

Engineering Drawings

We have gained the basic understanding and interpretation of a multiview drawing, isometric drawing, cylindrical drawing, as well as section views. We have learned how to make a multiview drawing given an isometric drawing, and vice versa. We have also learned how to make multiview drawings using SolidWorks. A basic understanding and interpretation of these technical drawings were achieved through lecture, in-class practice, and homework assignments.

In-Class Practice Example of a Multiview Drawing based off an Isometric

In-Class Example of an Isometric Drawing based off Multiview
