

The Holy Grail has been an object that has fascinated me since watching movies from my childhood like Indiana Jones and the Last Crusade or Monty Python and the Holy Grail. The intricate designs and the fact that it has become synonymous to “the ultimate treasure” has particularly captivated me. The most difficult part of this project was without a doubt adding the red decorative jewel to the grail. At first, I tried to make the jewel a part and then assemble it, but later, I realized it would be easier if I made an extra plane and extruded into the grail. This project also taught me how to add color to a Solidworks assembly, something I had never done before.
