

ENGINEERING DRAWING

Engineering drawing is an important skill to know as engineers. Engineering drawing consists of drawing an isometric drawing or orthographic drawing, so this is either in a three dimensional view or have three multi views that would be drawn. Throughout the semester, I learned a lot involving technical drawings. I learned that that with drawing there are different types of lines such as hidden lines, dimension lines and center lines, just to name a few. The different lines are mostly used in multi-view drawings. In isometric drawing, I learned how to visualize an object in three dimensions. Here are some example of the drawings that I did during the semester:

MULTI-VIEW DRAWINGS

ISOMETRIC DRAWINGS
