

Leaning Tower of Pisa

<http://lense.mycharminggirl.com/2012/05/leaning-tower-of-pisa-at-tuscany-italy.html>

I chose to create a reproduction of the Leaning Tower of Pisa for my Solid Works project. I liked this design because I had originally wanted to do some kind of skyscraper however I felt that it would be difficult to show any real detail in the design of a modern skyscraper. With this design was able to challenge myself with the angled design and the arches and pillars. The most difficult part of the project was trying to align the pillars with the arches as I often had to correct my measurements several times to get them to fit. I enjoyed this project and was able to learn more about designing round fixtures in Solid Works.
