

For my personal CAD project, I decided to reproduce a pair of JVC Gumy headphones. I own a pair of these headphones, so I used them as my model.

This project doesn't relate to my major, but listening to music is something everyone enjoys, including me. In doing this project, I realized that even objects that look simple, such as headphones, have a lot of background work that goes into not only making these objects, but designing these objects. I would not have imagined that something as plain as a pair of headphones would be so difficult to attempt to design.
