Areas of Specialization in Psychology That Require Graduate School

**Activity:**

- Some of the questions that people are pursuing can be answered through psychology. If you want to pursue a career in psychology, you need to have a strong background in the field. Typically, this involves completing a Ph.D. in psychology. The following are some of the areas of specialization that require graduate school:

**Developmental Psychology:**

- Some of the areas of specialization include child development, adolescent development, and adult development. These areas focus on the physical, cognitive, emotional, and social changes that occur throughout the life span.

**Social Psychology:**

- The field of social psychology focuses on the ways in which people interact with each other and the environments in which they live. This field includes the study of group dynamics, persuasion, and attitude change.

**Clinical Psychology:**

- Clinical psychology is a branch of psychology that focuses on the diagnosis and treatment of mental health disorders. It is a field that is concerned with helping individuals who are struggling with various issues such as anxiety, depression, and emotional trauma.

**Experimental Psychology:**

- Experimental psychology is a branch of psychology that focuses on the use of scientific methods to study behavior and mental processes. This field includes the study of memory, perception, and decision making.

**Psychology:**

- General psychology is a broad field that encompasses the study of all aspects of human behavior and mental processes. It is a field that is concerned with understanding the ways in which people think, feel, and act.

**Neuroscience:**

- Neuroscience is a field that combines biology, psychology, and medicine to study the nervous system. This field includes the study of the brain and its functions, as well as the ways in which behavior and mental processes are influenced by the nervous system.

**Counseling Psychology:**

- Counseling psychology is a field that focuses on helping people who are struggling with personal, career, or social issues. This field includes the study of human development, motivation, and interpersonal relationships.

**Educational Psychology:**

- Educational psychology is a field that focuses on the study of learning and teaching. This field includes the study of the ways in which people learn, as well as the ways in which teaching can be improved.

**Industrial/Organizational Psychology:**

- Industrial/organizational psychology is a field that focuses on the relationship between people and work. This field includes the study of job satisfaction, motivation, and performance in the workplace.

**Environmental Psychology:**

- Environmental psychology is a field that focuses on the ways in which people interact with their environment. This field includes the study of the ways in which people use and modify their environment, as well as the ways in which environmental factors can influence behavior.
