

Engineering Drawing

In Engineering Drawing we learned how to physically draw a three dimensional shape on graph paper. We would draw this shape using the 3 view method, showing the objects front, top, and side views. We would then dimension the views so that other people who read our drawing could recreate that 3D shape. We also learned how to draw a 3 dimensional shape from the 2D 3 view drawings. We had to learn how to properly detail the drawings showing that it's made of iron, steel, platinum, etc. We also learned other views like sectional and multi view.
