My goal’s in life

_Yao ziyan_

A. Personal expectations: to be a good person and make some achievements.

B. Social life: I have many friends and still be in contact with friends from primary school, high schools.

C. Recreation: shopping and travelling with my family and friends.

D. Political life: care about some government actions.
How pollution affects people

- Air pollution: the atmosphere of chemicals, particulates or biological materials cause disease and death to humans. Among these materials, fossil fuel emissions are the primary cause. During the combustion, sulfur dioxide is released, long term effects of this pollution include cancer and cardiac disease. Although it is unhealthy to people, but many countries still rely heavily on energy form coal.

- Light pollution: pollution is the added light itself, too much nighttime light equals too little melatonin production. Low melatonin levels are incredibly detrimental, with sweeping health effects across the body, among them are obesity, hypertension, heart attacks.
My goal’s in life

_Tarek Almunthari

- **Social life:** To maintain strong relationship with my family (parents and siblings). Also, to get married and have a dozen of adorable children.

- **Work:** To start as mechanical engineer and work my way up in the career hierarchy.

- **Hope to change the world:** to be a better place as possible as I can.
How Technology affects relationship

Technology is destroying our physical face to face relationships:

- You can’t transform the physical world to a virtual world to communicate. Virtual world is for machines not humans.
  - I can’t pat my brother in the back when he gets good grads.
  - I can't wipe off the tears of my sister’s cheek when she’s crying.

- The new generation is using symbols and shortcuts to express feeling.
  - ex. LOL instead of a real laugh.

- People spend more time watching screens than looking at each other’s faces.
  - The more technology we have the less interaction between human.

Personal

- Career Goals: I hope to become an Aerospace Engineer and hopefully be able to design the next big commercial aircraft.

- Social Goals: I would like to keep in touch with my friends, including the ones from high school and to have a good job.

- Recreational Goals: I like flying airplanes and hope to one day get my pilots license.

- Political: I would like to pay more attention to what is happening in the government.
Resources

- Fossil Fuels do not last forever and are not renewable
- Fossil fuels are the largest source of emission of greenhouse gases
- In the US alone, 90% of greenhouse emissions come from Fossil fuel emissions
- Are causing ice caps to melts and oceans to rise
- Some estimates say our fossil fuel reserves will be depleted within 50 years, while others say it will be 100-120 years
