CAD Lab

Over the course of this semester, we have been learning how to use the design program Solid Works. We learned a few new things each week until we were finally knowledgeable enough to complete a CAD quiz, and create our own project to design on our own. Some of the things we learned throughout the semester include how to assemble different parts, make drawings of each part we create, and how to use the software to make anything. Below, some pictures of projects we had to complete throughout the year can be found.
