Summary and Conclusions

EDSGN 100 is an interesting, useful and helpful course for first-year engineering students. I learned how to use Solidworks, which is an important tool for future engineering courses. The design projects not only taught me design skills, but provided me with valuable group work experience. Xinli Wu is a helpful and excellent professor. Solidworks TAs are always there for me if I need any help. All in all, this course is crucial to beginning engineering students and well introduced the engineering world.
