Project Summary

D_nizzle is my online persona. I use that name for many different social media sites. I have developed a bio site and blog to help me show case and show off what I may or may not have learned in Art 203. The purpose of this project is to familiarize me with web content and how to develop websites using a few of Adobe's best products. The main focus is Dreamweaver and Wordpress, both of which I had almost no experience with. I assume since the course had many assignments due through the week it is also an attempt to keep us on task which can only help us in the workforce.

Statement of Purpose

My motivation of course is a good grade first of all. Second is to learn and develop my web design skills. My intended use is to help advance my career and have more desirable skills to employers in technology fields. I also help a friend with a web design business and I originally had taken this class to help me learn Dreamweaver. I plan to continue my education of Wordpress as well and use it to advance the business. These skills are important in today's life. If you have any business or fundraiser or event it most likely needs to be online to attract more people. Being able to develop your own website will come in handy.

Architecture of Website Design

I designed my bio site using Adobe's Muse. It is a feature rich web design program where you can place anything anywhere and give it css or php features using built in commands. It is based on html or you can place outside html or pictures on your pages. My proposed interface is pretty simple. I have no drop down menus only single pages and all are in the menu bar. They are clearly marked and easy to follow. They link to my bio, about me, gallery, sandbox and blog pages. I used simple page layouts and made it so you don't have to scroll too much.

Implementation Plan

The above pages and pictures will be implemented on an as needed basis. Based on project needs and goals. As we move along in the project you will be told what to use and where to put it. I will be paid \$1,000,000,000.
