Personal CAD Project:

Swiss Army Knife

I chose to make this object for my personal CAD project because I was a boy scout for many years, and it seemed like it would be challenging. The design was loosely based off of an existing model that is included at the bottom of this report. The most difficult part of this project was the corkscrew, because it required multiple planes and many drawings to complete it. While making this I learned a few different tools and shortcuts to make certain things easier.
