I chose to make a torpedo because I am currently striving to be in the Navy and the torpedo is an extremely effective weapon for Naval Operations.

The toughest part of the project was making the propeller. It took me a while to figure out how to get a curved shape on the fins and then mirror that all the way around the propeller. Even though today’s torpedoes do not use propellers anymore, I figured it would be a good way to bring motion into the project.

Through this project, I was able to better my skills in solid works, and I had a great time doing it.
