Engineering Drawing

Over the course of the semester, we have been learning about how to create engineering drawings, including multi-view drawings, and isometric (3-D) drawings. As we learned more throughout the semester, we found we could create more and more difficult drawings, which finally culminated in a final exam. This exam tested our knowledge on things about different drawings, as well as testing our drawing skills by giving us difficult parts that we had to draw.

We also learned how to create cross-sectional drawings, like the one shown below.
