CAD Lab

In the CAD Lab portion of my Edesign 100 class, I learned to design objects on Solid Works. Some of the skills I now have include:

- Extruding a base/making an extruding cut
- Revolving an object
- Creating a sweep
- Adding a fillet/chamber
- Creating a loft and shell
- Creating a 3-view and isometric virtual drawing of an object

The following are images of objects/products I’ve designed in CAD which include a moving crank, a mug, and a self-designed birdhouse!
