

EDSGN 100

David Pedron

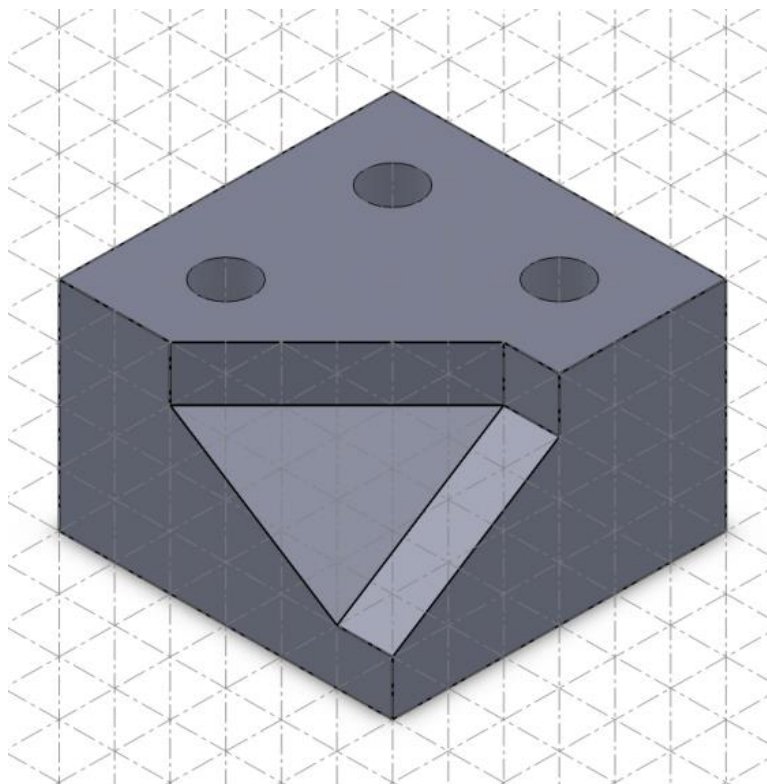

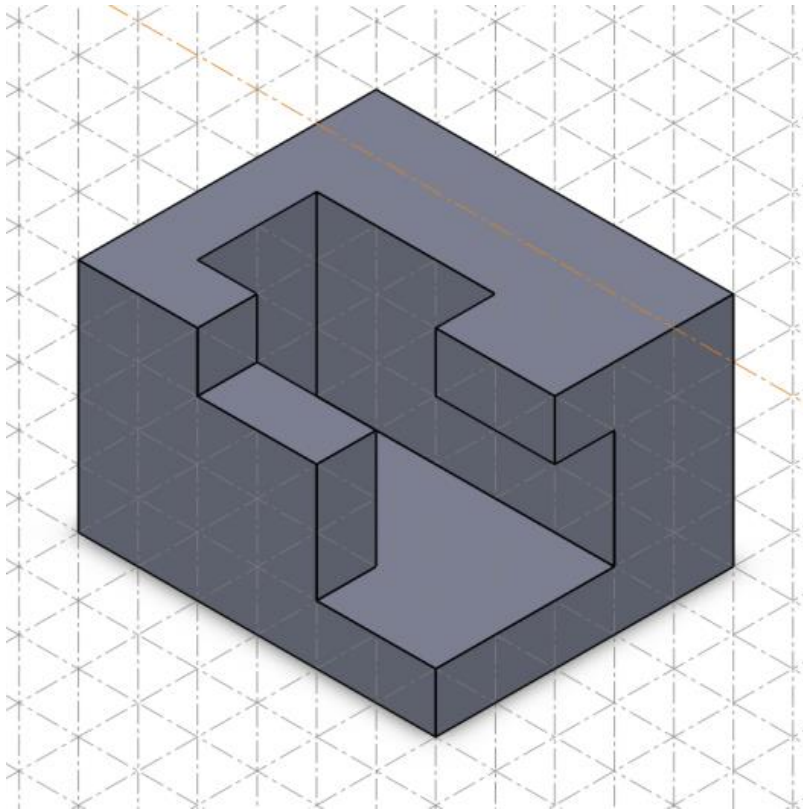

Engineering Drawing

During EDSGN 100, several techniques for drawing were learned, including multi-view (2 Dimensional drawing that showcases the front, top, and right side views of a 3-D model), isometric view (a 3-D representation of the multi-view drawing that showcases the actual 3-D model), and section view (where portions of the model that aren't visible in the multi-view version are shown in an enhanced drawing). Below are some examples of each of three aforementioned techniques:

Multi-View:

IsometricView:

Section View:
