

CAD Lab

I have learned multiple skills and techniques while in CAD lab. I have gained knowledge and skills in the tools such as sweep, extrude boss and cut, loft, and several others. I have learned how to properly dimension my projects and draw them so there will not be any errors when trying to complete it. I have also learned how to make an assembly properly and how to create a drawing based off of the final component.

This is my CAD final project. I created an art easel for drawing and painting. I used all of the skills I have learned throughout the semester to create this.
