I chose to make a boat, specifically a schooner, because I have had a long standing hobby of being around and sailing boats. My favorite kind just happens to be the schooner, simply because it is such a simple design for a sailing vessel. The hardest part about making this was getting the correct curvature of all of the parts. A boat is not just straight lines, but rather curves and expansions. Once I was able to make everything a viable size, it all just came down to putting everything together. I thoroughly enjoyed making this boat, especially since I roughly modeled after existing boats, such as the America, the namesake of world renowned regatta, the America’s Cup.
