Kenny Le Personal Cad Project
Guitar
Professor Catanach
Spring 2014
Growing up, one of the biggest parts of my life has been music. I remember when I was just a kid and my dad would use to play to my sisters for hours on end on his guitar, night after night. I would bask in the music, we would sing and pretend to play along. My dad bought me my first guitar when I was five and I was obsessed ever since. It was easy for me to design and create a guitar as my final product since it has been so important to my life. I thought the most difficult part of the design was to get the right shape and contours of the body. Every guitar has a specific body shape which yields different sounds ranging from brightness, tone, and loudness which is why I wanted mine to be perfect. By doing this project I learned how to better utilize SolidWorks for my own personal use. I learned the importance of getting dimensions perfect, the need for precise cuts, and how to properly add designs to render my project to be as realistic as possible. By doing my own product of choice, I thought SolidWorks became more fun and I was a lot more obsessed with making it as perfect as I could.
