9 Communicative Language Teaching

INTRODUCTION

You may have noticed that the goal of most of the methods we have looked at so far is for students to learn to communicate in the target language. In the 1970s, though, educators began to question if they were going about meeting the goal in the right way. Some observed that students could produce sentences accurately in a lesson, but could not use them appropriately when genuinely communicating outside of the classroom. Others noted that being able to communicate required more than mastering linguistic structures. Students may know the rules of linguistic usage, but be unable to use the language (Widdowson 1978). It became clear that communication required that students perform certain functions as well, such as promising, inviting, and declining invitations within a social context (Wilkins 1976). In short, being able to communicate required more than linguistic competence; it required communicative competence (Hymes 1971)—knowing when and how to say what to whom. Such observations contributed to a shift in the field in the late 1970s and early 1980s from a linguistic structure-centered approach to a Communicative Approach (Widdowson 1990).

Communicative Language Teaching aims broadly to apply the theoretical perspective of the Communicative Approach by making communicative competence the goal of language teaching and by acknowledging the interdependence of language and communication. What this looks like in the classroom may depend on how the tenets are interpreted and applied. Nevertheless, we will follow our usual way of understanding the theory and associated practices by visiting a class in which a form of Communicative Language Teaching is being practiced. The class we will visit is one being conducted for adult immigrants to Canada. These twenty people have lived in Canada for two years and are at a high-intermediate level of English proficiency. They meet two evenings a week for two hours each class.
EXPERIENCE

The teacher greets the class and distributes a handout. There is writing on both sides. On one side is a copy of a sports column from a recent newspaper, in which the reporter discusses who he thinks will win the World Cup. The teacher asks the students to read it and then to underline the predictions the reporter has made. He gives all instructions in the target language. When the students have finished, they read what they have underlined. The teacher writes the predictions on the blackboard. Then he and the students discuss which predictions the reporter feels more certain about and which predictions he feels less certain about.

Malaysia is very likely to win the World Cup this year.
Italy can win if they play as well as they have lately.
France probably will not be a contender again.
England may have an outside chance.

Then he asks the students to look at the first sentence and to tell the class another way to express this same prediction. One student says, 'Malaysia probably will win the World Cup.' 'Yes,' says the teacher. 'Any others?' No one responds. The teacher offers, 'Malaysia is almost certain to win the World Cup.' 'What about the next?' he asks the class. One student replies, 'It is possible that Italy will win the World Cup.' Another student offers, 'There's a possibility that Italy will win the World Cup.' Each of the reporter's predictions is discussed in this manner. All the paraphrases the students suggest are evaluated by the teacher and the other students to make sure they convey the same degree of certainty as the reporter's original prediction.

Next, the teacher asks the students to turn to the other side of the handout. On it are all the sentences of the article that they have been working on. They are, however, out of order. For example, the first two sentences on this side of the handout are:

England may have an outside chance.
In the final analysis, the winning team may simply be the one with the most experience.

The first sentence was in the middle of the original sports column. The second was the last sentence of the original column. The teacher tells the students to unscramble the sentences, to put them in their proper order by numbering them. When they finish, the students compare what they have done with the original on the other side of the handout.

The teacher next announces that the students will be playing a game.

He divides the class into small groups containing five people each. He hands each group a deck of thirteen cards. Each card has a picture of a piece of sports equipment. As the students identify the items, the teacher writes each name on the blackboard: basketball, soccer ball, volleyball, tennis racket, skis, ice skates, roller skates, football, baseball bat, golf clubs, bowling ball, badminton racket, and hockey stick.

The cards are shuffled and four of the students in a group are dealt three cards each. They do not show their cards to anyone else. The extra card is placed face down in the middle of the group. The fifth person in each group receives no cards. She is told that she should try to predict what it is that Dumduan (one of the students in the class) will be doing the following weekend. The fifth student is to make statements like, 'Dumduan may go skiing this weekend.' If one of the members of her group has a card showing skis, the group member would reply, for example, 'Dumduan can't go skiing because I have her skis.' If, on the other hand, no one has the picture of the skis, then the fifth student can make a strong statement about the likelihood of Dumduan going skiing. She can say, for example, 'Dumduan will go skiing.' She can check her prediction by turning over the card that was placed face down. If it is the picture of the skis, then she knows she is correct.

The students seem to really enjoy playing the game. They take turns so that each person has a chance to make the predictions about how a classmate will spend his or her time.

For the next activity, the teacher reads a number of predictions like the following:

In 2008, Quebec will vote to remain part of Canada.
By 2020, solar energy will replace the world's reliance on fossil fuels.
By 2050, people will be living on the moon.

The students are told to make statements about how probable they think the predictions are and why they believe so. They are also asked how they feel about the prediction. In discussing one of the predictions, a student says he does not think that it is like that a world government will be in place by the twenty-second century. The teacher and students ignore his error and the discussion continues.

Next, the teacher has the students divide into groups of three. Since there are twenty students, there are six groups of three students and one group of two. One member of each group is given a picture strip story. There are six pictures in a row on a piece of paper, but no words. The pictures tell a story. The student with the story shows the first picture to the other members of his group, while covering the remaining five pictures.
THINKING ABOUT THE EXPERIENCE

As we have seen before, there are important principles underlying the behavior we have observed. Let us now investigate these by compiling our two lists: our observations and the underlying principles.

Observations

1. The teacher distributes a handout that has a copy of a sports column from a recent newspaper.

2. The teacher tells the students to underline the reporter’s predictions and to say which ones they think the reporter feels most certain of and which he feels least certain of.

3. The teacher gives the students the directions for the activity in the target language.

Principles

1. Whenever possible, ‘authentic language’—language as it is used in a real context—should be introduced.

2. Being able to figure out the speaker’s or writer’s intentions is part of being communicatively competent.

3. The target language is a vehicle for classroom communication, not just the object of study.

Communicative Language Teaching

128

Observations

15. After the role play is finished, the students elicit relevant vocabulary.

16. For their homework, the students are to listen to a debate on the radio or watch it on television.

Principles

The grammar and vocabulary that the students learn follow from the function, situational context, and the roles of the interlocutors.

Students should be given opportunities to listen to language as it is used in authentic communication. They may be coached on strategies for how to improve their comprehension.

REVIEWING THE PRINCIPLES

The answers to our ten questions will help us come to a better understanding of Communicative Language Teaching. In some answers new information has been provided to clarify certain concepts.

1 What are the goals of teachers who use Communicative Language Teaching (CLT)?

The goal is to enable students to communicate in the target language. To do this students need knowledge of the linguistic forms, meanings, and functions. They need to know that many different forms can be used to perform a function and also that a single form can often serve a variety of functions. They must be able to choose from among these the most appropriate form, given the social context and the roles of the interlocutors. They must also be able to manage the process of negotiating meaning with their interlocutors. Communication is a process; knowledge of the forms of language is insufficient.

2 What is the role of the teacher? What is the role of the students?

The teacher facilitates communication in the classroom. In this role, one of his major responsibilities is to establish situations likely to promote communication. During the activities he acts as an adviser, answering students’ questions and monitoring their performance. He might make note of their errors to be worked on at a later time during more accuracy-based activities. At other times he might be a ‘co-communicator’ engaging in the communicative activity along with students (Littlewood 1981).

Students are, above all, communicators. They are actively engaged in negotiating meaning—in trying to make themselves understood and in understanding others—even when their knowledge of the target language is incomplete.

Also, since the teacher’s role is less dominant than in a teacher-centered method, students are seen as more responsible managers of their own learning.

3 What are some characteristics of the teaching/learning process?

The most obvious characteristic of CLT is that almost everything that is done is done with a communicative intent. Students use the language a great deal through communicative activities such as games, role plays, and problem-solving tasks (see discussion of these in the review of techniques).

Activities that are truly communicative, according to Morrow (in Johnson and Morrow 1981), have three features in common: information gap, choice, and feedback.

An information gap exists when one person in an exchange knows something the other person does not. If we both know today is Tuesday and I ask you, ‘What is today?’ and you answer, ‘Tuesday,’ our exchange is not really communicative.

In communication, the speaker has a choice of what she will say and how she will say it. If the exercise is tightly controlled so that students can only say something in one way, the speaker has no choice and the exchange, therefore, is not communicative. In a chain drill, for example, if a student must reply to her neighbor’s question in the same way as her neighbor replied to someone else’s question, then she has no choice of form and content, and real communication does not occur.

True communication is purposeful. A speaker can thus evaluate whether or not his purpose has been achieved based upon the information she receives from his listener. If the listener does not have an opportunity to provide the speaker with such feedback, then the exchange is not really communicative. Forming questions through a transformation drill may be a worthwhile activity, but it is not in keeping with CLT since a speaker will receive no response from a listener, so is unable to assess whether her question has been understood or not.

Another characteristic of CLT is the use of authentic materials. It is
considered desirable to give students an opportunity to develop strategies for understanding language as it is actually used.

Finally, we noted that activities in CLT are often carried out by students in small groups. Small numbers of students interacting are favored in order to maximize the time allotted to each student for communicating.

4 What is the nature of student-teacher interaction? What is the nature of student-student interaction?

The teacher may present some part of the lesson, such as when working with linguistic accuracy. At other times, he is the facilitator of the activities, but he does not always himself interact with the students. Sometimes he is a co-communicator, but more often he establishes situations that prompt communication between and among the students.

Students interact a great deal with one another. They do this in various configurations: pairs, triads, small groups, and whole group.

5 How are the feelings of the students dealt with?

One of the basic assumptions of CLT is that by learning to communicate students will be more motivated to study a foreign language since they will feel they are learning to do something useful with the language. Also, teachers give students an opportunity to express their individuality by having them share their ideas and opinions on a regular basis. Finally, student security is enhanced by the many opportunities for cooperative interactions with their fellow students and the teacher.

6 How is language viewed? How is culture viewed?

Language is for communication. Linguistic competence, the knowledge of forms and their meanings, is just one part of communicative competence. Another aspect of communicative competence is knowledge of the functions language is used for. As we have seen in this lesson, a variety of forms can be used to accomplish a single function. A speaker can make a prediction by saying, for example, ‘It may rain,’ or ‘Perhaps it will rain.’ Conversely, the same form of the language can be used for a variety of functions. ‘May,’ for instance, can be used to make a prediction or to give permission (‘You may sit in the back’).

Thus, learners need knowledge of forms and meanings and functions. However, they must also use this knowledge and take into consideration the social situation in order to convey their intended meaning appropriately. A speaker can seek permission using ‘may’ (‘May I have a piece of fruit?’); however, if the speaker perceives the listener as being more of a social equal or the situation as being informal, he or she would more likely use ‘can’ to seek permission (‘Can I have a piece of fruit?’).

Culture is the everyday lifestyle of people who use the language. There are certain aspects of it that are especially important to communication—the use of nonverbal behavior, for example, which might receive greater attention in CLT.

7 What areas of language are emphasized? What language skills are emphasized?

Language functions might be emphasized over forms. Typically, although not always, a functional syllabus is used. A variety of forms are introduced for each function. Only the simpler forms would be presented at first, but as students get more proficient in the target language, the functions are reintroduced and more complex forms are learned. Thus, for example, in learning to make requests, beginning students might practice ‘Would you ... ?’ and ‘Could you ... ?’ Highly proficient students might learn ‘I wonder if you would mind . . .’

Students work with language at the suprasentential or discourse level. They learn about cohesion and coherence. For example, in our lesson the students recognized that the second sentence of the scrambled order was the last sentence of the original sports column because of its introductory adverbial phrase, ‘In the final analysis . . .’ This adverbial phrase is a cohesive device that binds and orders this sentence to the other sentences. The students also recognized the lack of coherence between the first two sentences of the scrambled order, which did not appear connected in any meaningful way.

Students work on all four skills from the beginning. Just as oral communication is seen to take place through negotiation between speaker and listener, so too is meaning thought to be derived from the written word through an interaction between the reader and the writer. The writer is not present to receive immediate feedback from the reader, of course, but the reader tries to understand the writer’s intentions and the writer writes with the reader’s perspective in mind. Meaning does not, therefore, reside exclusively in the text, but rather arises through negotiation between the reader and writer.
8 What is the role of the students' native language?

Judicious use of the students' native language is permitted in CLT. However, whenever possible, the target language should be used not only during communicative activities, but also for explaining the activities to the students or in assigning homework. The students learn from these classroom management exchanges, too, and realize that the target language is a vehicle for communication, not just an object to be studied.

9 How is evaluation accomplished?

A teacher evaluates not only the students' accuracy, but also their fluency. The student who has the most control of the structures and vocabulary is not always the best communicator.

A teacher can informally evaluate his students' performance in his role as an adviser or co-communicator. For more formal evaluation, a teacher is likely to use an integrative test which has a real communicative function. In order to assess students' writing skill, for instance, a teacher might ask them to write a letter to a friend.

10 How does the teacher respond to student errors?

Errors of form are tolerated during fluency-based activities and are seen as a natural outcome of the development of communication skills. Students can have limited linguistic knowledge and still be successful communicators. The teacher may note the errors during fluency activities and return to them later with an accuracy-based activity.

REVIEWING THE TECHNIQUES AND THE MATERIALS

There may be aspects of CLT that you find appealing. This review has been provided in the event you wish to try to use any of the techniques or materials associated with CLT.

Authentic materials

To overcome the typical problem that students cannot transfer what they learn in the classroom to the outside world and to expose students to natural language in a variety of situations, adherents of CLT advocate the use of language materials authentic to native speakers of the target language. In this lesson we see that the teacher uses a real newspaper article. He also assigns the students homework, requiring that they listen to a live radio or television broadcast.

Of course, the class that we observed was at the high intermediate level of proficiency. For students with lower proficiency in the target language, it may not be possible to use language materials such as these. More accessible materials (for example, the use of a weather forecast when working on predictions), or at least ones that are realistic, are most desirable. With a lower level class it is possible to use realia that do not contain a lot of language, but about which a lot of discussion could be generated.

Menus in the target language are an example; timetables are another.

Scrambled sentences

The students are given a passage (a text) in which the sentences are in a scrambled order. This may be a passage they have worked with or one they have not seen before. They are told to unscramble the sentences so that the sentences are restored to their original order. This type of exercise teaches students about the cohesion and coherence properties of language. They learn how sentences are bound together at the suprasentential level through formal linguistic devices such as pronouns, which make a text cohesive, and semantic propositions, which unify a text and make it coherent.

In addition to written passages, students might also be asked to unscramble the lines of a mixed-up dialog. Or they might be asked to put the pictures of a picture strip story in order and write lines to accompany the pictures.

Language games

Games are used frequently in CLT. The students find them enjoyable, and if they are properly designed, they give students valuable communicative practice. Morrow's three features of communicative activities were manifested in the card game we observed in the following way: An information gap existed because the speaker did not know what her classmate was going to do the following weekend. The speaker had a choice as to what she would predict (which sport) and how she would predict it (which form her prediction would take). The speaker received feedback from the members of her group. If her prediction was incomprehensible, then none of course, what is authentic and natural to native speakers of the target language is not so to learners in the classroom. What is important is that these materials are used in a way that is real for learners (Widdowson 1998).
of the members of her group would respond. If she got a meaningful response, she could presume her prediction was understood.

**Picture strip story**

Many activities can be done with picture strip stories. We suggested one in our discussion of scrambled sentences.

In the activity we observed, one student in a small group was given a strip story. She showed the first picture of the story to the other members of her group and asked them to predict what the second picture would look like. An information gap existed—the students in the groups did not know what the picture contained. They had a choice as to what their prediction would be and how they would word it. They received feedback, not on the form but on the content of the prediction, by being able to view the picture and compare it with their prediction.

The activity just described is an example of using a problem-solving task as a communicative technique. Problem-solving tasks work well in CLT because they usually include the three features of communication. What's more, they can be structured so that students share information or work together to arrive at a solution. This gives students practice in negotiating meaning.

**Role play**

We already encountered the use of role plays as a technique when we looked at Desuggestopedia. Role plays are very important in CLT because they give students an opportunity to practice communicating in different social contexts and in different social roles. Role plays can be set up so that they are very structured (for example, the teacher tells the students who they are and what they should say) or in a less structured way (for example, the teacher tells the students who they are, what the situation is, and what they are talking about, but the students determine what they will say). The latter is more in keeping with CLT, of course, because it gives the students more of a choice. Notice that role plays structured like this also provide information gaps since students cannot be sure (as with most forms of communication) what the other person or people will say (there is a natural unpredictability). Students also receive feedback on whether or not they have effectively communicated.

**CONCLUSION**

Perhaps the greatest contribution of CLT is asking teachers to look closely at what is involved in communication. If teachers intend students to use the target language, then they must truly understand all that being communicatively competent entails.

Is achieving communicative competence a goal for which you should prepare your students? Would you adopt a functional syllabus? Should a variety of language forms be presented at one time? Are there times when you would emphasize fluency over accuracy? Do these or any other principles of CLT make sense to you?

Would you ever use language games, problem-solving tasks, or role plays? Should all your activities include the three features of communication? Should authentic language be used? Are there any other techniques or materials of CLT that you would find useful?

**ACTIVITIES**

**A Check your understanding of Communicative Language Teaching.**

1. Explain in your own words Morrow's three features of communication: information gap, choice, and feedback. Choose one of the activities in the lesson we observed and say whether or not these three features are present.

2. Why do we say that communication is a process? What does it mean to negotiate meaning?

3. What does it mean to say that the linguistic forms a speaker uses should be appropriate to the social context?

**B Apply what you have understood about CLT.**

1. If you wanted to introduce your friend Paula to Roger, you might say:

   Roger, this is (my friend) Paula.
   I would like you to meet Paula.
   Let me present Paula to you.
   Roger, meet Paula.
   Allow me to introduce Paula.

   In other words, there are a variety of forms for this one function. Which would you teach to a beginning class, an intermediate class, an advanced class? Why?

   List linguistic forms you can use for the function of inviting. Which would you teach to beginners? To intermediates? To an advanced class?
2 Imagine that you are working with your students on the function of requesting information. The authentic material you have selected is a railroad timetable. Design a communicative game or problem-solving task in which the timetable is used to give your students practice in requesting information.

3 Plan a role play to work on the same function as in Exercise 2.
