

## Engineering Drawing

The main thing that we learned in engineering drawing is how to understand, read, and create Multiview and isometric drawings. Below you can see some of the shapes we were assigned to draw so that we could get practice with the tools, techniques and dimensioning.

Sometimes we were given a 3D object and we had to draw the Top, Front, and Right side view of the object like below:

Sometimes we were given the three view instead and we had to create an isometric drawing like below:
