USB D-Link Hub Bracket

Team 4

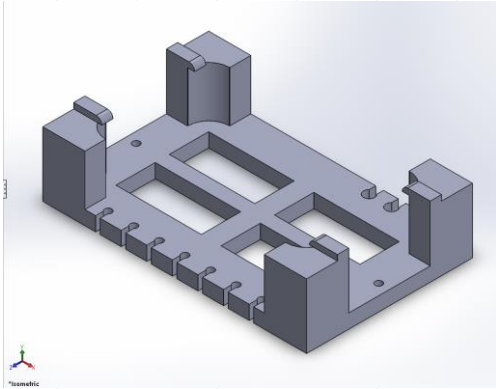

Spring 2016

Matthew Bell, Tim Morrow, Nicholas Lewis, Hao Jing

LOCKHEED MARTIN

Introduction

For the advancement of a custom avionics mission system, it will require a USB Hub bracket as a debug and auxiliary mounting device. It will allow the bracket to have an increased capacity and vertical mounting.

Design Objectives

The objective of this design was to make changes to the present USB hub mounting bracket.

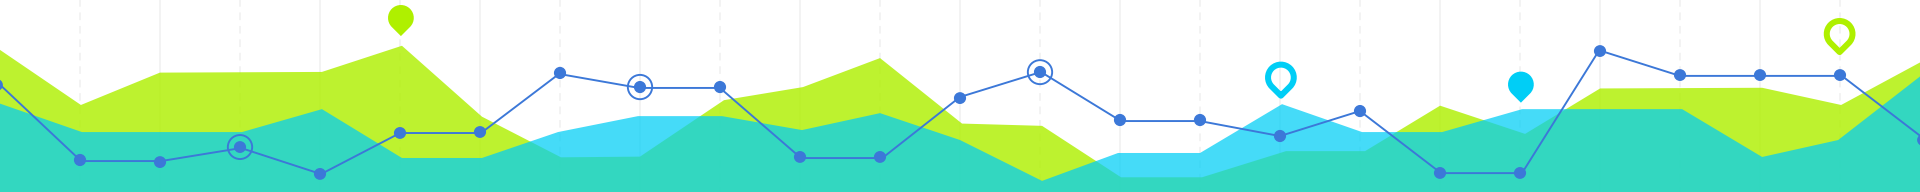

- Change from Horizontal to Vertical mounting
- Design New Cable Retention System
- Design for 7 ports

Design Approach

Our team took several steps to make this design:

- Brainstorming
- Sketching
- Design Matrices
- Modeling
- Testing
- Manufacturing

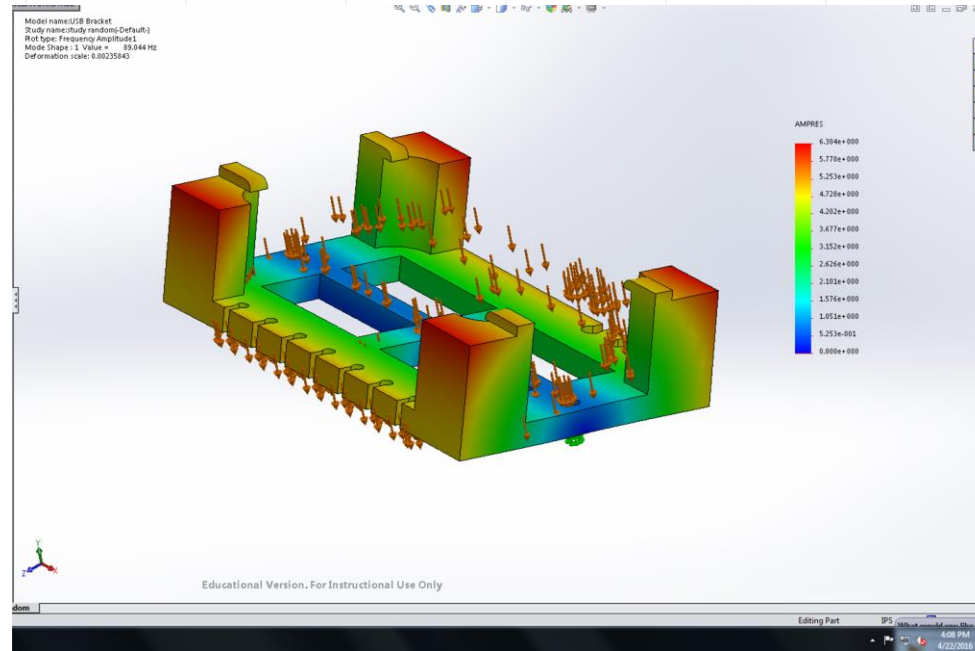

Analysis of Design

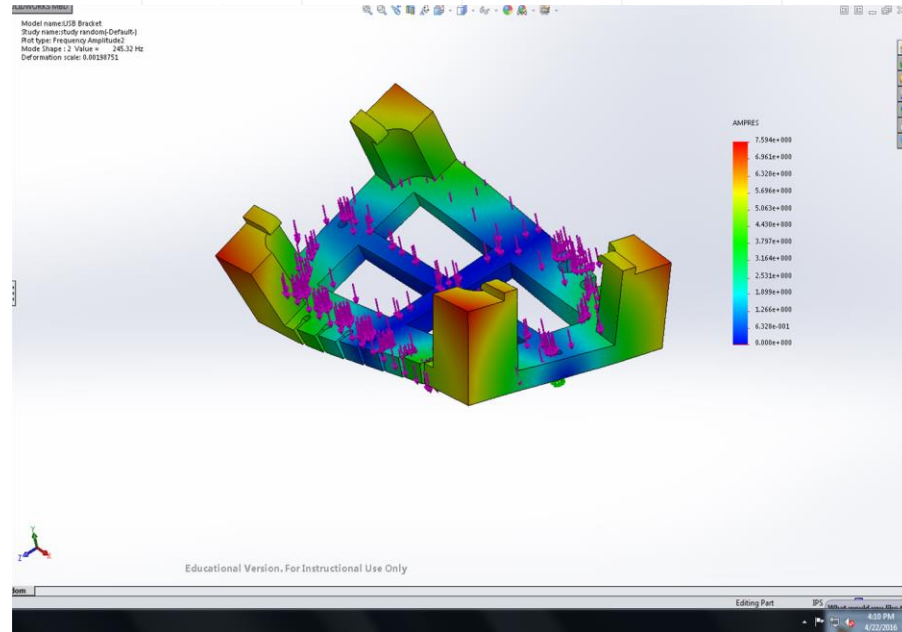

- Structure
- Material
 - Biodegradable (PLA)
 - Easily Printed
- Vibration Loading

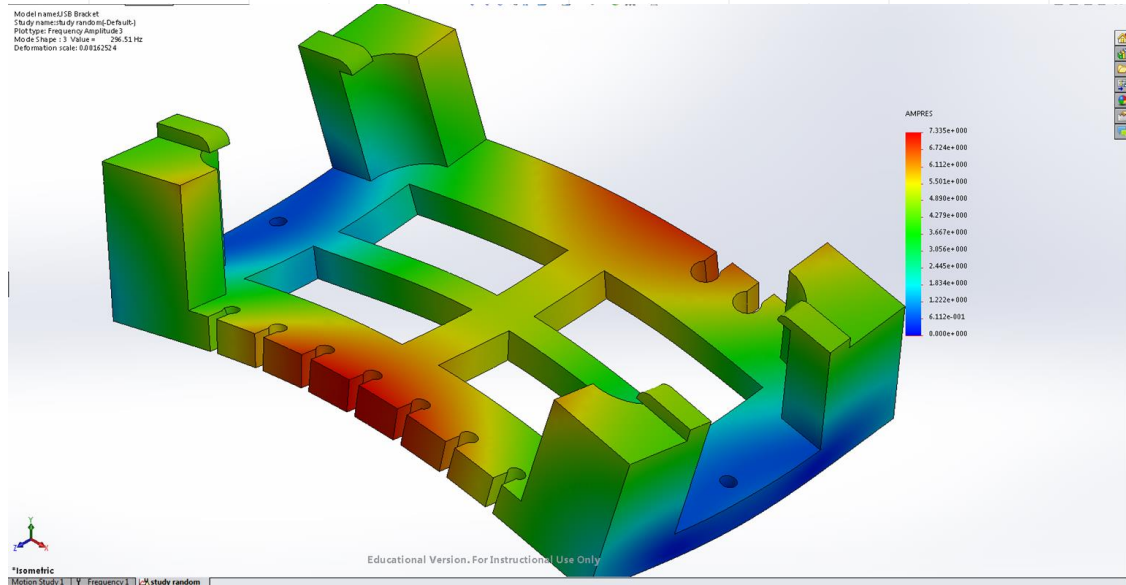

89 Hz

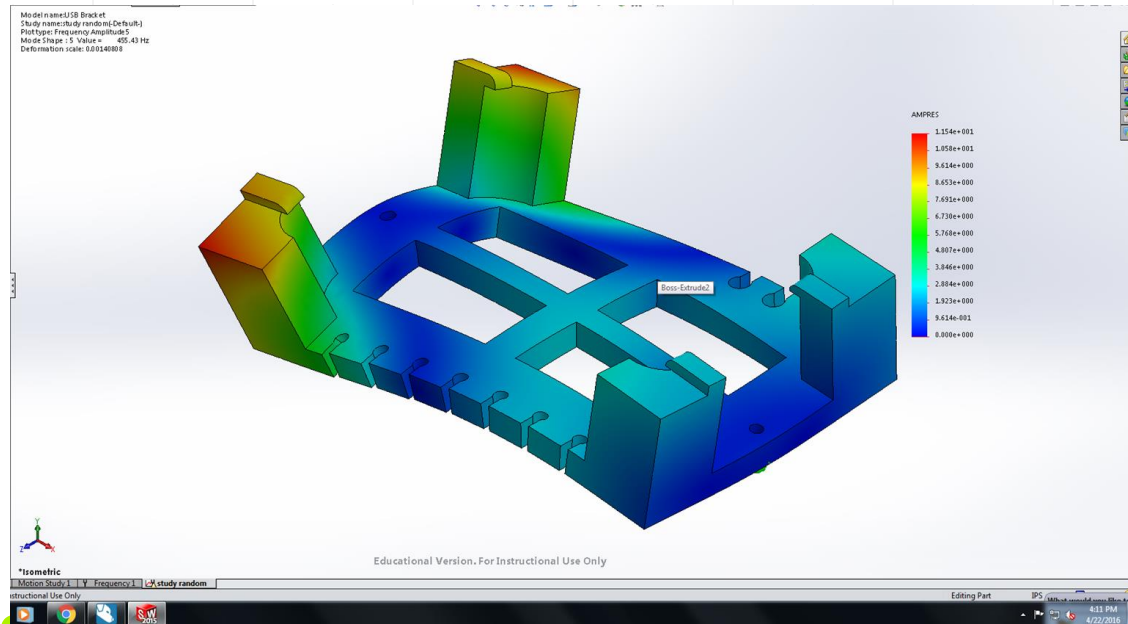

245 Hz

296 Hz

455 Hz
