

- CAD Lab:

- During the entire period of EDSGN100 course, we used the software SolidWorks. Solidworks has an enormous tools and features that we explored through the semester. First, we have learned how to design separate parts of a CAD model before we had the chance to learn how to put these separate parts together in a tool called “Assembly”. Solidworks can also draw the parts or assemblies modeled using “drawing” tool.
- Here are some pictures of my final cad project:

- Parts:

- Assembly:

- Drawings:
