

Engineering Drawing Section

This semester in the drawing section of Engineering Design 100, we learned how to draw 3-view drawing, isometric drawings, and we also learned about cut out sections.

When drawing the 3-view drawings, we took an isometric view and then drew three separate images that showed the isometric view from the top, front, and right sides.

For example, we would take an image such as the one in the top right and create the three views.

We would also reverse this and take the 3-view drawings and create the isometric views from the 3 different drawings.
