Gathering Information & Solution Concept options generation

Solution 1: Polypropylene mesh Dave H

It’s a plastic mesh that is commonly used for solar dyers. It is a food safe material and will dry the food efficiently and effectively.

Solution 2: Teflon coated fiberglass Dave R

Teflon is another commonly used mesh for cooking. It is heat resistance and meets all food safety standards. In addition, Teflon coated fiber glass is a durable material that can withstand the weight of these foods.

Solution 3: Chicken Wire Christian V

Chicken wire is easily found in every country and would be useful for the solar dryer tray. It would have to be stainless steel chicken wire and not galvanized in order to meet food safety standards.

Solution 4: Cheesecloth Dan K

Cheesecloth is a permeable fabric that would let air flow through it in order to dry the material properly. It would a difficult material to clean and not very durable. However it would be not difficult to find.
