect. Do not transfer shock or stress to valve, and center and plumb box over wrench nut of valve. Do not use valves to bring misaligned pipe into alignment during installation. Support pipe in manner to prevent stress on valve.

3.8 THRUST RESTRAINT

A. General Requirements: Provide each nonrestrained cap, tee, and bend (both horizontal and vertical) with thrust restraints as detailed on Drawings.

B. Concrete Reaction Backing: Place concrete reaction backing between undisturbed solid ground and fitting to be anchored. Locate backing, unless otherwise shown or directed, to contain resultant thrust force and so that pipe and fitting joints are accessible for repair.

3.9 CONNECTIONS TO EXISTING WATER MAINS AND INTERRUPTIONS OF SERVICE

A. Notification: Notify Owner a minimum of seven working days in advance of anticipated time for installing a connection to water system or when necessary to close down a portion of existing system to carry out work. Under no circumstances are valves to be manipulated on existing water system, except under direct supervision of a representative of Owner.

B. Owner’s Restrictions: Owner reserves right to designate day and time when existing water main may be removed from service. Owner may require that this work be done at night or on a weekend. In addition, Owner further reserves right to require that work on installation of connections between existing and new water mains, or in other areas where service to customers will be interrupted, be carried out continuously and expeditiously until water service is restored.

C. Notification of Customers: Give adequate and timely notice to affected customers that construction will require interruption of service.

D. Installation: In cases where connections to existing water system or other work require an interruption of water service, carefully plan work ahead in close coordination with Architect and Owner. Obtain Architect’s approval of installation schedule and procedure before work is started, and procure necessary materials, tools and equipment before work is started. Make
provision in prices bid for connections, and laying pipe adjacent to existing fittings, for adequate personnel to be available for continuous operations and payment of premium time. No additional or extra payment will be made for extra personnel and overtime for installation of connections, cutting and capping of existing water mains, or passing of existing fittings, whether or not Owner directs that work be continuous, without interruption, and that this work be at night or on a Sunday.

E. Installation of Tapping Sleeves and Valves: Use tapping machine, and strictly follow manufacturer’s instructions. Submit procedure for approval prior to installing. Personnel performing tap to have been regularly engaged in installing taps of this size for at least 10 years and have at least 5 installations in successful operation for 5 years.

3.10 FIELD QUALITY CONTROL

A. Hydrostatic Pressure and Leakage Test: Conduct pressure and leakage tests in accordance with Section 01666.

B. Cleaning Prior to Tests: Before tests are conducted, clean piping by a method acceptable to the Architect.

3.11 DISINFECTION OF WATER MAINS

A. Disinfect and flush with water in accordance with provisions of Section 01656.

END OF SECTION 33 11 13
SECTION 33 40 00 - STORM DRAINAGE UTILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The work specified in this Section consists of constructing the various types and sizes of piped storm sewer lines and in-line appurtenances.

B. Related Sections:
   1. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
   2. Section 33 49 00: Storm Drainage Structures.

1.2 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. AASHTO M252, Corrugated Polyethylene Drainage Pipe (Type S).
   2. AASHTO M294, Corrugated Polyethylene Drainage Pipe, 300 to 1200-mm Diameter.

B. American Society for Testing and Materials (ASTM):

  20. ASTM D 3034, Specification for Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
22. ASTM F 477, Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
23. ASTM F 667, Large Diameter Corrugated Polyethylene Tubing and Fittings, Spec. for.

C. Commonwealth of Pennsylvania Department of Transportation (PENNDOT), Specifications Publication 408/2003, as supplemented.
1. PENNDOT Section 610.2 Pipe For Pipe Underdrain and Pavement Base Drain.

D. Federal Specifications:

1.3 SUBMITTALS

A. Shop Drawings and Product Data: Submit completely dimensioned shop drawings, catalog cuts and such other data as required to provide complete descriptive information for the following:
1. Basic Materials.
2. Pipe and Fittings.
3. Piping Specialties.

1.4 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Transport, handle and store pipe materials and the associated materials specified herein, in the manner recommended by the respective materials manufacturers so as to prevent damage and defects to their respective materials.

1.5 SITE CONDITIONS

A. Environmental Requirements:
1. Keep trenches dewatered until pipe joints have been made and concrete placements have cured.
2. Do not lay pipe in water or on bedding containing frost.
3. Do not lay pipe when weather conditions are unsuitable, as determined by the Engineer, for pipe laying work.
4. To improve workability of Preformed Plastic Sealing Compound during cold weather, store such at temperature above 70 degrees F or artificially warm compound in a manner satisfactory to the Engineer.
5. During warm weather stiffen Preformed Plastic Sealing Compound by placing under cold water or by other means as recommended by the compound manufacturer.

PART 2 - PRODUCTS

2.1 BASIC MATERIALS

A. Non-Shrink Non-Metallic Grout: As specified in Section 03 60 00: Grouting.
B. Waterproofed Mortar: Conforming to requirements of ASTM C 270 for Type M, 2500 psi (Parts by volume include: One part cement, 1/4 part lime, and sand at not less than 2-1/4 nor more than three times the sum of the volumes of cement and lime used and of the following materials:

1. Waterproofing Agent: Medusa Waterproofing Powder by Medusa Portland Cement Co.;  Hydratite by Grace Construction Materials; or Hydrolox by Chem-Master Corp. Add the Medusa product in the ratio of two pounds per bag of cement; add the other products per manufacturer's recommendations.
2. Portland Cement: Conforming to ASTM C 150, Type I.
3. Hydrated Lime: Conforming to ASTM C 207, Type S.
5. Water: Clean and free from deleterious amounts of acids, alkalis, and organic materials.

C. Drainage Structure Brick: Masonry units made from clay or shale conforming to physical and dimensional requirements of ASTM C 32, Grade MS.

D. Riprap: Field stone or rough unhewn quarry stone of approximately rectangular shapes. Provide stones of such quality that will not disintegrate on exposure to water or weathering.

1. Minimum thickness: 9 inches measured perpendicular to face of stone.
2. Minimum face dimensions: Not less than stone thickness.
3. Weight: Not less than 70 percent of the individual pieces weighing 150 lbs. maximum and 10 percent weighing less 100 lbs. minimum.

2.2 PIPE AND FITTINGS

A. High Density Polyethylene Corrugated Pipe: Provide corrugated pipe and fittings with integrally formed smooth interior, manufactured from polyethylene compounds which meet or exceed the requirements of Type III, Category 4 or 5, Graded P33 or P34, Class C according to ASTM D 1248. Clean reworked material may be incorporated into the compounds.

1. Pipe and fittings showing visible defects and foreign inclusions in the material are not acceptable.
2. Pipe lengths shall have cleanly and squarely cut ends so as not to adversely affect pipe joining.
3. Provide corrugated fittings (corrugations shall match the pipe) of either molded or fabricated type. Fittings by other than the pipe manufacturer are not acceptable.
4. Joints: Split coupling type and of a corrugated design to engage the pipe corrugations for a minimum of four corrugations, two on each side of the pipe joint, creating a watertight seal.
5. Gaskets: Provide neoprene sponge gaskets on each pipe joint where pipe is installed under roadway embankments. Insert the gasket under the coupling on each side of the pipe joint.

B. Solid Wall Polyvinyl Chloride (PVC) Pipe: Provide pipe which is permanently marked with manufacturer's trademark, size, and ASTM conformance designation.

1. Pipe, Solid Wall, Size 6 through 15 Inch Diameters: Type PSM SDR-35 conforming to ASTM D 3034 requirements, or Type PS-46 conforming to ASTM F 789 requirements for pipe sizes above 15 inch to 18 inch diameter.
2. Pipe, Solid Wall, Size 18 through 27 Inch Diameters: Type PS-46 conforming to ASTM F 679 requirements.
3. Fittings: Commercially manufactured molded fittings made from PVC compounds having a cell classification of 12454-B, 12454-C, or 13343-C as defined in ASTM D 1784.
4. Joints: Push-on style joint, with elastomeric gasket, conforming to ASTM D 3212 requirements for joint design; gasket conforming to ASTM F 477 requirements for material specifications, providing a watertight seal.
	a. Pipe bell design shall incorporate the gasket locked in a groove so as to prevent gasket displacement when pipes are joined.
C. Schedule Type Polyvinyl Chloride (PVC) Pipe: Schedule 40, Type I PVC soil and waste pipe conforming to ASTM D 1785 requirements for pipe, and ASTM D 2466 for fittings.
   1. Solvent-weld Joints: Conforming to ASTM D 2564 requirements, providing a water tight seal.

D. Perforated Wall and Solid Wall PVC Pipe Drains: Provide pipe which is permanently marked with manufacturer’s trademark, pipe size and ASTM conformance designation.
   1. PVC Pipe and Fittings: Provide pipe conforming to ASTM D 1785, Schedule 40, and PVC socket-type pipe fittings conforming to ASTM D 2467. Slotted pipe shall have four rows of 0.025 inch slots spaced 1/2-inch apart.
   2. PVC Pipe and Fitting Solvent Cement: Material conforming to ASTM D 2564.

E. Rubber-Gasket Joints, Buried Pipe: Conforming to ANSI A21.11 requirements.
   1. For buried pipe installation, provide push-on or mechanical joints except where other types of joints are indicated on the Drawings or required by the Specifications.
   2. For buried pipe installation, provide mechanical joints except where other types of joints are indicated on the Drawings or required by the Specifications.
   3. For buried pipe installation, provide push-on joints except where other types of joints are indicated on the Drawings or required by the Specifications.
   4. All joints shall be water tight.

F. PENNDOT Conforming Pipe Underdrain: The Contractor shall use the following pipe underdrain materials.
   1. Perforated Plastic Semi-circular Pipe: Extruded or moulded using a high density, flexible plastic with minimal material thickness of 0.125 inches; and conforming to the requirements of PENNDOT Section 610.2.

2.3 PIPING SPECIALTIES

   1. Acceptable Manufacturers:
      a. FERNCO Inc., CMA Concrete Manhole Adapter, Distributed by the General Engineering Company.
      b. Or equal.

B. Sleeve Type Pipe Seal: Sleeve type pipe seal used for core-drilled connection of piping to existing manholes. In general, the pipe seal shall conform to the requirements of ASTM C 923 and shall incorporate a positive compression fit of the gasket to both the manhole and the pipe.
   1. Acceptable Manufacturers:
      a. Press-Seal Gasket Corp., Concrete Products Supply Co.; PSX Seal.
      b. Or equal.

2.4 STORM DRAINAGE STRUCTURES

A. Concrete Inlet Construction Options: The Contractor is permitted the option to construct inlets in the Project of types specified immediately following. However only one type of inlet construction permitted in the Project except where required otherwise on Drawings.

B. Cast-In-Place Concrete Inlet: Concrete work as specified in Section 03 30 53: Miscellaneous Cast-in-Place Concrete. Field cast reinforced concrete inlet to conform to type and design indicated on the Drawings.
   1. Concrete Strength and Type: Class A (4,000 psi); Type I (Normal) Cement.
2. Frame and Grate: Provide grating fabricated of structural steel bars and a structural steel angle frame with integral concrete anchoring lugs. Design to sustain HS-20 loading according to current AASHTO Specifications.

C. Precast Concrete Inlets: Conforming to Pennsylvania Department of Transportation’s Type M. Concrete shall conform to Class A as specified in Section 03 30 53: Miscellaneous Cast-in-Place Concrete. Reinforce openings in inlet with reinforcement bars conforming to ASTM A 615. Reinforce walls and bottom with welded wire fabric conforming to ASTM A 185. Cast steel angle in top of inlet to hold grate.
   1. Precast Concrete Leveling/Adjusting Units: Provide units of not less than two inches thickness and of materials and construction as specified for Precast Concrete Inlets.
   2. Inlet Frame and Grate: Provide gratings of the design indicated and fabricated of structural steel bar and angle with angle frame. Design to sustain HS-20 loading according to current AASHTO Specifications.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Field Inspection: Inspect each section of pipe and each pipe fitting before laying in conformance with the inspection requirements of the appropriate referenced standard.
   1. Inspect precast manhole components in accordance with requirements of ASTM C 478 regarding repairable defects and defects subject to rejection by the Engineer.

B. Rejected Products: Remove rejected Products from the Project site and replace with new Products at no increase in Contract Price.
   1. Pipe already laid and later found defective will not be accepted and shall require replacement at no increase in Contract Price.

3.2 PREPARATION

A. General Requirements: Do not lay pipe or set or construct inlets, endwalls, or manhole bases in excavations containing water or on subgrade containing frost. Keep excavations water-free until concrete pours of whatever nature have cured. Keep pipe and manhole interiors cleared of debris as construction progresses.

B. Trenching for Site Utilities: Perform earthwork for buried site drainage piping and associated concrete structures as specified in Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
   1. Bedding materials and concrete work for pipe bedding as specified in Section 31 23 33.13: Trenching and Backfilling for Site Utilities.

3.3 CONSTRUCTION

A. General Requirements: Use proper and suitable tools and appliances for the proper and safe handling, lowering into trench and laying of pipes.
   1. Lay pipe proceeding upgrade true to line and grades given. Lay bell and spigot pipe with bell end upgrade. Lay tongue and groove pipe with groove end upgrade. No wedging or blocking permitted in laying pipe unless by written order of the Engineer.
   2. Exercise care to insure that each length abuts against the next in such manner that no shoulder or unevenness of any kind occurs along inside bottom half of pipe line.
   3. Before joints are made, bed each section of pipe full length of barrel with recesses excavated so pipe invert forms continuous grade with invert of pipe previously laid. Do
not bring succeeding pipe into position until the preceding length is embedded and securely in place. Dig bell holes sufficiently large to permit proper joint making and to insure pipe is firmly bedded full length of its barrel.

4. Walking or working on completed pipe line, except as necessary in tamping and backfilling, is not permitted until trench is backfilled one-foot deep over top of pipes.

5. Take up and relay pipe that is out of alignment or grade, or pipe having disturbed joints after laying.

B. Piping Laying and Joining: Perform pipe laying and joining in strict accordance with manufacturer's installation instructions, reference standards as included, and such additional requirements as specified herein.

1. Laying/Joining Specified Types of Plastic Pipe: Installation and joint assembly according to ASTM D 2321 requirements and for Class I bedding material as included therein.

2. Solvent-Weld Joints: Use chemical solvent welding components as recommended by the pipe material manufacturer and comply with said pipe manufacturer's cleaning and joining instructions.

C. Underdrain Installation: Install underdrain using bedding and backfill materials specified in Section 31 23 33.13: Trenching and Backfilling for Site Utilities. Perform trench preparation, backfilling, and compaction in accordance with Section 31 23 33.13: Trenching and Backfilling for Site Utilities. Provide materials indicated in underdrain installation details on the Drawings and install such to conform to the details indicated.

D. Storm Drainage Structure Installations: Do not complete storm drainage structure construction until after grading has been finished and the necessary arrangements have been made to ensure suitable connections and tie-ins at proper grade and alignment.

1. Set precast drainage structures on a bed of aggregate, as indicated on the Drawings, over undisturbed or well compacted earth.

2. Set inlet and outlet pipes in drainage structures true to line and grade, with the pipes cut flush with inside face of walls, and extend the pipes a sufficient distance beyond the outside face of drainage structure walls to provide for pipe section connections.

3. Fill annular space between installed pipes and drainage structure openings with Waterproofed Mortar. Trowel mortar to a smooth, flat finish both inside and outside.

4. Install inlet frame and grate with frame adjusted to the proper elevation using Precast Concrete Leveling/Adjusting Units set in Waterproofed Mortar; or using Drainage Structure Brick set in Waterproofed Mortar.

E. Connections To Existing Precast Concrete Structures: Expose the existing concrete structures to the extent required to perform the new connection work indicated on the Drawings and as specified herein:

1. Make openings of sufficient size to accommodate the pipe and one inch of annular mortar space. Fill such annular space with Waterproofed Mortar thoroughly compacted in place.

2. Set pipes entering such existing concrete structures flush with inside face of such structures.

3. As required, fill bottom of structures with Class B concrete to invert of new pipe and slope surface 1¼-inch to outlet pipe.

F. Connections To Existing Precast Concrete Structures: Expose the existing concrete structures to the extent required to perform the new connection work indicated on the Drawings and as specified hereinafter.

1. The option is allowed to make connections by the Cut-In Opening Method (with PVC Waterstop and Non-Shrink Non-Metallic Grout), or by the Core-Drilled Opening Method (with Sleeve Type Pipe Seal).

2. Cut-In Opening Method: Cut the required opening or openings by such methods so as to prevent cracking and spalling concrete. Make openings of sufficient size to accommodate the pipe with PVC Waterstop installed and one inch of annular grout.

3. Core-Drilled Opening Method: Core-drill the required opening or openings true to line and absolutely smooth cored surface. Install the Sleeve Type Pipe Seal expanded in place in accordance with the manufacturer's installation instructions.

3.4 FIELD QUALITY CONTROL

A. PVC Pipe Drains Testing: Perform a Deflection Test on the PVC Pipe Drains installed in the project.

1. Testing Equipment: Provide GO/NO-GO Mandrel and incidental equipment for Deflection Test on PVC pipeline. Mandrel to conform to following requirements:
   a. Cylindrical in shape with not less than nine arms spaced evenly around the mandrel.
   b. Minimum contact length of mandrel arms with pipe wall not less than the nominal diameter of the pipe being tested.
   c. Mandrel diameter 95 percent of inside pipe diameter.

2. Deflection Test, PVC Pipe: In addition to air tests and infiltration test, conduct deflection tests on PVC pipe. Test each PVC pipeline installed.
   a. Conduct deflection testing not less than 30 days after PVC pipelines are backfilled.
   b. Pull mandrel through pipe section manually; powered pulling devices not permitted.
   c. Consider any pipeline section through which the mandrel cannot pass to have more than maximum allowable deflection of five percent.

END OF SECTION 33 40 00
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Frames and covers for sanitary and storm manholes.
   2. Frames and grates for storm inlets.

B. Related Sections:
   1. Quality Control: Applicable Division 1 specification section.
   2. Section 31 22 19: Finish Grading.
   4. Section 03 30 53: Miscellaneous Cast-In-Place Concrete.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):
   1. ASTM A 48, Gray Iron Castings.
   3. ASTM A 615, Deformed and Plain Billet-Steel Bars for Concrete Reinforcement, Spec for.
   4. ASTM C 270, Mortar for Unit Masonry.
   5. AASHTO M 105 (ASTM A 48), Class No. 207, Grey Iron Castings.
   6. ASTM A 47/A 47M, Grade 24018, Malleable Iron Castings.
   7. ASTM A 536, Grade 60-40-18, Ductile Iron Castings.

B. Federal Specifications:

1.3 SUBMITTALS

A. Shop Drawings and Product Data:
   1. Manufacturer's published detail drawings, modified to suit design conditions if required, and Contractor prepared drawings as applicable.
   2. Manufacturer's descriptive literature and specifications covering the product specified. Include installation information.
   3. Shop Drawings to indicate types of materials, dimensions and details including location of reinforcement, inserts, anchors, connections, accessories, joints, openings, and setting details.

B. Certificates:
   1. Certified records or reports of results of shop tests, such records or reports to contain a sworn statement that shop tests have been made as specified.
   2. Manufacturer's sworn certification that components and products will be manufactured in accordance with specified reference standards for components and products.

C. Design Calculations: Submit structural calculations for structures furnished under this Section. Have calculations sealed and signed by a Registered Professional Engineer.
1.4 QUALITY ASSURANCE

A. Quality Control:
   1. Maintain uniform quality of products and component compatibility by using products of one manufacturer in the case of precast reinforced concrete manholes.

B. Certifications:
   1. Obtain certificate of construction compliance with ASTM C 478 from the precast reinforced concrete manhole manufacturer. Submit same certificate as part of required submittals.
   2. Obtain certificate of material compliance with ASTM A 48, Class 30 tensile strength from the manhole frame and cover manufacturer. Furnish certification that tensile test bars were from same pour as castings. Submit the certificates as part of required submittals.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Transport and handle products specified herein in a manner recommended by the respective manufacturers of such to prevent damage and defects.

PART 2 - PRODUCTS

2.1 BASIC MATERIALS

A. Manhole Frame and Cover:
   1. Grey iron castings conforming to ASTM A 48, Class 35. Provide castings of uniform quality, free from blowholes, porosity, hard spots, shrinkage distortion, or other defects. Frame and cover design and dimensions as indicated on Drawings.
   2. Provide casting designed for AASHTO H-20 loading.
      a. Finish: Bearing surfaces machined to prevent rocking and rattling.
      b. Identification: Cast the applicable word integrally on cover in 2 inch size raised letters.
      d. Tensile Test Bar: Size B, cast separately, but poured from same iron as castings they represent.
      e. Aluminum Inner Cover: Fabricate from aluminum alloy 6061-T6 sheet or plate to dimensions indicated on Drawings. Provide cover with vents and lift handle.
      f. Cover Gasket: One piece O-ring gasket factory installed in a machined rectangular or dovetail groove in the cover bearing surface.
      g. Gasket material of neoprene composition having good abrasion resistance, low compression set, 40 durometer hardness and suited for use in sanitary sewer manholes.
   3. Acceptable Manufacturer:
      b. PENNDOT Bulletin 15.
      c. Or approved equal.
   4. Inlet Frame and Grates:
      a. Provide inlet grates and frames as shown on the PENNDOT Standard Drawings RC-34 and as shown on the Drawings. Grates and frames may be either fabricated structural steel or cast gray, malleable, or ductile iron.
   5. Fabricated:
      a. Coat structural steel grates with bituminous paint in the shop or in the field, prior to placement.
b. Coat structural steel frames with bituminous paint at the time of casting the concrete inlet top unit.
c. As an alternative to bituminous paint, hot dip galvanize structural steel grates and frames.

6. Castings:
   a. Gray iron castings conforming to AASHTO M 105 (ASTM A 48), Class No. 207
   b. Malleable iron castings conforming to ASTM A 47/A 47M, Grade 24018
   c. Ductile iron castings conforming to ASTM A 536, Grade 60-40-18 unless otherwise specified.
   d. Sandblast all castings or otherwise effectively clean scale and sand so as to present a smooth, clean, and uniform surface.

7. Acceptable Manufacturers:
   b. PENNDOT Bulletin 15
   c. Or approved equal.

2.2 SOURCE QUALITY CONTROL

A. Furnish manufacturers’ certified test records or reports with sworn statement of tests made to establish material quality.

B. Furnish proof of current listing in PENNDOT Bulletin 15.

C. Engineer reserves right to accept certified test records or reports of previously conducted tests.

PART 3 - EXECUTION

3.1 INSPECTION

A. Inspect installed precast reinforced concrete manhole components before setting frames, top units, and covers in accordance with requirements of ASTM C 478 regarding repairable defects and defects subject to rejection by the Engineer.

B. Frame and Cover Installation: Where required, make final adjustment of frame to elevation using materials specified in Part 2 Products.
   1. Set precast grade rings in Water-proof Mortar, of thickness not to exceed 3/4 inch maximum and 3/8 inch minimum. Wet, but do not saturate precast grade rings immediately before laying.
   2. Precast grade ring: Pre-set to proper plane and elevation using wedges or blocks of cementitious material not exceeding one square inch wide on all sides. No more than four wedges or blocks per grade ring permitted. Incorporate wedges or blocks in fresh mortar in a manner to completely encase each. Crown fresh mortar to produce squeeze-out between grade rings. Tool exposed joints with appropriately shaped tool and compact mortar edge into joints. Clean off excess mortar prior to initial mortar set.
   3. Bolt manhole frames in place on manhole top section, or on leveling units if required, after installing 1/2 inch thick preformed plastic sealing compound on bearing surface of manhole frame. Remove excess sealing compound squeeze-out after manhole frame is bolted in place.
   4. Use bolts of sufficient length to properly pass through leveling units, if any, engage full depth of manhole top section inserts and allowing enough threaded end to pass through manhole frame to properly tighten nut and washer. Tighten manhole frame bolts after mortar has cured.
C. Frame and Grate Installation: Where required, make final adjustment of top section and frame to elevation using materials specified in Part 2 Products. If grade sections are used, they must encompass all four sides of the box.
   1. Set loose frames in cast-in-place inlet tops only where they are securely held in position by sturdy stringers spanning the entire width of the excavation and confirmed to be to final pavement grade prior to placement of concrete.

3.2 FIELD QUALITY CONTROL

A. General: Make a visual inspection of each unit constructed to ensure compliance with installation requirements.
   1. Repair or replace defective materials and workmanship, as is the case, and conduct such additional inspection and such subsequent repairs as required until manholes and inlets meet requirements.
   2. Materials and methods used to make manhole repairs must meet with Engineer's approval prior to use.
   3. Make repairs and replacements at no additional expense to Owner.

END OF SECTION 33 49 00
SECTION 33 60 80 - MECHANICAL INSULATION

PART 1 - GENERAL

1.1 STIPULATIONS

A. The specifications sections “General Conditions,” “Special Requirements” and “General Requirements form a part of this section by reference thereto and shall have the same force and effect as if printed herewith in full.

1.2 SUMMARY

A. Section Includes:
1. Thermal insulation for piping and equipment in valve manholes.
2. Jacketing and accessories for insulation.
3. Thermal insulation for steam tunnels and steam manholes

1.3 RELATED SECTIONS

A. Section 33 63 00 – Steam Distribution.
B. Section 33 61 00 – Hydronic Energy Distribution.
C. Section 33 05 16 – Concrete Utility Structures.

1.4 SUBMITTALS

A. Product Data: Provide product description, list of materials and thickness for each service or equipment scheduled, locations, and manufacturer’s installation instructions.
B. Indicate manufacturer, trade names, and model numbers, components, thermal performance, arrangement, and accessories being provided.
C. Include applicable literature, catalog material, or technical brochures.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Maintain ambient temperatures and conditions required by manufacturers of insulation, adhesives, mastics, and insulation cements.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Minimum experience on at least 5 projects of a similar nature in past 5 years.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver all materials to the job site and protect the insulation against dirt, water, chemical and mechanical damage before, during, and after installation. Do not install damaged insulation and remove it from the job site.
B. Deliver insulation, coverings, cements, adhesives, coatings, etc. to the site in factory-fabricated containers with the manufacturer’s stamp or label affixed showing fire hazard ratings of the products, name of manufacturer and brand.

C. Installed insulation which has not been weatherproofed shall be protected from inclement weather by an approved waterproof sheeting installed by the Contractor. Any water-damaged insulation shall be removed and replaced by the Contractor at no additional cost.

PART 2 - PRODUCTS

2.1 PIPE INSULATIONS

A. Manufacturers:
   2. Pittsburgh Corning Corporation.

B. Glass Fiber: ASTM C 547, Type I; rigid molded, noncombustible.

C. ‘K’ (‘ksi’) Value: 0.23 at 75 degrees F Mean Temperature (0.033 at 24 degrees C).

D. Maximum Service Temperature: 0 degrees F to 850 degrees F (minus 18 degrees C to 454 degrees C).

E. Vapor Retarder Jacket: White kraft paper reinforced with glass fiber yarn and bonded to aluminum foil, secure with self sealing longitudinal laps and butt strips or AP jacket with outward clinch expanding staples coated with vapor barrier mastic as needed.

F. Hydrous Calcium Silicate Pipe Insulation: ASTM C 533, Type I; rigid molded pipe; asbestos-free color coded throughout material thickness.

G. ‘K’ (‘ksi’) Value: 0.42 at 300 degrees F Mean Temperature (0.058 at 149 degrees C) as tested in accordance with ASTM C 335.

H. Maximum Service Temperature: 1200 degrees F (649 degrees C).

I. Compressive Strength (block): Minimum of 100 psi to produce 5 percent compression at 1 ½-inch thickness.

J. Non-combustible as determined by test following ASTM E 136.

K. Tie Wire: 16 gage (0.045 mm) stainless steel with twisted ends on maximum 12-inch (300 mm) centers.

L. Field Applied Jackets:
   1. Aluminum Jacket: 0.016 inch (0.045 mm) thick sheet, (smooth/embossed) finish, with longitudinal slip joints and 2-inch (50 mm) laps, die shaped fitting covers with factory applied moisture barrier.
   2. Stainless Steel Jacket: Type 304 stainless steel, 0.010 inch (0.25 mm), (smooth/corrugated) finish.

2.2 EQUIPMENT INSULATION
A. Manufacturers:
2. Pittsburgh Corning Corporation.

B. Rigid Fiber Glass Board: ASTM C 612, Type IA & IB; rigid.
1. ‘K’ (ksi) Value: 0.23 at 75 degrees F Mean Temperature (0.033 at 24 degrees C).
3. Density: 3.0 lb./cu. Ft. (48 kg./cu. m) density.
4. Vapor Retarder Jacket: Aluminum foil reinforced with fiber glass yarn and laminated to fire-resistant kraft shall be secured with UL listed pressure sensitive tape and/or outward clinch expanding staples and vapor barrier mastic as needed.

C. Rigid Fiber Glass Board: ASTM C 612, Type II; rigid, noncombustible.
1. ‘K’ (ksi) Value: 0.23 at 75 degrees F Mean Temperature (0.033 at 24 degrees C).
3. Density: 3.0 lb./cu. Ft. (48 kg./cu. m) density.

D. Hydrous Calcium Silicate Block Insulation: ASTM C 533; rigid molded block; asbestos free color coded throughout material thickness.
1. ‘K’ (ksi) Value: 0.41 at 300 degrees F Mean Temperature (0.058 at 149 degrees C) when tested in accordance with ASTM C 177 and C 518.
3. Compressive Strength (block): Minimum of 100 psi to produce 5 percent compression at 1 ½-inch thickness.

E. Securement: Insulation shall be securely banded in place, tightly butted, joints staggered and secured with 16 gauge galvanized or stainless steel wire or ½-inch by .015 galvanized steel bands on 12-inch maximum centers for large areas.

F. Field Applied Jackets:
1. Aluminum Jacket: 0.016-inch (.045 mm) thick sheet, smooth/embossed finish, with longitudinal slip joints and 2-inch (50 mm) laps.
2. Weatherproof coating: Provide non water-vapor retarder, non-burning, weatherproof coating for use over insulation where “breathing” is required.

2.2 STEAM TUNNEL AND UTILITY MANHOLE INSULATION

A. Acceptable Manufacturers:
1. Exterior Insulation: Dow Chemical Company Styrofoam Brand insulation
2. Interior Insulation: Same as Equipment Insulation above.

B. Tunnel insulation, for application to top exterior or sides of concrete steam tunnel or manhole:
1. Closed cell extruded polystyrene foam insulation; ASTM C 578 – 92, Type VI.
2. Maximum service temperature: 165 degrees F.
5. Water Absorption: 0.1 percent maximum, by volume; ASTM C 272-91.
6. Cover Material: Pressure treated plywood, one-quarter inch thick.

C. Tunnel insulation, for application to top interior or sides of concrete steam tunnel or manhole:
1. Rigid Fiber Glass Board: ASTM C 612, Type IA & IB; rigid.
2. ‘K’ (ksi) Value: 0.23 at 75 degrees F Mean Temperature (0.033 at 24 degrees C).
4. Density: 3.0 lb./cu. Ft. (48 kg./cu. m) density.
3.1 EXAMINATION AND PREPARATION

A. Verify that piping has been successfully tested for leakage before applying insulation materials.
B. Verify that all surfaces are clean, dry and free of foreign material.

3.2 INSTALLATION

A. Install materials in accordance with manufacturer’s recommendations, building codes and industry standards.
B. Continue insulation vapor barrier through penetrations except where prohibited by code.
C. Piping Insulation
D. Locate insulation and cover seams in least visible locations.
E. Neatly finish insulation at supports, protrusions, and interruptions.
F. Provide insulated dual temperature pipes or cold pipes conveying fluids below ambient temperature with vapor retardant jackets with self sealing laps. Insulate complete system.
G. In dual temperature systems seal all pipe terminations including fittings, wall penetrations, and pipe supports with vapor barrier mastic such as Foster 30-35 or equal. In addition, in brine or chilled water pipe systems vapor seal pipe terminations every four pipe sections, using Foster 30-35 or equal.
H. For insulated pipes conveying fluids above ambient temperature, secure jackets with self sealing lap or outward clinched, expanded staples. Bevel and seal ends of insulation at equipment, flanges and unions.
I. Provide insert between support shield and piping on piping 1 ½-inches (38 mm) diameter or larger. Fabricate support shields from rigid, heavy density insulating material suitable for temperature. Insulation inserts shall not be less than the following lengths:
   1. 1 ½-inch to 2 ½-inch pipe size 10-inches long
   2. 3-inches to 6-inches pipe size 12-inches long
   3. 8-inches to 10-inches pipe size 16-inches long
   4. 12-inches and over 22-inches long
J. For pipe exposed in manholes or exterior applications, finish with aluminum jacket or stainless steel jacket. Jacket seams shall be located on bottom side of horizontal piping. PVC covers are not acceptable.
K. Where jacketing is not practical, use coating such as Insulkote or Foster 35-00.
L. Equipment Insulation
M. Apply insulation as close as possible to equipment by grooving, scoring, and beveling insulation, if necessary. As required, secure insulation to equipment with studs, pins, clips, adhesive, wires or bands.
N. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor retardant cement.
O. Provide insulated dual temperature equipment or cold equipment containing fluids below ambient temperature with vapor retardant jackets.

P. For insulated equipment containing fluids above ambient temperature, provide jacket with or without vapor barrier.

Q. Cover insulation with aluminum jacket or stainless steel jacket. PVC covers are not acceptable.

R. Do not insulate over nameplate or ASME stamps. Bevel and seal insulation around such.

S. When equipment with insulation requires periodic opening for maintenance, repair, or cleaning, install insulation in such a manner that it can be easily removed and replaced without damage.

3.3 PIPING INSULATION SCHEDULE

A. Fiberglass Pipe insulation, ASTM C 547, Type 1

1.4 SYSTEM DESCRIPTION

A. Chilled water distribution piping shall be capable of operation at not less than 150 psig and have a maximum working temperature of 75 degrees F.

B. General Requirements: Where more than one piping system material is specified, ensure system components are compatible and joined to ensure the integrity of the system is not jeopardized. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.
1. Use unions, flanges, and couplings downstream of valves and at equipment or apparatus connections. Do not use direct welded or threaded connections to valves, equipment or other apparatus.
2. Use non-conducting dielectric connections whenever joining dissimilar metals in open systems.
3. Provide pipe hangers and supports in accordance with ASME B31.9 unless indicated otherwise.

C. Valving Requirements: The following requirements are general in nature; provide valves where indicated.
1. Use ball valves or gate valves for shut-off and to isolate equipment, part of systems, or vertical risers.
2. Use globe valves for throttling, bypass, or manual flow control services.
3. Use only butterfly valves in chilled and condenser water systems 4 inch and larger for throttling and isolation service.
4. Use lug end butterfly valves to isolate equipment.

1.5 SUBMITTALS

A. Product Data: Include data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.
1. Manufacturer’s Installation Instructions: Indicate hanging and support methods, joining procedures.
2. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.

C. Project Record Documents: Record actual locations of piping and valves.

1.6 QUALITY ASSURANCE

A. Manufacturer's Experience: Company specializing in manufacturing products of the type specified in this section, with minimum five years of documented experience.

B. Ductile Iron Pipe: Test in accordance with AWWA C151 (ANSI A21.51).

C. Fittings: Test gray-iron and ductile-iron fittings in accordance with AWWA C110 (ANSI A21.10) and AWWA C153 (ANSI A21.53) Compact Fittings.

D. Installer Experience: Company specializing in performing work of the type specified in this section, with minimum five years of experience.

E. Welder Experience: Certify in accordance with ASME (BPV IX).
   1. Welding Materials and Procedures: Conform to ASME (BPV IX) and applicable state labor regulations.
   2. Provide certificate of compliance from authority having jurisdiction, indicating approval of welders.

F. Regulatory Requirements: Conform to ASME B31.9 code for installation of piping system.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle and store pipe materials, and other specified products, as recommended by respective manufacturers and supplemented in this Section, to prevent damage and defects.

B. Ship and transport valves to the site in shipping containers with labeling in place. Inspect for damage.

C. Storage: Store pipe and associated pipe fittings elevated off the ground with open ends capped or otherwise closed.
   1. Provide temporary protective coating on cast iron and steel valves.
   2. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
   3. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Keep trenches dewatered while installing pipe until required pipe joints are made and trench backfilled above water table.

B. Under no circumstances lay pipe in water or on bedding containing frost.

C. Do not lay pipe when weather conditions are unsuitable, as determined by Professional, for pipe laying work.
PART 2 - PRODUCTS

2.1 DUCTILE IRON PIPING FOR CHILLED WATER

B. Wall Thickness: Class 52, determined in accordance with AWWA C150 (ANSI A21.50), latest edition.

C. Joints: Provide fully restrained mechanical joints, conforming to applicable provisions of AWWA C111.

D. Interior Pipe Lining: Cement mortar lined in accordance with AWWA C104, double thickness, and bituminous seal coated in accordance with Section 4-11, Seal Coat, of AWWA C104. Provide NSF 61 approved seal coatings.

E. Exterior Pipe Coatings: Bituminous coating in accordance with Section 51-8, Coatings and Linings, AWWA C151.

F. Acceptable Manufacturers:
   1. American Pipe Co.
   2. Clow.
   3. Griffin.

G. Fittings: Ductile iron conforming to applicable provisions of AWWA C110 or ductile iron compact fittings conforming to AWWA C153; minimum working pressure rated at 250 psi.

H. Fittings to be mechanical or restrained joint conforming with applicable provisions of AWWA C111.

I. Fitting Lining: Cement mortar lined in accordance with AWWA C104, double thickness, and bituminous seal coated in accordance with Section 4-12, Seal Coat, of AWWA C104. Seal coatings NSF 61 approved.

J. Fitting Coatings: Standard bituminous coating in accordance with Section 51-8, Coatings and Linings, AWWA C151.

K. Joint Material for Ductile Iron Pipe or Fittings:
   1. Mechanical Joints, Ductile Iron Pipe and Fittings: Conforming to requirements of AWWA C111.
   2. Provide mechanical joints with retainer glands.

L. Mechanical Couplings: Gasketed, sleeve type with diameter to properly fit specified pipe. Couplings consist of one steel middle ring; two steel, malleable iron or ductile iron followers; two specially compounded rubber gaskets; and high strength low alloy steel bolting system suitable for coupling steel or ductile iron pipe.

M. Acceptable Manufacturers:
   1. Dresser Manufacturing Division Style 38 and 138; Transition Style 162.
   2. Smith Blair Product No. 411, transition product No. 413.

N. Wedge Action Retainer Glands:
1. Use fully restrained type joints on fittings and valves 4 inches through 48 inches diameter.
2. Retainer glands are not acceptable in lieu of restrained joints.
3. Mechanical joint retainer glands cast from ASTM A536, Grade 65-45-12 ductile iron. Wedging mechanism manufactured of ductile iron, heat treated to a hardness of 370 BHN minimum. Provide retainer glands with dimensions that can be used with standardized mechanical joint bell and tee head bolts conforming to requirements of AWWA C111 and AWWA C153. Wedge action screws incorporate twist off nuts in design to ensure proper torque. Provide mechanical joint restraining device for water working pressure rating of 250 psi minimum with a safety factor of at least 2:1.
4. Install mechanical joint retainer glands in accordance with manufacturer’s recommendations. Apply torque to T-bolts in accordance with manufacturer’s recommendations. Tighten torque limiting twist off nuts in alternate manner and clockwise direction. Apply joint deflection before T-bolts are torqued. Where retainer glands are used, limit joint deflection to 2-1/2 degrees maximum.

O. Acceptable Manufacturers:
1. EBAA Iron, Inc., Series 1100 (Megalug).
2. Ford Meter Box Co., Inc.; Series 1400 (Uni-Flange).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Carefully examine material for defects, and do not install material known to be defective.
B. Replace material found defective in manufacture or damaged in transit or handling at no additional expense.
C. Remove defective material from jobsite.
D. Rejected Products: Remove rejected Products from the Project site and replace with new Products at no increase in Contract Price.
1. Pipe already laid and later found defective will not be accepted and shall require its replacement.

3.2 PREPARATION

A. Verify that other site piping and building piping sizes, locations and inverts are as indicated.
B. Clean piping interior prior to laying pipe and following pipe laying and keep open ends of piping and pipe attachment openings capped or plugged until actual connection or actual pipe testing.
1. Provide protective means to prevent water and debris from entering pipe and fittings when not connected or left unobserved.
2. Cut pipe ends square, ream pipe ends to full pipe diameter, remove burrs. Bevel plain end ferrous pipe over 2 inches diameter. Thread ferrous pipe 2 inches diameter and under.
   a. Remove scale and dirt on inside and outside before assembly.
   b. Prepare piping connections with flanges and unions.
C. Earthwork: Perform earthwork for piping installation as specified in Section 31 23 33.
1. Bedding materials and concrete work for pipe bedding as specified in Section 31 23 33.
2. Excavate trenches in rock at least 25-feet in advance of pipe laying. Protect pipe ends from rock removal operations.
3. Establish elevations of buried piping to ensure not less than 48 inches of cover.

3.3 HANDLING OF PIPE AND FITTINGS

A. Unload, handle, and store ductile iron pipe, fittings, valves and appurtenances in accordance with AWWA C600. If damage or coating abrasion occurs and is deemed repairable, repair as directed by Professional in accordance with manufacturer’s recommendations. If damage is not repairable in opinion of Professional, reject pipe, fittings, valves or appurtenances, remove from Project site and replace at no additional expense.

B. Keep fittings and valves drained and stored before installation in a manner protecting them from damage due to freezing of trapped water.

3.4 INSTALLATION

A. General Requirements: Install the individual piping types in accordance with their respective manufacturer’s instructions.
   1. Install chilled water piping according to ASME B31.9 requirements.
   2. Lay and maintain pipe at required lines and grades as indicated on Drawings. Place fittings and valves at required locations with joints centered, spigots forced home, and valve stems plumb. Do not deviate from required line and grade, except with approval of Professional.
   3. Do not exceed allowable deflection at joints.
   4. Route piping in orderly manner, parallel to building structure, and maintain gradient. Slope piping and arrange to drain at low points.
   5. Install piping to conserve to avoid interference with other systems and Work.
   6. Sleeve pipe passing through walls and floors.
   7. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
   8. After completion of installations, clean, fill and treat the piping systems as required.
   9. Use eccentric reducers to maintain top of pipe level.
   10. Install hangers and supports in accordance with ASME B31.9.
   11. Close open ends of pipe with a watertight plug when pipe laying is not in progress.

3.5 THRUST RESTRAINT

A. General Requirements: Provide each non-restrained cap, tee, and bend (both horizontal and vertical) with thrust restraints as detailed on Drawings.

B. Concrete Reaction Backing: Place concrete reaction backing between undisturbed solid ground and fitting to be anchored. Locate backing, unless otherwise shown or directed, to contain resultant thrust force and so that pipe and fitting joints are accessible for repair.

3.6 FIELD QUALITY CONTROL

A. General Requirements: Conduct tests specified herein so that each pipe line installed in the Project is tested to the Professional’s satisfaction. Provide tools, materials, equipment, and instruments necessary for pipeline testing.

B. Perform hydrostatic pressure and leakage test, in accordance with Section 33 11 13 –Water System, and test criteria below. Care shall be taken to insure all trapped air is removed from the system prior to the test. Appropriate safety precautions shall be taken to guard against possible injury to personnel in the event of a failure. Test criteria:
1. Test pressure and duration: Test at 250 psig hydraulic pressure for a period of not less than two hours.
2. Allowable leakage rate: Not to exceed 10 Gallons/Inch Diameter/Mile/24 Hours.
3. Testing shall be witnessed by the University’s Representative, and results signed by University’s Representative.

C. Alternate Testing for Cold Weather
1. Pneumatic testing shall be performed in conformance with ANSI/ASME B31.9 and these criteria:
   a. Preliminary test: to 10 psig to check for major leaks.
   b. Cycle test: Gradually increase pressure to 125 psig, in stages of not more than 25% increments to allow for equalization of stresses and checking for leaks at each stage. Hold pressure of 125 psig for 10 minutes.
   c. Final test: Reduce pressure to 75 psig and conduct standing test for two hours with no loss in pressure, except for temperature compensation.

D. Repair and Retest: When section or sections of piping fails to meet specified requirements, determine source or sources of leakage, replace defective material and retest at no increase in Contract Price.

END OF SECTION 33 61 00
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The Work specified in this Section consists of constructing the compressed air distribution on site outside buildings.

1.2 RELATED SECTIONS:

A. Section 33 05 16 – Concrete Utility Structures

D. National Fire Protection Association (NFPA):

1.4 SYSTEM DESCRIPTION

A. Location: In steam tunnels and utility vaults.

B. Maximum Operating Pressure: 125 psig.

1.5 SUBMITTALS

A. Product Data: Provide manufacturers catalog literature with capacity, weight, and electrical characteristics and connection requirements.
1. Manufacturer’s Installation Instructions: Indicate manufacturer’s installation instructions, hoisting and setting requirements, starting procedures.
3. Warranty: Submit manufacturer warranty and ensure forms have been completed in Department’s name and registered with manufacturer.

B. Shop Drawings: Indicate piping system schematic with electrical characteristics and connection requirements.

C. Project Record Documents: Record actual locations of piping and components. Modify shop drawings to indicate final locations.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Pressure Vessels: Conform to applicable code for installation of pressure vessels.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Handling: Ship and transport pipe with end protectors in place. Inspect for damage.

B. Storage: Store pipe and associated pipe fittings elevated off the ground with open ends capped or otherwise closed.
   1. Protect piping and equipment from weather and construction traffic.

PART 2 - PRODUCTS

2.1 COMPRESSED AIR PIPE MATERIALS

A. Pipe and Fittings Materials, Above Grade and Inside Structures:
   1. Steel Pipe: ASTM A 53, Schedule 40 black, seamless or welded.

2.2 VALVES

A. Ball Valves:
   1. Acceptable Manufacturers:
      a. Apollo; Model 70-100, threaded.
   2. MSS SP-110, Class 150, 600 psi WOG, 316 Stainless Steel, two piece body, stainless steel ball, full port, teflon seats and stuffing box ring, blow-out proof stem, vinyl grip lever handle, threaded ends.

B. Quick Connector: 3/8 inch (10 mm) brass, snap on connector with self closing valve, Style A.

2.3 UNIONS AND COUPLINGS

A. Unions; Ferrous Pipe: 150 psi (1034 kPa) malleable iron threaded unions.
B. Dielectric Connections: Union with galvanized or plated steel threaded ends, with water impervious isolation barrier.

C. Flexible Connector: Neoprene with brass threaded connectors.

2.4 CONDENSATE DRAIN TRAPS

A. Provide automatic condensate drain, Spirax Model No. FA-30; Size 3/4 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that concrete utility tunnel and utility vault Work is complete and ready for pipe installation. See Section 33 05 16 for Concrete utility structures.

B. Verify that building service connection and pipe size, location and elevations are as indicated.

C. Field Inspection: Inspect each section of pipe and each pipe fitting for damage and defect before installation.

D. Verify that building service connection and pipe size, location and elevations are as indicated.

3.2 PREPARATION

A. General Requirements: Clean piping interior prior to laying pipe and following pipe laying and keep open ends of piping and pipe attachment openings capped or plugged until actual connection or actual pipe testing.
   1. Provide the protective means to prevent water and debris from entering pipe and fittings when not connected or left unobserved.

B. Cut pipe ends square, ream pipe ends to full pipe diameter, remove burrs. Bevel plain end ferrous pipe over 2 inches (50 mm) diameter. Thread ferrous pipe 2 inches (50 mm) diameter and under.
   1. Remove scale and dirt on inside and outside before assembly.
   2. Prepare piping connections with flanges and unions.

3.3 INSTALLATION

A. General Requirements: Install the individual piping types in accordance with their respective manufacturer’s installation instructions.
   1. Install air piping according to ASME B31.9 requirements. Identify piping system and components.
   2. Make pipe joints in accordance with the pipe manufacturer=s instructions.
   3. Route piping in orderly manner, parallel to building structure, and maintain gradient. Slope piping and arrange to drain at low points.
   4. Install piping to conserve building space and to avoid interfere with use of space.
   5. Sleeve pipe passing through partitions, walls and floors.
   6. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
   7. Install takeoff to outlets from top of main, with shut off valve after take off.
   8. Install valves with stems upright or horizontal, not inverted.
9. Installed compressed air couplings, female quick connectors, and pressure gages where outlets are indicated.
10. Install tees instead of elbows at changes in direction of piping. Fit open end of each tee with a plug.

B. Pipe Hangers and Supports Installations: In general, install in accordance with ASME B31.9.
   1. Support horizontal piping as scheduled hereinafter.
   2. Install hangers to provide minimum 1/2 inch (13 mm) space between finished covering and adjacent work.
   3. Place hangers within 12 inches (300 mm) of each horizontal elbow.
   4. Use hangers with 1-1/2 inch (38 mm) minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
   5. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.
   6. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
   7. Provide enamel type finish coating on steel hangers and supports regardless of installation locations.
   8. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings.
   9. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.
10. Cap and seal ends of piping when not connected to mechanical equipment.

3.4 SCHEDULES

A. Hanger Spacing for Steel Piping:
   1. 1/2 inch (15 mm), 3/4 inch (20 mm), and 1 inch (25 mm): Maximum span, 7 feet (2100 mm); minimum rod size, 1/4 inch (6 mm).
   2. 1-1/4 inches (32 mm): Maximum span, 8 feet (2400 mm); minimum rod size, 3/8 inch (9 mm).
   3. 1-1/2 inches (40 mm): Maximum span, 9 feet (2700 mm); minimum rod size, 3/8 inch (9 mm).
   4. 2 inches (50 mm): Maximum span, 10 feet (3.0 m); minimum rod size, 3/8 inch (9 mm).
   5. 2-1/2 inches (65 mm): Maximum span, 11 feet (3.4 m); minimum rod size, 3/8 inch (9 mm).
   6. 3 inches (80 mm): Maximum span, 12 feet (3.6 m); minimum rod size, 3/8 inch (9 mm).

3.5 FIELD QUALITY CONTROL

A. General Requirements: Conduct tests specified herein so that each pipe line installed in the Project is tested to the Professional's satisfaction.

B. Compressed Air Piping Leak Test: Prior to initial operation, clean and test compressed air piping in accordance with ASME B31.9.
   1. Materials and Equipment: Provide tools, materials, apparatus and instruments necessary for pipeline testing.
   2. Test Pressures: Test all piping, regardless of location, to 100 psi for four (4) hours.
   3. Allowable Loss: Allowable pressure drop is zero, except for pressure drop due to temperature.

C. Repair and Retest: When Work fails to meet specified requirements, determine source or sources of leakage, repair or replace defective material and retest at no increase in Contract Price.
   1. Rejected Products: Remove rejected Products from the Project site and replace with new Products at no increase in Contract Price.
2. Pipe already laid and later found defective will not be accepted and shall require its replacement.

END OF SECTION 33 61 50
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The work specified in this Section consists of constructing the various types and sizes of precast concrete round shape manholes and cast-in-place concrete rectangular shape manholes required in the project.
   1. Includes the round shape precast concrete manholes for the sanitary sewer work.
   2. Includes the construction of cast-in-place concrete rectangular shape manholes for Mechanical work.
   3. Includes the construction of cast-in-place concrete rectangular shape manholes for Electrical work.

1.2 RELATED SECTIONS

A. Section 31 23 33 – Trenching, Backfilling and Compacting.
B. Section 33 05 16 – Precast Concrete Utility Structures.
C. Section 03 30 53 – Cast-in-Place Concrete.
D. Section 03 60 00 – Grout.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):
   4. ASTM A 615, Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
   5. ASTM C 144, Specification for Aggregate for Masonry Mortar.
   9. ASTM C 361, Specification for Reinforced Concrete Low-Head Pressure Pipe.
  11. ASTM C 478, Specification for Precast Reinforced Concrete Manhole Sections.
  15. ASTM D 2240, Test Method for Rubber Property-Durometer Hardness.

B. American Association of State Highway and Transportation Officials (AASHTO) Standards as referenced throughout these Specifications.

C. Federal Specifications:

1.4 SUBMITTALS

A. Shop Drawings and Product Data: Submit manufacturer's published detail drawings, modified to suit design conditions if required, catalog cuts, Contractor prepared drawings as applicable, and such other data as required to provide complete descriptive information for the following:
   1. Basic Materials.
   2. Precast Reinforced Concrete Manhole Components.

B. Certificates: Submit certified records or reports of results of shop tests with such records or reports containing a sworn statement that shop tests have been made as specified.
   1. Submit manufacturer's sworn certification that components and products will be manufactured in accordance with specified reference standards for components and products.
   2. Submit manufacturer's sworn certification that manhole frame and cover tensile test bars were poured from the same iron as castings they represent.

1.5 QUALITY ASSURANCE

A. Source Quality Control: Maintain uniform quality of products and component compatibility by using the products of one manufacturer for precast reinforced concrete manholes.
   1. Obtain certificate of materials and construction compliance with ASTM C 478 from the precast reinforced concrete manhole manufacturer. Submit this certificate as part of required submittals.
   2. Obtain certificate of material and construction compliance with ASTM A 48, Class 30 tensile strength from the manhole frame and cover manufacturer. Furnish certification that tensile test bars were from same pour as castings. Submit the certificate as part of required submittals.
   3. Shop and Laboratory Tests: As a condition of the Contract, the materials stated herein require periodic testing according to methods referenced, or as required by the Architect.
      a. Laboratory Tests: Submit three manhole frame and cover tensile test bars for each 50 manhole frames and covers or less if the total required is less than 50. Submit one machined test bar ready for testing. Architect will verify certifications, release one bar for the Machined Bar Tensile Test, and retain two remaining bars.
         1) Testing Laboratory shall furnish both Architect and Contractor two copies of test result reports. These reports will be considered as sufficient evidence of acceptance or rejection of materials represented.
      b. Shop Tests: The manhole component manufacturers shall have the capability to perform the number of tests that the Architect may require to establish the quality of the proposed manhole components. Manufacturers shall furnish to the Architect certified test records or reports with sworn statement of tests made as specified.
         1) Precast Reinforced Concrete Manholes: Conduct tests as specified in ASTM C 478.
         2) Manhole Frames and Covers: Test for AASHTO H-20 highway loading. Test one manhole cover of each design submitted for approval.

B. Certified Test Records: The Architect reserves the right to accept certified test records or reports of previously conducted tests.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Handling: Transport and handle precast reinforced concrete manhole components, and other products specified herein, in a manner recommended by their respective manufacturers to prevent damage and defects.
1. Through-wall lifting holes are not permitted in manhole component construction.

B. Storage: Store precast reinforced concrete manhole components in accordance with their manufacturer's recommendations to prevent joint damage and contamination. Exercise such care in storage of other specified products as recommended by their respective manufacturers.

1.7 SITE CONDITIONS

A. Environmental Requirements:
1. Do not set or construct manhole bases on subgrade containing frost.
2. To improve workability of Preformed Plastic Sealing Compound during cold weather, store such at temperature above 70 degrees F or artificially warm compound in a manner as recommended by the compound manufacturer.
3. During warm weather stiffen Preformed Plastic Sealing Compound by placing under cold water or by other means as recommended by the compound manufacturer.

PART 2 - PRODUCTS

2.1 BASIC MATERIALS

A. Cast-In-Place Concrete Products: As specified in Section 03 30 53.
1. Use Class A (4000 psi) quality concrete unless indicated otherwise on the Drawings.
2. Concrete formwork and reinforcement materials and fabrications are as specified in the referenced Sections in Section 03 30 53.

B. Non-Shrink Non-Metallic Grout: As specified in Section 03 60 00.

C. Waterproofed Mortar: Conforming to requirements of ASTM C 270 for Type M, 2500 psi. Parts by volume include: One part cement, 1/4 part lime, and sand at not less than 2-1/4 nor more than three times the sum of the volumes of cement and lime used and of the following materials:
1. Waterproofing Agent: Medusa Waterproofing Powder by Medusa Portland Cement Co.; Hydratite by Grace Construction Materials; or Hydrolox by Chem-Master Corp. Add the Medusa product in the ratio of two pounds per bag of cement; add the other products per manufacturer’s recommendations.
2. Portland Cement: Conforming to ASTM C 150, Type I.
3. Hydrated Lime: Conforming to ASTM C 207, Type S.
5. Water: Clean and free from deleterious amounts of acids, alkalis, and organic materials.

D. Epoxy Bonding Compound: Provide a high-modulus, low viscosity, moisture insensitive epoxy adhesive having the following characteristics.
1. Mix Ratio: 100 percent solids, two-component; mixed one part by volume component B to two parts by volume component A.
2. Ultimate Compressive Strength: 13,000 psi after cure at 73 degrees F and 50 percent relative humidity determined in accordance with ASTM D 695.
3. Acceptable Manufacturers:
   a. Sika Corporation: Sikadur Hi-Mod.
   b. Euclid Chemical Company; No. 452 Epoxy System.
   c. A. C. Horn, Inc.; Epoxite Binder.
   d. Or approved equal.
E. Manhole Steps: Manhole steps shall be provided only in the manholes where permitted by the Owner. The Contractor is permitted the option to provide one type of manhole step in the Project as selected from the step types and designs as specified herein. Only one type of step will be allowed within any one manhole.
   2. Reinforced Plastic Step: Composed of a ½ inch Grade 60, ASTM A 615 deformed steel reinforcing bar completely encapsulated in Grade 49108, ASTM D 4101 polypropylene copolymer compound, Type II; M. A. Industries, Inc., Type PS4, Or approved equal.

F. Manhole Frame and Cover (For Storm System): Gray iron castings conforming to ASTM A 48, Class No. 30, designed for AASHTO Highway Loading Class H-20. Provide castings of uniform quality, free from blowholes, porosity, hard spots, shrinkage distortion, or other defects. Frame and cover design and dimensions are as indicated on Drawings.
   1. Finish: Bearing surfaces machined to prevent rocking and rattling under traffic. Casting finished to meet AASHTO Specification M 306, 4.3.3 Painting, Welding, Plugging - Not Allowed.
   2. Identification: Cast the word STORM integrally on cover in two-inch size, raised letters.

G. Watertight Manhole Frame and Cover (For Sanitary Sewer): Gray iron castings conforming to specified requirements for Manhole Frame and Cover for Storm System with the addition of cover hold-down bolts.
   1. Cover Hold-down Bolts: Type 316 stainless steel conforming to ASTM A 276 for bolts and washers or manufacturer’s standard bronze bolts and washers.
   2. Identification: Cast the word SEWER integrally on cover in two-inch size, raised letters.
   3. O-ring Cover Gasket: One piece O-ring gasket factory installed in a machined rectangular or dovetail groove in the bearing surface of the cover.
      a. Gasket material of neoprene composition having good abrasion resistance, low compression set, Type D 40 durometer hardness determined in accordance with ASTM D 2240 and suited for use in sanitary sewer manholes.
      b. Gluing of gasket is not permitted.

H. Watertight Manhole Frame and Cover (For Electrical Manholes): Basic construction quality as specified above including cover hold-down bolts and O-ring gasket. Additional requirements as follows:

I. Manhole Component (Section-to-Section) Seals: The Contractor is permitted the option to provide one type of manhole component seal in the Project as selected from seal types specified herein except where required otherwise on the Drawings:
   1. Preformed Plastic Sealing Compound: Conforming to Fed. Spec. SS-S-210A, Type 1, Rope Form, of either bitumastic base compound or butyl rubber base compound and shipped protected in a removable two-piece wrapper.
      a. Dimensions: Size the cross-section of rope form to provide squeeze-out of material around entire interior and exterior circumference of each manhole section joint when joint is completed.
      b. Acceptable Manufacturers:
         1) K. T. Snyder Company, Inc.; RAM-NEK.
2) K. T. Snyder Company, Inc.; RUB'R-NEK.
3) Hamilton Kent Manufacturing Company; KENT-SEAL NO. 2.
4) Rubber Compression Gasket: Of material composition conforming to ASTM C 361 or ASTM C 443.

J. PVC Waterstop (For Connection to Existing Manholes): PVC waterstop for use for grouted connection of piping to existing manholes or for sewer pipe entering manhole bases of cast-in-place concrete construction.
   2. Acceptable Manufacturers:
      a. FERNCO Inc., CMA Concrete Manhole Adapter, Distributed by the General Engineering Company.
      b. Or approved equal.

K. Surface (Expanding-Type) Waterstop: Surface Waterstop for use for pipe diameters larger than 24 inches connecting into manhole bases of cast-in-place concrete construction.
   1. Material Composition: A specially formulated joint sealant which swells on contact with water. Provide waterstop packaged in continuous length coils. Sealant composed of chloroprene rubber and chloroprene rubber modified to impart hydrophilic properties.
      a. Waterstop shall have a coating formulated to inhibit initial expansion due to moisture presence in the fresh concrete.
      b. Waterstop configuration shall be of dual extrusion design and 10 mm by 20 mm dimensions.
      c. Waterstop shall be secured to hardened concrete with the waterstop manufacturer’s standard adhesive binder.
   2. Acceptable Manufacturers:
      a. Greenslack, Inc.; Hydrotite VCJ.
      b. Or approved equal.

2.2 PRECAST REINFORCED CONCRETE MANHOLE COMPONENTS

A. Materials and Fabrication: Conforming to requirements specified in ASTM C 478 except as follows:
   1. Concrete: Composition and compressive strength conforming to ASTM C 478 except use Type II or Type III cement in manhole components and increase compressive strength to 4500 psi (at 28 days) in precast bases.
   2. Casting and Curing: Wet cast and steam curing process in accordance with Section 3.6.11 and 3.7.2 of AWWA C 302.
   3. Manhole Steps: Factory installed in manhole components, prealigned vertically, spaced on equal centers, and located the minimum distance from ends of risers and top sections as indicated on Drawings.
   4. Manhole Component Seals: As specified previously. Manhole component joints factory formed for self-centering concrete to concrete bearing employing either a rubber compression gasket or preformed plastic sealing compound.
   5. Manhole Component Design: Designs shall conform to ASTM C 478. Base, tapered and straight riser section, and top section dimensions and diameters, not consistent with ASTM C 478, are as indicated on Drawings.

B. Precast Base and Riser Sections: Design, materials and construction as specified previously under Materials and Fabrication.
1. Large Diameter Pipe Base (Doghouse Style): Precast base section designed to fit over large diameter pipes allowing the construction of the bottom portion (slab) of the base to be poured-in-place around and under the pipe. Construct the poured-in-place portion in accordance with the requirements specified hereinafter for Cast-In-Place Concrete Manhole Base.

C. Prefabricated Pipe Openings: Provide precast base sections with custom preformed pipe openings with integral pipe seals. Preform the pipe opening to accommodate the type of pipe and pipe opening seal required.

1. Prefabricated Pipe Opening Seals: Resilient gaskets of the types and designs which conform to the requirements specified in ASTM C 923.

D. Precast Top Sections: Designs as required by the Drawings, and of materials and construction as specified herein, except additional and differing requirements as follows:

1. Hold Down Bolt Inserts: Factory cast the inserts in the top section with no fewer than two 3/4-inch threaded inserts or slotted inserts to accommodate manhole frame hold down bolts. Provide threaded inserts of three-inch depth and designed for an ultimate load in tension of 12,500 pounds. Inserts factory plugged for shipping. Coordinate insert locations in the top sections to match the bolt hole locations in the manhole cover frames.

2. Flat Slab Tops: Thickness versus diameter is as indicated on the Drawings. Tops factory formed to properly accept and support required manhole cover frame and properly formed underside to join the top section to the riser section in a matching joint.

3. Eccentric Cone Tops: Provide precast tops of the same minimum wall thickness and with same area of circumferential steel reinforcement as riser sections.

E. Precast Grade Rings: Provide one-piece design (two-piece design not acceptable) precast concrete leveling and adjusting units of three-inch or four-inch thickness, and of materials and construction as specified previously under Materials and Fabrication.

1. Provide precast grade rings with hold down bolt holes matching location of bolt holes in the cast iron manhole cover frame.

2. The grade ring design shall provide for full bearing of the cast iron manhole cover frame.

F. Waterproof Coating: Provide asphalt compound coating of either the solvent type or the emulsion type. However, mixtures of the two types in the Project are not permitted.

1. Solvent Type: Brush or spray-on asphalt compound, cold-applied and conforming to Federal Specification SS-A-701 B.

2. Emulsion-Type: Brush or spray-on asphalt-base, clay emulsion with fibers, cold-applied and conforming to Federal Specification SS-R-1781.

3. Acceptable Manufacturers:
   a. W. R. Meadows, Inc.; SEALMASTIC.
   b. Cooper Creek.
   c. Or approved equal.

4. Application: The coating may be either shop or field applied. Apply coating to the exterior of manhole components.
   a. Apply coating in two coats at the rate of 75 to 100 square feet per gallon per coat. Allow 24 hours drying between coats.

PART 3 - EXECUTION
3.1 **EXAMINATION**

A. **Field Inspection:** Inspect precast reinforced concrete manhole components in accordance with requirements of ASTM C 478 regarding repairable defects and defects subject to rejection by the Architect.

3.2 **PREPARATION**

A. **Earthwork:** Perform earthwork for manhole installation as previously specified in Section 31 23 33 and according to the following:
   1. **Protection:** During the earthwork operations, keep pipe and manhole interiors cleared of debris as construction progresses.

B. **Waterproof Coating Touch-Up:** Touch-up chipped, cracked, or abraded surfaces and finished joints with two coats of the factory applied waterproof coating material.
   1. Bring coating materials for touch up and field coating to the job site in the original sealed and labeled containers of the manufacturer.

3.3 **MANHOLE CONSTRUCTION METHODS**

A. **Cast-In-Place Concrete (Rectangular Shape) Manhole Construction:** Construct manholes in accordance with design and dimensions indicated on Drawings.
   1. Form and pour concrete in accordance with requirements of Section 03 30 53. Additional requirements as follows:
      a. Vibrate poured concrete using mechanical vibrator of a type and design approved by Architect. Use vibrators of type capable of transmitting vibration to concrete in frequencies of not less than five thousand impulses per minute.
   2. Install piping or conduits in cast-in-place manhole construction prior to pouring the concrete.
      a. Apply Epoxy Bonding Compound in accordance with manufacturer’s instructions to pipe at base connection prior to pouring the concrete.
      b. Install PVC Waterstop on individual pipes or conduits entering and leaving manhole base prior to pouring concrete. Install PVC Waterstop in accordance with manufacturer’s written instructions.
   3. Use Class A (4000 psi) concrete as specified in Section 03 30 53, unless indicated otherwise on Drawings.

B. **Precast Concrete Round Manhole Base Installation:** Install precast base on a 6-inch deep compacted layer of aggregate meeting requirements of Pipe Zone Bedding as specified in Section 31 23 33.
   1. Set pipe in the Prefabricated Pipe Opening Seals so that an equal annular space is created on the interior and exterior of the wall of the manhole base section.
   2. Following pipe installation through the seal, grout the annular space at the pipe connection, on both sides of the wall, to the spring line of the pipe. Finish the grout smooth and flush with face of manhole.

C. **Large Diameter Pipe Base (Doghouse Style) Round Precast Manhole Base Installation:** Pipes entering the precast base shall be sealed into the grout in-fill with Surface (Expanding Type) Waterstop. Install the waterstop material to be centered within the wall thickness of the base wall.
   1. **Waterstop Installation:** Install the Surface (Expanding Type) Waterstop on the pipe and in accordance with manufacturer’s recommendations and the following:
      a. Install the waterstop on properly prepared substrates and in accordance with the environmental requirements stated in the manufacturer’s instructions.
      b. Prime the joining surfaces if required by the waterstop manufacturer’s instructions.
2. Grout Installation: Install the Non-Shrink Non-Metallic Grout to fill the annular space between the pipe and the base section. Trowel the finished grout installation smooth and flush with the riser section surfaces, both inside and outside.

D. Length of Pipe Connections into Manholes: Use pipes no longer than five feet in length when connecting into manholes through Prefabricated Pipe Opening Seals.
1. For other types of pipe connections into manholes, use pipes of such length that a pipe joint is provided at the outside edge of manhole base or wall as applicable. Also use pipes no longer than 6 feet in length for first pipe joined thereto.

E. Concrete Channel Fill In Sanitary Sewer Runs: Field pour and form concrete channel fill for each manhole base except in the case where precast bases are used, factory preformed channels may be provided.
1. Form inverts directly in concrete channel fill.
2. Accurately shape invert to a semi-circular bottom conforming to inside of connecting pipes, and steel trowel finish to a smooth dense surface.
3. Make changes in size and grade gradually.
4. Make changes in direction of entering sewer and branches to a true curve of as large a radius as manhole size will permit.
5. In terminal manholes, install concrete channel fill with formed channel extending from downstream pipe opening directly across the base to future pipe opening on upstream side of the base.
6. Make slopes gradual outside the invert channels.
7. Use Class B (3000 psi) concrete as specified in Section 03 30 53, unless indicated otherwise on Drawings.
8. When precast bases with preformed channels are used, fill the annular space at the pipe connections on both sides of the wall to assure flow through the channel and bring grout up to the spring line of the pipe.
9. Use Non-Shrink Non-Metallic grout as specified in Section 03 60 00.

F. Precast Concrete Manhole Wall Section Installation: Provide precast reinforced concrete straight riser, tapered riser and top sections necessary to construct complete manholes. Fit the different manhole components together to permit watertight jointing and true vertical alignment of manhole steps.
1. If rubber compression gaskets are used between sections, install gaskets and join sections in accordance with written instructions of manhole component manufacturer.
2. If Preformed Plastic Sealing Compound is used between sections, install sealing compound in accordance with manufacturer's recommendations, and join sections in accordance with written instructions of manhole component manufacturer.
   a. Prime joint surfaces if required by sealing compound manufacturer.
   b. If sealing compound is installed in advance of section joining, leave exposed half of two-piece protective wrapper in place until just prior to section joining.
   c. Use sealing compound as the sole element utilized in sealing section joints from internal and external hydrostatic pressure.
   d. Arrange and pay for the sealing compound manufacturer's representative to be present for first installation of manhole sections to instruct workmen on proper installation methods of sealing compound and to be present while manhole sections are being installed.
   e. Following manhole section installation, trowel sealing compound surface smooth and flush with interior face of manhole.
   f. Make pipe connections into manhole walls as specified for pipes connecting into manhole bases.

G. Lifting Recess Sealing: Seal lifting recesses is precast concrete manhole sections with properly designed tapered rubber plugs. Drive plugs into recesses in such manner to render them completely water and air tight. Sealing of lifting recesses with grout not permitted.
H. Cast Iron Manhole Frame and Cover Installation: Where required, make final adjustment of cast iron frame to proper elevation using Grade Rings. Set manhole frame and cover to conform to roadway grade and crown (if any). Set top of manhole frame and cover 1/2-inch below finished paving elevation.

1. Precast Concrete Grade Ring: Wet, but do not saturate, the grade rings immediately before laying. Pre-set grade rings to proper plane and elevation using wedges or blocks of cementious material not exceeding the joint thickness. No more than four wedges or blocks per grade ring permitted. Incorporate wedges or blocks in fresh mortar in a manner to completely encase each. Mortar thickness not to exceed 3/4-inch maximum and 3/8-inch minimum. Crown fresh mortar to produce squeeze-out between grade rings. Tool exposed joints with appropriately shaped tool and compact mortar edge into joints. Clean off excess mortar prior to initial mortar set.

2. Cast Iron Manhole Frame and Cover Anchorage: Anchor manhole frames in place on manhole top section, or on leveling units, after installing ½-inch thick preformed plastic sealing compound on bearing surface of manhole frame. Remove excess sealing compound squeeze-out after manhole frame is bolted in place.

   a. Anchor Bolt Length: Size bolts according to the following:
      1) Sufficient length to properly pass through leveling units (if any).
      2) Sufficient length to engage full depth of manhole top section inserts.
      3) Sufficient length to allow enough threaded end to pass through manhole frame to properly tighten nut and washer.

   b. Tighten manhole frame bolts after mortar has cured.

   c. Install manhole covers using the proper bolts as provided with the covers for the waterproof installations.

3.4 INTERFACING EXISTING SEWER

A. Bypass Provisions: As work of this Section, maintain flow in the existing sewer both during construction operations and until concrete is cured, both in the case of cast-in-place work and newly formed invert channels.

   1. Provide a fail-safe (and properly sized) temporary means and methods of continued wastewater system service. The means and methods are at the Contractor’s discretion.
   2. Do not permit ground or surface water to enter the existing wastewater sewer facilities during the construction or the bypass work.
   3. Do not flush or drain water, or deposit debris from the new manhole construction, into the existing wastewater sewer facilities.

B. Constructing Manholes on Existing Sewer: Where new manholes are constructed on existing sewers, the Contractor shall have the option to construct the specified cast-in-place manhole bases or precast manhole bases. In either case, make the appropriate connection of the new and existing sewer pipe to the new manhole.

   1. Where the invert difference between the new and existing sewer is two feet or more, construct a drop manhole base. No separate or additional payment will be made for the vertical feet of drop connection required.
   2. Where the existing piping is damaged beyond the new manhole base as a result of work of constructing the new manhole, replace such damaged pipe with new to the first joint or to such point as agreed to by the Architect.
   3. Where precast manhole bases are used, replace the existing sewer pipe with new to the first joint outside the manhole base.
   4. Where cast-in-place manhole bases are constructed, saw-cut the existing piping to be removed. Chipping or breaking pipe as a cutting method is not acceptable.
   5. Following the manhole base construction, install a watertight pipe plug until debris and accumulated water have been removed from the new manhole base and the new sewer facilities have passed the specified acceptance tests.

3.5 FIELD QUALITY CONTROL
A. General Requirements: For those manholes required to be watertight, conduct tests as specified herein and in the presence of, and to complete satisfaction of, the Architect. Should a manhole not satisfactorily pass testing, discontinue manhole construction in the Project until that manhole does test satisfactorily.

1. Provide tools, materials, equipment, and instruments necessary to conduct the manhole testing specified herein.
   a. Vacuum Testing Equipment: Use vacuum apparatus equipped with necessary piping, control valves and gauges to control air removal rate from the manhole and to monitor vacuum.
      1) Provide an extra vacuum gauge of known accuracy to frequently check test equipment and apparatus.
      2) Vacuum testing equipment and associated testing apparatus are subject to Architect's approval.
      3) Provide seal plate with vacuum piping connections for inserting in manhole frame.

2. Prior to testing, clean manholes thoroughly and seal openings, both to the complete satisfaction of the Architect. Seal openings using properly sized plugs.

3. Perform testing with the cast iron frames and covers installed. Include the joint between the precast manhole component and the cast iron manhole frame in the test.

4. The Contractor may elect to make a test for his own purposes prior to backfilling. However, conduct tests of the manholes for acceptance only after the backfilling has been completed.

5. If a manhole is constructed on an existing active sanitary sewer, where sewage flow must be maintained, the test will be waived.

B. Vacuum Test Procedure: Perform vacuum testing in accordance with the testing equipment manufacturer's written instructions and the following:

1. Draw a vacuum of ten inches of mercury and close the valves.

2. Consider manhole acceptable when vacuum does not drop below nine inches of mercury for the following manhole sizes and times:
   a. Four foot diameter - 60 seconds.
   b. Five foot diameter - 75 seconds.
   c. Six foot diameter - 90 seconds.
   d. Seven foot diameter - 105 seconds.

C. Repair and Retest: Determine source or sources of leaks in manholes failing acceptable limits.

1. Repair or replace defective materials and workmanship, as is the case, and conduct such additional Manhole Acceptance Tests and such subsequent repairs and retesting as required until manholes meet test requirements.

2. Materials and methods used to make manhole repairs shall meet with Architect's approval prior to use.

3. Make repairs, replacements, and retests at no increase in Contract Price.

END OF SECTION 33 62 50
PART 1 - GENERAL

1.1 SUMMARY

A. SECTION INCLUDES
   1. Pipe and pipe fittings.
   2. Valves.
   3. Steam piping system.
   4. Steam condensate piping system.
   5. Steam traps.
   7. Accumulators and Flash Tanks.
   8. Air Powered Condensate Pump.

1.2 RELATED SECTIONS

A. Section 33 05 16 – Concrete Utility Structures.

B. Section 31 23 33 - Trenching, Backfilling and Compaction.

C. Section 03 30 53 - Cast-In-Place Concrete.

1.3 REFERENCES

1.4 SYSTEM DESCRIPTION

A. High Pressure Steam (HPS): Maximum operating pressure 250 psig.

B. Low Pressure Steam (LPS): Maximum operating pressure 15 psig.

C. Condensate Return (CR, PC, GC): Maximum operating pressure 125 psig, 212 degrees F.

D. For steam and condensate piping in manholes and structures, use steel carrier pipe, high temperature insulation, and aluminum jacket.

E. When more than one piping system material is selected, ensure systems components are compatible and joined to ensure the integrity of the system is not jeopardized. Provide necessary joining fittings. Ensure flanges, unions, and couplings for servicing are consistently provided.

F. Use unions, flanges, and downstream of valves and at equipment or apparatus connections. Use dielectric unions where joining dissimilar materials. Do not use direct welded or threaded connections.

G. Provide inserts, anchors, pipe hangers and supports in accordance with ASME B31.9 unless indicated otherwise.

H. Use stainless steel ball valves for shut-off and to isolate equipment, parts of systems, or vertical risers for pipe sizes up to and including three inches. For pipe sizes over 3 inch, use butterfly valves.

I. Use stainless steel globe valves, ball valves or butterfly valves for throttling, bypass, or manual flow control services for pipe sizes up to and including three inches. For pipe sizes over 3 inch, use butterfly valves.

J. Use Balanced Pressure Thermostatic Steam Traps for:
1. Main steam headers

1.5 PERFORMANCE REQUIREMENTS

A. Steam Traps:
   1. Select to handle minimum of two times maximum condensate load of apparatus served.

B. Pressure Differentials:
   a. Low Pressure Systems (15 psi (103 kPa) maximum): 2 psi (13.8 kPa).
   b. High Pressure Steam (125 to 250 psi (1034 kPa) maximum): 40 psi (276 kPa).

1.6 SUBMITTALS

A. Product Data:
   1. Provide data on pipe materials, pipe fittings, valves and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.
   2. Include product description, model, dimensions, component sizes, rough-in requirements, service sizes, and finishes.
   3. Submit schedule indicating manufacturer, model number, size, location, rated capacity, load served, and features for each specialty.
   4. Include electrical characteristics and connection requirements.

C. Manufacturer's Installation Instructions: Indicate hanging and support methods, joining procedures.

D. Project Record Documents: Record actual locations of piping and valves.

E. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.

1.7 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing the type of products specified in this section, with minimum five years of documented experience.

B. Installer: Company specializing in performing the work of this section, with minimum five years of documented experience.

C. Welders: Certify in accordance with ASME (BPV IX).

1.8 REGULATORY REQUIREMENTS

A. Conform to ASME B31.9 and ASME B31.1 code for installation of piping system.

B. Provide certificate of compliance from authority having jurisdiction indicating approval of welders.

C. Welding Materials and Procedures: Conform to ASME (BPV IX) and applicable state labor regulations.

D. Products Requiring Electrical Connection: Listed and classified by UL as suitable for the purpose indicated.

1.9 DELIVERY, STORAGE, AND HANDLING
A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.10 EXTRA MATERIALS

A. Provide two repacking kits for each size and valve type.

B. Provide two service kits for each size and type of steam trap.

PART 2 - PRODUCTS

2.1 LOW PRESSURE STEAM PIPING 15 PSIG (103 KPA) MAXIMUM

A. Steel Pipe: ASTM A 53, Schedule 40, black.
   2. Joints: Threaded up to 2 inch, AWS D1.1, welded for larger than 2 inch.

2.2 STEAM CONDENSATE PIPING – ABOVE GRADE AND IN MANHOLES

A. Steel Pipe: ASTM A 53, Schedule 80, black.
   1. Fittings: ASME B16.3 malleable iron Class 125, or ASTM A 234/A 234M forged steel.
   2. Joints: Threaded up to 2 inch, AWS D1.1, welded for larger than 2 inch.

2.3 FRP CONDENSATE CARRIER PIPING UNDERGROUND

A. FRP Pipe and Fitting Materials Sizes 1-14 inches, Direct-Buried.
   1. Pipe Construction:
      a. The structural wall of fiberglass pipe shall have glass fibers in a matrix of cured epoxy resin.
      b. The integral, reinforced resin-rich liner shall consist of glass and a resin/hardener system identical to that of the structural wall, and shall have a 60 mil nominal thickness. Non-reinforced pure resin-type corrosion barriers (liners) shall not be allowed due to their potential for severe fracturing during transportation, installation, and operation of the pipe.
      c. Pipe shall be manufactured according to ASTM D-2997, RTRP, Type II, Grade 1 Class C specification for Reinforced Thermosetting Resin Pipe (RTRP).
      d. Epoxy fiberglass pipe shall be translucent to all for inspection of damage.
      e. Pipe in 2 through 8-inch sizes shall be furnished in 30 or 40 foot length to minimize the number of field–bonded joints for rapid installation.
   2. Standard Fitting Construction:
      a. Fittings in 1 through 14-inch sizes shall be filament wound with a reinforced resin-rich liner of 60 mil minimum thickness and of the same glass and resin type as the pipe. Pipe, fittings, and adhesive shall, as an assembly, provide a continuous liner throughout the system.
      b. Compression-molded fittings in 2, 3, 4 and 6-inch nominal sizes may also be allowed upon agreement between purchaser and manufacturer.
c. Contact-molded spray or hand-layup fittings are not allowed.

3. Workmanship:
   a. The pipe and fittings shall be free from all defects, including delaminations, indentations, pinholes, foreign inclusions, bubbles, and resin-starved areas which, due to their nature, degree or extent, detrimentally affect the strength and serviceability of the pipe or fittings. The pipe and fittings shall be as uniform as commercially practicable in color, density and other physical properties.

4. Testing
   a. Samples of pipe and couplings shall be tested at random, based on standard quality control practices to determine conformance of the materials to American Society for Testing and Materials guidelines for testing fiberglass pipe products:
   b. Test samples may be hydrostatically tested by the manufacturer to 1.5 times the pressure rating for signs of leakage.

5. Field Testing
   a. Piping systems are designed for hydrostatic field testing at 150 percent of rated operating pressure. Pneumatic testing is not recommended.

6. Manufacturer:
   a. Fibercast - Centricast Plus RB-2530

2.4 PIPE HANGERS AND SUPPORTS

A. Conform to ASME B31.9.

B. Hangers for Pipe Sizes 1/2 to 1-1/2 Inch (13 to 38 mm): Malleable iron, adjustable swivel, split ring.

C. Hangers for Pipe Sizes 2 to 4 Inches (50 to 100 mm): Carbon steel, adjustable, clevis.

D. Hangers for Pipe Sizes 6 Inches (150 mm) and Over: Adjustable steel yoke, cast iron roll, double hanger.

E. Multiple or Trapeze Hangers for Pipe Sizes to 4 inches (100 mm): Steel channels with welded spacers and hanger rods.

F. Multiple or Trapeze Hangers for Pipe Sizes 6 Inches (150 mm) and Over: Steel channels with welded spacers and hanger rods; cast iron roll and stand.

G. Wall Support for Pipe Sizes to 3 Inches (70 mm): Cast iron hook.

H. Wall Support for Pipe Sizes 4 to 5 Inches (100 to 125 mm): Welded steel bracket and wrought steel clamp.

I. Wall Support for Pipe Sizes 6 Inches (150 mm) and Over: Welded steel bracket and wrought steel clamp; adjustable steel yoke and cast iron roll.

J. Vertical Support: Steel riser clamp.

K. Floor Support for Pipe Sizes to 4 Inches (100 mm): Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

L. Floor Support for Pipe Sizes 6 Inches (150 mm) and Over: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.

M. Hanger Rods: Mild steel threaded both ends, threaded one end, or continuous threaded.
N. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

2.5 UNIONS, FLANGES, AND COUPLINGS

A. Unions for Pipe 2 Inches (50 mm) and Under:
   1. Ferrous Piping: 150 psig (1034 kPa) galvanized malleable iron, threaded.

B. Flanges for Pipe Over 2 Inches (50 mm):
   1. Ferrous Piping: 150 psig (1034 kPa) forged steel, slip-on.
   2. Gaskets: 1/16 inch (1.6 mm) thick preformed non-asbestos graphite fiber.

C. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

D. Flange isolation kits: cathodic protection for installation in steam mains as indicated on the drawings.
   1. Requirements: 250psi steam system operation.
   2. Components:
      a. Steel washer.
      b. Insulating washer.
      c. Bolt sleeve.
      d. Flange gasket.
   3. Acceptable Manufacturers:
      a. PSI, Inc.

2.6 STEAM SERVICE VALVES

A. Manufacturers:
   1. Adams.
   2. Tricentric.
   4. Vanessa.

B. Triple offset butterfly valve.

C. Valves performance characteristics as listed below:
   1. Service: Steam
   2. Working pressure, max., psig: 250.
   3. Temperature range, F: 375.
   5. Valves shall be rated for bubble tight shutoff.

D. Construction
   1. Size, in.: 3 in. through 10 in.
   2. Body type: Flanged, ANSI Class 150.
   3. Body material: Carbon steel, ASTM A-216, grade WCB.
   7. Seat: Graphite/stainless steel laminate.
   8. Epoxy finish.
2.7 CONDENSATE SERVICE BUTTERFLY VALVES

A. Manufacturers:
   2. Jamesbury.
   3. Crane.

B. High performance butterfly valve, lever operated, lug mounting, ASME Class 150

C. Construction:
   1. Carbon steel body ASTM A216
   2. 316 Stainless steel disk ASTM A564
   3. 17-4 PH Stainless Steel ASTM A564 Gr 630
   4. PTFE Packing

2.8 STAINLESS STEEL BALL VALVES

A. Service: Steam Condensate

B. Up To and Including 2 Inches:
   1. Stainless steel two piece body, ball, stem, and lever handle.
   2. RPTFE packing and seats and stuffing box ring, threaded ends.

C. Manufacturer:
   1. Conbraco Industries Inc., Apollo 76-100 Series Stainless Steel Ball Valves.

2.9 STAINLESS STEEL CHECK VALVES

A. Up to and including 3 Inches:
   1. Stainless steel body and trim, rotating swing disc or wafer style with Teflon seat, threaded ends.

B. Manufacturer:
   1. Red – White Valve Co., Figure 884.

2.10 PRESSURE DRIVEN CONDENSATE PUMP

A. Acceptable Manufacturers:
   1. Spirax Sarco.
   2. Armstrong Intl, Inc.
   3. Or approved equal.

B. Body shall be constructed of cast iron, ASTM A 216 with all stainless steel internals. Single compression springs shall not be accepted. Motive and vent connections shall have externally replaceable seats for viewing and inspecting the internal valves.

C. Motive Force: Compressed air.

D. Pumps shall require no electricity for operation.

E. The Pump shall include a bronze water level gauge with shut off valves.

F. Overall height of the pump shall not exceed 28 inches.

G. Condensate inlet and outlet connections.
H. Check valves shall be either bronze or stainless steel.

2.11 FLOAT AND THERMOSTATIC TRAPS

A. Manufacturers:
1. Spirax-Sarco FTGS43 – 1 Inch.
2. MEPCO (Marshall Engineered Products Co.).

B. Construction: Austenitic stainless steel body ASTM A351, stainless steel internal parts.

C. Differential Pressure: 4.5 bar.

D. Maximum working pressure: 232 psig at 450 deg. F.

2.12 THERMAL EXPANSION JOINT

A. Manufacturers:
2. No substitutes.

B. Internal and external guides and designed for the injection of self-lubricating packing under full line pressure. A 2 inch diameter minimum type A packing cylinder shall be welded in place and shall have internal acme threads to assure maximum evacuation of the injectable packing from the packing cylinder. Integral anchor base.

C. Construction:
1. Traverse chamber and stuffing box shall be seamless steel A-53 Gr B pipe or equivalent tubing with circumferential weld attachments of the butt type only.
2. Slip shall be machined from A-53 Gr B seamless pipe. Slip shall be coated with Corro-Cote Plus Plating a duplex chrome plate consisting of 1 mil of hard chrome applied over 1 mil of crack-free hard chrome and certified by permascope inspection per ASTM standard B-499.

D. Stuffing Box:
1. The stuffing box packing area in contact with the sliding slip shall be at least 15 times the expansion joints nominal pipe size
2. Stuffing box injectable packing shall be Type H for operating temperatures to 550F
3. Internal and external guide surfaces in contact with chrome-plated slip shall be furnished with BRONZALON low friction inserts to prevent scoring or binding of the sliding slip.

E. Type/Traverse:
1. Expansion joints shall be single or double type with anchor base. Each slip has a nominal traverse of 8”.
2. Expansion joints shall be designed to 150 psi with welded ends.

F. Insulation: Provide insulating blanket with flange and packing box access. Blanket should be for use in man-hole applications.

G. Performance: It shall be the installer’s responsibility to make final connections and verify free movement from installed pipe temperature to minimum and maximum temperature.
1. The joint will be cycled a minimum of 3 times through the rated travel to ensure free movement and verify the proper amount of packing is injected. Each joint shall be preset with 1” movement in extension and the nominal traverse in compression.
2.13 BELLOWS EXPANSION JOINT (FOR FRP TO STEEL PIPE TRANSITION)

A. Manufacturer:
1. Flexicraft Flextra 150.

B. Bellows style rubber expansion joint capable of lateral and axial motion with 150# flanges.
1. Bellows manufactured of EPDM with polyester or nylon reinforcement.
2. Safety factor of 4:1 for pressure rating.
3. Flanges to conform to ANSI dimensions.
5. Lateral motion: ¾ inches.

2.14 PREFABRICATED PIPE ANCHORS

A. Manufacturers:

B. Pre-fabricated, pre-engineered pipe anchors, welded pipe connections, gauge thickness to match piping system.

C. Anchors are to be constructed of A36 and A106 carbon steel.

D. Pipe anchors are to be designed to withstand the forces from pressure thrust, friction force of packed expansion joints, and friction force from guides and supports depending on the application.

2.15 STEAM AIR VENTS

A. Manufacturers:
3. Spirax-Sarco.

B. 125 psi (860 kPa)
1. Balanced Pressure Type: Cast brass body and cover; access to internal parts without disturbing piping; stainless steel bellows, stainless steel valve and seat.

C. 225 psi (1550 kPa)
1. Balanced Pressure Type: ASTM A 126 cast iron body and cover; access to internal parts without disturbing piping; phosphor bronze bellows, stainless steel valve and seat.

2.16 ACCUMULATORS AND FLASH TANKS

A. Manufacturers:
1. Adamson Global Technology Corp.
2. Weben Jarco, Inc.
3. Wessels Company.

B. Tank:
1. Closed type, tested and stamped in accordance with ASME (BPV VIII, 1) welded steel construction, cleaned, prime coated, and supplied with steel support legs or wall bracket.
3. Construct with nozzles and tappings for installation of accessories and piping connections.
PART 3 - EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
B. Remove scale and dirt on inside and outside before assembly.
C. Prepare piping connections to equipment with flanges or unions.
D. Keep open ends of pipe free from scale and dirt. Whenever work is suspended during construction protect open ends with temporary plugs or caps.
E. After completion, fill, clean, and treat systems.
F. Schedule and coordinate shutdown of steam, condensate, and compressed air system with the University Office of the Physical Plant prior to installation.

3.2 INSTALLATION

A. Install in accordance with manufacturer’s instructions.
B. Route piping in orderly manner, plumb and parallel to buildings and structures, and maintain gradient. Do not block access or vent manholes.
C. Install piping to conserve building space and avoid interference with use of space.
D. Sleeve pipe passing through partitions, walls, and floors.
E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
F. Anchor Blocks: See Section 03 30 53 – Cast-in-Place concrete.
G. Inserts:
   1. Provide inserts for placement in concrete formwork.
   2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
   3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches (100 mm).
   4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
   5. Where inserts are omitted, drill through concrete slab from below, and provide through-bolt with recessed square steel plate and nut above slab.
H. Pipe Hangers and Supports:
   1. Use minimum of ½ inch diameter anchor bolts
   2. Install in accordance with ASME B31.9.
   3. Support horizontal piping as scheduled.
   4. Place hangers within 12 inches (300 mm) of each horizontal elbow.
   5. Use hangers with 1-1/2 inch (38 mm) minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
7. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
8. Provide copper plated hangers and supports for copper piping.
9. Prime coat exposed steel hangers and supports. Refer to Section 09900. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

I. Provide clearance for installation of insulation and access to valves and fittings.
J. Unless otherwise indicated, slope steam piping one inch in 40 feet (0.25 percent) in direction of flow. Use eccentric reducers to maintain bottom of pipe level.
K. Unless otherwise indicated, slope steam condensate piping one inch in 40 feet (0.25 percent). Provide drip trap assembly at low points and before control valves. Run condensate lines from trap to nearest condensate receiver. Provide loop vents over trapped sections.
L. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.
M. Install valves with stems upright or horizontal, not inverted.
N. Install specialties in accordance with manufacturer's instructions.
O. Steam Traps:
1. Provide minimum 3/4 inch (20 mm) size on steam mains and branches.
2. Install with union or flanged connections at both ends.
3. Provide gate valve and strainer at inlet, and gate valve and check valve at discharge.
4. Provide minimum 10 inch (250 mm) long, line size dirt pocket between apparatus and trap.
5. Remove thermostatic elements from steam traps during temporary and trial usage, and until system has been operated and dirt pockets cleaned of sediment and scale.
6. In high pressure and medium pressure mains, provide 3/4 inch (20 mm) nipple in bottom of main, extending 3/4 inch (20 mm) into and above bottom of pipe. Provide dirt pocket with 1/2 inch (13 mm) high pressure thermostatic trap.

3.3 TESTING OF STEAM DISTRIBUTION PIPING
A. New steam distribution piping systems which connect to existing hot steam lines shall be tested as follows.
B. The new system shall be installed and the ends of the lines blanked off prior to making the connection to the existing hot line.
C. The new line shall then be heated by admitting high pressure steam (or low pressure if high pressure is not available) and the line brought up to pressure.
D. The line shall then be cooled to approximately ambient temperature.
E. The line shall then be hydrostatically tested as specified and thoroughly flushed out.
F. Make final connections to existing hot lines, energize and waste condensate.
G. De-energize and open and clean all dirt legs and strainers.

3.4 SCHEDULES
A. Hanger Spacing for Steel Steam Piping.
1. 1/2 inch (15 mm): Maximum span, 8 feet (2400 mm); minimum rod size, 1/4 inch (6 mm).
2. 3/4 inch (20 mm) and 1 inch (25 mm): Maximum span, 9 feet (2700 mm); minimum rod size, 1/4 inch (6 mm).
3. 1-1/4 inches (32 mm): Maximum span, 11 feet (3.3 m); minimum rod size, 3/8 inch (9 mm).
4. 1-1/2 inches (40 mm): Maximum span, 12 feet (3.6 m); minimum rod size, 3/8 inch (9 mm).
5. 2 inches (50 mm): Maximum span, 13 feet (4.0 m); minimum rod size, 3/8 inch (9 mm).
6. 2-1/2 inches (65 mm): Maximum span, 14 feet (4.2 m); minimum rod size, 3/8 inch (9 mm).
7. 3 inches (80 mm): Maximum span, 15 feet (4.5 m); minimum rod size, 3/8 inch (9 mm).
8. 4 inches (100 mm): Maximum span, 17 feet (5.1 m); minimum rod size, 1/2 inch (13 mm).
9. 6 inches (150 mm): Maximum span, 21 feet (6.4 m); minimum rod size, 1/2 inch (13 mm).
10. 8 inches (200 mm): Maximum span, 24 feet (7.3 m); minimum rod size, 5/8 inch (16 mm).

B. Hanger Spacing for Steel Steam Condensate Piping.
1. 1/2 inch (15 mm), 3/4 inch (20 mm), and 1 inch (25 mm): Maximum span, 7 feet (2100 mm); minimum rod size, 1/4 inch (6 mm).
2. 1-1/4 inches (32 mm): Maximum span, 8 feet (2400 mm); minimum rod size, 3/8 inch (9 mm).
3. 1-1/2 inches (40 mm): Maximum span, 9 feet (2700 mm); minimum rod size, 3/8 inch (9 mm).
4. 2 inches (50 mm): Maximum span, 10 feet (3.0 m); minimum rod size, 3/8 inch (9 mm).
5. 2-1/2 inches (65 mm): Maximum span, 11 feet (3.4 m); minimum rod size, 3/8 inch (9 mm).
6. 3 inches (80 mm): Maximum span, 12 feet (3.6 m); minimum rod size, 3/8 inch (9 mm).
7. 4 inches (100 mm): Maximum span, 14 feet (4.3 m); minimum rod size, 1/2 inch (13 mm).
8. 6 inches (150 mm): Maximum span, 17 feet (5.1 m); minimum rod size, 1/2 inch (13 mm).
9. 8 inches (200 mm): Maximum span, 19 feet (5.8 m); minimum rod size, 5/8 inch (16 mm).
10. 10 inches (250 mm): Maximum span, 20 feet (6.1 m); minimum rod size, 3/4 inch (19 mm).

END OF SECTION 33 63 00
SECTION 33 71 19 - ELECTRICAL UNDERGROUND DUCTS AND MANHOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Requirements for underground electrical work, materials and products and raceway systems.

B. Related Sections:
   1. Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
   2. Section 03 30 53: Miscellaneous Cast-in-Place Concrete.
   3. Dampproofing: Applicable Division 7 specification.
   5. Section 26 05 00 – Common Work Results for Electrical.
   6. Section 26 05 26 – Grounding and Bonding for Electrical Systems.
   7. Section 26 05 63 – Acceptance Testing of Electrical Systems.
   8. Section 26 05 13 - Medium Voltage Cables.
   10. Section 26 05 33.13 – Conduits and Backboxes for Electrical Systems.

1.2 REFERENCE STANDARDS

A. The following publications of the issues listed below, but referred to thereafter by basic designation only, form a part of this specification to the extent indicated by the references thereto:

B. American Society for Testing and Materials (ASTM):
   1. ASTM A 36, Specification for Structural Steel.

C. Federal Specifications (Fed. Spec.):
   2. Fed. Spec. FF-S-325, Shield, Expansion; Nail, Expansion; and Nail, Drive Screw (Devices, Anchoring, Masonry) Group II (Shield, Expansion Bolt Anchor) Type 4 (Wedge expansion anchors) Class 1 (one piece steel expander with cone taper integral with stud).

1.3 QUALITY CONTROL

A. Equipment Manufacturer:
   1. In cases where the Contractor contemplates using equipment not made by the first named manufacturer of these specifications, refer to Section 26 05 00 of these specifications for special requirements and/or substitution requirements.

1.4 GENERAL REQUIREMENTS

A. Section 26 05 00, Common Work Results for Electrical, with the following additions and modifications.

B. Factory Tests:
   1. Determine applicable soil-density relationships for underground electrical installation bedding per applicable soil tests as defined in Division 2 of the Specifications.
2. Determine soil-density relationships for compaction of backfill material as defined in Division 2 of the Specifications.

1.5 SUBMITTALS

A. Submit the following information for approval:
   1. Catalog Information:
      a. Conduit. (All Types)
      b. Corrosion-Resistant Handholes.
      c. Precast Handholes.
      d. Manhole Frame and Cover.
      e. Handhole Frame and Cover.
      f. Sump Pumps.

1.6 CERTIFICATES

A. Material and Equipment: Provide manufacturer's statement certifying that the product supplied meets or exceeds contract requirements.
   1. Precast handhole and accessories.
   2. Manhole frame and cover.

PART 2 - PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. Basic Electrical Materials: Those products such as building wire, connectors, fittings and similar devices as required for work of this Section are as specified in other Sections of these Specifications.

B. Provide materials and equipment listed by UL, when such equipment is listed or approved.

C. Conduit and Conduit Spacers: Conform to Section 26 05 33 13.

D. Wire and Cable: Conform to Section 26 05 13 and 26 05 19.

E. Grounding Material: Conform to Section 26 05 26.

2.2 WATERPROOFING OF CONDUIT JOINTS

A. General: Ensure that equipment and materials for waterproofing conduit joints complies with the following manufacturers for quality, installation procedures, and guaranteed end results.
   1. Rigid Metal Conduit:
      a. Thread sealant: As recommended and approved by the conduit manufacturer.
      b. Cleaning solvent: As recommended and approved by the conduit manufacturer.
   2. Non-Metallic Conduit:
      a. All weather, quick-set joint cement: Approved by the conduit manufacturer.
      b. Cleaning solvent: As recommended and approved by the conduit manufacturer.

2.3 CAST JUNCTION BOXES

A. Provide weatherproof and watertight junction boxes for flush in-ground installation where indicated on the Contract Drawings.
1. Construction: Cast iron type with necessary boxes, checkered cover, and neoprene gasket for flush mounting.
2. Install junction box in concrete pad as detailed on the Contract Drawings.
3. Provide box of minimum size of 8 inches x 8 inches; larger as required by the
4. National Electrical Code, or as indicated on the Contract Drawings and/or required by the
5. Acceptable Manufacturers:
   a. Appleton.
   b. Crouse Hinds.
   c. Killark.

2.4 PRECAST CONCRETE MANHOLES AND HANDHOLES

A. Provide precast concrete, watertight manholes/handholes as indicated on the Contract Drawings. Provide manholes/handholes complete with necessary, required and specified appurtenances such as watertight locking type covers, cable racks, pulling-in irons, ground rods and ladder and water drainage provisions.

B. Conform waterproofing work of manholes to requirements specified in appropriate Division 7 specification section.

C. Acceptable manholes/handholes manufactures as indicated on Contract Drawings or as approved equal.

2.5 SUPPORTS AND FASTENERS

A. Supporting Devices: Carbon steel angles, channels, and bars meeting material requirements of ASTM A 36. Pre-engineered UL Listed supporting systems of electrogalvanized steel or electrogalvanized steel PVC coated products may be used in lieu of field fabricated support systems.

B. Fasteners: Provide anchoring devices to anchor conduit or raceway, and supporting devices or pre-engineered supporting systems, to the structure, of the type designed for the specific purpose of anchoring into structure materials at intended point of installation. RAWL PLUGS NOT PERMITTED.
   3. Conform anchoring devices for fastening into solid masonry or concrete to Fed Spec. FF-S-325 Group II, Type 4, Class 1 for expansion type anchors.

2.6 UNDERGROUND WARNING TAPE

A. Printed polyethylene material, 4 mils minimum thickness with minimum one-inch high lettering. Overcoated graphics to read, "CAUTION-BURIED ELECTRIC LINE" for electric lines and/or "CAUTION - BURIED TELEPHONE" for telephone lines. APWA color to be red.

B. Acceptable Manufacturers:
   1. Brady #11296
   2. Seton.

2.7 GROUNDING

A. Ground rods are to be copper clad steel with diameter adequate to permit driving full length of the rod minus 6 inches, which extends above the finished concrete slab. Conform to Section 26 05 26 of these Specifications.
PART 3 - EXECUTION

3.1 INSTALLATION

A. Incoming Service Requirements:
   1. Coordinate work and work requirements with Servicing Utility Company and the Owner prior to installation.
   2. Contact the following representative of the Serving Utility Company for electrical service installation requirements and to verify exactly the work required by the utility company to perform under this Contract.
      a. _______________ with PPL, Met-Ed, Allegheny Power, etc.
         Phone: _______________

B. General Requirements: (For Underground Work)
   1. Install underground conduit systems in accordance with Article 300-5 of the NEC, in accordance with previous requirements of this Section, and the following requirements exceeding NEC:
      a. Perform earthwork for buried conduit as specified previously for electrical work under Section 31 23 33.13: Trenching and Backfilling for Site Utilities.
      b. Install Concrete Encasement as indicated and detailed. Concrete as previously specified in Section 03 30 53: Miscellaneous Cast-in-Place Concrete.
      c. Where detailed on the Contract Drawings, underground conduits, both single and banked, concrete encase and reinforce using 5/8-inch steel reinforcing rods as indicated on the Contract Drawings.
      d. Bank conduits to the extent indicated and secure same in place with install separators at 5-foot intervals. Provide separators with sufficient strength to prevent displacement of conduits when placing backfill or pouring concrete encasement.
      e. Lay conduit lines to grade a minimum of three inches per 100 feet. Grade conduit lines away from buildings, except conduit lines running between buildings, without intervening handholes or manholes shall be level.
      f. Where conduit lines run to manholes, handholes or similar underground structures, grade conduits to drain to such.
      g. Construct underground conduit lines to be watertight. Stagger conduit couplings in banks of conduits.
      h. Unless otherwise indicated on drawing or details, where conduits change direction or turn up at equipment, transformers, buildings, terminal poles, etc., use long sweep PVC coated rigid galvanized steel conduit elbows.
      i. Provide two and one half feet minimum cover over conduits and over concrete encasement of conduit, unless indicated otherwise or specified.
      j. Where conduits are to be turned up into equipment or transformer pads, extend the concrete encasement for the conduits up to the top of the concrete pad and provide a 3/4" chamfer around exposed top edges. Isolate the concrete encasement for the conduits from the concrete pad for the equipment or transformer pad. Provide 2" high crushable fiber materials around duct bank encasement.
      k. Extend conduits 6 inches above concrete slab surface. Install insulating grounding bushing on all conduits. Perform concrete work as specified in Section 03 30 53: Miscellaneous Cast-In-Place Concrete.
      l. Where conduits are to be turned up at terminal poles, extend the concrete encasement for the conduits up pole to a height of 24 inches above finished grade and be provided with a 3/4" chamfer around all exposed top edges. Perform
concrete work as specified in Section 03 30 53: Miscellaneous Cast-In-Place Concrete.

C. Underground Duct Bank with Concrete Encasement: Construct underground duct bank lines of individual conduits encased in concrete as indicated. Except where rigid galvanized steel conduit is indicated or specified, use only one kind of conduit in any one duct bank. Use ducts no smaller than 4 inches in diameter unless otherwise indicated. Provide concrete encasement rectangular in cross-section surrounding the bank and provide at least 3 inches of concrete cover for ducts. Separate conduit by a minimum concrete thickness of 2-inches, and maintain a separation, between conduit centerlines, of seven and one-half inches. Separate power conduits from telephone, communication, and/or data highway conduits a minimum of 24 inches of earth or concrete thickness of 8 inches, unless otherwise indicated.

D. Place duct bank lines with a continuous slope downward toward manholes, handholes and away from buildings with a pitch of not less than 3 inches in 100 feet. Except at conduit risers, change direction of bends in runs exceeding a total of 10 degrees, either vertical or horizontal, by long sweep bends having a minimum radius of curvature of 25 feet. Sweep bends may be made up of one or more curved or straight sections or combinations thereof. Use only manufactured bends with a minimum radius of 18 inches for use with conduits of less than 3 inches in diameter and a minimum radius of 36 inches for conduits of 3 inches in diameter and larger. Terminate conduits in end-bells where duct bank lines enter manholes and handholes as indicated on the Contract Drawings.

E. Provide separators compatible with the conduit utilized and conforming to those specified in other Sections of these Specifications. Stagger the joints of the conduits by rows and layers so as to provide a duct bank line having the maximum strength. During construction, protect partially completed duct bank lines from the entrance of debris such as mud, sand, and dirt by means of suitable conduit plugs. As each section of a duct bank line is completed from manhole to manhole, from manhole to building or structure and/or from handhole to handhole, draw a testing mandrel not less than 12 inches long with a diameter 1/4 inch less than the size of the conduit, after which draw a brush having the diameter of the duct bank and stiff bristles through until the conduit is clear of particles of earth, sand, and/or gravel; immediately install conduit plugs. Provide a plastic pull rope, having a minimum of 3 additional feet at each end, in telephone and spare duct banks.

F. Underground Conduit for Service Feeders: Indicate underground conduit for service feeders into buildings on the Contract Drawings. Where rigid steel conduit bank is utilized, protect the ends of the conduit by threaded metal caps or brushings; coat the threads with graphite grease or other suitable coating. Clean and plug conduit before conductors are installed.

G. Conform concrete to that specified in Division 3 of this Specification.

H. Backfilling: Provide a continuous plastic warning tape about 12 inches below the top of the trench directly over each underground duct bank. Conform concrete to that specified in Division 3 of this Contract. Progress backfilling as rapidly as the construction, testing, and acceptance of the work permits. Ensure backfill is free from roots, wood, scrap material, and other vegetable matter and refuse. Install and compact backfill as specified in Section 31 23 33.13: Trenching and Backfilling for Site Utilities.

### 3.2 CONDUIT WATERPROOFING

A. Non-Metallic Conduit:

1. Plastic PVC Conduit (Schedule 40): Liberally coat the end of the conduit with an approved all weather, quick-set clear cement before joining. Insert joint into the coupling, pushing firmly, and rotating conduit until it reaches the pre-formed stopping ridge within the coupling.
3.3 MANHOLES/HANDHOLES

A. Provide steel bar pulling-in irons bent in the configuration of a deformed "Z" and cast in the walls and floors. Pocket pulling-in irons in the floor and center directly under the manhole cover. Locate pulling-in irons in the wall not less than 6 inches above or below, and opposite the conduits entering the manhole. Locate the pulling-in-irons such as not to interfere with the cable distribution racks. Project pulling-in-irons into the manhole approximately 4 inches. Zinc-coat irons after fabrication.

B. Ensure cable racks, including hooks and insulators, are sufficient to accommodate the cables and spaced not more than 24 inches horizontally. Provide wall bracket of glass reinforced nylon channel. Provide support brackets of glass reinforced nylon and of the removable type. Provide insulators of dry-process glazed porcelain.

C. Hot-dipped galvanize all metal-work within the manhole, including the steel ships ladder after fabrication and ground.

3.4 MANHOLE/HANDHOLE INSTALLATIONS

A. Where openings into manholes are below final finished grade, extend openings to the required elevation with either concrete or brick suitably arranged to support or anchor the frames and covers. Obtain engineer approval of the construction method and procedure before any work is done.

B. Where required for pulling cables, furnish and install in the walls of the manholes and handholes, a sufficient number of inserts for the proper attachment of cable supports.

C. In general, properly dress and rack cable/or wire on the support arms and insulators around the walls of the manholes and handholes, providing slack where required for future rearrangements. Install cable support brackets, along with the support arms and porcelain insulators, on each wall of the manhole and handhole. Secure cables within manholes and handholes to the insulators by marlin rope. Use proper regard for neat and orderly appearance and location, and provide accessibility for future connections. Take care not to damage the walls of the manholes and handholes during cable pulling.

D. Provide each manhole with a 1 inch diameter hole in the floor for a ground rod. Provide a 3/4 inch diameter by 10 foot long copper clad ground rod installed in one corner with 6 inches of the ground rod left extended above finished floor. Seal through floor using materials specified in the applicable Division 7 specification section. Ground metal work to the ground rod.

E. Conform manhole frames and covers to requirements as outlined above in these Specifications; and ensure Engineer approval.

F. Provide a manhole drainage system as indicated on the Contract Drawings.

3.5 FRAME AND COVER INSTALLATION

A. Where required, make final adjustment of frame to elevation using materials grade rings.
   1. Set precast grade rings in Waterproof Mortar. Do not exceed 3/4-inch maximum and 3/8-inch minimum mortar thickness. Wet, but do not saturate precast grade rings immediately before laying.
   2. Precast grade ring: Pre-set to proper plane and elevation using wedges or blocks of cementation material not exceeding one spare inch wide on each side. Permit no more than four wedges or blocks per grade ring. Incorporate wedges or blocks in fresh mortar in a manner to completely encase each. Crown fresh mortar to produce squeeze-out
between grade rings. Tool exposed joints with appropriately shaped tool and compact mortar edge into joints. Clean off excess mortar prior to initial mortar set.

3. Bolt manhole frames in place on manhole top section, or on leveling units if required, after installing 2 inch thick preformed plastic sealing compound on bearing surface of manhole frame. Remove excess sealing compound squeeze-out after manhole frame is bolted in place.

4. Use bolts of sufficient length to properly pass through leveling units, if used, engage full depth of manhole top section inserts and allow enough threaded end to pass through manhole frame to properly tighten nut and washer. Tighten manhole frame bolts after mortar has cured.

3.6 FIELD COATING

A. Clean cast-iron or steel frames, covers and gratings not buried in masonry of mortar, rust, grease, dirt, and other deleterious materials by an approved blasting process, and give a coat of bituminous coating material. Clean surfaces that cannot be cleaned satisfactorily by blasting to bare metal, by wire brushing, or other mechanical means. Wash surfaces contaminated with rust, dirt, oil, grease or other contaminants with solvents until thoroughly cleaned. Immediately after cleaning, coat surface with a pretreatment coating or give a crystalline phosphate coating. As soon as practicable after the pretreatment coating has dried, prime treated surfaces with a coat of zinc chromate primer and coat with synthetic exterior gloss enamel.

3.7 WATERPROOFING MANHOLES

A. Apply a specified protective coal-tar-based coating of two applied coats, minimum, to surfaces in direct contact with in ground cover to obtain a minimum 12.0 dry mil total applied surface thickness. Apply coating in strict conformance with manufacturer's requirements. Topcoat coating with a sunlight protective inhibitor. Provide coating with a vapor resistance of at least 0.5 perms.

B. Have the manufacturer certify and, on request, submit test reports by a laboratory acceptable to the Engineer proving that the material proposed meets the requirements and has been in successful commercial use on structures of a similar type for a period of at least five years.

C. Note:
   1. A perm is a standard unit of permanence relating to rate of water vapor transmission through a specimen coating.
      weight of water (grams)
      Perms =length of test (hours x area of specimen (sq. ft.) x vapor pressure difference from one side of specimen to the other (inches in mercury)

3.8 CONNECTIONS TO MANHOLES/HANDHOLES

A. Construct concrete encased duct bank lines connecting to manholes or handholes to have a tapered section adjacent to the manhole or handhole to provide shear strength. Construct manholes and handholes to provide for keying the concrete envelope of the duct bank line into the wall of the manhole or handhole. Use vibrators when this portion of the envelope is poured to assure a seal between the envelope and the wall of the manhole or handhole.

3.9 CABLE DUCT BANK SHIELDS

A. Provide shields of a suitable type manufactured for the purpose where cables enter and leave manholes and handholes and other duct bank entrances.
3.10  EARTHWORK

A. Excavate to depths as required for manholes and handholes. Excavation for manholes and handholes shall conform to the requirements stipulated in Division 2 - Site Work.

B. Remove waste excavated materials not required or suitable for backfill on the project from the site as directed. Provide sheeting and shoring as necessary for projection of work and safety of personnel. Remove water from excavation by pumping or other approved method.

3.11  GROUNDING

A. Provide non-current carrying metallic parts associated with electrical equipment with a maximum resistance to solid “earth” ground not exceeding the values indicated in Section 26 05 63 of these Specifications.

3.12  DISSIMILAR SURFACES ISOLATION

A. Paint aluminum surfaces at point of contact with wood, concrete or masonry construction with one coat (minimum dry mil thickness - 5.0 mils) of bituminous paint.

B. Clean away excess or misplaced paint materials from aluminum surfaces and adjoining construction materials.

3.13  TEST

A. Field Tests: Field test of electrical equipment and conform systems to those specified in Section 26 05 53 of these Specifications.

END OF SECTION 33 71 19
