

I have learned a lot this year in drawing. Coming into the class I was nervous because I did not know what I was doing when it came to engineering drawing. After this semester, I feel much more knowledgeable of how to do a proper engineering drawing. We learned a lot, including multi view, and learned specific details about where the top front and right view should be. In isometric view, we learned how to draw an isometric object into multi view, and the other way around as well.

This is an example of multi view (left) and isometric view (right). We would take the left drawing, and have to make it isometric. Or, we would take the right drawing and make that multi view. We also learned how to make eclipses, and how to show if there were holes in objects, and a lot more. I feel very informed of drawing knowledge now because of this class! Through a lot of practice, I feel I almost perfected this technique. Obviously there is always room for improvement, but I am very proud of how far I came in a year.
