Essential Requirements for Solar Tray

In order to fully understand the requirements, we need to know:

- The design of the solar dryer
- Problems of generic solar trays
- Why the original trays are not optimal for said foods
- What the EU standards are
- Dimensions of the solar dryer
- Climate of Kenya
- Easily accessible materials native to Kenya
- Local prices of materials
- Data of a more optimal tray

To design the actual tray, we need to meet certain requirements such as:

- Reducing costs
- Increasing efficiency
  - Letting the proper amount of air flow
  - Faster drying speeds
- Easy to clean
- Using locally available materials
- Meeting EU standards
