OBJECTIVE: I would love to learn from this experience and gain extra knowledge of the field I am entering. This would also be a positive experience to add to my resume and can lead to future opportunities.

EDUCATION: Attended the number one ranked high school in Pennsylvania, Conestoga High School. I graduated high school with first honors and a GPA of 3.4 on a 4.0 scale. Today I am currently attending The Pennsylvania State University. I'm currently enrolled in the College of Engineering specifically pursuing to major in Chemical Engineering.

EXPIREANCE: The last month of my senior year in high school I had an internship at a chemical engineering company in my hometown, [Enviornex](#). At the beginning of my internship I worked alongside a Chemist in the lab. I then started working on my own in the lab testing samples of catalysts. I would do BET testing on the sample to find the surface area of the catalyst, determining how reactive the catalyst was.

ACTIVITIES: In high school I was involved in my swim team all four years. As a freshman I made varsity and my senior year I was named a captain by coach. In my junior year of high school I applied for a job at Wegmans, a U.S. regional supermarket chain. I continue to work there when I am home for breaks and the summer time.

HONORS/ AWARDS: As stated above I was a member of my high school swim team, as a freshman I was awarded my Varsity letter and was also recognized as an All American Athlete. I finished high school having first honors each semester. Along with being awarded first honors I was also awarded AP Scholar with Honor in high school.

SKILLS: I am proficient in Microsoft Word and Excel. I have also have some experience in Solid Works.
