Engineering Drawing

One of the more prominent things that I’ve learned throughout this E-Design course was the concept of three dimensional as well as isometric drawings. It emphasizes the importance of being able to visualize objects while at the same time portraying three views in such a way that other people are able to draw and replicate them in the exact same manner as you did.

While this may have proved to be difficult for some people who weren’t used to visualizing objects in this way, doing 3D drawings and isometric drawings was one of my more favorite parts of this course, and I acknowledge Engineering drawing as a very important skill to have.
